It lies not in the mouth of the Republican Party to charge the Democratic Party with extravagance.

Good Roads.

EXTENSION OF REMARKS

OF

HON. WILLIAM R. SMITH,

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. SMITH of Texas. Mr. Speaker, the Democratic Party in national convention declared, "We favor national aid to State and local authorities in the construction and maintenance of post roads"; and that convention also declared in favor of "the extension of the rural delivery system as rapidly as practicable." These declarations of policy in effect should be regarded as imperative commands upon the Democrats in Congress, who constitute the majority and are responsible for what is or is not done here.

The bill before the House has been formulated and brought in here in obedience to these commands, and while its provisions are not in all respects as I would have had them had I been specially charged with the duty of formulating this legislation, the bill shall nevertheless have my cordial support. The ultimate aim is to bring the blessings of the Postal Service most speedily and punctually to every home, however humble, in this broad land of ours, and this measure is a decided step in that direction.

I am troubled with no question as to the constitutionality of this measure. I have really been surprised that any Member upon this floor could have reached the conclusion that Congress is without constitutional power to pass such a measure as this; but I note that those who have made such an objection to this bill have entirely overlooked the plain provision of the Constitution upon which it is based. I refer to the provision giving Congress power "to establish post offices and post roads." I do not see how language could be more clear and specific and at the same time more comprehensive. Under this authority Congress has adopted whatever means it has thought necessary to carry on the postal business. Houses have been rented and constructed; persons have been employed; the mails have been carried by various means, including railway trains, automobiles, horse-drawn vehicles, pneumatic tubes, and by other convey-ances, and I have no doubt other means will be added from time to time as the postal necessities increase and new inventions are discovered. For myself, I hope the day is not far distant when both the telephone and the telegraph will be added to our Postal System, in order that the conveniences and benefits to be derived from these means of carrying intelligence may be at the command of the public at greatly reduced cost.

The power to establish post roads certainly carries with it the power to assist in the improvement of such roads or to lay them out and to build them, if necessary.

Mr. Speaker, I think this bill wisely and logically contemplates cooperation between the Federal Government and the State and local authorities, for all post roads are used for local purposes as well as for the postal business. One is State and the other Federal, and both should contribute for the joint use.

I am for this bill not only because of the general benefit it will be to all classes throughout the country but because of its

special benefit to a long-neglected class of our people, the farmers. It has only been within recent years that the National Government has directed its attention to the extent it ought to, to the interest of this worthy class of our people; and even up to this time they have not received the full degree of care and attention that it seems to me it was the duty of the Government to bestow upon them. I am glad to say, however, that the tide is now at last turning in favor of the people who live upon the farm. Just a few years ago we gave them rural free delivery. Later we gave them the parcel post. Now we propose a plan for the improvement of the roads in order to give them more complete enjoyment of the Free Delivery and Parcel Post System, and facilitate and cheapen the transportation in which they must necessarily engage.

Good roads are worth many times what they cost. They bring producer and consumer closer together; they open new markets to both the merchant and the farmer; they economize transportation; they enlarge the farmer's opportunities; they cheapen the cost of the farmer's improvements, greatly enhance the value of his land, and add immensely to the pleasure and

comforts of farm life.

The more I study the question of good roads the more I am amazed that it has received so little attention. Bad roads have not only been the special blight of country life, but they have exacted a toll upon commerce that is incalculable. When we consider the fact that practically the entire food supply and the bulk of the raw materials of manufacture must be transported over bad country roads before they reach the consumer, we can form some idea of this enormous toll and of the individual

and national loss which it entails.

We all know that perhaps the greatest clog to the progress, development, and prosperity of this country has been the steady movement from the farms to the cities. Farm life, generally speaking, has been neither pleasant nor profitable, hence it has not been attractive. This should be changed, and it would be in large measure by the construction of good roads. financial system suitable to the peculiar needs of the farmer should be established, giving him money on long time at a low rate of interest, together with an adequate marketing system, as we hope will be done at an early date, farm life will in due time become what it ought to be, the most independent, the most wholesome, the most prosperous, and the happiest of all the avocations. Then will the movement back to the farm begin, and with agriculture prosperous and contented peace and plenty will reign throughout the land.

Memoranda of Secretary Lansing to Great Britain.

EXTENSION OF REMARKS

HON. S. D. FESS, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 29, 1916.

Mr. FESS. Mr. Speaker, under leave to print, I submit the memoranda of Secretary Lansing to Great Britain, under recent date, covering the seizure by Great Britain of United States mails and parcel post in transit.

TEXT OF AMERICAN NOTE.

Department advised that British customs authorities removed from Danish steamer Oscar II 734 bags parcel mail en route from United States to Norway, Sweden, and Denmark; that British port authorities have removed from Swedish steamer Stockholm 58 bags parcel mail en route Gothenburg, Sweden, to New York; that 5,000 packages of merchandise, American property, have been seized by British authorities on the Danish steamer United States on her last trip to the United States; that customs authorities at Kirkwall, on December 18, seized 597 bags of parcel mail from steamer Prederich VIII, manifested for Norway, Sweden, and Denmark. Other similar cases might be mentioned, such as that of the steamer Heligolav.

Department inclined to regard parcel-post articles as subject to same treatment as articles sent as express or freight in respect to belligerent search, seizure, and condemnation. On the other hand, parcel-post articles are entitled to the usual exemptions of neutral trade, and the protests of the Government of the United States in regard to what constitutes the unlawful bringing in of ships for search in port, the illegality of so-called blockade by Great Britain, and the Improper assumption of jurisdiction of vessels and cargoes apply to commerce using Parcel Post Service for the transmission of commodities. Please bring this matter of parcel post formally to the attention of the British Government.

The department is further informed that December 23 the entire

this matter of parcel post formally to the attention of the british covernment.

The department is further informed that December 23 the entire mails, including scaled mails and presumably the American diplomatic and consular pouches, from the United States to the Netherlands were removed by British authorities from the Dutch steamer New Amsterdam; that December 20 the Dutch vessel Noorder Dyke was deprived at the Downs of American mail from the United States to Rotterdam, and that these mails are still held by British authorities. Other similar in-

stances could be mentioned, as the cases of the steamers Rotterdam and Noordam.

RIGHT OF SEIZURE DENIED.

The department can not admit the right of British authorities to seize neutral vessels plying directly between American and neutral European ports without touching at British ports, to bring them into port, and, while there, to remove or censor mails carried by them. Modern practice generally recognizes that mails are not to be censored, confiscated, or destroyed on high seas, even when carried by belligerent mail ships. To attain same end by bringing such mail ships within British jurisdiction for purposes of search and then subjecting them to local regulations allowing censorship of mails can not be justified on the ground of national jurisdiction. In cases where neutral mail ships merely touch at British ports, the department believes that British authorities have no international right to remove the sealed mails or to censor them on board ship. Mails on such ships never rightfully come into the custody of the British mail service, and that service is entirely without responsibility for their transit or safety.

As a result of British action strong feeling is being aroused in this country on account of the loss of valuable letters, money orders, and drafts, and foreign banks are refusing to cash American drafts, owing to the absence of any security that the drafts will travel safely in the mails. Moreover, the detention of diplomatic and consular mail is an aggravating circumstance in a practice which is generally regarded in this country as vexatiously inquisitorial and without compensating military advantage to Great Britain. Please lay this matter immediately before the British Government in a formal and vigorous protest, and press for a discontinuance of these unwarranted interferences with inviolable mails. Impress upon Sir Edward Grey the necessity for prompt action in this matter.

I also submit the reply of Great Britain, delivered to Ambas-

I also submit the reply of Great Britain, delivered to Ambassador Page January 25, and signed by Sir Edward Grey, the foreign minister, as follows:

The communication which your excellency was good enough to make on the 10th instant regarding the seizure of mails from neutral vessels raised important questions of principle in regard to matters which are determined by the policy jointly decided and acted upon by the allied Governments. His Majesty's Government are therefore compelled to communicate with their allies before they can send a reply to your memorandum. They are consulting with the French Government in the first instance, and I hope to be in a position before long to state the result of the consultation.

I herewith also submit an editorial from the London Evening Mail, giving British opinion of neutral rights:

SEA DOMINION.

Are we using our undoubted dominion of the sea to the utmost? We are not. Why? Because we have a lawyer Government which, apparently, does not know its own mind for five minutes together.

Ah, God, for a man with heart, head, hand, Like some of the simple great ones gone For ever and ever by,

One still strong man in a blatant land Whatever they call him, what care I, Aristocrat, democrat, autocrat—one Who can rule and dare not lie.

Whatever they call him, what care 1,
Aristocrat, democrat, autocrat—one
Who can rule and dare not lie.

We hope, we trust, that our military war minister is such a one.
But as the sea service (mercantile as well as naval) has ruled events
from the very beginning, how is it that we have no naval war minister?
How is it that this civilian Government of ours can not, apparently,
face the conditions under which this war must be conducted if we
would win? "American interests," forsooth! Why, if we rigidly enforced a blockade and agreed to pay for any loss in "interests,"
and could by this shorten the war by one single month, it would save
us money. We are told that we are spending £5,000,000 a day—that is,
2150,000,000 a month—would rot such a sum pay for every interest
that suffered by a rigid blockade? Of course it would, and there would
be a month's less loss of life. Yet this Government continues to write
letters to the American Government. Was it not an American who said,
"The pen is mightier than the sword"? No doubt, for the getting
of dollars; yet unless we are careful the "pen" may undo us. What
are marine laws to us? Why write a mass of verblage relating to
seizures of vessels and the material loss sustained? America is piling up
her heap of dollars, growing enormously rich upon this European war,
and a very large proportion of these American business men who are
crying out are Germans or of German parentage. President Wilson is
a mere weakling; had there been a man like Abraham Lincoln at the
head of that Nation we should have had America's help instead of her
hindrance long since.

American experts know perfectly well how things are. They
know that never has there been such a war as this. They know that
to lay down rules is merely to hamper us, and we sincerely trust
that in this life-and-death struggle our civil Government may even
yet be bold enough to take a strong line without hesitation and
small mindedness. Yet where is our naval war minister?

Let all neutrals be plainly told that we shall do an

from this let us enforce a stern blockade on every neutral, and listen to no protests.

We command the sea, and that command will in the end decide the issue whatever setbacks are before us; why then waste that power by trifling in the interests of neutral trade. With such a war as this neutrals can not reasonably expect to go about their business without interference, they may be thankful that they are spared the burden of war and that, in spite of interferences, they are heaping up riches.

Just now the two Central Empires are pressing on toward Constantinople. Suppose that Germany overruns Asia Minor, can she remain there? Not unless she can gain command of communication by sea, and this she can not do. Sea power then, British sea power, will, in the end, decide the war whatever happens on land. Where, then, is our naval war minister?

THE EDITOR.

Child Labor.

EXTENSION OF REMARKS

OF

HON. WILLIAM B. CHARLES,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 27, 1916.

Mr. CHARLES. Mr. Speaker, I will vote for the Keating child-labor bill. Congress has the power to regulate interstate commerce, and it can not use that power to better advantage than to protect the children of the Nation, who will be the citizens of the future. The children are the Nation's best assets.

We should conserve the health and mentality of our children by enacting laws along industrial and educational lines such as will be a benefit and equip them for the battles of life.

If the Keating child-labor bill should become a law, the responsibility will be laid at the doors of the shipper and producer, and not upon the common carrier. Three great departments of the Government—Labor, Commerce, and Justice—will formulate provisions for its enforcement, and the Secretary of Labor, acting in conjunction with local authorities, will enforce it in the Federal courts.

I am glad to be able to vote for a law which will bring other States in the Union under the same child-labor conditions that exist in the great State of New York. The exploitation of the labor of children of tender ages must stop.

The Roads Bill.

EXTENSION OF REMARKS

OF

HON. THOMAS W. MILLER,

OF DELAWARE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. MILLER of Delaware. Mr. Speaker, although it was my privilege to address the House earlier in the day for a few minutes during the debate upon this bill, I am going to take advantage of the unanimous-consent agreement which permits Members to extend their remarks in the Record upon the subject of the roads bill. I am impelled to do this because in the few minutes allotted me in the debate it was impossible for me to present all of my reasons for voting against this measure. It need hardly be said that I am an advocate of good roads, not only in my own State but throughout the country at large. my opinion, this is not the question at stake in this particular instance. If such were the case, I would unhesitatingly vote for the bill, because if there is a State in the Union that needs good roads it is in certain localities within my own State, especially in the two lower counties of Kent and Sussex. debates upon this bill within the past few days, to which I have given my earnest attention, it appears to me that there has been too much of the city versus country injected into the discussions. It has been intimated that Members whose constituencies lie within cities are opposed to the bill because, obviously, none of the money will be spent within the city, and the opponents of the bill have been hailed as inimical to the farmer and his interests. Representing the State of Delaware at large in this House, I think that I may speak impartially on this phase of the debate, because my State is practically agricultural in its entire landed area. In other words, my district contains as many farmers and farms as the average congressional district, and possibly more. It can not be said, therefore, that I have not the interest of the farmer at heart when I vote against this bill, as I intend to do. Politically, it would be a very easy matter for me to vote for this bill, both as a Republican Member of Congress and as an individual. In the former capacity, as a member of the minority, one would have to bear none of the responsibility of adding millions to the governmental expenditures while the Democratic deficit increases. In the latter capacity, as an individual Member, it would be far easier to vote for the bill than to vote against it, especially as it seems to be the sentiment of those favoring the bill that he who opposes it is inimical to the farmers.

Of course, if this bill should become a law Delaware would receive financial aid from the Government under the act to the

extent of \$103,290, or approximately twenty-six one-hundredths of 1 per cent of the total bill; but bear in mind the money will not be forthcoming unless the State supplies an equal amount. In Delaware road building and highways are not under a State highway department, but each county takes care of the work itself through their respective levy courts. The money for road building is raised by individual county bond issues, after the same has been authorized by the general assembly; therefore, in the event of the roads bill becoming a law, it would first be necessary to either call a special session of the general assembly to provide the required legislation or wait until the regular session of the general assembly in the year 1917. The question would then come up as to whether the sum represented by the Government aid would be divided up among the various counties or else go to one county alone. If it were divided among the three counties, it can readily be seen that the \$34,000 going to each, contingent upon their supplying a like amount, which would have to be raised by a bond issue, would be of no real use for constructive road building within the State of Delaware. The facts just given are not my reasons for opposing this bill, but have been cited in case there should be anyone within my State of the opinion that by voting against this bill I had really been against a measure which would have been of some material benefit to the State. If the matter is considered from that standpoint, the above statement of facts should disillusion anyone who held that opinion.

This bill, if enacted into law in its present form, would take from the Federal Treasury in each fiscal year a maximum amount of \$25,000,000. Does anyone think that the yearly expenditures for road building will be reduced by succeeding Congresses? On the other hand, it is far more likely to be increased from year to year, because if the Government is once committed to this form of governmental expenditure, the amount of money appropriated and the scope covered by the measure

will be increased from year to year.

I have examined with great care the report of the Committee on Roads upon this measure, and in my opinion it is eloquent in what it did not say in favor of this bill rather than what it did say. In one paragraph of the report we read the following language:

Roads are local concerns, and primarily it is the duty of the States to provide them for their people.

The very language of their report just quoted is one of the strongest arguments against this bill if Members will only look upon the question from such an angle as to be unbiased by the interest of their own particular district or State. What use can be made of \$25,000,000, or a number of times that amount, when it is scattered throughout the 48 States for road building? The surface of the country will hardly be scratched, or, as has been remarked, it would hardly be enough to scrape the mud off the surface of the road. If the Government goes into the road-building business, it will result in the most stupendous and colossal expenditure of money that has ever been witnessed, because if the plan is once adopted Congress will not have the courage to abandon it. I heard a Member remark in a debate on this bill that the Members of Congress were the "slaves of their constituents," but I do not think we should let such a thought govern our action on a matter of this importance if after conscientiously considering the matter we come to the conclusion that the bill is not, after all, the best thing for the country and therefore the people.

At the opening of the present session of Congress the President of the United States, in his message, made it plain that there were two very important subjects to be considered by the present Congress, namely, the question of national defense and the raising of revenues. The question of the raising of revenue has beset the Democratic Party ever since the enactment of the Underwood tariff bill in the fall of 1913. Although that bill was in operation for almost a year before the start of the European war it failed to produce the proper revenue to run the Government, and when the first full fiscal year under the Democratic administration closed on June 30, 1914—a month before the European war started—a deficit in the Treasury was a reality, and such a situation had become apparent months

before the European war started.

The Democratic Party was forced to place a stamp tax upon the people, which was dubbed a "war tax," although this country was not at war. The so-called "war tax." would have expired by limitation on December 31, 1915, but within the first few weeks of the present Congress they were forced to extend this stamp tax for another year. In addition to this, it has already been announced that they will amend the Underwood Tariff Act, which provides for free sugar, in order to raise additional revenue. In spite of the revenue situation which forced the President in his address to recommend a tax on

bank checks, gasoline, automobiles, and so forth, we see a bill like this rolled into the House for consideration. If there were two salient points in the President's message which should appeal to every Member of the House, irrespective of his politics and his feelings, they are the questions of the national defense and revenue. These two questions should be settled one way or the other before a bill which will appropriate additional millions is brought up in the House, must less passed by it.

Upon the floor of the House to-day I was assailed by the gentleman from Missouri, the author of this bill and the chairman of the committee reporting it, because I announced that one of my reasons for voting against the bill was due to the unsettled state of the two questions referred to in the President's address and to which I have just called attention. It was intimated by this gentleman that I had a sinister and ulterior motive in opposing this bill from the standpoint of a national-defense advocate. It was intimated that because a certain powder company had some plants and offices in my State that I was influenced in reaching my decision. I realize that in daring to go up against this bill I would probably lay myself open to unjust and unfair criticism as above mentioned. I dislike to inject this matter into my remarks on the bill, but should anyone who heard the remarks of the gentleman or who might read them be influenced in any degree. I unhesitatingly state that such an accusation or insinuation is without any foundation. I make this statement upon my integrity as a Member of this House, and am going into no further details because the mere character of the accusation requires nothing further, and I regret, Mr. Speaker, that such an occasion arose that would make it necessary for me to digress in order to refute such a statement made by one Member against another.

Child Labor.

EXTENSION OF REMARKS

HON. AMBROSE KENNEDY.

OF RHODE ISLAND.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. KENNEDY of Rhode Island. Mr. Speaker, the present session of Congress has elicited the opinions of many Members on both sides of the House on the question whether or not this country, in view of the recent developments and experiences in world affairs, should make adequate and immediate provisions for a full measure of military and naval preparedness for the

To-day there is pending in this House a measure, not military in character, but associated, on account of the principles it pronounces, with the question of national preparedness. child-labor bill called up by the Committee on Labor.

No one acquainted with the scope and purpose of this bill can hesitate to give it his warmest support. It brings the strong arm of the Federal Government to the assistance of the children of the country and forces universal respect for their rights, particularly in States in which laws for the protection of children in various employments are either insufficient or do not exist at all.

The future preparedness of the country must depend not only upon arms and armaments but also upon the training and education of the young men and women of the land. I am in favor of preparedness in every form in which it can and should be obtained; preparedness in a stronger Arm; preparedness in a stronger Navy; and preparedness in the health, training, and education of the children of this country. I can see in this child-labor bill one of the main elements of national strength in the safeguards it throws around the children of every State in the Union. No nation can hope to be or continue great which does not by proper legislation provide for the training of its youth, mental, physical, and moral. They are its strength and security and the main hope on which the future of the country must depend.

But notwithstanding the salutary character of this pro-posed legislation, it is confronted with much opposition from a section of the country in which adequate laws for the protection of children do not exist. Gentlemen who oppose it do not attack the moral principle upon which the act is based but rather the constitutionality of the measure. They argue, with some cogency of reasoning, that the commerce clause in the turers and mill owners, and others, are decreased because of the

Constitution does not justify the enactment of such legislation.

Whatever force this argument may appear to have, recent decisions of the Supreme Court have completely knocked the props from under it. I have read very carefully the arguments advanced before the Committee on Labor for and against the constitutionality of this legislation, as well as the recent decisions of the Supreme Court of the United States, particularly in the lottery cases, relative to legislation of a kindred nature which already appears on the statute books. This measure is but another step in the pathway of remedial legislation, and I am satisfied that, in its presentation and final passage, Congress can not be charged with any usurpation of power. It comes squarely within the wide latitude of interpretation which the Supreme Court has already given to the commerce clause in the Constitution as applied to new conditions that directly affect the morals of the public.

In addition to the moral, this legislation has a material

side which must not be lightly regarded. It is a self-evident proposition that the enactment of adequate child-labor laws in some of the States of the Union establishes inequalities which operate to the advantage of manufacturing interests in other States which have not yet enacted within their borders legis-lation of this nature. This law will take away from emlation of this nature. This law will take away from employers in competing States the advantages they now enjoy over their competitors in States in which child labor has been properly regulated by statute. This unfair advantage has been a source of complaint, and the only complete and summary method of preventing it is by the passage of national legislation along the lines proposed in this bill by prohibiting the interstate shipment of the products of child labor.

I am strongly in favor of the bill and will gladly give it my support.

Child-Labor Bill.

EXTENSION OF REMARKS

HON. CARL C. VAN DYKE.

OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday January 29, 1916.

Mr. VAN DYKE. Mr. Speaker, as a member of the Labor Committee, and finding myself absolutely in favor of the provisions of the so-called Keating-Owen child-labor bill, I desire to state that after having listened to the testimony presented to this committee by both sides, I am truly convinced that the measure should not only pass this House, but that no unnecessary delay should arise in the Senate to prohibit the passage of this most meritorious bill this session of Congress.

The hearings before the committee this year have developed this fact, that the child-labor evil is not nearly as great as it was five years ago. This, to my mind, is ample proof that the employment of child labor in mines, quarries, canneries, manufacturing plants and cotton mills should be restricted and is,

in no sense of the word, a necessary evil.

Because of the laws which have been inaugurated in over 40 of the States dealing with this condition, the sentiment of the people at large is clearly demonstrated. In 1910, according to the United States census, there were nearly 2,000,000 children under 16 years of age engaged in different industries—more than 5 per cent of all the workers in the United States. A little less than one-half of this number were children under 14 years less than one-half of this number were children under 14 years of age, many of them infants of 10 years. Six hundred and thirty-seven thousand were little girls. In cotton mills alone there were 41,076 children under the age of 16 employed, and 11,811 were tots of from 10 to 13 years of age, of whom 5,440 were girls.

These are the men and women of the future. Upon the health and intelligence of these boys and girls of to-day depends the future of our country; and I want to say here now that if the effort to voluntarily eradicate this evil has not been successful, then it is our duty as legislators to pass such laws as will protect the future of our country by seeing to it that the children of to-day are given a chance to develop, both physically and men-

It does not matter whether the restrictions in this bill are such as to demand an additional cost in the maintenance of these factories; neither does it matter if the incomes of the manufacprovisions of this bill, but it does matter as to the kind of the people who are going to live in and handle the affairs of this country in the future.

The opponents of this bill who appeared before the Labor Committee this year were representatives of the cotton mills of the South and the counsel for the National Manufacturers' Association; and I am pleased to note that not a single man who appeared before the committee stated that he believed in child labor, but that economic conditions were such that it was absolutely necessary to employ such labor.

This is the same argument that has always been employed and always will be in legislation of this kind. Time and again it has been proven that this argument does not hold; and if this bill becomes a law you will find that these cotton manufacturers will still continue to do business at the same old stand and the representatives of the National Manufacturers' Association will still continue to appear before committees of Congress arguing against legislation which is beneficial to the laboring class but appears to be undesirable legislation from their standpoint of view because of economic conditions.

Those who testified before the committee stated, in effect, that there were in the employ of the mills children between the ages of 12 and 16 years who were working 11 hours a day. While the provisions of the bill, which precludes the working of children under the age of 14 years, is practically indorsed by all, some of the mill owners and manufacturers included, that portion of the bill which calls for the working of children between the ages of 14 and 16 but eight hours a day, and that eight hours to be between 7 o'clock a. m. and 7 o'clock p. m., is really the section of the bill which is being fought so strenuously by the opponents of this bill. You will find, Mr. Speaker, that when the opponents of this bill see that their fight on this certain section is lost that they will then gracefully acquiesce and allow the bill to pass.

The witnesses before the committee maintained, upon my questioning them, that it was impossible to run their mills on an 8-hour basis, for either adults or children, and that in order to keep the mill running it was absolutely necessary to keep the children working 11 hours a day. Eleven hours a day. Think of it! Children, between the ages of 12 and 16, getting up before daybreak in the morning and starting to work in these mills, and laboring on until night has fallen, and to them custs its shadow of gloom over all.

They say they have provided night schools, Young Men's Christian Association, Young Women's Christian Association, playgrounds, and other institutions, which would be very beneficial to these children, providing they had the time to partake of their benefits. But, pray tell me, how is a child, laboring from daylight to dark, going to have an opportunity to attend day school; and what condition will that child be in physically and mentally after having labored 11 long weary hours during the day? Will a child of that tender age be able to derive any benefits from a night school, even if it has sufficient strength left to drag itself wearily into that schoolroom?

All of these witnesses stated that they were in favor of doing everything in their power to promote the interest of these children, and still when I suggested to them, during the hearings on this bill, that the facilities provided for education did not amount to much unless the children were in the physical condition to make use of the opportunity, the answer was that this was all they could do.

I then suggested a way in which their mills could still run whereby they would be enable not only to work these children but also give them an opportunity to acquire an education; and that was by working the children in shifts of from five to six hours a day, so that the first shift could attend school in the afternoon, and the second shift in the morning. This would allow the mills to run as they are doing at the present time, and allow the children to earn a sufficient amount of money, which, when combined with the earnings of the rest of the family, would provide for them a living, and at the same time give them an opportunity to get at least a primary education. And I submit that, for a child of that tender age, five or six hours a day in a factory or mill is long enough. To my mind, if it is necessary to employ children, this plan certainly is possible.

The opponents of this bill are discussing its constitutionality, but it is only necessary to refer to one decision of the Supreme Court to cast any such contentions to one side; and that decision was in the lottery cases, which carried with it, first, that the right to regulate carried with it the right to prohibit. Then, having decided in favor of the right to prohibit, the court held that intrastate commerce, which the States plainly could prohibit as being against the morals of the people within that

State, could be prohibited by the National Government, so far as it related to interstate commerce.

It is true that the cotton cloth produced by child labor is not injurious in itself. Neither was the paper upon which the lottery tickets were printed. It was the danger of the lottery tickets, and the danger of that class of goods which is produced by child labor in this case, to the morals of the people in the State from which it is shipped and the danger of what might happen to the morals of the people of the State into which it is shipped.

In other words, the manufacture of any piece of goods by child labor does not only affect the community in which that piece of goods is manufactured, but it does affect the morals of the entire country to the extent that it affects the welfare of the future of this country, because those children who are today employed in those mills and factories are the very same people upon whose shoulders will fall the burden of caring for the destinies of this country in a decade or two.

Therefore I maintain that we not only have a right to legislate to prohibit child labor but that it is our bounden duty to legislate in that respect, and to do it at once.

Good Roads.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 24, 1916.

Mr. SCHALL. Mr. Speaker, the time has gone by when anyone questions whether good roads are a necessity. question of equitable division of the cost. We must have a uniform system of good roads everywhere. Not 14 miles of costly concrete in one county and quagmire in the next. All the people should help pay for all the roads. The relation of the farmer to the city man is so close, the prosperity of the rural community is so interwoven with that of the city that it is but just that the burden should be shared. The greater wealth, the greater number of people are in the cities. They have already been benefited by expenditure, and it is narrow and selfish to refuse to others the opportunity that helped place their community where it is, The stream of traffic goes from the town to the farm, as well as from the farm to the town. The produce of the city man, needed by the farmer, must travel the country roads. And moreover, whatever adds to the difficulty and cost of transporting the farmer's produce raises the cost of living in the cities. Good roads cut the cost of transportation in half. It has been estimated that the average saving in hauling over good roads is \$1.50 On that basis one can readily estimate the immense saving by multiplying this by the millions and millions of tons hauled over wagon roads in the United States. In New York State the taxation is so arranged that 90 per cent of the cost of road building is borne by the city, leaving 10 per cent to be borne by the farmer.

The point is raised by the gentleman from Illinois [Mr. Mann] that this legislation is to benefit the automobilist. Even so, how does that exclude the farmer from its benefits? A road that is good enough for the rural postman's automobile or motor cycle, aside from hastening the delivery of rural mail, will expedite the lumberman's trip to market.

Good roads enhance the value of the farms themselves. Land 5 miles from town is worth three times that 20 miles from town. Improve the road to the land 20 miles away and at once you enhance the value of the land. Bad roads waste time on the trip, and even force the farmer to use the good weather he needs to employ on the farm in taking his goods to market.

There seems to be a fear that the farmer will get some special legislation. No matter what the remedies proposed in his behalf, there are some to rise and cry out lest he be pauperized. No such outcry goes up when cities are munificently endowed with buildings or bridges are erected or harbors deepened or rivers improved; there is no thought of cavil at aid to military schools. It was long ago decided that rural aid was right and proper for internal improvement. Roads are national in their importance. Not alone will they benefit the farmer. They are interstate as well as intrastate. They affect every industry, and the trade and commerce of every section.

The farmers are not getting their share of the benefit from money expended. From 1896 to 1906, even though 60 per cent

of the exports were farm products, less than 1 per cent was spent for their direct benefit. Over \$180,000,000 was spent for rivers

and harbors and a mere pittance for highways.

The bill provides that each State shall receive a specific amount of \$65,000; on the basis of miles of post roads and on the basis of population, two other amounts. Minnesota, for example, with its population of 2,075,708, will receive on the basis of population \$248,338. With its 4,623 miles of post roads, it will receive on the basis of mileage \$420,096. This makes a total for Minnesota of \$733,434. For every dollar the United States puts in, the different States must put in a dollar.

For my part, I wish the bill carried with it a greater appro-

priation.

Good roads are the arteries of civilization. When the con-quering Roman was advancing from province to province, the first obstacle to his progress was the lack of highways. How well he succeeded in overcoming this lack is a proverb. The first feat of engineering of the efficient armies across the water is to provide for transporting troops and supplies. How important this feature is to the modern army is shown by the difficulty of advancing experienced by the Germany Army when they got into Russia and Poland, where the science of road

building is in its infancy.

The gentleman from Ohio [Mr. Longworth] fears that this expenditure will be blocked on account of the necessity for preparedness legislation. I maintain that road building is the foundation and basis of preparedness. The whole story of the European war teaches us this, from the early days of that weird gray stream of soldiers, countless hordes, march, march, marching over perfect roads to the front, to the later days when the masses of troops were advanced by auto transport; when mountains of supplies were forwarded the same way. This is a preparedness that looks not alone to destruction but to construction as

well

Good roads bring people into closer contact, contribute to social possibilities, annihilate distance, and rob the farm of its loneliness. They make possible the consolidated school and render not impossible the day when the farmer shall transport his goods to market by nuto van. They help to equalize supply and demand, provide for quicker exchange of commodities, and hence lessen the cost to the ultimate consumer. Good roads and prosperity go hand in hand.

Rural Post Roads.

EXTENSION OF REMARKS

HON. JOHN T. WATKINS. OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, January 25, 1916.

Mr. WATKINS. Mr. Speaker, this bill provides for the authorization of the expenditure of \$25,000,000 annually by the National Government to aid the States of this Union in the

construction of rural post roads.

My first effort upon becoming a Member of the House of Representatives was to procure an assignment on the Committee on Agriculture. My avowed purpose was to aid in the passage of legislation in the interest of the public roads of our country. This privilege was not granted me, but my ardor in behalf of the construction of good roads has never dampened. No substantial headway was ever made in procuring legislation in this direction on any of the bills which were referred to the Committee on Agriculture. About two years ago I united with a few other Members of the House of Representatives in forming a good-roads organization under the leadership of the gentleman from Missouri [Mr. Shackleford], who reported this bill, and to whom more than anyone else is due the credit of arousing an interest and procuring legislation in the House of Representatives in favor of good roads. As a result of this organization a Committee on Roads was created in the House of Representatives, with the gentleman from Missouri [Mr. Shackle-ford] as chairman. From the inception of this committee's activities a new impetus was given to the good-roads movement, and to-day we find a practically unanimous sentiment in the House in favor of Government aid. Many do not agree to the provisions of this particular bill, but it is a question of form, not of substance.

The slogan of to-day is "Safety first." That is a synonym of preparedness" in the present-day parlance.

Some of the critics are disposed to deride this measure by

calling it "pork." If so, it is well worthy of the alliteration of "Peace, pork, and preparedness," for no bill has ever been presented to this House which was more conducive to the peace, prosperity, and happiness of the people of this country than this one. Nor can any better plan of preparedness be conceived than a perfect system of highways, enabling the rapid transportation of arms, munitions of war, men, animals, baggage, provisions for soldiers, and provender for stock.

Complaint is made that the provisions of this bill make a discrimination against the more populous sections of the country. particularly in the East, where there are many wealthy cities. It is superfluous to call attention to the fact that they have received many favors through the legislative channels of the Nation; but their Representatives here should consider that in case of the invasion of this country by a foreign foe these high-ways would afford a means of rapid transit for troops from the

interior of the country to come to their rescue.

If \$25,000,000 was carried in the public buildings bill to construct Government buildings in the cities of this country, no such cry of extravagance as we now hear would be heard from these gentlemen. Public buildings are worthy investments by the Government. So are good roads.

If the river and harbor bill should carry double the amount of this bill, there would not be a murmur from these gentlemen; still there is not a river or a harbor in the country which would be of any service whatever, if there were not highways lead-

ing to them.

One of the complaints heard in the discussion of this bill is that some of the States would not avail themselves of the fund, because they have already spent large sums for good roads under their own plans, and would not want to contribute their required amount under the provisions of this bill or be interfered with by the National Government. There is nothing compulsory about this measure. It is left entirely with each State to accept its part of the fund, by complying with the provisions of the act or to decline to do so, at pleasure.

A man who boarded at a house where the table fare was "the same yesterday, to-day, and forever" was coming to the house when the dinner bell began to ring. A dog lying on the porch raised on his haunches and commenced to howl. The boarder said: "What are you howling about? You don't have to eat it."
The question of the benefit of good roads has been gone over

so often that an elementary discussion of the subject would be entirely superfluous. But there is one phase of the proposition to which more than passing mention should be made. That is the high cost of living and the cost of high living.

Those in high life who speed over the country in automobiles will find that the cost of high living will be considerably reduced by the construction of good roads. And by cheapening the transportation of the products of the farm to the markets the high cost of living will be greatly lessened.

In his speech on this bill the gentleman from Louisiana, Judge

Wilson, Says:

We have 2,500,000 miles of public roads. Over these roads are carried annually 350,000,000 tons of freight, consisting of farm products, supplies, and other articles. The average haul per ton is 8 miles, Over the unimproved road the cost per ton-mile is 23 cents, or \$1.84 per ton for the average haul of 8 miles. Over the improved or surfaced road the cost per ton-mile is 13 cents, or \$1.04 per ton for the average haul of 8 miles. Over the improved or surfaced road the cost per ton-mile is 13 cents, or \$1.04 per ton for the average haul of 8 miles—a saving of 80 cents per ton. Hence on 350,000,000 tons, with universal good roads, the annual saving would be \$280,000,000.

It is claimed that about 40 per cent of the cost of every article to the consumer is the cost of transportation. We to-day can carry a ton of freight 1,000 miles for \$1.25 by water and we can carry a ton of freight in the United States over our railroads for something like 250 miles for \$1.25, but we can not carry a ton of freight over our wagon roads in the United States to exceed 5 miles for \$1.25.

The Secretary of Agriculture, in his annual report this year, estimates that the farmers' crops for the year 1915 were valued at \$10,000,000,000. Every dollar's worth of the farm com-

modities had to be hauled to market.

Under the proposed bill it is estimated that the State of Louisiana will receive \$345,064.

Agriculture is the substratum, the foundation, the support of all other industries. When the farmer prospers we all prosper. With parcel post, rural free-delivery routes, and good roads, the farmer can be made contented to live on the farm, devote bimself to the peaceful pursuit of furnishing the world with the products of his labor, and better his own condition as well as that of all mankind, building up a sturdy yeomanry and in-stilling in his posterity the love of home, his country, and his

"The Establishment of Law and Order in Mexico Can Not Succeed on Our Moral Support Alone-Carranza Needs Money."

EXTENSION OF REMARKS

HON. FRED A. BRITTEN.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES, Saturday, January 29, 1916.

Mr. BRITTEN. Mr. Speaker, I desire to call to the attention of the House the introduction of a resolution which, if adopted and successfully concluded by the President of the United States, will place in the hands of the de facto government in Mexico millions of dollars in gold, which will enable Corranza to rebuild the national railways of his lawless country and to establish an effective military police force in every State or Province, and to bring about a condition of law and

order such as could not possibly be accomplished by the invasion of our troops, the loss of thousands of American lives. and the transformation of Mexico into a blood-stained battle field such as is now destroying the young manhood of Europe.

Mr. Speaker, the acquirement of Lower California would give us a strip of land extending 800 miles south of the State of California, in which is included the wonderful Magdalena Bay, for the establishment of a great naval base halfway between San Francisco Bay and the Panama Canal.

Whereas the President of the United States did, on November 11, 1913, issue to the President of Mexico an ultimatum demanding his immediate resignation as President of that Republic, and further demanded that he (President Huerta) be not a candidate to succeed himself in the subsequent popular elections by the people of Mexico;

mediate resignation as President of that Republic, and further unanded that he (President Huerta) be not a candidate to succeed himself in the subsequent popular elections by the people of Mexico; and Whereas the attitude of our Government has been largely responsible for two terrible years of murder, rapine, and destruction not only of American lives and property, but of those of foreign citizens who have been equally unguarded; and Whereas the President of the United States has recognized Carranza as President of the de facto government controlling Mexico, with the assurance that this recognition and moral support would speedly bring about a condition of peace and tranquillity in Mexico and the establishment of reasonable commercial relations; and Whereas our moral support of Carranza's government was not based on the assumption that he had already acquired sufficient power to establish a permanent government immediately, but on the assumption that he was in a position to do so within a reasonable length of time, and with the full knowledge that revolutions still existed and that Villa and Zapata were still political factors and that the lives and property of American citizens in and on the border of Mexico might still be sacrificed; and Whereas the President has let it be known that he is positively against intervention and has committed this country to an un-American policy of watchful waiting, compromising, and humiliation, through which must be sacrificed more American lives and property because of Carranza's sympathy with the lawless brigands of Mexico or his incapability, under the circumstances, of bringing about even a semblance of law and order; and Whereas it has this day become known in Washington that New York bankers will furnish no funds to Carranza's de facto government in Mexico with which he might reconstruct the national rallways and establish a large police constabulary which could stamp out crime and bring reasonable protection to the inhabitants of his heartbroken country; and

Resolved, That the President of the United States be, and he is hereby, authorized to negotiate with the Carranza government of Mexico for the purchase of the territory in Mexico lying west of the Colorado River and of the Gulf of California, known as "Lower California."

Mr. Speaker, conditions at the present time in Mexico are worse than at any time in the last 100 years, according to all reports from that stricken country. The reign of terror which was inaugurated shortly after the downfall of Diaz and which has raged since the death of Madero has produced a situation with which the Mexicans themselves are utterly incapable of dealing.

Technically, the revolution is over. Carranza has been recognized and has announced his desire and intention to correct the evils that exist. Events, however, continue to prove that he is utterly unable to carry out his promises of reform. It is even difficult to believe that his promises are made in good faith when, with a death rate of 9,000 a month, he has demanded the withdrawal of the American Red Cross. He has issued a statement that business conditions are improving rapidly, although it is known that in Guadalajara manufacturing business has decreased 80 per cent, in El Oro 95 per cent, and that elsewhere in Carranza territory conditions are little better. He has ordered that looting be stopped and announced that it has ceased. Yet, according to residents of Mexico City, there has been more looting during the Carranza régime than in all previous administrations. Even if Carranza himself were willing or capable of effecting reform, his subordinates are not, and they are his own appointments.

With the best intentions in the world-

Writes Mark S. Watson, reporting Mexican conditions for the Chicago Tribune-

the Chicago Tribune—
Carranza can not control the swashbucklers who surround him. At least he does not. As to this there is no argument. The record that 713 private residences in Mexico City are occupied by officers and, in the main, were filled with their women up to the middle of November is some evidence of how much attention is being paid to the first chief's order that there be no confiscation.

The record of street robberles and the forced entry of houses by automobile loads of officers wearing Mexican uniforms is some evidence of the military discipline. The Government-controlled papers refer briefly to the robberles as committed by persons "disguised as Carranga officers." The disguise is so complete that the next day the same officers can be seen leading their commands.

The civil appointments of Gen. Carranza-

Also reported Mr. Watson in a recent dispatch to the

Also reported Mr. Watson in a recent dispatch to the Tribune—
hold out little assurance of improved conditions under their jurisdiction. "There are efficient men and there are honest men," Mr. Watson was told by despairing residents, "but the two are never found together in the advisers of the First Chief. If a man is honest, he is inefficient; if capable, he is crooked."

Antonio Manero, president of the banking commission, intrusted with financial affairs of the gravest importance, is an ex-convict, having been imprisoned for forgery on the bank in which he had been employed. Rafael Nieto, subsecretary of Hacienta, is a former garage owner in Saltillo, Carranza's old capital. Roque Estrada, minister of justice, was an assistant to a lawyer's clerk before the revolution, and has been awarded the highest position in the field of law.

"Of the five Judges now seated in Mexico City," Mr. Watson comments, "one has practiced law. He is the 'least bad' of the five. Daily they decline to let attorneys, indignant at their outrageous decisions, even file notice of appeal to a supreme court when that body shall have been organized.

"The instructions from Minister of Justice Estrada that the knowledge of law by the judiciary was a matter of no consequence as compared with their devotion to 'revolutionary ideals,' whatever, in addition to personal profit, those ideals may be, found its counterpart in Palovicini's instructions to his teachers that 'if was unnecessary for them to know their subjects as long as they were good revolutionists." "There has been starvation in Mexico, there is pestilence, and there will be famine if the corn crop fails or if the prices on the present short supply are kept up. Gen. Carranza has laid great stress on his control of the prices of foodstuffs, and in his own district of Coahulla prices are not exorbitant, but in the Federal District controlled by his immediate subordinates prices have been, and are, and will continue to be exorbitant." As Mr. Watson points on:

"It is to the advantage

Good Roads.

EXTENSION OF REMARKS

E. BROWNE. HON. EDWARD

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. BROWNE of Wisconsin, Mr. Speaker, I spoke at some length a few days ago on the Shackleford bill, addressing my-self to the merits of the bill, I now desire to address myself briefly to the importance of good roads and national aid for

I will preface what I am going to say by stating that the Sixty-third Congress, recognizing the demands for national aid for roads, created the first permanent Road Committee. This committee considered only one subject, national aid for roads. It has conferred with almost all the State highway departments in the United States, and had many representatives of State highway commissions and others interested in good roads be-

The bill presented has the indorsement of many State highway commissions, as the chairman; the gentleman from Missouri

[Mr. Shackleford], has indicated.

A national law must be adaptable. A Federal road law to pass Congress must be a law under which each of the 48 States can participate. There are 8 States that have no State highway commissions. Ten years ago a majority of the States did not have State highway commissions. The States having highway commissions and State aid have made more progress in road building in the last 10 years than they did in the previous 50 years.

It is obvious that no national aid law will ever pass Congress, and ought not to, that does not give to each State a chance to receive an equitable share of the money appropriated. OBSTACLES TO NATIONAL AID FOR ROADS.

The greatest obstacles in the way of national aid for roads are:

First. The well-meaning good-road enthusiast, who has never thought of the different and varied conditions to be met in drafting a national road law which will be workable in 48 different States, and whose knowledge on road legislation is limited to his general observation, "I want a good road so that I can go anywhere I desire to go, and I want it completed at Many of this type of road enthusiasts favor the ocean to ocean good-road movement, the old trail roads and other

transcontinental roads to be built wholly, or in the greater part, by the Government.

Second. Another class of road enthusiasts want the roads so local that they lead from every man's house to the nearest market place, and they desire the side roads of every community improved before the main roads, and each advocate wants the road to go by his house first.

We have over 2,000,000 miles of wagon roads in the United States. It is apparent that if we attempt to improve all the roads in the 48 States by Government aid at once it would bankrupt the country and would be out of the question.

Outside of the large cities most of the opposition comes from the States east of the Alleghany Mountains, who have a more perfect system of roads than any of the other States. representatives from these States argue that these States will pay more money out than they will receive under national aid, and that they can take care of their road matters, and that all the other States in the Union ought to take care of theirs.

This argument could be made by a majority of States against any internal improvement ever made by this Government.

ALL OF THE STATES HAVE CONTRIBUTED TO OTHER IMPROVEMENTS.

The whole United States has been contributing for years toward internal improvements, 90 per cent of the benefits of which have inured to the States that are now objecting to the first internal improvement that will directly benefit the inhabitants of the great agricultural States of the Union.

Over 50,000,000 people in the United States are living in the country, including villages and cities under 2,500 inhabitants.

FARMERS PAY LARGE TAX.

The farming population alone is paying taxes upon between forty and fifty billion dollars worth of property.

Each year the farming population is adding between five and ten billion dollars to the wealth of the Nation.

Upon the prosperity of the farmer and the rural communities

depends the prosperity of the whole United States

No class of people in the United States pay a higher tax for the amount of property they own than the farmer.

It therefore seems only fair and just that the whole United States should be in favor of a great internal improvement that will directly benefit one-half of the population and indirectly benefit the whole population of the United States

You would think, to hear the arguments of Representatives from some of the States that have great ports of entry, that every cent of money received at each port from the importation of goods to this country belonged to their States, and it was a gratuity, on their part, to allow the National Government to have this fund.

The money received by the National Government as duties from importation of goods to the United States belongs to the people of the interior as much as to the people who reside on the seacoasts where the great seaports chance to be located.

The Panama Canal has cost the Government \$400,000,000, The river and harbor appropriations of the Sixty-third Congress amount to over \$62,000,000. Thirty-five million dollars was appropriated by the Sixty-third Congress for a railroad in Alaska, a Territory containing less than 65,000 people.

Can the present Democratic administration afford to have the Sixty-fourth Congress adjourn without appropriating at least \$25,000,000 for its wagon roads that will accommodate directly 50,000,000 people and indirectly the entire population?

WILL THE GOVERNMENT'S FINANCES PERMIT?

Some Members say this legislation should be deferred until our national finances are in better condition. Twenty-five millions of dollars is not a great amount for this Government to raise. Add a trifle per cent more on the income tax and it would raise twice that amount. An income tax similar to the Wisconsin State income tax would raise several hundred millions of dollars. Only between two and three million dollars of the Alaskan railroad appropriation of \$35,000,000 has been used. Why not repeal this law and use this appropriation for good roads—a much more urgent need and one that will benefit a hundred millions of people, while the Alaskan Railroad appropriation only accommodates 65,000 people, the entire population of that Territory?

The \$60,000,000 appropriated for rivers and harbors by the Sixty-third Congress has not been expended. Why not repeal this law to the extent of \$25,000,000 and use it for wagon roads?

WHY SHOULD RIVERS HAVE PREFERENCE?

Why do our Congresses give the roads on our rivers preference over the roads on the land?

The improvement of our wagon roads, over which the whole food supply of the Nation is annually hauled, and over which men, women, and children are obliged to travel in all kinds of weather on foot, on horseback, and in wagons 365 days in the year, ought not to be compelled to side-step for every other internal improvement.

RAISE MONEY BY TAX ON MUNITIONS.

The \$25,000,000 asked for by this bill for wagon roads might be raised by imposing a tax on the exportation of munitions of war. Some of the great establishments are waxing fat from the sale of these death-dealing instruments of war. If this Government is going to allow corporations to capitalize the misfortunes of our brothers across the sea by profiting in gold at the rate, in some cases, of \$1,000,000 a day in net profits, I would be in favor of making them pay not only for this internal improvement but for anything that this Government thinks necessary for national defenses.

IMPROVEMENT OF GOOD ROADS.

In my opinion, the question of national aid for highways is the greatest question before Congress. On this great question we should waive technical differences.

Horace Greeley once said that "the way to resume specie payment was to resume."

The way to have national aid for roads is to pass the best road law Congress is capable of drafting, and after working under it, if it prove inadequate perfect it by amendment. We will never make any progress by attempting to defeat every measure that does not meet in every particular with our ideas.

GOOD ROADS LESSEN THE COST OF TRANSPORTATION.

It costs more, on an average, to haul a bushel of potatoes from the farm where they are produced to the nearest market place than it does to carry them from Dublin, Ireland, to New York City. If by good roads we can lessen the cost of transportation by wagon 50 or 75 per cent, it is going to ultimately reduce the high cost of living.

It has been said by a Secretary of Agriculture that it costs the farmers every year to move the great crops they raise something like \$1,600,000,000, and that from \$400,000,000 to \$500,000,000 of this amount could be saved by good roads.

The mud tax, or the bad-road tax, is the highest tax the Ameri-

can people are paying.

GOOD ROADS BENEFIT EVERYBODY.

Heretofore we have looked upon the wagon roads as something that concerned simply the farmer, the man who lived upon the road, and we have not considered that it was the problem of anybody else. We have thus shouldered the responsibility of road building and keeping in repair 2,000,000 miles of road upon the farmer alone.

At the end of every road is the farmer with his crops and all kinds of farm produce. At the other end of the road is the city with its people waiting to be fed, with its merchants waiting for trade, and with the railroads waiting for goods to transport. To whose advantage is it to have a road for the farmer to come to town? It is certainly to the advantage of the merchants and the city and the railroads as much as it is for the farmer.

The farms and the farmer are the great abiding support of the city.

GOVERNMENT AID WILL STIMULATE ROAD BUILDING.

If Congress passes this bill, it is going to stimulate road building throughout the United States. It is going to compel the States that have not State highway commissions to get them before the year 1920.

Good roads will make rural life more attractive. They will tend to check the drift of population from the farms to the cities. In the last 10 years—from 1900 to 1910—the urban population increased 50 per cent, while the rural population increased only 11.02 per cent, and in one or more of the great agricultural States the rural population decreased.

This is a situation and tendency which is viewed by many with alarm, and the National Government and many States are in various ways trying to turn back the tide toward the cities with the movement "back to the farm."

Good roads will tend to help this movement more than any-

thing this Government can do.

If this road bill becomes a law, it will help the farmer in moving his crops to market and will eventually make a system of roads connecting all parts of our country.

The Government, with its expert engineers, will undoubtedly

be able to reduce materially the cost of road building.

A Government engineer like Col. Goethals at the head of a great national road bureau would make more progress in the matter of the improvement of our roads than will be made in 50 years by our 48 States, with their thousands of smaller subdivisions, undertaking to work out the road problem by themselves

I believe that a system of roads such as Government aid will insure will improve the conditions of rural life and make it more

attractive, and have a direct bearing upon the social, intellectual, and economic welfare of the whole people; that it will be followed by a greater activity and cooperation on the part of the rural population of this country that will mean an era of the greatest prosperity this country has ever known.

Charles Sumner, more than 50 years ago, truly said that-The two greatest forces for the advancement of civilization are the schoolmaster and good roads.

Child Labor.

EXTENSION OF REMARKS

HON. WILLIAM S. VARE, OF PENNSYLVANIA, .

IN THE HOUSE OF REPRESENTATIVES, .

Wednesday, January 26, 1916.

Mr. VARE. Mr. Speaker, the two amendments which I propose are designed to include in this Federal measure the humane and practicable principles embodied in the law which Gov. Brumbaugh, of Pennsylvania, caused to be written on the statuté books.

The amendments are as follows:

After the word "years," on line 1, page 2, insert "who work more than eight hours in any one day or more than six days in any one week, or after the hour of 7 o'clock postmeridian, or before the hour of 7 o'clock antemeridian; and each minor between the age of 14 and 16 years so employed shall, during the period of such employment, attend, for a period or periods equivalent to not less than six hours each week, a public school, during the usual public school term: Provided, That the school hours shall not be on Saturday, nor before 8 o'clock antemeridian nor after 5 o'clock postmeridian of any other day."

Add a section, to be numbered section 2, as follows:

SEC. 2. That no producer, manufacturer, or dealer shall ship or deliver for shipment in interstate commerce the product of any mine, quarry, mill, cannery, workshop, factory, or manufacturing establishment situated in the United States which has been produced, in whole or in part, by the labor of any minor under 18 years of age, unless he shall have obtained, without cost to said minor, a certificate of the physical fitness of said minor to perform the work assigned to him, said certificate to be signed by a reputable physician.

Renumber the sections of the bill.

It is little enough for the Government to require that all products entering into interstate commerce shall be made by adults, and if by children, then by children who shall be pro-tected in their right to an education.

Owing to the fact that the Keating bill restricts the hours of employment of children between the ages of 14 and 16 to eight hours a day, I have worded my amendment, providing for the educational feature, to require that at least six hours a week be

devoted to the education of these young employees.

The phrase "public school" is broad enough to authorize the employers to establish schools of their own, if that method should be deemed more practicable. The term, nevertheless, is designed to prevent any attempt to comply with the educational provision merely by the ruse of having a perfunctory classroom. By "public school" is meant one that shall be under the supervision of the regular school authorities.

The other amendment is designed to prevent the employment of sickly children. This prohibitory feature is one of the best of the new Pennsylvania system, and it is a necessary part of the humane program. Other regulations can be left to the discretion of the officials to whom power is delegated by the measure now before the House, but I think the bill must be regarded as incomplete without the educational and health features proposed by these two amendments.

There is need for vocational education throughout the country. Ninety per cent of the children in the country get no chance to go to the high schools and colleges. They should at least have the chance for a common-school education and for vocational education. If the objection is raised to the educational amendment on the ground that many of the States have no facilities for vocational education, I say that it is high time they had such facilities, and the employers of labor finding it necessary to provide educational facilities in their own factories, if not outside, will soon crystallize public sentiment in favor of greater educational facilities.

The amendment which I offer permits the employers to establish vocational schools of their own, if they so desire, so long as the course of instruction is under the supervision of the authorized educational authorities. It gives an incentive to vocational education which will be of benefit not merely to the child,

but to the employers as well.

The Commission on Industrial Education of the National Manufacturers' Association has given a complete indorsement to the Pennsylvania child-labor law, with its educational feature, in sharp contrast to the attitude of some of the influential politicians of Pennsylvania who opposed Gov. Brumbaugh's efforts in enacting this law,

It has been said that the continuation school, or vocational school, is a regular educational and life-saving device for those who work and those who employ. No child should have to work, Unfortunately some of them have to work. It is our duty, then, to see that even while working they are not denied educational

opportunities.

I believe that the Federal Government should give financial aid to vocational schools and enlist in the movement for the education of children who are employed. I believe that as much should be done for the Nation as a whole as has been done for Pennsylvania. We can not interfere with the matters which are regulated exclusively by the States, but we can bring about a great reform by placing these restrictions upon interstate commerce so that manufacturers and other business men will see to it that the children they employ have proper educational facilities. Unless this step forward is taken, it will mean that there will be a revulsion of feeling which will result in more stringent law preventing the employment of children altogether.

I wish to take the liberty of quoting from the report of the Committee on Industrial Education of the National Manufacturers' Association of New York, May 25, 1915, which places the stamp of approval on what Pennsylvania has done with regard

to the reform now before the House:

turers' Association of New York, May 25, 1915, which places the stamp of approval on what Pennsylvania has done with regard to the reform now before the House:

Pennsylvania has entered upon one of the greatest educational accomplishments of the generation. She has entrusted this accomplishment to experienced and able leaders with power, authority, and money. Hereafter every child in that State before leaving school for work must have the equivalent of the first six years of elementary schooling. If then he is 14 years of age and otherwise qualified, he may go to work under fair safeguards, but only upon the further provision that he is released from employment eight hours per week for instruction in his vocation and in citizenship in continuation schools that are now to be established. This is the first instance of compulsory school attendance until 16, excepting in Wisconsin and in the city of Boston. It is the best form of 16-year compulsion, because it correlates school with work and goes far toward making all later life happy and intelligently progressive in the occupations. After three years of most satisfactory experience Wisconsin has just raised the compulsory period to 17, as in northern Europe, and as Pennsylvania will raise it some day, following the happy experience of her Initial years.

The need of this schooling was agreed upon by employers, social workers, educators, labor leaders, and legislators. There were, however, some sharp differences of judgment as to the details of the law as enacted last May. These differences are fast disappearing, partly through better understanding of the situation and largely because it has become clear to all that the law must be interpreted and applied almost solely with a view to the accomplishment of its main spirit and purpose, to which, possibly, minor and contradictory interpretations might do harm.

For instance, the law is effective January 1, 1916. The provision that after that no employer may employ a child with less than a sixthgrade cducation seems at

and loss.

Interest in the passage of this law was heightened by the disclosure in the census of 1910 that there were then 456,925 foreign-born whites in Pennsylvania 10 years of age and older who were unable to speak English, being 33.6 per cent of all of the 1,390,564 foreign-born whites in the State. This was a great increase in foreign illiterates over 1900, when only 16.7 per cent were unable to speak English. The thorough Americanization of these people and their children is a pressing need. Heretofore many children under 16 worked 10 hours a day and 58 hours a week. Hereafter they can work only a total of 51 hours a week, including the 8 hours spent in school, and the maximum may not exceed 9 hours in any one day. This last requirement has caused rather bitter complaint in a few places where it has seemed necessary to work the children either 10 hours or not at all, on the ground that some processes now carried on by children require attention constantly so long as the mill runs.

It is unfortunate that a few employers, not knowing all the conditions, began to discharge children some time ago. Let us hope that with the present light no child will be discharged unnecessarily nor a single day before it need be, for such a discharge would needlessly hurt the child and hurt the cause.

The whole spirit and purpose of this law is that children shall be kept at work, not that they shall be discharged; that they shall learn in connection with their work, not that they shall be thrown into idleness or returned to a kind of school they are unfitted for. If any considerable number must be discharged, there should be a thorough organized effort to transfer them from one place to another without hurt or loss.

The law affects about 70,000 children and will elevate in years to come the citizenship, the social and economic efficiency of the whole State. By every presumption children will pay a full share of all costs and adjustments by loss of wages and otherwise. Let all grown-ups do their part as best they may.

It pays a State to invest in its people. Were the Pennsylvania law to be rewritten to-day, it would be written somewhat differently. It will be changed by various legislatures so long as Pennsylvania is a developing Commonwealth.

In its essential spirit and purpose and its assured accomplishment it is one of the greatest and best educational measures that have been enacted in this country. Never was better opportunity for the exercise of forbearance, cordiality, and large constructive intelligence. Never has Pennsylvania more pleasantly surprised the people of all the States by forward-looking legislation.

Federal Aid for Post Roads.

EXTENSION OF REMARKS

HON, JOHN W. ABERCROMBIE.

OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

Mr. ABERCROMBIE. Mr. Speaker, the pending bill, H. R. 7617, authorizes a future annual appropriation of not more than \$25,000,000 to be used by the Secretary of Agriculture in cooperating with State highway departments in the construction, improvement, and maintenance of rural post roads. The chief difference between it and the bill on the same subject introduced by myself lies in the fact that it authorizes at some future time a maximum appropriation of \$25,000,000 for the purposes mentioned, while the bill introduced by me makes available immediately for those purposes an annual appropriation of not less than that amount. The bill which I introduced was prepared by the National Association of State Highway Officials, and, excepting Pennsylvania, has been indorsed, I am reliably informed, by every State highway department in the Nation. I regret that, under the rules of the House, the bill introduced by me, especially that portion of it which makes the appropriation immediately available, can not at this time be substituted for the pending measure.

In deciding whether we should give our votes to the passage of this bill, three questions should be considered, namely:

1. Is the proposed enactment constitutional?

2. Is the object sought to be accomplished desirable?

3. Is the suggested plan workable?

THE QUESTION OF CONSTITUTIONALITY.

Since each Member of Congress is under a solemn oath to obey the Constitution of the United States, the question of the constitutionality of any legislation that may be proposed is a matter of fundamental importance. If that question is decided in the negative, all others are eliminated.

The Constitution is the charter of our liberties as a free and self-governing people. It is not, as I understand it, a dead mass of fixed dogmas, but is a vital body of living principles, and should be construed in the light of widening experience, of developing reason and conscience, and of advancing civilization.

As a matter of fact, the interpretation of written constitutions and the development of constitutional governments have been thus evolutionary. We of to-day, in the light of the experiences of the past, the beliefs of the present, and the hopes of the future, place constructions upon our Constitution which are very different from those entertained or anticipated by the founders of the Republic. For instance, there was a time when practically all internal improvements were regarded almost universally as State functions, whereas now the Federal Government is engaged, either independently or in cooperation with

the States, in almost every form of internal activity.

Appropriations from the Federal Treasury have been or are being made for the digging of canals, for the deepening of rivers and harbors, for the building of locks and dams, for the construction of railroads, for the support of the land-grant colleges,

for the construction of public buildings in towns and cities, for the conservation of the public health, for the promotion of scientific and practical agriculture (including the irrigation of arid lands, farm-demonstration work, and the eradication of boll weevil, cattle tick, and log cholera), and for other purposes.

The Federal Government has appropriated about \$800,000,000

for the improvement of rivers and harbors. The construction of the Panama Canal has cost approximately \$400,000,000. For the purpose of promoting railroad development throughout the country almost 200,000,000 acres of land have been donated. Irrigation projects have cost something like \$100,000,000. The sum of \$35,000,000 has been authorized for the construction of a railroad in Alaska. Billions of dollars have been expended for these and other internal improvements. Billions more will be

expended in the years to come.

If under the Constitution Congress has the authority to make appropriations for internal activities of the character mentioned, has it not by the same reasoning the power also to make the appropriation and perform the service suggested in the pending bill? Congress builds railroads. Can it not also build wagon roads? Congress digs canals and constructs locks and dams. Can it not also make excavations, fill ravines, and construct bridges? Congress cuts channels, deepens rivers and harbors, and maintains them. Can it not also construct, improve, and maintain public highways? Congress assists the farmer in raising his crops. Can it not also assist him in conveying those crops to the market?

But we do not have to reason by analogy in order to reach the conclusion that Congress has the power to enact the proposed law. The Constitution itself is explicit in regard to the power of Congress relative to such matters. Paragraphs 1, 3,

and 7 of section 8, Article I, read as follows:

The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

To regulate commerce with foreign nations and among the several States and with the Indian tribes.

To establish post offices and post roads.

The "general-welfare" clause in paragraph 1, the "commerce" clause in paragraph 2, and the "post-roads" clause in paragraph 3, taken singly or collectively, seem to remove all doubt as to the constitutionality of the pending bill. If the power "to establish post offices" carries with it the authority to erect, improve, and maintain the buildings in which the offices are located, certainly the power "to establish post roads" carries with it the authority to construct, improve, and maintain

them as provided in the bill under consideration.

So far as Congress can do so, the question of the constitutionality of appropriations for road-building purposes was settled early in the history of the United States. During the first 30 or 40 years after the Government was organized something like \$14,000,000 was expended for such purposes, most of it upon the Cumberland Road. With the beginning of the era of railroad building through Federal land grants the construction of public highways at Federal expense was discontinued. Since that time the matter has been treated as a State or local

FEDERAL AID DESIRABLE.

If we are convinced of the constitutionality of the proposed enactment, and a majority of the Members of the House seem to be so convinced, let us consider briefly the next question, namely. Is the object sought to be accomplished desirable? In order to answer this question correctly it is necessary for us to understand what that object is. What is the object that the promoters of this legislation seek to accomplish? It is this: The securement of better rural post roads through the cooperation of the Nation and the States.

Since a majority of our public highways are now used as post roads, and since practically all of them will be so used in the future, the provisions of this bill, if enacted into law, would apply ultimately to public roads generally. Hence the object of this legislation is the improvement of public roads

everywhere.

Is there a general need of highway improvement and is there a general demand? It is estimated that there are in the United States 2.273,131 miles of public roads, of which 1.220,-579 miles are used for postal purposes. Of the total mileage, only 247,490 miles, or 10.9 per cent, are improved. The States spent in 1914 the sum of \$249,055,067 in making highway im-The States provements. That was a large sum of money, but nothing like an adequate amount. It is evident that if left to the States alone centuries will pass before good roads become the rule rather than the exception.

There are about 900,000,000 acres of farm land in this country, and the value of our farm products is estimated at \$10,000,000, 000 annually, a sum which staggers the imagination. Except those which are consumed by the farmers themselves, all of these products have to be transported to the markets over wagon roads, and the things for which they are exchanged have to be carried back to the farms over the same kind of highways. Thus many hundred millions of tons of commodities are transported to and fro each year. It is safe to estimate, therefore, that a billion dollars are expended annually for the rural transportation of farm products and the things for which they are exchanged.

Reliable statistics show that in the United States, where 90 per cent of the roads are unimproved, the average haul of farm products costs from two to ten times as much as similar hauls cost in those countries where the roads have been adequately improved. If these statistics be true, and we have no reason to doubt them, think of the tremendous saving that would accrue to those engaged in agricultural pursuits if all our roads were improved in the same way. Since the products of the farm are consumed by the people generally, it is impossible to estimate or to segregate the benefits which would accrue to every class of our citizens. Each citizen, whether he uses the roads for business or for pleasure, or not at all, is directly or indirectly interested in this matter of highway development, for the reason that the cost of every one of the necessaries of life is materially affected by the expense of transportation. Costly transporta-tion is one of the causes of the high cost of living.

Nobody denies that the improvement of our highways would promote agriculture. By the same reasoning we conclude that it would advance commerce, industry, education, and religior. Just as every phase of life has been promoted by the construction of railroads and the improvement of rivers and harbors, so would civilization be advanced by the improvement of our most commonly used means of transportation. As a matter of fact, our wagon roads are as vitally necessary to the development of our national life as are our railroads, rivers, lakes, and canals;

yet they have been the most neglected.

The transportation of farm and manufactured products begins at the point of production and ends at the point of consumption, and when one link in the chain of transportation is weak the entire chain is weak. Producer, transporter, trader, consumer. all are injured when transportation facilities are inadequate. With 90 per cent of our more than 2.000,000 miles of public roads almost wholly unimproved, our transportation facilities are most inadequate. From this great inadequacy the entire Nation suf-It should be apparent to all that the object sought to be accomplished by the advocates of the proposed legislation is desirable beyond measure.

A WORKABLE PLAN.

The plan outlined in the bill provides for the cooperation of the Federal Government with the various States in the matter of constructing, improving, and maintaining rural post roads. This plan is similar to that pursued in numerous other activities in which the Federal Government is engaged. Just as the States and their counties are cooperating in the construction of public highways, it is proposed that the Nation and the States shall cooperate for a similar purpose. There will be no encroachment upon the prerogatives of the States, and there will be no enlargement of the authority of the Federal Government.

Numerous Members of the House have told of the good results from such cooperation between States and counties, and I predict that a similar cooperation between the Federal Government and the States will produce even more satisfactory results. While I believe that the pending bill could be improved in some of its provisions, I realize that in matters of legislation all of us can not secure just what we desire. Practically all laws are the results of compromise. This is one of the matters in which if I can not get exactly what I desire I shall take that which is possible. Any defects that may develop under the operation of the act can be remedied by future Congresses.

There is a special reason why I should give my vote to the passage of this bill. The party with which I am affiliated has spoken in no uncertain terms relative to the subject of national aid for the construction and maintenance of certain kinds of public roads. The Democratic platform adopted at Baltimore

in 1912 contained this plank:

We favor national aid to State and local authorities in the construc-tion and maintenance of post roads.

I do not see how any Member on this side of the House can afford to oppose this measure. Cooperation is the watchword of the era in which we live. Let the Nation and the States cooperate in the manner suggested.

Child Labor.

EXTENSION OF REMARKS

HON. WILLIAM E. COX. OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. COX. Mr. Speaker, it is with pleasure that I give my earnest and hearty support to H. R. 8234, known as the childlabor bill. For many years this has been a burning and vital question with all good, forward-looking people: To do something for the children to aid them in growing strong, active, virile bodies and mind. Those in favor of this humane legislation have besought the legislatures of every State in the Union. with varying fortunes of failure and success, each State believing, and truly so, that it had a right to act upon legislation along these lines as it saw fit, with the result that to-day there is no uniformity of legislation at all. While a vast majority of the States of the Union fix the age when children can be employed in factories, quarries, mills, canneries, and so forth, but no uniformity of age, the only legislative body in the United States that has power to pass uniform legislation affecting child labor is the Congress of the United States.

At last the appeals of humanity have reached Congress and its best thought and views are embraced and embodied in the

pending legislation

This bill, if it becomes a law, and I sincerely trust it will, will be uniform all over the United States, because it places the burden and the responsibility upon the shipper of goods. He must know when he ships a consignment of goods that none of them were made or manufactured by children under the age set forth in the proposed bill.

The bill provides:

That no producer, manufacturer, or dealer shall ship, or deliver for shipment in interstate commerce, the product of any mine or quarry situated in the United States which has been produced in whole or in part by the labor of children under the age of 16 years; or the product of any mill, cannery, workship, factory, or manufacturing establishment situated in the United States which has been produced in whole or in part by the labor of children under the age of 14 years; or by the labor of children between the ages of 14 and 16 years who work more than eight hours in any one day or more than six days in any one week, or after the hour of 7 o'clock p. m., or before the hour of 7 o'clock a. m.

The provisions of the above-quoted section are plain and emphatic. No quibble; no misconstruction can possibly be placed

upon the section or any paragraph contained in it.

If anything is to be done to prevent children from engaging in dangerous and hazardous work under the age of 16, or under the age of 14 years, the responsibility must be placed somewhere, and the responsible person is the one who proposes to ship it through interstate commerce from one State to another State in the Union.

The bill does not affect, nor is it intended to affect goods manufactured, mined, or quarried to be used and consumed in a State. It is only where the product mined, manufactured, quarried, or canned is proposed to enter interstate commerce.

There is no question but what under the Constitution of the United States Congress has such power to enact this kind of The power of Congress to regulate commerce between the States is conclusive, as has been held by the United States Supreme Court in numbers of cases.

Likewise the measure will not impose any hardship upon those engaged in selling goods in interstate commerce. will be required to be on their guard, with a view of seeing whether or not any of the goods proposed to be shipped have been manufactured in violation of section 1 of this act.

For many years there has been an agitation going on in the country to conserve our natural resources. With loud voice this has been proclaimed on every stump and every platform in the United States. Our newspapers and magazines have teemed with articles calling the attention of the Nation to the fact that our natural resources-coal, iron, and minerals of all kindswere being wasted. Soon the storehouses of nature would become exhausted and posterity would be left in utter destitution and want, so far as these things were concerned. But few have turned their attention to the necessity of looking after our real resources—the children. These, and these alone, are not only our nature's resources, but God's resources. To-day there are upward of 20,000,000 of children in the United States of school age; many millions of them are not in school, but are employed in endeavoring to earn a living in the dangerous trades and occupations, in open competition with men and women of mature years and experience. Instead of dwarfing their bodies and stunting their intellects, these boys and girls ought to be in school until they at least complete the grades and, if possible, receive a thorough and complete high-school education, so that when they become mature men and women they will be able to meet the fierce competition that is now drawing round and about them from every quarter.

The time is here now, and as time goes on it will be more and more that the man or woman unequipped and unqualified from a mental viewpoint will be wholly unable to meet their

competitors in a fair field of competition.

Every child born in this fair country of ours is entitled to a fair chance, a fair deal in life; and if it is compelled to grow up in ignorance of the practical and, in some cases, the scientific things of life, by reason of poverty or otherwise, it has not had a fair chance and an equal opportunity.

No doubt this bill will take thousands of children from quar-

ries, mines, and factories. They ought to be out of there; they have no business there. They should be in the schoolroom equipping and qualifying themselves for future life, so they

could make men and women of themselves.

The agitation for this legislation has been going on for almost a quarter of a century by a few "Good Samaritans." They have spent their time, their money, and their energy in bringing about legislation of this kind solely for the purpose of bettering humanity. They have finally reached the court of last resort, and this court has heeded their cry, so far as the House is concerned, and passed this legislation. I trust that it, will not cease its travel until the Senate enacts it into law and it is approved by the President.

Child Labor in Mills, Factories, and Mines.

EXTENSION OF REMARKS

HON. JAMES A. GALLIVAN,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. GALLIVAN. Mr. Speaker, it is hardly necessary for me to say that I am in favor of the passage of this bill and that I earnestly hope it will be speeded on its way to afford the pro-tection and blessings that it will bring to the pale-faced, ill-fed, uneducated, oppressed children of this country, who are unfortunately and unhappily living in certain States of the Union which have up till this hour refused to place upon their statute books the kind of legislation that is embodied in this bill. the last Congress I supported to the limit of my ability similar legislation. There is greater need than ever for such legislation in these days. Members of the Sixty-fourth Congress who come here for the first time are auxious to contribute their views to the general discussion. And so, Mr. Chairman, in order that they may have that opportunity, I have no desire to occupy the time of the House to the exclusion of our new colleagues.

I want the House, if it will, to listen to a most illuminating editorial on the subject of "Child labor" which appeared in the Boston Post of Sunday, January 23, 1916. This newspaper is the leading Democratic organ of New England, and its editor

writes as follows:

" CHILD-LABOR SUNDAY,"

To-day is "Child-labor Sunday." From many pulpits in the land there will be heard the sad stories of the slavery of too many of our little citizens in the mines and the mills of these supposedly civilized and merciful United States. Hundreds of thousands of men and women will be asked to do what they can to help the just and righteous cause of freeing these small wage earners from a bondage that stunts their bodies, dulls their minds, and reduces their capacity to be useful citizens. Let us trust that the day will be one of great accomplishment.

"Is there need of this crusade?" some one may ask. For answer come the stirring words of Henry M. Dyckman, of Westfield, a member of the national child-labor committee. "There are at present," he says, "approximately 2,000,000 children whose young lives are being burned up like fuel to run the engines in some score of industries in the United States. Many of these children are of a tender age, hardly more than babies. As an instance of this is the case of little Marietta, who was found during the investigation of industrial conditions in New York, This little child of 3 years of age was found in a tenement house making artificial flowers. She made forget-me-nots by gluing together petals, center, and stem, and by working from 8 until 8 could make 600 in a day.

"This seems almost incredible, but I possess a picture of the child at

center, and stem, and by working that day, day, "This seems almost incredible, but I possess a picture of the child at her work, taken by agents of the committee who saw her. She is but one of thousands of wretched babies who are being sacrificed to greed. In our factories there are 122,000 children of 10 years old and upward who are working 9, 10, and 11 hours a day in States where such long

hours are permitted. The different laws in the various States with regard to their employment make it hard for States which have humane laws to compete, with those without such laws; for instance, Alabama has nearly 94,000 children under 13 years of age at work; Georgia, 93,000; Mississippi, 83,000. Against this Massachusetts employs only 1,700 under this age. It will be seen at what a disadvantage we are in competing with such cheap labor."

Whence shall come the relief for these toilers who ought to be at school? State laws are good when States are enlightened enough to make them. But some of the Southern States will not pass any measures of reform. An ex-governor of North Carolina actually had the callousness to say to a congressional committee the other day that a bolt of cotton made by child labor was "just as wide, just as long, just as white, and just as good as if made by adults." The cotton was all that mattered, it seems; the growing boy or girl was of no importance. But there is help at hand. Uncle Samuel may take part in it. At any rate, the Keating-Owen bill has already been favorably reported to the House at Washington, and it is likely to pass. This bill forbids interstate commerce in goods in the production of which children under 14 have worked in mills, factories, canneries, or workshops; in which children between 14 and 16 have worked over eight hours a day or at night.

Let us fervently hope that greed will soon be commelled to yield to

Inight.

Let us ferventiv hope that greed will soon be compelled to yield to righteousness in this matter. If a State will not give its children a chance in the world, its manufacturers must be made to.

Mexican Situation.

EXTENSION OF REMARKS

HON. JEFF: MCLEMORE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 31, 1916.

Mr. McLEMORE. Mr. Speaker, on Thursday of last week I introduced in this House a resolution, which reads as follows: Whereas the Mexicans continue to murder our soldiers who are sta-tioned along the border: Therefore, be it

Resolved, That the House of Representatives of the Sixty-fourth Congress submit to the President a request that the remnant of our troops be withdrawn from the border and used as a nucleus around which to organize an Army.

Resolved further, That the House of Representatives of the Sixty-fourth Congress submit to the President the further request that the settlement of the Mexican question be left to those States of the Union that are contiguous to Mexico.

Mr. Speaker, I have no hope of seeing my resolution adopted, but I have introduced it in response to many requests that have been made and that the Congress may become better acquainted with a sentiment that is prevailing among the American people generally who reside along the Rio Grande in Texas, and, I might also add, those Americans who reside along the border in the States of New Mexico, Arizona, and California.

There is no probability, or even possibility, that the National Government will grant to the people of these border States the right to avenge the multiplied wrongs that have been in-flicted upon American citizens in Mexico and along the Mexican border, for that is a right which is claimed by the National Government, and the National Government is jealous of its rights, and will not relinquish any one of them for the glory or good of any mere State, even though such State is an integral portion of our great Union.

For some years the Mexican border has been patrolled by a portion of our small standing Army. I have the highest regard for our Army, what there is of it, but our soldier boys along the border have been held back by "orders from Washington," even though not a few of their comrades have fallen victims to Mexican bullets. They were ordered not to cross the border in pursuit of murderous marauding bands of Mexicans, for such a thing would have been "a violation of neutrality rights," and only the Mexicans, it seems, have the privilege of violating such rights.

A few days ago four American soldiers were bathing in the Rio Grande, which was their inherent right. Two of them were captured by armed Mexican soldiers, who appeared on the Mexican side of the river, while the other two Americans made their escape, and, although fired on by the Mexican soldiers. they swam to the American side in safety. Four comrades, who attempted to swim to the rescue of the captured soldiers, were drowned, according to the reports, although it is possible they were first shot by the Mexicans. Later, three lieutenants of the American Army led a detachment of 15 soldiers across the river in search of the 2 captured soldiers, but without success. On their return to the American side of the river the three lieutenants, charged with "invasion," were placed under arrest to await court-martial, notwithstanding the fact that the last American soldier captured near the same place was

taken across the river and beheaded and his head placed on a pike and paraded around to make a Mexican holiday.

The two captured Americans, so the press dispatches inform us, have since been returned to the American side of the river. But what right had armed Mexicans to capture them in the first place? They were without clothes, and most assuredly they carried no arms; and then, too, are we not at peace with Mexico? Has not Carranza been recognized by our Government, and did this not occur in territory controlled by Carranza—territory where Carranza soldiers have been in control for months?

The three American lieutenants who went to the rescue of their two captured companions will be court-martialed. The wrath of Carranza must be appeased and his de facto Government must be upheld at all hazard, for who can we deal with should Carranza's Government go to smash, in case we decide to purchase Lower California and a strip of Northern Mexico, as

is not altogether improbable?

I hope, Mr. Speaker, that Congress will petition the President to pardon these so-called violators of neutrality rights and that instead of a court-martial they be presented with a medal befitting those who risk their lives in defense of their country's honor.

In conclusion, Mr. Speaker, I beg to call attention to a recent speech delivered by the President in New York. In that speech the President made the statement that he had obtained his information regarding Mexico "from liars." I wish to commend the President for his openness in thus taking the American people into his confidence. The President sent several personal representatives to Mexico, and when one of them, a Texan, returned and told him the truth that representative at once fell into disfavor with the administration, and his report was pigeonholed and has never been given to the public,

Constitutionality of the Keating-Owen Child-Labor Bill.

EXTENSION OF REMARKS

HON. EDWARD KEATING. OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. KEATING. Mr. Speaker, under the general leave to print I desire to submit a brief in support of the constitutionality of the Keating-Owen child-labor bill.

This brief has been prepared by Prof. Thomas I. Parkinson, of Columbia University, New York City, and to my mind clearly sustains the constitutionality of the proposed legislation. Prof. Parkinson's brief is as follows:

INTRODUCTION.

The Palmer-Owen bill, prohibiting shipment in interstate commerce of the products of child labor, passed the House of Representatives in the last Congress, and a similar bill (now known as the Keating-Owen bill) has been reported favorably by the House Committee on Labor. This brief undertakes to consider the various aspects of the constitutional power of Congress to regulate interstate commerce for the accomplishment of the purposes of these bills.

The conclusions of the brief may be summarized as follows:

I. The power of Congress over interstate commerce is complete and exclusive.

exclusive.

II. The power of Congress to regulate interstate commerce, as stated in the commerce clause of the Federal Constitution, includes power to prohibit absolutely the shipment or transportation in interstate commerce of specified persons or property.

III. The power of Congress over interstate commerce may be exercised in the interest of the public health, morals, safety, and welfare, as well as in the interest of that commerce and its instrumentallities.

IV. Whatever its incidental effects, a congressional regulation of interstate commerce is never a violation of the reserved rights of the States.

interstate commerce is never a violation of the States.

V. The power of Congress to prohibit shipment or transportation in interstate commerce is limited only by the requirement of the fifth amendment that such prohibition shall not constitute a deprivation of individual rights without due process of law, i. e., that such prohibition shall not be an arbitrary or unreasonable interference with the individual's rights of property or liberty of contract.

VI. The prohibition of shipment in interstate commerce of the products of child labor is a reasonable exercise of the congressional commerce power in the interest of the public welfare.

merce power in the interest of the public wellare,

L.—THE POWER OF CONGRESS OVER INTERSTATE COMMERCE IS COMPLETE
AND EXCLUSIVE.

Congress has supreme and plenary power over interstate commerce,
Article I, section 8, clause 3, of the Federal Constitution, provides:
"That Congress shall have power to regulate commerce with foreign
nations, among the several States, and with the Indian tribes."
Under the Articles of Confederation each State had complete control
over its own commerce. The exercise of this control resulted in embarrassing and destructive consequences and led to an oppressed and

degraded state of commerce. Brown v. Maryland (12 Wheat., 419, 445; 1827). The prevailing motive for the adoption of the present Constitution was to "rescue it " " from the perpetual jarring and hostility of commercial regulation. " " The entire purpose for which the delegates assembled at Annapolis, was to devise means for the uniform regulation of trade. They found no means but in a General Government; and they recommended a convention to accomplish that purpose. " " We do not find, in the history of the formation and adoption of the Constitution, that any man speaks of a general concurrent power in the regulation of foreign and domestic trade as residing in the States. The very object intended, more than any other, was to take away such power. If it had not so provided, the Constitution would not have been worth accepting. Chief Justice Marshall in Gibbons v. Ogden (9 Wheat., 1, 11, 12; 1824).

It is no longer necessary to cite cases to support the declaration that the commerce clause has vested in Congress a broad, complete, and exclusive power over interstate and foreign commerce; but the following from one of Chief Justice Marshall's opinions is worth repeating here:

"It may be doubted whether any of the evils proceeding from the feebleness of the Federal Government contributed more to that great revolution which introduced the present system than the deep and general conviction that commerce ought to be regulated by Congress. It is not therefore a matter of surprise that the grant should be as extensive as the mischief, and should comprehend all foreign commerce and all commerce among the States. To construe the power so as to impair its efficacy would tend to defeat an object, in the attainment of which the American public took, and justly took, that strong interest which arose from a full conviction of its necessity." Brown v. Maryland (12 Wheat., 419, 445; 1827).

Whatever may have been the primary reason for the insertion of this clause in the Constitution it is now definitely settled that it has ve

state commerce.
In the early case of Gibbons v. Ogden (supra, 196), Chief Justice Marshall discusses the congressional power over interstate commerce

In the early case of Gibbons v. Ogden (supra, 196), Chief Justice Marshall discusses the congressional power over interstate commerce as follows:

"What is this power? It is the power to regulate; that is, to prescribe the rule by which commerce is to be governed. This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution. * * * If, as has always been understood, the sovereignty of Congress, though limited to specific objects, is plenary as to these objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States. The wisdom and the discretion of Congress, their identity with the people and the influence which their constitutions possess at elections are in this as in many other instances, as that, for example, of declaring war, the sole restraints on which they have relied to secure them-from abuse." Quoted with approval in the Lottery case (188 U. S., 321, 353; 1902).

This view of the commerce power was affirmed by the Supreme Court in the late case of Hoke r. United States (227 U. S., 308, 320; 1913), where it is said: "The power is direct; there is no word of limitation in it, and its broad and universal scope has been so often declared as to make repetition unnecessary."

In the exercise of the power thus broadly granted and interpreted Congress has a wide discretion. A regulation of interstate commerce is not subject to attack in the courts on the ground that it is not the most advisable which Congress might have adopted under the circumstances. Thus in the Lottery case (188 U. S., 321, 353; 1903) the court said: "They (prior decisions) also show * o * that in determining the character of the regulations to be adopted Congress has a large discretion which is

within its appointed sphere." (Minn. Rate cases, 230 U. S., 352, 398; 1913.)

These cases establish in our constitutional law the principle that the power of Congress to regulate interstate commerce is a broad and complete power acknowledging no limitations except those contained in the Federal Constitution. "This power," says Chief Justice Marshall, "is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution." In a very late case Mr. Justice McKenna said: "The power is direct; there is no word of limitations in it, and its broad and universal scope has been so often declared as to make repetition unnecessary." In a similar case Mr. Justice Harlan said that "in determining the character of the regulations to be adopted Congress has a large discretion which is not to be controlled by the courts"; and in a very recent case Mr. Justice Hughes said: "The full control by Congress of the subjects committed to its regulation is not to be denied or thwarted by the commitgling of interstate and intrastate operations." These declarations by the Supreme Court ought to be kept prominently in mind in approaching the consideration of the constitutionality of the proposed Federal child-labor legislation, and particularly they ought to be kept constantly before us when considering the validity of objections to its constitutionality based upon such general assertions as that the framers of the Constitution did not intend such extensive use of the Federal power; that there are other means by which the desired result can be more effectively or expeditiously accomplished; that the commingling of interstate and intrastate business makes such legislation, in effect, a

regulation of manufacture for the intrastate trade; that the proposed legislation would be an interference with the reserved powers of the States, and similar contentions.

THE POWER OF CONGRESS TO REGULATE INTERSTATE COMMERCE, AS STATED IN THE COMMERCE CLAUSE OF THE FEDERAL CONSTITUTION, INCLUDES POWER TO PROHIBIT ABSOLUTELY THE SHIPMENT OR TRANSPORTATION IN INTERSTATE COMMERCE OF SPECIFIED PERSONS OR

INCLUDES POWER TO PROHIBIT ABSOLUTELY THE SHIPMENT OR TRANSPORTATION IN INTERSTATE COMMERCE OF SPECIFIED PERSONS OR PROPERTY.

The States, by adopting the Federal Constitution, delegated to Congress the power "to regulate commerce " among the several States," We are for the moment concerned only with the interpretation of the word "regulate" and the determination of the question whether it should be interpreted to include power to prohibit. The answer must be found in the provisions of the Constitution itself as interpreted by the practice of Congress and the decisions of the Supreme Court. That the power under the commerce clause to regulate includes the power to prohibit is shown both by the application of general principles of interpretation and by authoritative precedent.

(A) General principles of interpretation justify the conclusion that the power to regulate interstate commerce includes power to prohibit it. First. The power of Congress over interstate commerce is the same as that enjoyed by the individual States prior to the adoption of the Federal Constitution.

Under the Articles of Confederation each State had complete control over its commerce with the other States, and could prevent the importation of the products of another State. The exercise of the power to regulate commerce most familiar to the framers of the Federal Constitution was the total or partial prohibition of traffic in particular articles. Several of the States had adopted such prohibitions. The only clause in the Constitution which took from the individual States any of their power over commerce is that which placed the power to regulate interstate commerce in the Federal Congress. The Supreme Court has decided that the power of Congress under this clause is exclusive; no residuan of power over interstate commerce has been left to the States. If the individual States prior to the adoption of the Federal Constitution possessed power to prohibit imports from other States, and if the entire power over interstate commerce was transfere

selected as the word to transfer to Congress the full power previously possessed by independent States, and that, of course, included power to prohibit.

Second. That the power to regulate was intended to include the power to prohibit is indicated by other provisions of the Constitution.

Article I, section 9 of the Federal Constitution provides: "The migration or importation of such persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year 1808." A prohibition by Congress of the migration or importation of such persons could be based only on the power to regulate interstate and foreign commerce, and if the framers did not intend the power to regulate to include the power to prohibit, this express restriction on the power to prohibit migration or importation of certain persons was entirely unnecessary and superfluous. It must be assumed that the framers of the Constitution believed that there was necessity for this provision, and that they so believed indicates that they intended that the power granted to Congress to regulate commerce in an earlier section of the Constitution should include the power to prohibit the migration or importation of these persons. This clause can not be waived aside as relating only to importation from foreign countries into this country. It is perfectly definite, and relates as well to "the migration * * to such persons as any of the States * * shall think proper to admit."

Referring to this section, Chief Justice Marshall, in Gibbons v. Ogden (9 Wheat., 1, 216; 1824), said:

"This section has always been considered as an exception from a power proves its existence, this section proves that the power to regulate commerce and * * so far as an exception from a power proves its existence, this section proves that the power to regulate commerce and the regulation of vessels employed in transporting men, who pass from place to place voluntarily, and to those who pass involuntarily."

Third. The power of Congress over

Congress over interstate commerce is as absolute as it is over foreign commerce."

Similar statements by the court to the effect that the power granted to Congress over interstate commerce is as extensive as the power over foreign commerce, may be found in Gibbons v. Ogden (9 Wheat, 1, 194, 228; 1824); License cases (5 How., 504, 578; 1847); Brown v. Houston (114 U. S., 622, 630; 1885); Pittsburgh & Southern Coal Co. v. Bates (156 U. S., 577, 587; 1895); Lottery cases (188 U. S., 321, 351; 1903).

The regulation of foreign commerce by Congress has frequently assumed the form of prohibition. The nonimportation and embargo acts, which were upheld by the Supreme Court, are striking illustrations of the exercise of this power. In the case of Gibbons v. Ogden (9 Wheat., 1, 216; 1824), Chief Justice Marshall, referring to the argument that embargoes are an instrument of war depending for their validity on the war-making power, said:

"They are sometimes resorted to without a view of war and with a single view to commerce. When Congress imposed that embargo which for a time engaged the attention of every man in the United States, the avowed object of the law was the protection of commerce and the avoiding of war."

Again, in United States v. Marigold (9 How., 560, 566; 1850), the court said:

a single view to commerce. When Congress imposed that amburgo which for a time engaged the attention of every man in the United States. to avowed object of the law was the protection of commerce and the avoiding of war.

States United States. v. Marigold (9 How., 560, 566; 1850), the court aid:

"Since the passage of the embargo and nonintercourse laws, and the repeated judicial sanctions those statutes have received, it can scarcely, at this day, be open to doubt, that every subject failing within the legitimate sphere of commerce regulation may be partially or wholly excluded, when either measure shall be demanded by the safety of by the important interests of the entire Nation."

In United States v. Williams (28 Fed., 614; 1808), the then recent embargo act was sustained as a valid regulation of foreign commerce. In the more recent case of Buttfield v. Stramsham (124 U. S., 470; 1904), an act of Congress prohibiting the importation of inferior grades of ten was held condour. Stramsham (214 U. S., 320; 1909), as act excluding allens was sustained, and in the Abby Dodge (223 U. S., 166; 1912) a conservation measure excluding deep-sea sponges taken by divers was upheld.

No more effective argument in favor of the power can be advanced than a statement of the frequent use of the power particularly in recent tariff acts. Among the recent prohibitions may be mentioned that against foreign convict-made articles; that against importation into the United States of fur-seaf skins taken in violation of law; and that against foreign convict-made articles; that against importation into the United States of fur-seaf skins taken in violation of law; and that against the importation of the eggs of game birds.

This power of Congress to prohibit importation as well established that the reference to the conference of the power. Thus, in Weber v. Prispose of the conference of the power of the conference of the power of the p

reserved-powers clause, the latter raises the issue octween the individual under the commerce clause and the fifth amendment.

(B) Precedent justifies the conclusion that the power to regulate includes the power to prohibit interstate commerce.

The foregoing theories of interpretation of the commerce clause and the precedents derived from its exercise over foreign commerce standing alone compel the conclusion that the power to regulate includes the power to prohibit in interstate as well as foreign commerce; but fortunately we have additional and more specific authority to the same effer the number of decisions of the Supreme Court in which prohibitions of transportation or shipment in interstate commerce of specified persons or things have been sustained. It is sufficient to list the prohibition of transportation of lottery tickets or advertising matter relating to lotteries.

(a) Prohibition of transportation of lottery tickets or advertising matter relating to lotteries.

The act of Congress of 1895 (28 Stat. L., 963, ch. 191), forbade, ander penalty of criminal punishment, the bringing into the United States for the purpose of disposing thereof, or the carrying from one State to another, of any lottery ticket or advertisement relating to 1 terles. The Supreme Court held that lottery tickets and advertising matter were subjects of commerce, that the regulation of their carriage from State to State was a regulation of interstate commerce, and that Congress had the power to prohibit their carriage in such commerce. (Lottery cases, 188 U. S., 321, 1903.)

(b) Obscene literature and articles designed for immoral and indecent use.

The acts of February 8, 1897 (29 Stat. L., 512, ch. 172), and March 4, 1909 (37 Stat. L., sec. 249), prohibiting the carrying of such litera-

cent use.

The acts of February 8, 1897 (29 Stat. L., 512, ch. 172), and March 4, 1909 (37 Stat. L., sec. 249), prohibiting the carrying of such literature and articles from one State to another, was held constitutional in U. S. v. Popper (98 Fed. Rep., 423, 1899). This act was cited with approval in Hoke v. U. S. (227 U. S. 308, 1913).

(c) Adulterated or misbranded food and drugs.

The act of June 36, 1906 (34 Stat. L., 768, ch. 3945), prohibits the shipment or delivery for shipment in interstate commerce of any adulterated or misbranded food or drug under penalty of criminal punishment. This act has been interpreted and its penalties enforced by the Supreme Court in the case of Hipolite Egg Co. v. United States (220 U. S., 45; 1911), and in United States v. Lexington Mill & Elevator Co. (232 U. S., 399; 1914). These cases are authority for the right

of Congress to condemn, when found in interstate commerce, the articles whose shipment is prohibited, and they are generally accepted as authority for the constitutionality of the prohibition. In Seven Cases v. United States, Nos. 59 and 51, January 10, 1916, the Supreme Court upheld the constitutionality of an amendment to this act which provided that misbranding includes any statement regarding the curative or therapeutic value of the article or ingredients which is false and frandulent fraudulent

or therapeutic value of the article or ingredients which is faise and fraudulent

(d) Transportation of women from one State to another for immoral purposes.

of Congress of June 25, 1910 (36 Stat. L., 825, ch. 395), prohibited the transportation in interstate commerce, for immoral purposes, of women and prins. This act was held constitutional in Hoke r. United States (277 U. S., 308; 1913)

(e) Transportation in interstate commerce of a commedity in which the carrier thereof has a legal interest.

The act of Congress of June 29, 1906 (34 Stat. L., 584, ch. 3591), commonly known as the Hepburn Act, prohibited the carriage in interstate commerce of commerce of commodities in which, at the time of such transportation, the carrier had a legal interest, direct or indirect. This prohibition was held constitutional in United States r. Delaware & Hudson Railroad Co. (213 U. S., 366; 1909).

(f) Indirect prohibition of the transportation of intoxicating liquors in interstate commerce.

In 1890 Congress passed the Wilson Act (26 Stat. L., 313, ch. 728), which provided that upon arrival within a State intoxicating liquors should become subject to the police regulations of the State, and should accompt therefrom under the rules protecting original packages that, despite the exclusive power of Congress over such eriginal packages in their transit to their point of destination, they should become subject to the State police regulations as soon as they reached the consignee. In In re Rahrer (140 U. S., 545; 1891), this act was held constitutional and a State law prohibiting the sale of intoxicating liquor in the original package was heid to apply to a sale in the original package of liquor brought from another State. The power of Congress thus to subject a legitimate article of commerce to laws which practically prohibited its transportation into a State implies a power on the part of Congress directly to prohibit such transportation. And Congress has prohibited by the Webb-Kenyon Act of 1913 (37 Stat. L., 699, ch. 99) the s

The nursery stock act of 1912 prohibiting such shipment or transportation imposes a penalty for violation which is enforced against the shipper even in the absence of knowledge on his part of his viola-

tion.

(j) Prohibition of the shipment or transportation of game in interstate commerce.

The "Lacey" Act (sec. 242 of the Criminal Code of the United States) prohibits the shipment or transportation in interstate commerce of (1) "foreign animals or birds, the importation of which is prohibited," and (2) "dead bodies or parts thereof" of "wild animals or birds." killed or shipped in violation of the laws of the State where killed or from which shipped. Violation is punished in the case of the shipper irrespective of his knowledge.

(k) Prohibition of the shipment or transportation in interstate commerce of renovated butter.

The act of 1902 prohibits shipment or transportation in interstate commerce of renovated butter unless marked in the way specified in the act. Violations are punished irrespective of knowledge.

(j) Prohibition of shipment in interstate commerce of specified virus, serum, etc.

(1) Prohibition of shipment in interstate commerce of specified virus, serum, etc.

The act of 1913 prohibits shipment of "worthless, contaminated, dangerous, or harmful virus, serum, etc.," for domestic animals, or the shipping of any virus, serum, etc., unless prepared under regulations of the Secretary of Agriculture at an establishment holding a license from the Secretary of Agriculture.

(m) Prohibition of importation and interstate transportation of prize-fight picture films.

The act of July 31, 1912 (37 Stat. L., 240), makes it unlawful to bring into the United States or to ship or transport in interstate commerce picture films representing prize fights designed to be used or capable of use for public exhibition. This act was held constitutional in its application to importations in the case of Weber v. Freed, No. 644, October term, 1915; opinion, December 13, 1915.

In view of these decisions it is unquestionable that, so far as the comemner clause is concerned, a regulation of interstate commerce may take the form of an absolute prohibition of shipment or transportation in such commerce. As the Supreme Court has said:

"It can scarcely at this day be open to doubt that every subject falling within the legitimate sphere of commerce regulation may be partially or wholly excluded, when either measure shall be demanded

by the safety or by the important interests of the entire Nation." (U. S. v. Marigold, supra.)

III.—THE POWER OF CONGRESS OVER INTERSTATE COMMERCE MAY BE EXERCISED IN THE INTERST OF THE PUBLIC HEALTH, MORALS, SAFETY, AND WELFARE AS WELL AS IN THE INTEREST OF THAT COMMERCE AND ITS INSTRUMENTALITIES.

Its instrumentalities.

It is frequently stated in the opinions of the Supreme Court that Congress possesses a police power under the commerce clause. This means, in effect, that Congress may exercise its express powers—of which the commerce power is one—for the purpose of protecting and furthering the general welfare of the people. The use of its powers for such general purposes is analogous to the use by the States of their so-called police power. This power in the States is simply the inherent power of government to legislate for the common good, notwithstanding guaranties of individual rights and liberties contained in our constitutions. In the case of Congress which possesses no inherent power, but is limited to powers expressly granted by the Federal Constitution, this so-called police power is merely a right to make use of its express powers to provide for the public welfare. In both cases the purpose of exercising the power is the same, and it is therefore convenient, as it has become usual, to refer to the exercise of the commerce and other express powers in the interest of the general welfare as the police power of Congress. This phrase will not prove confusing if we remember that by it we mean simply that use of the commerce power which alms not at benefiting or advancing commerce itself or its instrumentalities, but at advancing the general welfare through regulation of commerce.

Thus it has been held that under the power to establish post offices

aims not at benefiting or advancing commerce itself or its instrumentalities, but at advancing the general welfare through regulation of commerce.

Thus it has been held that under the power to establish post offices and post roads Congress may prohibit the transportation through the mails of all letters or circulars concerning lotteries. (Ex parte Jackson, 1877. 96 U. S., 727; In re Rapier, 1892, 143 U. S., 110.)

Similarly the use of the mails may be denied to any person or company engaged in conducting any lottery or device for obtaining money or property by means of faise pretenses. (Public Clearing House v. Covne, 1904, 194 U. S., 497.)

From the earliest days of our Nation it has been regarded as within the power of Congress in regulating foreign commerce to enact laws, not for the exclusive benefit or advancement of that commerce, but for the protection of the interests of the country. The embargo and non-intercourse laws are examples of such legislation. Thus in United States v. Marigold, 1850 (9 Howard, 560), the court said:

"Since the passage of the embargo and nonintercourse laws, and the repeated Judicial sanctions those statutes have received, it can scarcely, at this day, be open to doubt that every subject falling within the legitimate sphere of commercial regulation may be partially or wholly excluded, when either measure shall be demanded by the safety or by the important interests of the Nation."

In United States v. Williams, 1808 (28 Fed. Cases, 614, 621), Judge Davis, in sustaining the constitutionality of the then recent embargo act, said directly:

"Further, the power to regulate commerce is not to be confined to the adoption of measures exclusively beneficial to commerce itself or tending to its advancement; but in our national system, as in all modern sovereignties, it is also to be considered as an instrument for other purposes of general policy and interest."

In an essay on the Commercial Power of Congress, Mr. David Walter Brown, of the New York bar, thus summarizes the early exerc

sovereignties, it is also to be considered as an instrument for other purposes of general policy and interest."

In an essay on the Commercial Power of Congress, Mr. David Walter Brown, of the New York bar, thus summarizes the early exercise of the Commerce power:

"The policy of restriction included measures of two kinds: (1) The prohibition of the importation of foreign commodities and of the entry of foreign vessels into our ports; and (2) embargoes upon commerce. They illustrate, upon a grand scale and in a drastic manner, the application of the commercial power of Congress to the attainment of great national ends through restrictions placed upon various branches of trade, and extending even to total prohibition; and in so far as the precedents furnished by them are authoritative they indicate the unsoundness of the view that the power of Congress to regulate commerce is restricted to the passing of measures to advance it, but stops short of the power to prohibit it."

That this conclusion is correct is shown by the following quotation from the case of Buttfield v. Stranshand (1994) (192 U. S., 470), where the Supreme Court, in holding constitutional an act of Congress which prohibited the importation of inferior teas, said (p. 492).

"Congress has also, in other than tariff legislation, exerted a police power over foreign commerce by provisions which in and of themselves amounted to the assertion of the right to exclude merchandise at discretion. This is illustrated by statutory provisions which have been in force for more than 50 years regulating the degree of strength of drugs, medicines, and chemicals entitled to admission into the United States and excluding such as did not equal the standards adopted."

If the power of Congress over foreign commerce may be used as "an instrument for purposes of general policy." and if the power over interstate commerce, it would be fair to conclude from these cases alone that the power over interstate commerce, the uniterstate commerce within the own limits, may prope

the suppression of lotteries, carried on through such commerce, is to make it a criminal offense to cause lottery tickets to be carried from one State to another, we know of no authority in the courts to hold that the means thus devised are not appropriate and necessary to protect the country at large against a species of interstate commerces in the centre people of the Nation (28).

This case definitely decides that Congress may exercise its power over interstate commerce for the protection of the morals and general welfare of the people. Lottery tickets as specific articles of commerce were harmless in themselves, and the legislation in question was its advancement. The purpose, as appears from the foregoing quotation, was the suppression of lotteries. Congress had no power to prohibit directly the raising of money by lotteries, but under the power to regulate commerce it could deny to such business the privilege of using the activation of interstate commerce and the prohibited the shipment of me 30, 1908, 34 Stat. L., 768). Congress prohibited the shipment of me 30, 1908, 34 Stat. L., 768). Congress prohibited the shipment of me 30, 1908, 34 Stat. L., 768). Congress prohibited the shipment in interstate commerce of adulterated or misbranded foods and drugs. The constitutionality of such legislation as a regulation of commerce has been affirmed expressly by the lower courts and implicitly by the Supreme Court.

States v. Johnson, 1911, 221 U. S., 488; United States v. Lexington Mill Co., 1914, 232 U. S., 399; Seven Cases v. United States, Nos. 50 and 51, Jan 10, 1916; United States v. Helnie Spec. Co., 1910, 175 Fed., 299; Shawnes Milling Co. v. Temple, 1910, 179 Fed., 517; United States v. Seventy and the state of the court in declaring a State statute to be in conflict with the Federal pure food and drugs act, said (p. 128);

That Congress has ample power by the conflict with the Federal pure food and drugs act, said (p. 128);

That Congress has ample power of the food of the states and with foreign and the

The cases cited, it is submitted, definitely and necessarily establish the principle that Congress can regulate interstate commerce in the interest of public health, safety, morals, or welfare; in other words, Congress may regulate interstate commerce in such manner as to prevent its being used to maintain or to further conditions which are detrimental to the general welfare of the community. Mr. Justice Hughes, in the recent case of Seven Cases v. United States (Nos. 50 and 51) October term, 1915, Opinion January 10, 1916, referring to the decision in the white slave case, said:

"The court concluded with the reassertion of the simple principle that Congress is not to be denied the exercise of its constitutional authority over interstate commerce and its power to adopt not only means necessary but convenient to its exercise, because these means may have the quality of police regulations."

.—WHATEVER ITS INCIDENTAL EFFECTS, A CONGRESSIONAL REGULATION OF INTERSTATE COMMERCE IS NEVER A VIOLATION OF THE RESERVED RIGHTS OF THE STATES.

We have seen that Congress under the commerce clause possesses a broad, complete, and exclusive power to regulate interstate commerce; that this power to regulate includes power to prohibit the shipment or transportation of specified persons or property; and that in the exercise of its power to regulate interstate commerce Congress is not confined to measures which have for their purpose the good of interstate commerce and its instrumentalities, but may, in addition to such measures, regulate such commerce in the interest of promoting the public health, safety, morals, and welfare. From these established principles it is apparent that Federal legislation prohibiting the shipment in interstate commerce of the products of child labor is within the jurisdiction over commerce transferred by the States to the Federal Government and

vested in Congress by the Federal Constitution. There can be no doubt that such legislation regulates interstate commerce within the interpretation which the Supreme Court has uniformly given to the commerce clause. As a regulation of interstate commerce, it is unquestionably within the jurisdiction of the Federal control over commerce.

It is idle to say that it interferes with the reserved powers of the States. It is true the Federal Constitution, in Article X of the amendments, provides that "powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively or to the people." This provision becomes important, however, only after it has been determined that the power to do that which is proposed has not been delegated to Congress. The very essence of the argument in favor of the constitutionality of Federal child-labor legislation is that it is included within the power of Congress to regulate commerce. If it is within the congressional power, which by the Constitution was felegated to the exclusive configated out reserved to the States. In the consideration of objections of this sort it must be remembered that Congress is not making the employment of children illegal, but is merely excluding from interstate commerce the products of child labor. The fact that the congressional regulation may prevent or restrict the employment of children in the manufacture of goods within the State does not affect the constitutionality of the congressional action. So long as it is a regulation of commerce and so long as it does not constitute a deprivation of property without due process the power of Congress is supreme. Prof. Goodnow, now president of Johns Hoppins University, in his "Social Reform and the Constitution," p. 91, says: "Men's minds are peculiarly twisted when they argue under a Constitution purporting to be a regularly twisted when they argue under a Constitution purporting to be a regularly revised when they argue under a Constitution, and

of the extent to which the congressional power over interstate commerce may be expanded into fields which the Federal Government has not here-tofore occupied.

That Congress may reach conditions of manufacture and other acts which take place prior to transportation in interstate commerce is illustrated by the meat-inspection act (34 Stat. L., 675, 1260) and section 9 of the pure food and drugs act. The meat-inspection act provides that no meat may be shipped in interstate commerce unless labeled in accordance with the provisions of the act, and that inspectors may enter the establishments for the purpose of such inspection. The constitutionality of this act has never been questioned. Section 9 of the pure food and drugs act provides that no dealer who ships in interstate commerce adulterated or misbranded articles shall be prosecuted if he can establish a guaranty from the manufacturer from whom he purchased the article that the same is not adulterated or misbranded, and that in such case the party making the guaranty shall be amenable to prosecution. In United States v. Heinle Specialty Co. (175 Fed., 299; 1910) a manufacturer was prosecuted for selling adulterated food with a guaranty to a dealer in the same State, the dealer having subsequently shipped the food in interstate commerce. It was contended on behalf of the manufacturer that his connection with the food—that is, its manufacture and sale—was entirely an intrastate matter, and that the nint section of the pure-food act was therefore unconstitutional, in that it attempted to penalize acts wholly intrastate. The court refused to accept this argument, and in holding the section constitutional said:

"There is nothing in the act to indicate that there is an effort on the part of Congress to regulate the manufacturing, selling, or delivering of any article of food within the States. The act is intended to prevent adulterated and misbranded foods from being sold in interstate sales, but simply attempts to prevent the products of child labor from being sol

gress was acting within its power, electually disposed of this contention;
"The power of Congress under the commerce clause of the Constitution is the ultimate determining question. If the statute be a valid

exercise of that power, how it may affect persons or States is not material to be considered. It is the supreme law of the land and persons and States are subject to it." (Hoke v. United States, 1913, 227 U. S.,

create of that power, now it may affect persons or States is not material to be considered. It is the supreme law of the land and persons and States are subject to it." (Hoke v. United States, 1913, 227 U. S., 308, 320.)

Mr. Justice Hughes in replying to this same contention, urged against the Sherley amendment to the pure food and drugs act (Seven Cases v. United States, Nos. 50 and 51, Jan. 10, 1916), said:

"So far as it is objected that this measure, though relating to articles transported in interstate commerce, is an encroachment upon the reserved powers of the States, the objection is not to be distinguished in substance from that which was overruled in sustaining the white-slave act. There, after stating that 'if the facility of interstate transportation' can be denied in the case of lotteries, obscene literature, diseased cattle and persons, and impure food and drugs, the like facility could be taken away from 'the systematic enticement of and the enslavement in prostitution and debauchery of women,' the court concluded with the reassertion of the simple principle that Congress is not to be denied the exercise of its constitutional authority-over interstate commerce, and its power to adopt not only means necessary but convenient to its exercise, because these means may have the quality of police regulations."

These cases establish the right of Congress to exercise a complete power in the regulation of interstate commerce limited only by the due-process clause. Argument to the effect that this power is also limited by an inherent right of the States, is academic and untenable because wholly contrary to the precedents. The power is granted to Congress in plain and unmistakable terms, without limitation, and with the express purpose of ameliorating unsatisfactory and injurious results occasioned by State control. In its exercise of this delegated power Congress is absolutely unrestrained notwithstanding any indirect economic effects that its regulation may have upon the States. As long as it is regulati

authorized to exercise unlimited power. In the words of Mr. Justice Hughes (address before the New York State Bar Association, Jan. 14, 1916):

"Thus it is recognized that within its sphere as defined by the Constitution, the Nation is supreme. The question is simply of the extent of the Federal power as granted; where there is authorized exercise of that power, there is no reserved power to nullify it—a principle obviously essential to the maintenance of national integrity, yet continually calling for new applications. Thus, regulations required in the exercise of the judgment committed to Congress for the protection of interstate commerce can not be made nugatory by the mere commingling of interstate and intrastate transactions. To illustrate, Congress has taken account of the practical exigencies of traffic, and of the interestate account of the practical exigencies of traffic, and of the interestate rain movements, and has insisted that cars moving on railroads that are highways of interstate commerce shall be suitably equipped to the end that interstate traffic shall not be exposed to unnecessary danger. Again, Congress has asserted its authority to compel interstate carriers to give to interstate traffic reasonable rates without unjust discrimination; and the question whether interstate trade was left to be destreyed by hostile discrimination under the authority of local governments was decisively answered when the Constitution superseded the Articles of Confederation."

So far as the respective jurisdictions of State and Nation over commerce are concerned, can there be any doubt under the congressional practice and the judicial decisions which have been discussed in the preceding sections of this brief that the proposed prohibition of shipments of products of child labor in interstate commerce is within the Federal jurisdiction? However much we may think that such power ought not to be within the Federal jurisdiction, whatever may be our individual opinions as to the desirable balance of powers between t

-THE POWER OF CONGRESS TO PROHIBIT SHIPMENT OR TRANSPORTA-THE POWER OF CONGRESS TO PROBLET SHIPMENT OR TRANSPORTA-TION IN INTERSTATE COMMERCE IS LIMITED ONLY BY THE REQUIREMENT OF THE FIFTH AMENDMENT THAT SUCH PROHIBITION SHALL NOT CON-STITUTE A DEPRIVATION OF INDIVIDUAL RIGHTS WITHOUT DUE PROCESS OF LAW; I. E., THAT SUCH PROHIBITION SHALL NOT BE AN ARRITRARY OR UNREASONABLE INTERFERENCE WITH THE INDIVIDUAL'S RIGHTS OF PROPERTY OR LIBERTY OF CONTRACT.

OR UNREASONABLE INTERFERENCE WITH THE INDIVIDUAL'S RIGHTS OF PROPERTY OR LIBERTY OF CONTRACT.

The preceding sections of this brief point out that aside from the provision of Article I, section 9, respecting congressional prohibition of the migration of slaves and the commerce clause itself, there is nothing in the Federal Constitution which in any way limits or affects the congressional power over interstate commerce, except the fifth article of the amendments, which provides: "No person shall be 'deprived of life, liberty, or property without due process of law.'" This amendment, it has also been pointed out, does not affect the issue which arises between the Nation and the State in regard to their respective jurisdictions over commerce, but is simply a guaranty to the individual of protection against the arbitrary action of the Federal Government. The fifth amendment protects the individual against Federal action depriving him of life, liberty, or property without due process of law. In neither limits the Federal power in the interest of State power nor gives to the State any right to object to the extent or the manner in which the Federal Government exercises its powers. This amendment limits the Federal Government in the exercise of its express powers in precisely the same way that the fourteenth amendment limits the State government in the exercise of these inherent powers which are ordinarily described by the courts as the State's police power.

In the Lottery Case (188 U. S., 321, 362; 1903) it was argued that the principle which would justify the exclusion of lottery tickets from interstate commerce would lead necessarily to the conclusion that any article of whatever kind or nature could be excluded by Congress, regardless of the motive or purpose of such exclusion. Replying to this contention, Mr. Justice Harlan sald:

"It will be time enough to consider the constitutionality of such legislation when we must do so. The present case does not require the court to declare the full extent of the power that Congress may exercise in the regulation of commerce among the States. We may, however, repeat, in this connection, what the court has heretofore said, that the power of Congress to regulate commerce among the States, although plenary, can not be deemed arbitrary, since it is subject to such limitations or restrictions as are prescribed by the Constitution. This power, therefore, may not be exercised so as to infringe rights secured or protected by that instrument."

Obviously, Mr. Justice Harlan's reference is to the fifth amendment, for that is the only other clause of the Constitution which limits the congressional commerce power.

Whether the fifth amendment limits the power of Congress to prohibit the transportation of particular property in interstate commerce depends on the question whether such prohibition amounts to a deprivation of property without due process. This brings up the questions: To what sphere has the individual a right to ship goods in interstate commerce, and what amounts to deprivation without due process?

The exact meaning of this "due-process" clause, like similar clauses

interstate commerce, and what amounts to depression in the constitutions, has never been definitely settled. Comparatively few cases have arisen which involve the meaning of this clause in the fifth amendment. Numerous cases, however, have been decided involving the effect of the similar due-process clause in the fourteenth amendment. These cases indicate that the due-process limitation is intended to protect the individual from an arbitrary exercise of the powers of government, from legislation which interferes with private rights or interests to an extent that shocks existing conceptions of what is fundamentally fair and just under the circumstances to which it applies.

The following definitions have been pronounced by the Supreme Court:

tion which interferes with private rights or interests to an extent that shocks existing conceptions of what is fundamentally fair and just under the circumstances to which it applies.

The following definitions have been pronounced by the Supreme Court:

"Due process of law within the meaning of the fourteenth amendment is secured if the laws operate on all alike and do not subject the individual to an arbitrary exercise of the powers of government." Glozza v. Tierman (148 U. S., 657, 662; 1893).

To the same effect see Yick Wo v. Hopkins (118 U. S., 356, 367; 1886); Leeper v. Texas (139 U. S., 462, 468; 1891); Yesler v. Commissioners (146 U. S., 646, 655; 1892); Duncan v. Missouri (152 U. S., 377, 382; 1894).

The words "due process of law" "were intended to secure the individual from the arbitrary exercise of the powers of government unrestrained by the established principles of private rights and distributive justice." Bank v. Okely (4 Wheat., 235, 244; 1819); Twining v. N. J. (211 U. S., 78, 101; 1968).

"The great purpose of the requirement is to exclude everything that is arbitrary and capricious in legislation affecting the rights of the citizen." Dent v. W. Va. (129 U. S., 114, 124; 1889).

The due-process clause in the fifth amendment is identical with that in the fourteenth amendment. This pledge of individual rights and liberties is in the Constitution in a twofold sense; in the fifth amendment it is a limitation upon the powers of the National Government; in the fourteenth amendment it is a limitation upon the powers of the National Government; in the fourteenth amendment it is a limitation upon the powers of the National Government; in the fourteenth amendment it is a limitation upon the powers of the National Government; in the fourteenth amendment it is a limitation upon the powers of the National Government; in the fourteenth amendment it is a limitation upon the process of law." Slanghter House Causes (15 Wall., 26, 80; 1812); Tonnawnda v. Lion (181 U. S., 389, 391; 1991); Twining v. N. J. (su

the due-process clause of the fourteenth amendment.

In Chicago Railroad Company v. McGuire (219 U. S., 549, 567; 1911), it is said:

"Liberty implies the absence of arbitrary restraint, not immunity from reasonable regulations and prohibitions imposed in the interests of the community."

The scope of this power to regulate in the interests of the public good, commonly called the police power, has never been definitely determined. For many years the decisions of the Supreme Court seemed to restrict it to laws passed for the protection of the health, morals, or safety of the public. But later decisions have given it a broader scope, and at the present time it may properly be said to include all matters which are immediately necessary or advantageous to the welfare of the community.

In the case of McLean v. Arkansas (211 U. S., 539; 1909) the court held constitutional a State statute requiring coal to be weighed before screening as a basis for determining miners' wages. In the opinion in this case the principles which underlie the validity of legislation passed presumably in the exercise of the police power were stated as follows (p. 547):

"It is then the established doctrine of this court that the liberty of contract is not universal and is subject to restrictions passed by the legislative branch of the Government in the exercise of its powers to protect the safety, health, and welfare of the people.

"It is also true that the police power of the State is not unlimited and is subject to judicial review, and, when exerted in an arbitrary or oppressive manner, such laws may be annulled as violative of rights

protected by the Constitution. While the courts can set aside legislative enactments upon this ground, the principles upon which and the constitution of the principles upon which as the constitution of the principles upon which as the constitution of the principles upon which as the constitution of the principles of

the Supreme Court has said with reference to the exercise of the State's police power:

"The mere fact that a court may differ from the legislature in its views of public policy or that judges may hold views inconsistent with the propriety of the legislation in question affords no ground for judicial interference, unless the act in question is unmistakably and palpably in excess of legislative power."

The effect, therefore, of the fifth amendment on the congressional commerce power is simply to authorize the individual to assert his constitutional guaranty of due process, to restrain the enforcement of regulations of interstate commerce which are wholly arbitrary and unreasonable. It does not affect the validity of reasonable regulations substantially related to the betterment of evil conditions existing in the Nation. It is impossible to lay down in advance any fixed rules which will enable us in all future cases to separate the reasonable from the unreasonable regulation. Every regulation must stand or fall on its relation to the common welfare under all the circumstances existing at the time of its enactment. To him who asks for the application of this general argument to suppositious cases, as for example whether Congress could prohibit the passage of sound wheat from Minnesota to Wisconsin, we can only reply in the words of Mr. Justice Harlan in the Lottery case:

"It will be time enough to consider the constitutionality of such legislation when we must do so."

Its constitutionality will depend upon its reasonableness and its reasonableness will depend on the existence or nonexistence of conditions which justify this interference by Congress with the individual's right to find for his product a market in interstate commerce.

It remains to apply this general principle to the proposed prohibition of interstate commerce in the products of child labor. Does such a prohibition bear such substantial relation to the public health, the public safety, the public morals, or the public welfare as to make it a reasonable regulation of interstate commerce in the interest of the common good, or is it an unreasonable, arbitrary interference with the right to find and use an interstate market, without that justification which

arises from existing evil conditions toward the betterment of which it may reasonably be expected to contribute?

Name of the product of the third products of the product of th

are reasonable regulations of rights of property and of liberty of contract.

A State in the exercise of its police power may prohibit the employment of child labor in the manufacture of goods within the State, but it has not the power to complete its policy by prohibiting the importation from other States of the products of child labor. It is well established that a State is powerless to exclude the introduction and sale within its borders, in original packages, of recognized articles of interstate commerce (Brown v. Maryland, 1827, 12 Wheat, 419; Leisy v. Hardin, 1890, 135 U. S., 100). Such a regulation interferes with interstate commerce and consequently is unconstitutional. It is true that in the exercise of the police power in protecting citizens against fraud, a State has been permitted to make certain regulations which place no burden upon commerce among the States (Plumley v. Massachusetts, 1894, 155 U. S., 461 (prohibition of the sale of oleomargarine which is in imitation of yellow butter); Crossman v. Furman, 1904, 192 U. S., 129 (artifically colored coffee beans); Campagnie Francaise v. Louisiana Board of Health, 1902, 186 U. S., 380 (persons coming from districts infected with contagious or infectious diseases); but as child-labor products are not inherently dangerous to the citizens of the State, a direct prohibition by a State of the right to sell them within its borders would be an interference with interstate commerce and consequently void (People v. Hawkins, 1898, 157 N. Y., 1; People v. Haynes, 1910, 198 N. Y., 622; Opinion of the Justices, 1912, 211 Mass., 605). In each one of the these cases the State statute provided that goods manufactured by convict labor should be stamped so as to indicate the same. These laws applied alike to goods manufactured within and without the State. The courts in each case held

the statute unconstitutional as an unlawful interference with interstate commerce. In People v. Hawkins the court said (p. 17):

"A citizen of this State who happens to buy goods made in a prison in Ohio has the right to put them on the market here on their own merits, and if this right is restricted by the penal law, while the same goods made in factories are untouched, such a law is a restriction upon the freedom of commerce, and the objection to it is not removed by the fact that it may have been enacted in the guise of a police regulation. The validity of such a law is to be tested by its purpose and practical operation without regard to the name or classification that may have been given to it."

In the opinion of the justices the court declares (p. 606):

"The present bill, in our opinion, goes beyond a lawful exercise of the police power in its direct effects upon interstate commerce. Protection of domestic laborers, manufacturers or merchants against the lawful competition from other States by means of discriminating regulations upon goods manufactured in other States is an immediate interference with interstate commerce. One who purchases prison-made goods in other States has a right as complete and extensive to sell them upon their own merits as he has to sell private-made goods of like nature."

The same objections would be successfully urged against a statute prohibiting the sale within the State of child-labor products imported from another State. The prohibition of the sale of such products of child labor would not further the interests of the citizens of the State except as regards competition, and such legislation has been held, in a long line of decisions, to amount to an unlawful interference with interstate commerce:

Welden v. Missouri (1875; 91 U. S., 275): Walling v. Michigan (1886; 116 U. S., 446); Minnesota v. Barber (1897; 171 U. S., 30); Dozler v. Alabama (1910; 218 U. S., 78); Voight v. Wright (1891; 141 U. S., 62); Collins v. New Hampshire (1897; 171 U. S., 30); Dozler v. Alabama (19

for its self-protection."

It may be contended that a State might prohibit the sale of all products of child labor by a lawful exercise of the taxing power. While it is true that the original-package rule does not apply where there is a general tax laid upon property which has reached its destination (Brown v. Houston, 1885, 114 U. S., 622), or a tax upon the sale of articles within the State which were not brought from a foreign country (Woodruff v. Parham, 1869, 8 Wall., 123), nevertheless such a tax must be for a public purpose (Loan Association v. Topeka, 1875, 20 Wall., 655; Lowell v. Boston, 1873, 111 Mass., 454). Thus in the exercise of its taxing power the State is limited by the due-process clause in so far as the tax must be for the benefit of the community. A prohibitory tax on the products of child labor would not be valid, therefore, unless a direct prohibition of the sale of such products could be sustained, and it has been shown that such a prohibition as applied to goods imported from other States would constitute an interference with interstate commerce, because not being for a public purpose it is not within the police powers of the State (People v. Hawkins and cases cited above).

Even though it be conceded that the State, by the exercise of its

to goods imported from other States would constitute an interference with interstate commerce, because not being for a public purpose it is not within the police powers of the State (People v. Hawkins and cases cited above).

Even though it be conceded that the State, by the exercise of its police power, could prohibit the sale of child-labor products after such products are no longer part of interstate commerce, or could, under the power to levy a general property tax, place a prohibitory tax upon them, such measures would be absolutely unenforceable. The State has no method of determining what imports from other States are manufactured by child labor, because the goods themselves show no traces or marks of it. In order to effectively enforce such a law, it would be necessary for each State to place an inspector in every mine, quarry, and manufacturing establishment in the United States. This method is both impracticable and illegal. No State could afford to employ the necessary number of inspectors, and, even if this were done, the act authorizing the inspection in other States would be of doubtful constitutionality, as it is settled that State laws have no extra territorial effect, each State being supreme within its sphere. (Bruckner v. Finey, 1829, 2 Pet., 586; Bank of Augusta v. Earle, 1839, 13 Pet., 519; O. & M. Ry. v. Wheeler, 1862, 1 Black, 286.) Therefore it is obviously impossible for one State to prohibit the importation from other States of the products of child labor. Every means of effectively stamping out this national evil has been taken from the States, and the only possible method of effecting the complete prohibition fochild labor is by national control. In prohibiting the interstate shipment of such products Congress is exercising its power over interstate commerce to advance the public welfare by supplementing and making effective the police legislation of the States.

As has been pointed out in an earlier part of this brief, the Constitutional toweriton took from the interded to lodge tha

Admitting the force of all these precedents for police regulations affecting interstate commerce, the opponents of the pending bill will seek to distinguish them by pointing out that in every previous instance the prohibition of transportation has had for its purpose the protection of the consumer, has aimed to prevent the carrying through interstate commerce of the objectionable person or thing to the place or the person where its harmful effects are to be accomplished. Whereas in the case of the pending legislation the prohibition is aimed not at the protection of the consumer but at the protection of the producer; not the community which uses the products of the labor of children, but the community in which such children reside.

The fact that much of our previous legislation under the commerce clause has been confined to protection of commerce for the consumer is merely accidental. Even the pending legislation may have the ultimate effect of protecting the consumer. The amount of benefit or protection to the consumer is sufficient. The prohibition of transportation in interstate commerce of the products of child labor may well be expected to improve the quality of the goods sold in interstate commerce. It is reasonable to presume—at least the courts can not override a determination by Congress that it is reasonable to presume—that goods manufactured by persons of more mature age will be of higher quality and more substantial value than if manufactured by children under 14. If Congress believes that the prohibition of transportation of the products of child labor will tend to improve the quality of articles sold in interstate commerce, as well as to protect the health, morals, and welfare of the public, surely this is not such a culpable abuse of the congressional discretion as to warrant the court's setting aside of the congressional discretion as to warrant the court's setting aside of the congressional decreases.

state commerce, as well as to protect the health, morals, and welfare of the public, surely this is not such a culpable abuse of the congressional discretion as to warrant the court's setting aside of the congressional action.

A bill introduced in the present Congress by Congressman Alexander.

A bill introduced in the present Congress by Congressman Alexander, chairman of the House Committee on Interstate Commerce, illustrates the relation of this kind of regulation of commerce to the protection of the consumer. Congressman Alexander's bill prohibits ship ment in interstate commerce for purposes of slaughter of bull calvet less than 2 years old or of heifers less than 7 years old. Obviously this is not a health measure. These ages have no relation to the value of the meat as food. The only relation of this legislation to the protection of the consumer is that it protects the ultimate supply. It protects the ultimate supply of men and women.

The distinction between protection to consumer and producer is founded upon the narrow view of the police power which would make it depend upon, not the benefit to the general public, but the benefit of individuals resulting from such legislation. This is an erroneous view of the power. Prohibition of transportation of lottery tickets was upheld by the Supreme Court, not on the ground of the benefit done to the individual who might be affected to his detriment by the purchase of lottery tickets, but on the ground that the public welfare is benefited to the extent that those individuals are protected against the temptation to lottery gambling. In the same manner legislation limiting hours of abor has been sustained under the police power, not because of the benefit derived by the general public from a decrease in the burdensome toil of a large body of its citizens. The important point is that no such legislation would be supported under the police power because a hundred or a hundred thousand individuals were to be protected from some harmful consequence if that harmful co

sigher ideals the realization of which is sought by the community in its law.

What essential difference is there between legislation protecting a few individuals from the harm which may follow their transportation from one State to another when that harm will be detrimental to the public morals and legislation which will prevent the employment of children of tender years when such employment will be detrimental to the public health and welfare? What is there in the fact that in one case the public welfare is affected by practices which follow transportation and in the other case is affected by conditions which precede transportation which would justify holding the one prohibition a reasonable exercise of the police power in the public interest and the other an arbitrary exercise of the commerce power?

The argument for the distinction between the consumer and the producer as a test of the constitutionality of congressional police legislation under the commerce clause is not founded on any decision or any language of the Supreme Court. Although the lottery, the pure food, and the white slave acts may, as a matter of fact, operate to prevent evil conditions after interstate transportation, the cases holding them constitutional were not decided on any principle or theory, either expressly or impliedly so limited. On the contrary, these cases estabilish a principle which is equally applicable to conditions arising before or after transportation, namely, that Congress for the purpose of protecting the public health, morals, and welfare, may regulate interstate commerce to the extent of prohibiting transportation of specified persons or things. In short, that regulations of interstate commerce as was said in Hoke v. United States (227 U. S., 308, 323), "may have the quality of police legislation." In that case it is also said: "It may be that Congress could not prohibit the manufacture of the article in a State, it may be that Congress could not prohibit the manufacture of the article in a State, it may be that Cong

Congress by prohibiting interstate transportation of the product of that labor. In other words, the use in manufacturing of methods which are injurious to the health, morals, and welfare of the people justifies Congress in prohibiting interstate transportation of the article manufactured in an effort to prevent such evil methods or conditions. It means that evil conditions will not be permitted to thrive by the unrestricted use of the channels of interstate commerce.

Congress, it must be remembered, has no direct regulative control over either the mode of consumption or method of production. The prohibition of transportation of lottery tickets, adulterated or misbranded food and drugs, and of women, was based not on a desire to protect or advance interstate commerce itself, nor was it intended to protect particular individuals from particular harm, but as expressly stated by the Supreme Court it was an exercise of the commerce power for the protection and advancement of the health, morals, and welfare of the country. If it be true, as declared in the Hoke case, that the power over commerce conferred on the Nation may be exercised "to promote the general welfare, material and moral," what possible justification can there be for placing the consumer in a peculiar class and granting him the privilege of police protection from the National Government, while denying that protection to the unfertunate producer? It is submitted that from the cases when the regulation of commerce is not for the protection or advancement of that commerce itself (as in the case of transportation of explosive or combustible materials) the only test of constitutionality of the prohibition is this; Is the regulation reasonably designed for the protection of the health, morals, safety, or general welfare of the protection of the health, morals, safety, or general welfare of the protection of the health, morals, safety, or general welfare of the protection of the health, morals, safety, or general welfare of the protection of the constitutio

University, one of the leading authorities on the constitutional law of this country, thus expresses his opinion of the soundness of the suggested distinction:

"This distinction between conditions of production and purposes or methods of use of commodities, though a real one, will probably not be held controlling. In melther case has Congress a direct regulative power—over neither the conditions of production nor the mode or use of consumption. If, therefore, in either case the prohibition can be construed to be, in fact, a regulation of interstate or of foreign commerce, neither the ultimate effect nor the legislative intent embodied in the law may be inquired into by the courts. In result, then, it is to be admitted that the lottery case is authority for the doctrine that interstate carriers may be prohibited from carrying, or shippers or manufacturers from sending, from State to State and to foreign countries commodities produced under conditions so objectionable as to be subject to control as to their manufacture by the States under an exercise of their police power or of a character designed or appropriate for use which might similarly be forbidden by law."

If Congress passes the Keating-Owen bill, its very enactment will constitute a congressional declaration that child labor is a national nuisance; that its evil effects on the public health and welfare can not be effectively prevented by individual State action so long as one State refuses to enact the necessary legislation; and that congressional regulation under the power to regulate interstate commerce is Memanded in the interest of the public morals, health, and welfure. What can the Supreme Court say to such a declaration? Would that court undertake to refute it? And without refutation would it not entirely justify a regulation of commerce to prevent the evils?

Summarizing the previous decisions Mr. Justice McKenna, in the Hoke case, said:

"Surely if the facility of interstate transportation can be taken away from the demoralization of lotteries

finerature, the contagion of diseased cartie of persons, the impurity of food or drugs, like facility can be taken away from the systematic enticement to and the enslaving in prostitution and debauchery of women."

And to this we may add that if for these purposes the facility of interstate commerce can be taken away, then it can likewise be taken away from the exploitation of children of tender years, to the detriment of our future citizenship.

It may be objected that the case of Adair v. United States (208 U. S., 161: 1907) is authority against the constitutionality of the proposed legislation. In the Adair case the Supreme Court held unconstitutional an act of Congress prohibiting certain corporations engaged in interstate commerce from discriminating against members of trade unions in the employment or discharge of men. The basis of this decision was that the act constituted a deprivation of the liberty of contract without due process of law. The court discussed in great detail the limitations upon congressional control over interstate commerce imposed by the fifth amendment, and concluded that the regulation in this act violated the due-process clause. That this conclusion is justified and proper is declared by the same court in Coppage v. Kansas (236 U. S., 1;1914), where a similar statute of the State of Kansas was held to be a deprivation of the liberty to contract without due process of law. In this case the court said (p. 21), "The decision in the Adair case is in accord with the almost unbroken current of authorities in the State courts. * * It is not too much to say that such laws have by common consent been treated as unconstitutional." For decisions of State courts holding similar statutes not within the scope of State police power see note, volume 52. Lawyers United States Supreme Court Report, page 436.

Mr. Justice Harlam, in the course of the opinion in the Adair case, said that such a regulation of interstate commerce, as there was no "possible legal or logical connection * * between an empl

1911); Goldfield Consolidated Mines Co. v. Goldfield M. U. No. 220 (159 Fed., 500; 1907); Hitchman Coal & Coke Co. v. Mitchel (172 Fed., 963; 1909); Zikos v. Ore Raliroad & Navigation Co. (179 Fed., 893; 1910); Irving v. Joint District Council U. B. of Carpenters (180 Fed., 896; 1910).

But even if this statement of Mr. Justice Harlan in the Adair case be given authoritative effect as a precedent, it must be remembered that in this portion of his opinion the learned judge was dealing not with the limiting effect of the fifth amendment on the power of the courts to interfere with personal or property rights, but with the question, What is interstate commerce? In other words, What are the limits of the Federal jurisdiction as distinguished from the State jurisdiction over commerce? That portion of the opinion in which the statement just quoted is contained, is introduced by the following language: "Let us inquire, What is commerce, the power to regulate which is given to Congress?" The general language made use of by the learned justice in answering this question is of importance if at all not in a case involving the restrictive effect on the exercise by Congress of a power over interstate commerce which is clearly within the Federal jurisdiction, but only in cases like the employer's liability case, where the question is, What is interstate commerce and where does the Federal jurisdiction over commerce end and the State jurisdiction begin? Mr. Justice Harlan's general statement is to the effect that the Federal jurisdiction does not run to the point of the making or the terminating of a contract of employment between an interstate carrier and its employees. Even on this point his statement must be regarded as having been qualified by the subsequent cases. But in any event, Mr. Justice Harlan's statement has relation, not to the effect of the due-process of its power over interstate commerce, but to the relationship between the powers of the Nation and the State under the Federal Constitution. This question has b

process clause in the fifth amendment on an undoubted exercise by Congress of its power over interstate commerce, but to the relationship between the powers of the Nation and the State under the Federal Constitution. This question has been thoroughly discussed under subdivision 4 of this brief.

It is important, how you to the that in the proposed child-labor leading the proposed legislation is created its jurisdiction by directly regulating to regulate contracts of employment by virtue of its control over the instrumentalities or agencies of interstate commerce. It does not seek to extend its jurisdiction by directly regulating contracts of employment as was done in the Adalrease. So far as the proposed legislation is concerned, the employer is free to conduct his business with or without child labor. All that Child is the chooses to employ children he shall not have the facilities of interstate commerce for the distribution and sale of his product. This is not a regulation of conditions of employment. It is a regulation of the subject matter of interstate commerce with an incidental effect on the conditions of employers! Inbility case that one who engages in interstate commerce thereby subjects all of his business concerns, including his intrastate business, to the regulating power of Congress. This argument was refuted by Mr. Justice White, now Chief Justice, in the sweeping and vigorous language which such a broad claim of congressional power might be expected to inspire. He says: me engages in interstate commerce he thereby endows Congress with power not delegated to it by the Constitution; in other words, with the right to legislate concerning matters of purely State concern. It rests upon the conception that the Constitution destroyed that freedom of commerce which it was its purpose to preserve, since it treats the right of except upon such conditions as Congress may prescribe, even though the condition would be otherwise beyond the power of Congress. It is apparent that if the contention were well foun

stitutional law. Who could have said prior to the lottery cases that the policy of the lottery legislation would be upheld by the Supreme Court of the United States? Who could have said prior to the Hoke case that the antiwhite-slave legislation would be held constitutional? Yet if these acts had not been passed merely because there was a possibility that the Supreme Court would declare them unconstitutional, individual States might still pass drastic laws and yet be helpless to prevent the flourishing of lotterless and the white-slave trade.

This brief began by asking the question, Can Congress use its power to regulate interstate commèrce to stamp out child labor in mines and factories? It concluded with the answer, first, Yes; in the same manner that Congress can use the same power to stamp out lotterles, in pure foods, prostitution, etc. And, second, Yes; to the extent that Congress can close the channels of interstate commerce to the products of child labor and thereby prevent the exploiters of child labor finding an interstate market for its products.

The argument in support of these conclusions can not be better summed up than by repeating the language of Mr. Justice Harlan in the lottery cases, changed only by substituting the italicized words for words referring to lotteries:

"If a State, when considering legislation for the suppression of child labor within its own limits, may properly take into view the evils that inhere in mining or manufacturing in that mode, why may not Congress, invested with the power to regulate commerce among the several States, provide that such commerce shall not be polluted by the earrying of the products of such labor from one State to another? (p. 356). * * As a State may, for the purpose of guarding the morals of its own people, forbid all child labor within its limits, so Congress, for the purpose of guarding the people of the United States against the 'widespread pestilence of child labor from one State to another? * We should hesitate long before adjudging that an

A McKinley Policy Demanded by the Country.

EXTENSION OF REMARKS

HON. WILLIAM H. COLEMAN, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 1, 1916.

Mr. COLEMAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Hon. S. D. Fess on the occasion of the annual banquet of the Republican Tariff Club of the city of Pittsburgh, January 27, 1916. The address is as follows:

ADDRESS OF HON. S. D. FESS ON THE OCCASION OF THE ANNUAL BANQUET OF THE REPUBLICAN TARIFF CLUB OF THE CITY OF PITTSBURGH, JANUARY 27, 1916.

Mr. Toastmaster and fellow Republicans: I am honored by your invitation to address you here to-night. Your meeting is primarily in honor of America's greatest protectionist, Ohio's beloved son, the country's martyred President, William Mc-Kinley. As an Ohio man, I am glad to be here for that reason. This club is the tariff club, a wonderfully suggestive title just now in these Democratic times of stamp duties and war taxes. To such a club at such a time I am honored to be invited to speak on a McKinley policy. Pennsylvania loved McKinley because he stood for an American policy. Your State rarely goes astray on such a policy. Only once, in 1912, did you falter. But you made haste to retrace your steps. Like Ohio, which had but 3 lone Republicans in the Sixty-third Congress, but which has to-day 13 out of the 22, and that under a Democratic gerrymander, Pennsylvania, badly crippled in 1912, came back last year with her usual full quota of Republican Congressmen, among whom your splendid chairman and former president, Mr. Coleman, is distinguished for his brilliant success.

In the 50 years since the close of the Civil War this country has been under the protective system the entire period save the three years, fatal years, 1894 to 1897, of the Wilson free-trade experiment and the two years and three months of the fatal Underwood bill, which the President in his last message to Congress asked to be suspended upon the item of sugar. Well do we remember how, after the defeat of the party of protection in 1892, when its best friends became panicky and counciled its abandonment, McKinley stood like an oak in the face of the mighty storm and warned the country against interpreting the defeat as a command to abandon the principle of protection to American labor and enterprise. I well remember his great speech following that defeat when in clarion tones he said:

Do not lose your anchorage. This country will not and can not prosper under any system that does not recognize the difference of conditions in Europe and America. Open competition between high-paid American labor and poorly paid European labor will either drive out of existence American industry or lower American wages, either of which is unwise.

The Democrats then, as now, used their power and the Wilson bill went upon the statute books. Dire prophecy was made by Republican leaders of what would follow. What were the results?

Capital timid and in hiding, labor on the streets, and the country flooded by European goods, our exports fell off, and the balance of trade was against us. Gold left the country, revenues fell off, a depleted Treasury, and an issue of bonds within a year. It was but natural that the country would not only return to the protective system, but that it would rally under the banner of its great advocate, Maj. McKinley. Free trade was so thoroughly outlawed that no one was so poor as to do it reverence. It was a lost issue, and the party under the recent and erstwhile Secretary of State, W. J. Bryan, seized upon the crown of thorns and cross of gold and committed Democracy to the 16-to-1 folly. This folly was twice consigned to the scrap heap, but its author still cavorts about, and like the days of 1896 will undoubtedly commit the party to another folly this year, 20 years after, and lead his party again to the scrap heap.

For 20 years under protection, led by McKinley, Roosevelt, and Taft, this country reached the acme of prosperity. In 1912 prosperity was at high tide. Business had never been better. Markets at home and abroad were at flood tide. Capital was readily invested. Money was easy. Labor was fully employed at the highest rate of wage. These conditions are directly traceable to protection. In this atmosphere of prosperity independence grows, which, in turn, results in restlessness. In 1912, due to an unfortunate division among the friends of protection, the enemy stepped in on a minority vote of 1,300,000. Republicans were deluded into the belief that they could elect two Republicans on the same day. The result was the loss of both Republicans and the election of a Democrat that neither wing wanted.

What has been the result? Precisely what was predicted. Within a year the protective system was superseded by another tariff-for-revenue-only system. It took effect two years and three months ago. When Wilson signed it he complimented the country upon having freed the business of the country. The first seven months of its existence gave a real meaning to the "freeing business of the country." To a group of business men from my State he declared the business situation was psychological. To the editors of his native State he promised business would revive. To another group he said it was looking up. We were all constrained to ask how else it could look when it was flat on its back.

The night the Underwood bill was signed its author felicitated the country that the legislation would, first, reduce the cost of living, second, increase the foreign trade, third, not disturb the domestic business, and, fourth, would raise revenue enough to run the Government. I here and now declare this law has been a failure in every single item enumerated in this promise. Imports began at once to increase, but exports decreased until the magnificent balance of trade that had reached the enormous sum of one-half billion was entirely wiped out by April, 1914, within five months of the law's operation. Prices to the consumer went up. European goods displaced American-made goods, and thereby American labor and capital. Revenue fell off at a frightful rate. Gold was leaving the country, the Treasury was embarrassed, precisely as was predicted and as was experienced 20 years ago.

As the party responsible then took up the money question as the cause of the disaster, so now the same party declares it is the war that is the cause of the country's financial situation. The one single item that has saved the country's labor from universal suffering, from enforced idleness, is the great war. This is not the result of legislation, but of unhappy Europe in bloody war. With the nations that comprehend three-fourths of the world's population in war, a demand has come to this country for the supply of certain goods the like of which was never thought of. Our exports for the year just closed reached the enormous sum of \$3,500,000,000. This is war-order prosperity, its beginning. Europe's bonded indebtedness This is war-order prosperity, anticipated at has already reached the enormous sum of \$28,000,000,000. Much of the consumption of one side we have supplied. War activity has entirely closed out the German products, but it has not substantially decreased our importations in bulk, as the Government reports show. Most of the channels of trade are open. Indeed,

10 months of 1915 show imports \$62,000,000 greater than a like period the last year of the Payne law. Had the Payne rate, which was protective, been in operation there would have been raised over \$90,000,000 more than we realized under the Underwood bill. The war has not depleted the Treasury, it is the free-trade legislation under which 70 per cent of the imports come in free of duty. The President admits the failure of the Underwood bill and asks its suspension upon sugar. We join him The President admits the failure of the in this request, and ask him to suspend it upon wool, upon agricultural products, and on manufactured articles to make up the difference in cost of labor between this country and the countries with which we are in competition. In a word, we ask him to revise the law and adopt a protective system that not only stimulates American enterprise but never fails to raise the revenue necessary to run the Government. If it is not done this year, Republicans will do it next year. Under the Payne bill the labor of the country was not only well employed and the capital readily invested at a reasonable profit, but we collected enough revenue not only to pay the running expenses of the Government but to pay the construction of the Panama Canal out of current revenue funds.

Out of the authorization of the issue of \$375,000,000 bonds for that purpose only \$134,681,930 were issued. The balance was cared for by the Payne revenue law. This Democratic administration stands to-day condemned for signal failure as it did 20 years ago. Its remedy then for a depleted Treasury was the issuance of bonds. To-day it is a direct stamp tax, a Democratic deficiency tax, miscalled war tax. Even that falls far short of the Treasury needs. It has been ordered for another year. But in spite of the war levy, the Treasury is now embarrassed with six months of the year yet to run. It is true that the daily Treasury sheet reports this morning \$110,000,000 of a balance. But it must be recalled that this balance is reached by the bookkeeping of Mr. McAdoo, by which he increases the balance \$80,000,000 overnight without adding a dollar to the Treasury. Fifty-seven million dollars of this is in the disbursing officer's hands, heretofore carried on the debit side, and \$32,000,000 in the national-bank redemption fund, which also has been carried on the debit side. If this sum of \$80,000,000 is deducted from \$110,000,000, we have a balance of \$21,000,000. If we deduct the \$21,050,000 of silver change in dimes, quarters, and half dollars reported this morning, the Treasury is bankrupt.

The Underwood bill was signed October 3, 1913, when the protection law ceased to exist. On October 3 the daily Treasury report showed a balance of \$123,425,000 over against the \$21,000,000 to-day. If we include the \$67,000,000 reported on that day in the hands of disbursing officers, and the \$20,000,000 in the national-bank redemption fund, as McAdoo did when he reformed the bookkeeping to wipe out a deficit, the balance October 3, 1913, would be the enormous sum of over \$211,000,000, or \$101,000,000 more that it is to-day. These figures will indicate where the trouble lies. This deficit, it must not be forgotten, is in spite of the operation of the so-called war tax, which has been in operation since it was first enacted over a year ago.

In the face of this condition of the Treasury, the direct result of bad legislation, the President comes and asks support of a program to tax the people anew by the further imposition of stamp tax upon checks, additional tax upon gasoline, automobile tax per horsepower, and production tax upon iron and steel. It is not enough for the Democratic administration to rob these items of all protection, but it is now proposed to penalize them for tax purposes.

While the Republicans will join the President in putting our Navy back to the rank it held when the Democrats took possession of the House in 1910, they will not submit to this odious tax proposition, so long as the Underwood bill stands upon the statute books. The country needs better military defense, we admit, but it also needs better industrial defense. This can not be secured with this country under a free-trade scheme of the type of the Underwood bill. This scheme must give way to American protection.

The President yesterday gave out his latest change of mind. The tariff commission idea is the subject of the about-face performance this time. But he assures the country it is not a conversion to the protection idea, for the commission, we are assured, is to be nonpartisan and is to prevent a revision of the Underwood law. President Wilson's nonpartisan views are interesting in the light of his Indianapolis speech of a year ago, when his extreme partisanship bristled in eyery word. Also in the light of his Federal Reserve Board, upon which not a single Republican is found; also in the light of his trade commission, whose Democracy may be read in the activity of its

members for Mr. Wilson, most of whom were known only for

their party service.

The tariff commission is and has been a Republican measure. It never has been a Democratic measure. It has had the opposi-tion of the Democratic leaders. The one created by a Republican Congress and Republican President was strangled to death by the Democrats when they took control. They starved it to death by refusing to make appropriation for its work. If Mr. Wilson can lead his party to adopt this Republican measure we shall not object. If he can likewise lead it to adopt the Republican view on national defense we shall not object. These frequent somersaults of the President are greatly enjoyed by Republican spectators, but rather hard on Democratic would-be leaders, who last year prepared to defend their President's position and now finding him headed in the opposite direction, as defined in his addresses before Congress. So long as the membership of the majority party can make the turn as easily as the President no collision is likely. But it is hard on the solidarity of a majority responsible for legislation for the

Fellow Republicans, what the country wants to-day is not this sort of performance. It wants a return of a constructive McKinley policy, not only on the tariff but upon all public questions. It is anxiously awaiting the hour for registering its decision. It will condemn in no uncertain tones the cowardly proposals to ignore a national duty it inherited under McKinley's leadership in the Philippines by turning these islands adrift as the prey not only of the strongest faction of the islands but in due time to the foreign country which seeks control of the richest treasure in the South Seas. The Mexicanizing of these islands is the prospect. It will speak in no less certain tones on the "watchful waiting" policy which landed our marines in Vera Cruz to compel a salute which was never made, but really to intimidate the head of a neighboring country, and after the death of a score of our soldiers withdraw our forces to recognize another head whose hands were crimson, The people will ask, Why drive out one head without standing ready to meet what results from such expulsion, especially when it means the lives of our own citizens? The country will demand the extent of this blood-letting. The surrender of our sovereignty in the canal, read in the light of what is now taking place upon the high seas, is being keenly scrutinized by the American electorate.

My fellow Republicans, the present disease, plainly stated, is too much theory and not enough practical sense. In a word, we have too much Democracy that spells free trade of the Underwood brand, the southern cotton brand. This theory was born in the cotton fields of the South, nurtured by the cotton grower, and finally matured by the cotton king, the exporter. The section which exports in the raw state three-fourths of its chief production naturally demands the right to import the necessary articles of consumption from the cheapest market. hence free trade. No one seriously faults this intention, but the fault lies with those who permit it. We frequently hear the expression, "The South in the saddle."

This statement, full of meaning prior to the Civil War, was never so true as to-day. For 60 years preceding 1860 the States known as the slave States had dominated legislation. The Civil War produced a revolution. It not only freed the black man but it emancipated the country from the domination of what then was called slavocracy—the States which held slaves. This situation continued until 1911, when the Democrats took control of the House, which they organized. On March 4, 1913, the Democratic Party took full possession-President, Senate, and House. The Sixty-third Congress, which began in 1913. saw the South again in the saddle in every department of the Government. The Sixty-fourth Congress is no less so.

South to-day is in full swing, as a brief observation will reveal.

The President and family—first and second wife—are southern. His Cabinet, likewise, has half of its members from the

former slave States

While every department of the Government shows this sectional control, including the Diplomatic as well as Administrative Service, the best illustration of the "South in the saddle" is the House of Representatives. The Speaker is from Missouri, the Clerk is from Kentucky, the Doorkeeper from Virginia, and the postmaster from Georgia. It is true that the Sergeant at Arms is from Ohio and the Chaplain is from Michigan.

Since most legislation is through committees, both in Senate and House, the committee organization is important.

There are 17 large committees in the House, upon each of

portant-and one of the most important in the House, because of its privileged rank—is the Rules Committee.

The big committees and their chairmen are as follows:

Ways and Means, Kitchin, North Carolina. Appropriations, FITZGERALD, New York. Banking and Currency, Glass, Virginia. Judiciary, WEBB, North Carolina. Interstate and Foreign Commerce, Adamson, Georgia. Rivers and Harbors, Sparkman, Florida. Merchant Marine, ALEXANDER, Missouri, Agriculture, Lever, South Carolina, Foreign Affairs, Flood, Virginia. Military Affairs, HAY, Virginia. Naval Affairs, Pangerr, Tennessee. Post Offices, Moon, Tennessee. Indians, Stephens, Texas. Insular Affairs, Jones, Virginia. Railways and Canals, Dies, Texas. Public Buildings, Clark, Florida.

Roads, SHACKLEFORD, Missouri. Rules, HENRY, Texas.

Here are 18 committees, whose heads represent 9 States—Northern and 8 Southern. Of these, the Ways and Means, Judiciary, Banking and Currency, Interstate and Foreign Commerce, Foreign Affairs, Merchant Marine, Insular Affairs, and Rules all have to do with governmental attitude on questions of policy; in a word, their function is policy determining. heads of these come from Southern States-North Carolina, Virginia, Georgia, Missouri, and Texas. These States determine the Government's attitude in policy.

On the other hand, the Appropriations, Military Affairs, Naval Affairs, Post Office, Public Buildings, Agriculture, and Rivers and Harbors have to do with not only policy but appropriations of public money; very largely the latter function. All these except the first is controlled by the South. The other large com-

mittees are more generally administrative.

The significance of the control of these committees is apparent when our method of legislation is known. All questions of policy are first discussed in committee. This is not what the reader would expect; for the first step is to formulate the policy in a caucus of the majority members. Then it is taken in a per-functory way to the full committee. Then it is reported in the House caucus of the majority party—in this case the Demo-cratic—where the policy is determined. Then it comes to the full House, where the will of the majority of the caucus will be ratified by the force of the unit rule. When the matter reaches the floor for discussion the chairman of the committee has charge of it. He yields time for debate, directs discussion under the five-minute rule where amendment is allowed, and closes debate. In the committee he directs the hearings on the bill, in the caucus he represents the committee, and on the floor he controls the discussion. This makes the chairman of the committee an important figure in legislation. His importance is suggested to-day by the concern of the administration over the position of the chairman of the Ways and Means Committee, Claude Kitchin, on the President's program Mr. KITCHIN as floor leader could make of preparedness. trouble, if he were inclined so to do, by virtue of his position, extended him by vote of the Democratic caucus. The suggestion that Hay, of Virginia, chairman of the Committee on Military Affairs, be given charge of the program is due to his committee position. It might as well be given to PADGETT, of Tennessee, chairman of the Committee on Naval Affairs.

It will thus be noted that what the country's policy will be, as outlined by the Sixty-fourth Congress, will depend upon the influence of the chairmen, not one single one of whom comes from a State north of the Ohio River line. The Committee on Appropriations is not a policy-determining committee. If it be our naval policy, the chairman is from Tennessee. If it be our military policy, our chairman is from Virginia. If it be our banking policy, our chairman is from Virginia. If it be our foreign policy, our chairman is from Virginia. If it be our insular policy touching the Philippines, our chairman is from Virginia. If it be our interstate or foreign commerce, he is from Georgia. If it be our immigration policy, he is from Alabama. If it be our merchant marine, he is from Missouri. If it be our roads, he is from Missouri. If it be on railways and canals, he

is from Texas.

Then, on the other hand, on the question of appropriations there is one committee out of the seven such committees that is headed by a man from other sections save the South-FITZGERALD, of New York. But if there is an appropriation which there are 21 members. These committees are the real legislative committees. There are 40 other committees, each ranging from 3 to 15 members. Of these latter, the most im-

\$46,000,000, it will be under Sparkman, of Florida. If there is an appropriation for public buildings, the pork barrel (?) committee, it will be under CLARK, of Florida. If the appropriation for the Army as recommended by the Secretary of War to the amount of \$182,000,000 this coming year be made, it will be under HAX, of Virginia. If those for the Navy as recommended by the Secretary of the Navy be made, to the amount of \$217,-000,000, the appropriations will be under the direction of PADGETT, of Tennessee. If those be made for the Post Office Department as recommended by the Postmaster General to the amount of nearly \$300,000,000, it will be directed on the floor by Moon, of Tennessee. In other words, the Secretary of the Treasury in making his estimates for expenditures for the year 1916-17 places the enormous sum of \$1,127,000,000 as the amount needed. The committee which must direct the method of securing this revenue is the Ways and Means, under the leadership of Claude Kitchin, of North Carolina. The only committee of the list that is not to-day directed by the South is the Appropriation Committee, which goes to New York. This is an administrative committee, which is told by the various departments what it must appropriate to continue adminis-

The political committee, which might be named the strategical organ of the House, because it determines what matter may or may not be considered in the House, is the Committee on Rules. This most important and powerful committee is headed by HENRY, of Texas. To it leaders of movements must go if they wish to have considered matters of importance.

An analysis of this situation of the "South in the saddle"

is interesting. The eight Southern States here enumerated which have charge of these important matters contain:

First, In population, both white and colored, less than 20,000,000, according to the census of 1910, which is about one-

fifth of the country's people.

Second. In wealth they have less than \$25,000,000,000, or about one-seventh of the country's wealth.

Third. In representation in the House 97 Members.

It will be noticed that the State of Virginia controls four committees of the most significant possibilities—Foreign Affairs, Military Affairs, Banking and Currency, and Insular Affairs. This State, with a population in 1910 of 2,062,000 and wealth in 1912 of \$2,890,000,000, with 10 Representatives upon the floor of the House, has four times the importance in this Congress, if chairmanships have any meaning, than all the New England States, the Middle Atlantic States, the East and West States, the North Central States, and the Mountain and Pacific States combined, with a population in 1910 of 60,000,000 and wealth in 1912 amounting to nearly \$148,000,000,000. This State, with 10 Representatives, by virtue of the organization of the Sixty-fourth Congress, exerts more influence—four times over, if chairmanships of committees have any significance than all of New England, with 32 Representatives; New York, New Jersey, and Pennsylvania, with 90 Representatives; Ohio, Indiana, Illinois, Michigan, and Wisconsin, with 86 Representatives; Minnesota, Iowa, North Dakota, South Dakota, Nebraska, and Kansas, with 41 Representatives; and all the States west of the Rocky Mountains; making a total of 31 States with 282 Representatives.

These same States will cast in 1916 in the Electoral College 344 votes, or 75 more votes than are necessary to elect a President. It will be noted how these important committees are assigned: To Virginia, 4; to Texas, 3; to Tennessee, 3; North Carolina, 2; Missouri, 2; Florida, 2; Georgia, 1; South Carolina, 1. These 18 committees, including the Rules Committee, except 1, go to 8 Southern States. Of the remaining 39 less important committees, the chairmen of 23 go to Southern States. This leaves 16 committees, not including the Appropriations, for the rest of the country, as follows:

Name of committee.	Number of mem- bers.	Chairman from—
Elections No. 2 Mines and Mining Patents Invalid Pensions Pensions Alcoholic Liquor Traffic Expenditures in Treasury Department Expenditures in War Department Expenditures in Post Office Department Expenditures in Interior Department Expenditures in Department of Justice Expenditures in Department of Commerce Expenditures in Department of Commerce Expenditures in Department of Labor Public Buildings Printing	14 15 15 10 6 7 7 7 7	New Jersey, Illinois, Indiana, Ohio, Do, Illinois, Nebraska, Indiana, Illinois, Montana, Pennsylvania, New York, Do, Wisconsin, Indiana,

It will be readily noted that these committees have neither a policy-determining function, nor appropriations of money under their charge. They are simply perfunctory in administering the law falling under their province.

The revenues of the eight Southern States that control 17 committees amounted in the fiscal year of 1913, according to the Government reports, to \$53,000,000. That is a trifle over one-balf of the receipts in the single State of New York in the same year, that amount reaching \$101,000,000. The receipts of Virginia, which controls four of the greatest committees, are \$9,330,000, while States which show receipts to the amount of \$315,000,000, or thirty-five times as much, have control of no important committee. When the last Treasury report is examined with reference to the taxation for the support of the General Government, some striking facts are disclosed. The corporation and personal income taxes produced slightly over \$80,000,000 revenue. Of this amount, \$41,000,000 was personal income and \$39,000,000 from corporations. Of personal and corporation income the eight States last enumerated, controlling 18 committees, paid \$4,222,444, while New York alone paid \$27,638,743, or nearly seven times as much. The States of Massachusetts, Pennsylvania, Ohio, New Jersey, and Illinois paid \$23,585,447. The eight States that control these committees cast for President in 1912 1,855,169 votes, or 400,000 votes less than were cast in the two States of Ohio and Pennsylvania and only 270,000 more than were cast in the same year in the State of New York.

It is pertinent to ask an explanation of this rather anomalous condition. The South says what shall be done, and the other parts of the country do it. It declares for free trade, the best expression of which is the fatal Underwood bill. It courts the foreign market, because, as I said before, it sells threefourths of its chief product in it, and demands the right to buy in turn the cheap goods for consumption in the same market. Hence the Underwood bill. It is a fair sample of what the cotton States desire. It demands tax upon corporate industries, which falls least heavily upon it, for the simple reason that in-dustries are chiefly found outside of their States. They demand a personal income tax for a similar reason that protection of government is no less relished when the burdens of it fall upon others' shoulders. Now that their control of the days before the war has returned, the National Treasury shall be made to supply the various claims against the Government as well as the various wants of a section long kept away from the public crib. Thus the old doctrine of State's rights, so precious to the slaveholders prior to the war, has lost its meaning and the erstwhile dogmatism is now demanding Federal aid for every enterprise.

My fellow Republicans, if it be asked, Why all this? the answer lies in the caption, "The South is in the saddle" more truly than was ever the case prior to the sixties. This is not because of numbers, but simply because the Democratic Party, so far as control goes, is in the South. There are northern Democrats, it is true, but they follow the nod and beck of their southern leaders. As I once said, the southern leader takes snuff and the northern Member sneezes. In the light of the organization of the present administration in the House, Senate, and Executive. there should be small wonder over the character of legislation from which our country now suffers. This statement of fact is not an attack upon the South as a people. It is a compliment, rather, for the position of absolute control it has assumed. In other days my own State wielded a powerful influence in the Nation through its Shermans, its Garfields, and its McKinleys. Likewise New England, especially Maine and Massachusetts, exerted a powerful influence upon legislation. But it must be said this influence was national, never sectional. It disdained to ask a protection to the sugar growers of Louisiana and at the same time deny it to the wool growers of Ohio, or the wheat growers of the Northwest, or the lumbermen of the Rockies, or the fruit growers of the coast, or the manufacturer of New England. In a word, protection was demanded as a national policy, not a sectional advantage. Neither is it an indictment of the leaders of the South. They are, personally considered, as fine a lot of men as can be met anywhere. It is but a com-ment upon the complete control of the Nation's welfare by the free-trade section of the country and a suggestion of the impotence of the northern Democrat in the Nation's council and, as is always the case, the dominance of the South when we have a Democratic administration.

The Democratic Sixty-fourth Congress and its master, Woodrow Wilson, are headed to a fall, which will not be deferred beyond November, 1916, when the country will pronounce a verdict upon not only the southern free-trade propaganda, but it will pronounce judgment upon the northern Democrats as well who with abject servility follow this leadership in an un-Ameri-

can policy of the Underwood law.

Fellow Republicans, what the country demands to-day is a McKinley constructive policy and a leadership of the type of that of William McKinley. I have no doubt about the future, for, as in 1896, the country turned away from the vagaries of a Democratic administration, expelled from control the faddist carrying at the head of Democracy the banner of 16 to 1, and welcomed a Republican policy, led by a great American, so in 1916 the country, again suffering from a similar disorder and under similar leadership, will again turn away from a free-trade policy to welcome with open arms another McKinley protective policy under the leadership of another Republican who in the quiet between this and the next June days will be found, and who, I confidently believe, will lead the country to victory. In that great achievement no city will have a greater part than your wonderful industrial center in which the tariff club holds a conspicuous place. I thank you.

Child Labor.

EXTENSION OF REMARKS

HON. ROSCOE C. McCULLOCH, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. McCULLOCH. Mr. Speaker, under general leave granted for extension of remarks in the Record on the bill known as the child-labor bill, being H. R. 8234, to prevent interstate commerce in the products of child labor, and for other purposes, I desire to say that I favor the reforms that this bill seeks to bring about and I shall support it.

I shall not encumber the Record with a review of my reasons for supporting this bill, but I am making this statement at this time for the reason that to-night it will be necessary for me to leave for my home at Canton, Ohio, to attend the memorial celebration in honor of the life and memory of William McKinley.

Should a vote be taken on the child-labor bill on next Wednesday, it is probable that I will be unable to be present. I have made a careful investigation which convinces me that this bill will be passed by a large majority in this House and that my vote will be unnecessary to insure its passage. If I felt that my vote were necessary to pass the bill, I should remain.

Child Labor.

EXTENSION OF REMARKS

HON. JOUETT SHOUSE.

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. SHOUSE. Mr. Speaker, I favor the pending bill. I favor all legislation in the interest of the weak, the oppressed, the undefended, the helpless. I have listened with amusement to some of the arguments brought forward by the opponents of this measure. Practically without exception they hide behind the old excuse of "constitutionality." According to them, it is unconstitutional for the Federal Government to legislate on behalf of the child working in the factory on the ground that such legislation belongs to the separate States; and yet they are, for the most part, the same gentlemen who on yesterday held that it is entirely within the province of the same Federal Government to appropriate money for the building of roads within the different States. I favor good roads, and so voted, but far more strongly do I favor healthy, strong, robust children and the right of each to an education which a perverted industrial condition would deny

It is my privilege, Mr. Speaker, to represent a constituency that does not need this legislation. Kansas protects its women and children. In this as in other progressive laws Kansas has been a leader. But I should do injustice to the spirit of Kansas did I not seek to extend her blessings to other States of this Union where they are not enjoyed. I have no disposition to

malign the motives of those opposed to this bill, but I repeat merely an accepted fact when I say that all welfare legislation, whether State or National, has been and always will be opposed by a combination of greed and ignorance with some well-meaning but mistaken men.

This bill will pass. The sentiment of the House, reflecting the sentiment of the country, clearly favors it. And I appeal to its opponents to cease their tactics of delay, which in the end will be overcome and which serve simply to impede the legislative

progress of this body.

Preparedness.

Patriotism alone should control in considering the question of pre-

EXTENSION OF REMARKS

HON, WILLIAM E. HUMPHREY,

OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, February 1, 1916.

Mr. HUMPHREY of Washington. Mr. Speaker, a few days ago I gave an interview to the newspapers, in which I said: PREPAREDNESS.

"The question of 'preparedness' rises above party, politics, and partisanship. Patriotism alone should control in its consideration. I believe that the sole reason that there is any difference of opinion upon this question in this country to-day is because there is a difference of opinion as to whether or not there is any danger of our country being invaded by a foreign foe. If the danger of invasion is admitted, then all real Americans are in favor of immediate adequate preparedness. the danger of invasion exists, can not be mathematically demonstrated any more than 15 can be so demonstrated that it does not exist. The probability of invasion can only be ascertained by weighing the judgment of the thinking minds of the world.

WHAT NATION WILL ATTACK US?

"Those to-day who ask the question, 'Who will invade us?' those who ask the question, 'What nation is going to attack us?' must, upon reflection, be confounded with the weakness and the unfairness of their own question.

Suppose that the President of the United States did believe. from secret information or for any other reason, that we were in danger of being attacked by a certain nation, would it be good policy to shout this belief from the housetops? Would such action tend to produce peace or prevent possible war? What would be thought of a city council that would call the chief of police before them and say to him: 'Who is going to commit murder? Name the thief that we need fear. Tell us the identity of the man that is going to set fire to our property, or we will refuse to make any further appropriation for police This would be no more absurd and far less dangerous to the public interest than to demand that public officials publicly declare what nation they believe is likely to attack us. EXHAUSTION OF WARRING NATIONS.

"Many declare, as if it were an admitted fact, that no nation now engaged in the war in Europe, after the present deplorable struggle ends, will be in a condition to wage war because of exhaustion. But history does not support this position. The history of our own Nation, as does the history of the world, contradicts this statement. Never was this country so prepared for war, so powerful as compared with the other countries of the world, or so ready to fight any other nation as we were when we emerged from the awful conflict of the Civil War. France recognized this fact and promptly withdrew from Mexico when warned by us to do so. England recognized this fact and demonstrated it most conclusively in her action in the payment of the indemnity we demanded. At the close of the Civil War for the first and only time in our history we were the most powerful military Nation of the world.

PROBABILITY OF WAR.

"No one can demonstrate that war will come, as none can demonstrate to the contrary. The actions of men are not controlled by certainties but by probabilities. If we waited for certainties, progress would end and civilization would die. Stop any man to-day and you can convince him by statistics that none will dispute that the chances are a thousand to one that his house will never be burned. But does the wise man, for that reason, refuse to take out insurance?

"The facts of history demonstrate that there is far more probability of this Nation being invaded by a foreign enemy than that the average man's house will be burned. The probability of war is ten times greater than the probability of fire. Then is it not wisdom to take out the only national insur-

ance we have, which is preparation for defense?

"Based upon human experience, based upon all the facts of the past, it is the judgment of the great majority of the people of this country that we are in danger of war. This is the universal opinion of those whose opportunities, education, and training best qualify them to judge. We pay for and follow the advice of the expert when we are sick. We pay for and follow the advice of the expert when we are in legal trouble. Why should we fail to give weight to the military expert in this most vital of all questions?

But suppose the judgment of the majority of the American people upon this question is wrong; suppose that the judgment of high officials and military experts is wrong, and we follow this judgment and prepare; what have we lost? A mere pittance, far less than we pay for fire insurance, far less than we pay for police protection. But suppose that the majority judgment should prove to be correct and we fail to follow it and the

day of war comes. Then we lose all.

I live on the Pacific coast, in the Pacific Northwest, the most vulnerable point of all our country for a foreign foe. Suppose that the fears of the President, and of the Secretary of and of the Navy, and our Army officers, and of the War College, and of the military experts should come true and our country should be invaded, our towns destroyed, and our country overrun, and our citizens placed under tribute? Upon that day, as I stood and looked upon the blackened and smoking ruins of magnificent cities, as I saw the homeless and helpless, starving and shivering women and children, and as I stood there beside the new-made graves that marked the last resting place of thousands of our brave soldiers, the very flower of American manhood, that, untrained and poorly equipped, had fought in defense of their country and were slaughtered, what would it profit the dead, what comfort would it be to the living, and of what avail would it be to the country for me in that time of desolation to cry out that I never believed that this evil hour would ever come, and for the sake of a few dollars I had refused to do anything to cause that preparation that might have prevented this indescribable calamity.

"Is it possible that any public man can believe that he has the right to thus speculate in the blood of his fellows?

PREPAREDNESS PROVOKES WAR?

"We are constantly told that preparedness for war leads a nation into war; that if we are prepared to fight that we are going out and find some one to fight; that we are going to attack some other nation, justly or unjustly. If this is true, I ask, Is it not true of the other nations of the world? Surely we can not be different in that respect. The other nations are armed, and, therefore, according to this argument, they are going to fight some other nation. Are not these armed nations, then, imbued with this military spirit, likely to attack us? Those who take this position in reality argue that we can not trust ourselves against the temptation to attack others, but that we can trust others not to be tempted to attack us.

"This is a new doctrine. We are to have more confidence in the justice and righteousness of other nations than we have in ourselves. Surely reflection will show even those who make this argument its transparent and dangerous folly. Human nature has not yet reached any such stage of righteousness

INSPIRATION FOR PREPAREDNESS.

"It is doubtless true that there are some in this land whose enthusiasm for preparedness is stimulated by a sordid desire for gain. Creatures of this kind, no doubt, still inhabit the earth. It may be worthy of notice, however, that those in public life who screech loudest this indictment against a majority of the American people are those who hope to have the Government establish ammunition factories in their particular localities. Those who make these statements directly impugn the patriotism and the integrity of Woodrow Wilson, Theodore Roosevelt, and William H. Taft and all those who agree with them upon this question of preparedness. Those self-appointed guardians of the Nation's honor who make these accusations can hardly expect the American people to believe that Wilson and Roose velt and Taft and men of that type, when the fate of a nation is being weighed in the balance, are controlled by mercenary motives and that the professional pacifist of the Bryan type is preaching peace from motives of pure and unadulterated patriotism.

THE NAVY.

"The American people want preparation only as an insurance of peace, as a defense, and not for aggression. First of all and above all, we want to prepare so that no soldier can be landed on American soil. For these reasons, above all things else, we should have a great Navy. If we have a great Navy our safety is insured and the probability of war reduced to a minimum. Owing to our location, no other nation would ever dare to come to our shores with an invading army as long as our Navy was

undestroyed.

"For an insurance of peace, however, we must have a navy on both oceans. The Panama Canal will not remove this necessity. It is almost the same distance to a mile from Panama to Seattle that it is from Seattle to Yokohama. Or, in other words, a fleet in Japan is 10 days nearer Puget Sound and from 6 to 7 days nearer San Francisco than one on the Atlantic coast of our own country, even if the canal be used. As an insurance of peace we should have permanently upon the Pacific a naval fleet equal to that kept by any other nation upon that ocean. I mean by this not only battleships, but submarines, torpedo boats, aero-planes, and all the other necessary auxiliaries. The people of the Pacific coast are entitled to this, and they will not be satisfied with anything less.

LOSS OF LIFE IN NAVAL BATTLES.

"England swept the invincible Armada from the seas, forever destroyed the maritime greatness of Spain, and saved the Empire in the naval battle where more men were engaged and more men killed than in any other sea fight since the dawn of modern civilization, and yet she lost only a few thousand men.

"The heroic Nelson destroyed forever Napoleon's dream of universal empire at Trafalgar in the greatest fight that ever occurred between sail ships, and once more made secure the safety of the British Empire. But in this contest, that meant so much to his country and to the world, he lost but 1,690 men.

"As the historic struggle began at Tsu-Shima, Admiral Togo sent this message to his eager fleet, 'The rise or fall of the empire depends upon to-day's battle.' And he was right. That day decided the mastery of the seas in the Far East, brought safety to Japan, and made that little island empire a world power, and it cost the lives of only 116 men.

"The fight between the Scrapis and the Bon Homme Richard, where John Paul Jones, when asked to surrender, declared that he had 'just begun to fight,' was one of the most bloody and desperate battles ever waged on the sea. It placed the name of the brilliant American admiral among the immortals; yet in

that wonderful victory he lost only 150 men.

"On Lake Eric Commodore Perry fought one of the fiercest of all naval battles and won a triumph that vitally affected the world's history. 'We have met the enemy and they are ours,' announced one of the most important victories in our Nation's life, and it cost us the lives of only 27 men.
"Admiral Farragut passed by New Orleans, won one of the

greatest of naval victories, and struck one of the most deadly

blows against the Confederacy, but lost only 37 men.

"One of the history-making fights of the world was fought at Hampton Roads between the Merrimac and the Monitor. This fight changed the naval warfare of the world. It sealed the doom of the Confederacy. It is believed by many to have saved the Union. It changed decidedly the attitude of European nations toward the United States. Yet in this, among the greatest of all naval battles, not a single life was lost, but its result was beyond measure and beyond calculation.

'Spain was hopelessly defeated in our war with her when the Battle of Santiago ended. Santiago was the most complete naval victory ever fought on the ocean, and yet the Americans

"The Battle of Manila Bay brought eternal glory to our country and changed the map of the world, and not a single American life was lost.

"You take all the important naval fights in our Nation's history that have had such a tremendous effect upon our destiny and upon the destiny of the world and upon civilization, and we have not lost in all of them combined as many men as we have frequently lost in a single skirmish on land. And herein is one mighty advantage of the Navy. We can protect our country without great loss of life. A naval battle is also fought with little loss of property. The loss in a naval battle is as nothing compared with the loss that would follow if we were to be invaded. More men have been killed in Europe in the present war in a single day than have been killed in all the principal naval battles of the world put together. And yet the battles that have been fought on the seas have been as decisive in

bringing victory and in insuring national integrity and in making history as those that have been fought upon the land.

"Upon the British Navy to-day, as has been the case many times in the past, rests the fate of the British Empire. But for their navy that mighty empire would to-day be crumbling, and yet this defense, vital to the nation's existence, is costing but little in loss of life. What patriot beneath the British flag regrets all the millions that have been spent for the navy? All that clamor about the burden of cost is stilled in this day of

"A navy is not only the best but the cheapest protection. And especially it costs but comparatively little in blood and life. If the people of the country did but fully realize the advantages of a great Navy, the protection and security it brings to the country, and especially if they realized what it means in the way of saving life as compared with war upon land, they would demand that we build without a moment's delay the greatest Navy of the seas, and that we forever hold that position until the day of universal disarmament.

THE ARMY.

"The question of an army is more difficult. We must be prepared to repel an invader, but at the same time we want no great standing Army. We want no military spirit in this country. This is contrary to the genius of our institutions. It will be a sad epoch in our Nation's history when we have a large number of trained men whose sole purpose in life is war. We want protection, but we must have it without militarism. A reasonable increase in our standing Army is desirable, for we have use for it as a national police force in time of peace as well as in time of war, and in time of war they form the vital nucleus for an army of defense.

"But this Regular Army is not the great force we must depend upon in time of national disaster. Neither is there a more dangerous and bloody folly than that we can depend upon an army that will rise up over night. Granted that the patriotism of the American people would give us a million volunteers overnight in time of need, they would have nothing to fight with, they would not know how to use weapons even if they had them, nor how to protect themselves from deadly disease upon the march and in camp. It would not be an army; it would be a mob. In a contest against trained men, the result would not

be a battle but a slaughter.

NATIONAL GUARD.

"The failure of the President to mention the National Guard in his message to Congress upon preparedness, it seems to me, is greatly to be regretted. This could not have been an over sight on the part of the President, for the report of the Secretary of War that he had before him when preparing his mes sage refer at length to the National Guard. I believe the National Guard, notwithstanding its constitutional limitations, is of the highest value to the Nation. The results in Europe show that the men who have had the experience and training corresponding to that of our National Guard can in a few become first-class soldiers. I want to see the National Guard built up, strengthened, and increased. I hope the Government will give it every reasonable assistance and encouragement, financially and otherwise.

But neither the Regular Army nor the continental army nor the National Guard, nor all combined, will solve the problem of national defense and bring the security and the guaranty of peace that we desire. I doubt if any plan based upon voluntary service or service for pay will ever be successful.

GENERAL COMPULSORY SERVICE.

"Napoleon said, 'Compulsory service is the fairest, the kind-est, and the most democratic means of raising men.' That is the judgment of one of the greatest of all human intellects upon the subject about which he was best qualified to speak. Since then the experience of the world has demonstrated most emphatically the wisdom of his opinion.

Not only is compulsory service the fairest, kindest, and most democratic, but it is the cheapest and, far more important, gives defense without militarism. Switzerland, Australia, and New Zealand demonstrate this to-day. It is true that none of these systems are entirely suited to our country, and it is true that none of them could be put immediately into force. But some method embracing the foundation principles of these systems should be adopted and worked out as soon as possible. believe that this is the desire of the American people, and that desire is continually growing stronger. Universal service, with no exemption except that based on physical unfitness, is the sure foundation upon which to build national defense without the danger of militarism and without tremendous financial burdens that a standing army certainly brings.

"Service to the country should not be placed upon the mercenary basis of hire. Military duty should be required as a duty that all young men owe to their country. The son of the rich man and the son of the poor man should be required to give the same service and should receive the same reward. There should be no option in patriotism in this country. There should be no option as to who should fight for the flag. is there any room in this country for that sentiment of national death that the brave, the courageous, and the patriotic should fight in order that the mollycoddle, the pusillanimous, and the unpatriotic should live in ease and security.

"Universal compulsory military service would destroy all cast and class and would prevent all feeling of class antagonism, always dangerous in civil life and even more dangerous be tween the civilian and the soldier. Under this method young men of all classes and of all conditions would touch elbows, have a common understanding and a common training, a common purpose, and a common interest in their country. ing could do as much to destroy all class distinction in all walks of life and develop a universal love of country as this method of universal training of the young men of our Nation. This would give us millions of men that, in time of their country's need, would rally to the flag ready and prepared to fight. At the same time these young men, while trained for war, would not be the professional soldiers; they would not feel that their purpose in life was to fight. They would have all the anxlety and the desire for peace as other civilians, and their interest would be as great as that of any other citizen in maintaining peace. They would feel that they should fight only in their country's defense. In other words, by this system we can have preparedness without militarism, and that is what the people of this country want. Such system and a great navy would reduce the danger of war as low as possible for human ingenuity to reduce it, and if, unfortunately, it did come, we would then be prepared to meet it and defend ourselves without the useless slaughter of thousands of our bravest and best young men because they were untrained and unequipped, a mistake that has so unhappily characterized all our wars in the past.

MILITARY TRAINING IN SCHOOLS AND COLLEGES.

"The system that seems to meet the most general approval of those who have given the question most intelligent study is that this training should be in our colleges and schools; that it should be based on physical fitness alone; that it should be required of every able-bodied citizen. They believe that the schoolboys of this country should receive the rudiments of military drill and military discipline; that they should know how to shoot; that they should at least know which end of the gun to put to their shoulder; that they should know how to march and how to make camp and how to care for themselves in camp. In all our wars the disease of the camp has been more deadly than the bullets of the enemy. Our soldiers did not know the art of living in the field. One of the foremost soldiers of the country recently stated that if we were to call together an untrained army that thousands of our best young men would needlessly die in camp before they could be taught how to care for themselves.

'If war never came, would it not be a good thing for all the strong and healthy young men in this country to have this discipline that comes from the rudiments of military training? Would it not be good for them physically and morally and help them to better perform the duties of civil life? Being trained civilians, not professional soldiers, their interest being in civil life and not in war, knowing that in time of war they must fight, they would not only be a protection in time of necessity but a great power for peace. They would be the last to want an

uniust war.

PREFERENCE FOR THE SOLDIER.

"I make this suggestion to the American people: Might it not be well to give the men who prepare to serve their country in the National Guard, the continental army, and in the schools or colleges preference in the service of their country in civil life? If these men prepare to serve the country in time of war, why should they not be given preference in time of peace? We give preference in the Government service to the old soldier, and wisely and justly so. Why not give it to those that prepare to defend the country? This would be but merited recognition. It would show their country's appreciation. It would be of advantage to them, and it would be an advantage to the Nation. It would cost the country nothing. Such preference would be of great value in promoting enthusiasm in the soldier and in removing the objection of many to entering the service.

BURDEN OF COST.

"We hear much protest to-day against the financial burden that preparedness will bring. I submit I have little patience with this mercenary plea. The burden of cost brought by our military institutions is greatly and grossly exaggerated. figures in the aggregate may look large, but they are, in fact, very small when compared with our national wealth. Who feels the financial burden in normal times of maintaining our Navy? It is true that we spend millions of dollars annually for this purpose, but our Navy is built at home; it is maintained at home; all of the millions given by the people to build the Navy are repaid to the people again in wages and for supplies

"The maintenance of a Navy, in dollars and cents, is the cheapest insurance that is carried-far cheaper than the individual insurance. You take the cost of our Navy for the last 110 years, and it has annually been only \$0.0012 for each dollar of the valuation of the wealth of the country. For the last decade prior to 1910 it was only \$0.00091 per annum for each dollar. For the last three years it has been very much less

than for the decade mentioned.

"The cost of our Army has been but little more. What candid American citizen can look upon these facts and complain of the

financial burden brought by our Army or our Navy?

"A single battle would cost us more than it would cost to construct a great Navy. A single year of war would cost more than a century of preparedness. A single great war would cost more than a thousand years of being ready for war. Who will stop to ask the cost of preparedness on the day of battle? Who will measure in money the value of the dead or the agony of the wounded and dying? Who will measure in money the suffering and the privations of the widow and orphan? What is human life and human blood and human suffering worth measuring in gold? The American people have little patience with this protest against the cost of preparedness. It is not a question of cost. It is solely a question, Will preparedness reduce the chances of war?'

Child Labor-Keating Bill.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. SIEGEL. Mr. Speaker, being a firm believer in giving every child an equal opportunity to develop his strength not only mentally but physically as well, I shall vote in favor of the child-labor bill.

We can not sap the strength of the infant and simply count the profit in dollars and cents. We must broaden our horizon and see the consequence 20 to 30 years hence, when these children now in the factories and mills shall have grown up into either manhood or womanhood. Is there anyone here who can truly say that we shall not have sustained a great loss to the welfare of the country if these children shall not grow up with an optimistic view of things about them?

How can we anticipate the proper inculcation of love of our institutions and respect for our flag if our sole thought as to these children is, how much are they worth to the owner of a

factory or mill,

I had looked forward to the time when the owners of both factory and mill would step to the front and acknowledge that the time had come for the enactment of legislation embodied in the measure now before us.

We would have been glad to welcome this demonstration to the world that the American manufacturers and mill owners were more liberal in their treatment of their employees, but

apparently we are doomed to disappointment.

man, woman, or child. No opposition comes from the owners of mills or factories in such States.

In the States where immigrants are scarce there comes forth the most strenuous and greatest opposition to the enactment of laws that would reduce the hours of labor and give the child a chance to be in school instead of the mill; an opportunity to grow strong instead of losing his strength, and the ability to become a good law-abiding citizen, satisfied and contented with his surroundings, instead of a disgruntled, pessimistic, and dissatisfied individual.

Commissioner Royal Meeker, of the United States Bureau of Labor Statistics, has prepared for the World Almanac for 1916 the following summary of labor legislation revised to date, and, believing it to be invaluable, I herewith read it:

LAROR LEGISLATION.

BOYCOTTING, BLACKLISTING, AND INTIMIDATION LAWS.

The States having laws prohibiting boycotting in terms are Alabama, Colorado, Illinois, Indiana, and Texas.

The States having laws prohibiting blacklisting in terms are Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Florida, Illinois, Indiana, Iowa, Kansas, Minnesota, Mississippi (applies to telegraph operators only), Missouri, Montana, Nevada, New Mexico, North Carolina, North Dakota, Oklahoma, Oregon, Texas, Utah, Virginia, Washington, and Wisconsin.

Boycotting and plaketing by pages of the control of the

North Dakota, Oklahoma, Oregon, Texas, Utan, Virginia, Washington, and Wisconsin.

Boycotting and picketing by peaceful and lawful means are declared legal by a Federal statute.

A number of States have laws concerning intimidation, conspiracy against workingmen, and interference with employment, viz: Alabama, Colorado, Connecticut, Delaware, Florida, Georgia, Idaho (applies to mine employees only), Illinois, Kanras, Kentucky, Louislana, Maine, Massachusetts, Michigan, Minnesotta, Mississippi, Missouri, Nevada, New Hampshire, New Jersey, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, Porto Rico, Rhode Island, South Dakota, Texas, Utah, Vermont, Washington, West Virginia, and Wisconsin.

In the following States it is unlawful for an employee not to join or become a member of a labor organization, as a condition of employment: California, Colorado, Connecticut, Idaho, Indiana, Louisiana, Massachusetts, Minnesota, Mississippi (applies to telegraph operators only), Nevada, New Jersey, Ohlo, Oklahoma, Oregon, Pennsylvania, Porto Rico, South Carolina, Utah, and Wisconsin.

EIGHT-HOUR LAWS.

Alaska: Eight hours constitutes a day's labor on all public works and in all mines and workings, smelting and reduction works, and at coke

ovens.

Arizona: Eight hours constitute a day's labor on all public works and in all mines and workings, smelting and reduction works, blast furnaces, roiling mills, etc.

Arkansas: Eight hours constitute a day's work on public highways and bridges and for railway telegraph operators.

California: Unless otherwise expressly stipulated, eight hours constitute a day's work. The time of service of all laborers, workmen, and mechanics employed upon any public works of, or work done for, the State, or for any political suddivision thereof, whether the work is to be done by contract or otherwise, and of employees in mines and smelters is limited and restricted to eight hours in any one calendar day.

Colorado: A day's work for all workingmen employed by the State, or

colorado: A day's work for all workingmen employed by the State, or any county, township, school district, municipality, or incorporated town, and for all employees in underground or open-cut mines or workings, and in smelting and refining works is restricted to eight hours.

Connecticut: Eight hours of labor constitute a lawful day's work unless otherwise agreed. Railroad telegraph operators, controlling the movement of trains, may work but eight hours, except at stations kept open only in the daytime. Engineers, firemen, machinists, and other mechanics employed in State institutions may work but eight hours, except in case of emergency.

Delaware: Eight hours constitute a lawful day's work for all municipal employees of the city of Wilmington.

District of Columbia; A day's work for all laborers and mechanics employed by the District of Columbia, or by any contractor or subcontractor upon any public works of the District, is limited to eight hours. Hawaii: For all mechanics, clerks, laborers, and other employees on public works and in public offices eight hours of actual service constitute a day's work.

Idaho: Eight hours' actual work constitute a lawful day's labor for

a day's work.

Idaho: Eight hours' actual work constitute a lawful day's labor for manual laborers employed by the day on all State, county, and municipal works. Labor in mines and smelters is limited to eight hours per day. Illinois: Eight hours are a legal day's work in all mechanical employments, except on farms, and when otherwise agreed; the law does not apply to service by the year, month, or week. Eight hours constitute a day's labor on the public highways.

Indiana: Eight hours of labor constitute a legal day's work on the public roads, and for all classes of mechanics, workingmen, and laborers, excepting those engaged in agricultural and domestic labor. Overwork by agreement and for extra compensation is permitted.

Iowa: Eight hours constitute a day's labor on the public roads. Kansas: Eight hours are a day's work for all laborers, mechanics, or other persons employed by or on behalf of the State or any county, city, township, or other municipality.

Kentucky: Eight hours constitute a day's work on all public works.

Kentucky: Eight hours constitute a day's work on all public works

apparently we are doomed to disappointment.

Under those circumstances, and when men will not rise to the occasion, then we must meet the issue and make into law what should be the ordinary rule of conduct amongst employers of labor in the twentieth century.

I feel quite confident that in years hence these very mill and factory owners will wonder how it was that they did not have the foresight to favor instead of oppose the enactment of a measure of this kind.

It is remarkable perhaps, but worthy of note, that in the very States where the immigrant has settled in large numbers there we find legislation beneficial to the laborer, whether he be

does not apply to agricultural laborers. It is unlawful for employers to work their employees longer than eight hours per day in mines and smelters, or as train dispatchers, etc., on railroads, unless the office is open only during the daytime. Eight hours are a day's labor on highways, and on all public works in cities of the second class.

Montana: Eight hours constitute a legal day's work for persons engaged to operate or handle hoisting engines at mines. The law applies only to such plants as are in operation 16 or more hours per day, or at or in mines where the engine develops 15 or more hours per day, or at or in mines where the engine develops 15 or more hours per day, or at or in mines where the engine develops 15 or more hours per day, or at or in mines where the engine develops 15 or more hours per day, or at or in mines where the engine develops 15 or more hours per day, or at or in mines where the engine develops 15 or more hours per day, and in smelters, underground mines, and in railroad and other tunnels is limited to eight hours.

Nebraska: Eight hours constitute a day's work on public roads and on all public works in cities of the first class.

Nevada: For labor on public highways, in and about all mines, in smelters, plaster and cement mills, as train dispatchers, etc., on railroads, and on all works and undertakings carried on or aided by the State, county, or municipal governments the hours of labor are fixed at eight per day.

New Jersey: Eight hours is the limit of a day's work by any person employed by or on behalf of the State or any municipality thereof.

New Mexico: Eight hours constitute a day's labor in all employment by or on behalf of the State or municipality.

New York: Eight hours constitute a day's work on highways, and on work done by or for the State, or a municipal corporation, whether directly by contractors or subcontractors; also for all classes of employees, except in farm or domestic labor, though overwork for extra pay is permitted in private employments.

North Dakota

Eight hours constitute a day's labor for all mechanics, workmen, and laborers in the employ of the State, or of any municipal corporation therein, or otherwise engaged on public works. This act shall be deemed to apply to employees of contractors. Engineers holsting workmen at anthracite-coal mines may work but eight hours per day. Philippine Islands: Eight hours constitute a day's work on highways. Porto Rico: No laborer may be compelled to work more than eight hours per day on public works.

South Dakota: For labor on public highways a day's work is fixed at eight hours.

eight hours.

Tennessee: Eight hours shall be a day's work on the highways.

Texnessee: Eight hours constitute a day's work on the highways and by train dispatchers, etc., except at stations where but one operator is employed.

Utah: Eight hours constitute a day's labor on all works carried on or alded by the State, county, or municipal governments, and in all underground mines or workings, and in smelters and all other establishments for the reduction of ores.

Washington: Eight hours in any calendar day shall constitute a day's work on any work done for the State or for any county or municipality and in underground coal mines.

West Virginia: Eight hours shall constitute a day's work for all laborers, workmen, and mechanics who may be employed by or on behalf of the State, and for telegraph operators directing the movement of trains where 3 or more passenger or 10 or more freight trains pass in 24 hours.

Wisconsin: In all engagements to labor in any manufacturing or mechanical business, where there is no express contract to the contrary, a day's work shall consist of eight hours, but the law does not apply to contracts for labor by the week month, or year. Eight hours constitute a day's labor on the public highways. Employees on public works and train dispatchers may be employed but eight hours per day.

Wyoming: Eight hours' actual work constitute a legal day's labor in all underground mines, in smelters, and on all State and municipal works.

United States: A day's work for all laborers, workmen, and mechanics who may be employed by the United States, or by any contractor or subcontractor upon any of the public works of the United States, including dredging and rock excavation in river and harbor work, is limited to eight hours.

is undepiable

I take the liberty of reading the following editorial from the Washington Post of February 2, 1916, which is as follows:

That the press of the country is in favor of this legislation is undeniable.

I take the liberty of reading the following editorial from the Vashington Post of February 2, 1916, which is as follows:

PROTECTING CHILDREN.

The Children's Bureau of the Federal Department of Labor recently ointed out that a decided tendency is to be noted in workmen's comensation legislation to penalize manufacturers who illegally employ oildren. The comment was made that an employer, whenever he emloys a child illegally, now runs a risk far greater than that of a fine other the child-labor law.

The document issued by the children's bureau contains a series of The Children's Bureau of the Federal Department of Labor recently pointed out that a decided tendency is to be noted in workmen's compensation legislation to penalize manufacturers who illegally employ children. The comment was made that an employer, whenever he employs a child illegally, now runs a risk far greater than that of a fine under the child-labor law.

The document issued by the children's bureau contains a series of analytical tables which show that there are only nine political divisions which have no provision of any kind for a 14-year or higher wages limit in factories, but that, on the other hand, there are at least 18 political divisions which allow the age limit to be lower legally in special cases or for special occupations. At this time, when Con-

I sincerely hope that this measure will receive the support, as I feel it deserves, of all who desire to see humanity bettered and the Nation gain in strength, morally, physically, and menChild Labor.

EXTENSION OF REMARKS

HON. EDWARD KEATING. OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. KEATING. Mr. Speaker, the pending legislation strikes at a great evil—the employment of children in the mines, quarries, mills, factories, canneries, and other manufacturing establishments of the United States. It seeks to bar the products of such child labor from the channels of interstate com-

In effect this makes the Federal Government say to the various States which compose the Union: "If you wish to tolerate this immoral, this pestilential thing—child labor—you may do so, but you shall not spread the contagion. [Applause.] You may weave the bodies and souls of your children into the warp and woof of your cloth, but can not exchange that tainted cloth for the gold of citizens living in other States more considerate of the interests of their little ones." [Applause.]

The proposed legislation is needed, the standards it estab-

lishes are reasonable and its provisions square with the Constitution of our country.

NEED OF THE LEGISLATION.

First, as to the need of the legislation. Perhaps the most convincing bit of evidence on that point would be the figures compiled by the United States Census Bureau showing the number of children employed in industries affected by the bill. Here are the figures, according to the census of 1910, disregarding the fact that some of the States have improved their legis-lation since 1910, notably Massachusetts, New Jersey, Pennsylvania, Alabama, and Georgia:

Number of children employed in 1910 in industries affected by the bill:

136 --- 1 72-4

	Manufacturing and mechanical (specified occu- pations).		Extraction of minerals (speci- fied occupa- tions).	
	10-13 years.	14-15 years.	10-13 years.	14-15 years.

Wisconsin	81	3,670	2	16
Wyoming		17	1	39

The census of 1910 shows a distribution of the children of the several States among the industries that will be more or less affected by the operation of this bill if enacted into law, according to the following table:

	Children reported.		
Industry.		14 to 15.	Total.
Quarries Liquor and beverage industries. Chemical and allied industries. Paper and pulp industries Metal industries (except iron and steel). Clay, glass, and stone industries. Cigar and tobacco factories. Food and kindred industries Leather industries. Printing and book binding Mines Iron and steel industries Lumber and furniture industries Clothing industries. Clothing industries. Miscellaneous industries. Textile industries. Textile industries.	154 252 1,234 1,843 972 406 622 2,241 951 4,367	1,120 1,327 3,132 4,652 6,971 9,161 8,723 10,245 11,592 11,482 14,877 19,518 17,418 22,158 28,093 65,888	1, 344 1, 442 3, 316 4, 806 7, 223 10, 395 10, 566 11, 217 11, 988 12, 104 17, 118 20, 469 21, 786 23, 271 30, 155 80, 530

More than 200,000 children for whom this bill will be an industrial Magna Charta!

TESTIMONY OF SOCIAL WORKERS.

Then we have the testimony of the men and women who have devoted their lives to the consideration of the problems of child labor. They tell us that, when they appear before the legislatures of the various States and plead for legislation protecting the interests of the little ones, they are met with the argument that it is unfair to ask one State to establish standards higher than those maintained in the neighboring States. On that point let me read to you from the testimony of Mrs. Florence Kelley, general secretary of the National Consumers' League, given before a committee of this House. Mrs. Kelley is the daughter of a former Member of this House, one of the most distinguished sons of Pennsylvania. She is known from ocean as the capable and indefatigable champion of oppressed childhood and womanhood. This is what she says:

oppressed childhood and womanhood. This is what she says:

It is over 30 years since I enlisted in the effort to get better legislation for the protection of the children. I believe there are more children under 16 years old working to-day in dangerous occupations than there were when I began, because our manufacturing industries have increased stupendously and our State legislation has halted. There has been no unity in our progress. The 48 States suggest the legs of a centipede, some going forward and some paralyzed, the total progress lamentably slow. This Republic is one, and we can not go on forever with a favored class of children in the Northwestern States, where there is a requirement that the children shall not work until they are 15 years of age, and they are kept in school throughout the eighth grade, while in the southern cotton-manufacturing States there is no compulsory education, and either entire lack of legislation by the State or a collection of nugatory laws.

YIOLATIONS OF LAW NOT PUNISHED.

VIOLATIONS OF LAW NOT PUNISHED.

Then we have the testimony of Mr. W. H. Swift, who represents the National Child Labor Committee in North and South Carolina. Speaking of the need of Federal legislation, Mr. Swift testified before the Labor Committee of this House:

We have had this law protecting children up to 12 since 1905. I have seen many violations of it. So far as I now know, there has been in my State but one prosecution for the employment of a young child. The reason of it is because the manufacturers are influential.

The reason we do not do it is this: North Carolina and South Carolina are adjacent. If in North Carolina we undertook to change the age limit and the hours we are met with the proposition that South Carolina has not done it, and the people will move across the line, and then when we go to South Carolina and suggest that we change the age limit they say North Carolina will take all our wealth. I can not see any way by which it can be done successfully except by the Federal Government, and it will be done wisely in that way.

Mr. Specker, I might so on indefinitely quoting the utter-

Mr. Speaker, I might go on indefinitely quoting the utterances of the leaders of social welfare work on this subject. I will not do so because it is unnecessary. They are unanimous in declaring that if we are to have effective child-labor legislation in this country relief must come through the National Government

And I might say with perfect truth that that is the view entertained by the opponents of this bill. They are making a "last-ditch" stand against Federal legislation, because they know it will be effective legislation, that it will eradicate the

They have succeeded in evading and in a measure nullifying State legislation. They do not believe they would be so successful in an attempt to dodge national legislation,

WILLING TO BRIBE OFFICIALS.

On that point permit me to submit the very interesting testimony of one of the star witnesses placed on the stand by the opponents of this measure. I refer to Mr. David Clark, of Charlotte, N. C., editor of the Southern Textile Bulletin, the organ of the cotton mill interests of the South. While Mr. Clark was on the stand before the Labor Committee the following dialogue occurred:

ing dialogue occurred:

Mr. Krating. Do you think that when Gov. Kitchin, in his message of 1911, stated to the legislature. "I renew my recommendation of two years ago that factory inspection be provided to insure better enforcement of our law with respect to factory conditions and labor," that the recommendation was not justified and that the legislature was justified in refusing to act on it?

Mr. Clark. I have no doubt that Gov. Kitchin felt justified.

Mr. Krating. But you did not?

Mr. Clark. No, sir. The gentlemen here to-day do not favor it, at least. Some people favor Government inspection and some do not. Personally I do not, because it is largely a grafter proposition?

Mr. London. What do you mean by a grafting proposition?

Mr. Clark. I am not prepared to give you the facts, but my understanding is that if you pay you get a clean bill of health.

Mr. London. You believe that your mill owners would resort to corruption in order to escape a fair inspection?

Mr. Clark. Not more than any others; not more than was necessary.

Mr. London. You mean they would resort to corruption of a Government official?

Mr. Clark. Well, yes; if they were held up.

You will notice, gentlemen, that Mr. Clark, the spokesman

You will notice, gentlemen, that Mr. Clark, the spokesman for the cotton-mill interests, frankly declares that those interests are opposed to Government inspection and, therefore, to Government enforcement of child-labor legislation, and, if necessary to avoid such inspection and enforcement, they would bribe the sworn officers of the Government.

Under the circumstances is it any wonder that in the State of North Carolina practically no attempt is made to enforce the child-labor law? And is it any wonder that Mr. Swift, the secretary of the National Child Labor Committee, assures us that unless we secure Federal legislation we need not expect a change in conditions in North Carolina for many years to come?

STANDARDS OF THE BILL.

I have said that the standards established by this bill are reasonable. What are those standards. First, that children under 16 years shall not be employed in mines or quarries. Second, that children under 14 years shall not be employed in mills, factories, canneries, or other manufacturing establishments. Third, that children between 14 and 16 years shall not be employed in mills, factories, canneries, or other manufacturing establishments for more than 8 hours a day or 6 days in a week or at night.

Mr. Speaker, the majority of the American people, through their State legislatures, have placed the seal of their approval on those standards. Every provision of the pending legislation is now on the statute books of States containing more than 52

per cent of the total population of the Union.

For two successive Congresses your Committee on Labor has held public hearings on this measure. Notice of such hearings has been sent broadcast throughout the land, and yet the only manufacturers to appear before the committee in opposition to the bill have been the cotton-mill owners from a limited area in four or five Southern States.

So far as the evidence before this House is concerned, I am justified in declaring that 95 per cent of the business interests of this country recognize the standards set up in this bill as

humane and reasonable.

INDORSED BY MEDICAL ASSOCIATION.

The American Medical Association, at its annual meeting in Atlantic City in June, 1914—which meeting was attended by 6,000 of the most prominent physicians from every section of the United States-adopted the following resolution without a dissenting vote:

dissenting vote:

Whereas many thousands of children under 16 years of age are employed in the United States in gainful occupation, under improper conditions, resulting in the impairment of their health and future well-being; and
Whereas 19 States and the Congress of the United States, for the District of Columbia, have already enacted laws limiting the hours of labor for children under 16 to eight hours a day, and prohibiting such children from working at night or at dangerous occupations: Now, therefore, be it

Resolved by the American Medical Association, That we commend those States which have adopted legislation to protect children under 16 years of age from the disastrous consequences of unsuitable work and bad industrial conditions, and urge all other States to establish for the benefit of such children a work day not to exceed eight hours and the prohibition of labor at night or in any hazardous employments; and to this end we recommend that all State medical societies affiliated with this association, and the medical profession generally, advocate the passage of such laws by the legislatures of their respective States.

FARMERS AND UNIONS FOR IT.

PARMERS AND UNIONS FOR IT.

Every labor organization in the country has indorsed and is actively supporting this measure, and the Farmers' Union, the most extensive and powerful association of agriculturists in the South, at its annual convention in Fort Worth, Tex., on September 2, 1914, unanimously adopted the following resolution:

Whereas the National Farmers' Union believes in properly protecting the physical, mental, and moral welfare of the child in order that its younger years may be devoted to the securing of that degree of education which befits American citizens and enables the child to be properly prepared for the duties of life;

Whereas there is now pending in the National Congress H. R. 12292, known as the Palmer-Owen bill, which prohibits manufactured goods from being admitted to interstate commerce which have been made in factories which employ children under the age of 14 years, or which work children under the age of 16 years more than eight hours per day, or at night: Therefore be it

Resolved, That we indorse this bill and demand its passage by the present Congress, and that copies of this resolution be sent to the Clerks of the House and Senate, the chairman of the Committee on Labor, and the President of the United States.

" CHILD-LABOR SUNDAY."

Last Sunday 6,000 churches, from Maine to California, observed "Child-labor Sunday," and pastors and congregations pleaded for the enactment of this legislation.

The women's clubs of the country and other similar organizations have been earnestly championing this bill. They have fairly deluged Members with letters, telegrams, and petitions.

Mr. Speaker, the supporters of this bill have brought about what may be described as a political miracle—they have placed Theodore Roosevelt and William Jennings Bryan on one platform, because both of these distinguished gentlemen have earnestly indorsed the pending measure. Permit me to quote their expressions.

Theodore Roosevelt, ex-President of the United States:

I heartily favor the child-labor bill. I sincerely hope it will pass both ouses of Congress this year.

William Jennings Bryan:

I have for many years been an advocate of legislation protecting children from the evils of the child-labor system, and believe it is entirely proper to use the power of the Government over interstate commerce to aid in securing relief from the evils of the present system.

I wish to insert at this point indorsements of this bill received from men and women who are obviously the representatives of the best thought and endeavor in the country.

William Draper Lewis, dean University of Pennsylvania Law

The fact that all our great industrial States have at present on their statute books laws providing at least as great and in many cases much greater protection for children than that provided in the contemplated national bill is conclusive evidence that the power of the National Government is only asked to be used to prevent a few States, blinded to their own and the Nation's permanent interests, from obtaining a temporary unfair advantage. I have no doubt as to the constitutionality of the proposed act proposed act.

Judge Joseph McCullough, Greenville, S. C.:

I favor it not only because I believe that the mill is not the proper place for a child of tender years but in the interest of the mills themselves. I further believe that the best way to secure an effective child-labor law is for the Federal Government to legislate upon the subject, as it does upon other subjects affecting interstate community interests.

Nathan William MacChesney, president Illinois Bar Asso-

Child labor is a national menace that should be dealt with by a police regulation directed to the health, safety, and morals of the people whose labor is employed upon products of interstate commerce, and should be directed and controlled by the Federal Government.

Huston Quin, Louisville, Ky.:

I certainly trust it will pass both Houses.

Grafton D. Cushing, Boston, Mass.:

My legislative experience has shown me that a great advance could be made in conditions of employment if national laws could only supersede the various laws of the different States. I feel sure that the sentiment of this State is in favor of national child-labor legislation.

Thomas I. Parkinson, Columbia University Law School:

If this legislation is desirable, certainly it ought not to be held up by Congress merely because of the possibility of its being held unconstitutional. No one can say that it is unconstitutional. If the mere fear of its unconstitutionality were to prevent the passage of legislation by Congress there would be no development of our constitutional law.

MANUFACTURERS AND BUSINESS MEN.

Wallace B. Rogers, president Laurel Cotton Mills, Laurel,

I think the soundest solution of the child-labor problem is national compulsory education. Probably this is impossible now, so a fair and equitable child-labor law is to be the stepping-stone to compulsory education. As one interested in manufacturing. I favor such action. No particular hardship would accrue to any individual operator so long as all were laboring under the same condition. I have reached the conclusion that the time has come to believe that any industry which can not survive except by the employment of children under reasonable age should be abolished.

D. H. Wogner, Wanner, Camput Co., Paidgework, Conn.

D. H. Warner, Warner Corset Co., Bridgeport, Conn.:

My experience in handling labor has worked out a very definite conclusion as to the absolute detriment to the whole labor situation in the use of the labor of children, undeveloped mentally or physically, either from the employee's viewpoint or the employer's. It would be decidedly just to have the law controlling a national law, so that all interstate competition would be upon an equal footing. I sincerely hope this bill may become a law.

A. W. McAlister, Greensboro, N. C.:

It seems to me to be a wise measure and one that will ultimately commend itself to our lawmakers,

Adolph Lewisohn, New York City:

The protection and safeguarding of the children is of vital importance to the welfare of the entire community, and will have a farreaching effect upon future generations. I believe that to have it really become effective it should be taken up by the Federal Government.

Isaac N. Seligman, New York City:

I can conceive of nothing more important than the object of the Keating-Owen bill, and am firmly convinced that it should become one of the Federal laws. Its appearance on the statute book would, in my opinion, inaugurate a new era in the annals of the abolition of child labor in the United States.

POLITICAL LEADERS AND GOVERNMENT OFFICIALS.

A. Mitchell Palmer, Stroudsburg, Pa.:

I am satisfied that when this Federal child-labor law goes to the Supreme Court, as it must some day, because these exploiters of child labor will move heaven and earth to prevent such a law from being put into operation, the court will say that if the method of production be such as to create an atmosphere around the factory and mill which will stunt the growth of the little children employed, the prohibition of that article in interstate commerce is entirely within the rights and powers of the American Congress.

HENRY CABOT LODGE, United States Senator from Massachusetts:

I have always taken a deep interest in child-labor legislation, and I trust it may be possible to secure the passage of a suitable bill by the present Congress. It is needless to say that I shall do all in my power in that direction.

Julia C. Lathrop, Chief Children's Bureau, United States Department of Labor:

The passage of such a measure as this would undoubtedly signalize a distinct and immediate advance in the provisions for the hygiene and education of children.

William C. Redfield, Secretary of Commerce:

I believe that in every practicable and legal way child labor should be forbidden under 14 years of age, or in certain more exhausting industries under 16 years of age, and that whenever it is permitted it should be carefully restricted as to length of daily labor and as to night work. I think that the public interest not only requires this but that in any broad viewpoint the welfare of industry requires it also.

ORGANIZED LABOR.

John P. Frey, International Molders' Journal, Cincinnati, Ohio:

The children are the Nation's greatest asset; they are the ones who in the next half generation will take our places. * * * The time has come to act not only in the children's interest but for the Nation's welfare and safety.

John Golden, United Textile Workers of America:

It is the earnest hope of the thousands of members connected with our organization that this bill will become a law this year. The only reason for the employment of child labor is that it is low-wage labor and unresisting. In regulating child labor by Federal regulation we place all the States on an equal footing, protecting children against exploitation, protecting the American workman against the competition of child labor, and protecting the American manufacturer who, on principle, does not believe in child labor, and does not wish to employ it.

Paul Scharrenburg, secretary California Federation of Labor:

In these days of "preparedness" it would seem that the Nation can ill afford to neglect the children. Child labor is the great blighting curse of our country. The Federal child-labor bill strikes at the very roots of the evil, and it is the duty of every true American to do everything within his power to have that measure enacted into law at this session of Congress.

DOCTORS.

Woods Hutchinson, president American Academy of Medicine: The nation that works its children has no right to call itself civilized, and is about as rapacious and intelligent as the farmer who grinds his

S. Adolphus Knopf, New York City:

It is my firm conviction that we will never solve the tuberculosis nor the alcohol nor the sexual-disease problems, which weigh so heavily on our people, unless we do away with that curse of our Nation—child labor. I can not too strongly recommend the passage of the Keating-Owen bill, and plead with every father and mother and lover of children to do their utmost to bring this about.

William C. Hanson, Massachusetts Board of Health, Cam-

The passage of this bill should be regarded as epoch-making legislation in the interest of preventive medicine, which has for its great object the removal and avoidance of causes of disease.

Harvey W. Wiley, Washington, D. C.:

I want to join the army of those who are working for the principle of the protection of the child. I do not believe that the future man or woman should be sacrificed by exploiting the earning powers of the child. It is on the same principle of economy as would sell all the calves for veal and at the same time expect to have a race of grown-up cattle for beef.

Felix Adler, Society for Ethical Culture, New York City:

What enlightened sentiment demands is not only that the chidren in our own communities shall not be exploited, but that we shall not be forced against our will and better judgment to encourage child labor by purchasing the products of such labor. We have not the power to protect ourselves against such complicity as States, because we have abandoned to the Nation the right to control interstate commerce. The Nation, therefore, should step in and exercise the power of which we have bereft ourselves.

Meyer Bloomfield, vocation bureau, Boston, Mass.:

The Federal bill is the first intelligent attempt in our country at the right sort of conscription—educational conscription—which looks forward to enlisting all future citizens in activities that make for health, intelligence, civic loyalty, and industrial efficiency.

Jesse B. Davis, president National Vocational Guidance Association:

I am vitally interested in the Federal child-labor bill now pending in Congress. Not only as an educator, but as one especially interested in vocational guidance have I constant evidence of the need for the passage of this bill.

John Dewey, department of philosophy, Columbia University, New York City:

I heartily favor the principle of Federal control of child labor, and also the particular measure for securing it now pending in Congress. Its passage is, I am sure, in the best interests of the country. Incidentally, I might say that proper care of the education and physical development is a phase of national preparedness second in importance

Franklin B. Dyer, superintendent of schools, Boston, Mass.:

It seems to me that legislation should become general in regard to conditions under which children may work. Those States that have established protective measures have demonstrated the effectiveness of such legislation, and through such a bill as is proposed a desirable uniformity of humane conditions for children would be rapidly developed.

John Finley, commissioner of education, New York State:

Some interstate standardization of child-labor laws seems necessary if we are to deal effectively with this vital need of conserving the educational interests of child life.

Robert F. Hoxie, department of political economy, University of Chicago:

What we all hope for, of course, in the end is child-labor legislation so closely bound up with an adequate system of industrial education, and so adequately administered that wise discrimination applied to the individual child can take the place of fixed age limits. This, however, seems to be far in the future. I believe that the Keating-Owen bill is a necessary step in the right direction.

Frank M. Leavitt, University of Chicago:

Of course, I am wholly in favor of the Keating-Owen bill and believe in the justice and wisdom of the measure. My experience with prevocational, continuation, and industrial schools convinces me that the best place for children under 16 years of age to work is in the schools

C. A. Prosser, National Association for the Promotion of Industrial Education:

The United States Government has a duty for its protection of preventing the circulation through interstate commerce of all goods made by a system of child labor which is sure to result in an illiterate and therefore an incompetent citizenship.

SOCIAL WORKERS.

Jane Addams, Hull House, Chicago, Ill.:

Because our social and industrial problems are interstate problems, it becomes increasingly obvious that they must be regulated through Federal legislation.

Edward T. Devine, director, New York School of Philanthrophy:

If there is any such thing in this country as a national sentiment, it should certainly be allowed to show itself effectively in the fundamental matter of child protection and in the encouragement which such a measure would give to universal compulsory education.

Alexander Johnson, field secretary National Committee on Provision for the Feeble-Minded:

The arguments as to its being constitutional have been very thoroughly thrashed out, and it is hard to see how anyone who is without financial interests to influence him can question the essential right-coursess of its purpose.

Florence Kelley, secretary National Consumers' League:

Our immediate need is the passage of the Federal child-labor law enable the Federal Government to enforce the law.

CLERGY.

S. Parkes Cadman, Central Congregational Church, Brooklyn, N. Y.:

It is in the highest degree a humanitarian measure, as well as one of economic and political wisdom. I sincerely hope it will become a law this year.

John Haynes Holmes, Church of the Messiah, New York City: I believe that its enactment would constitute the biggest forward step yet achieved in the history of child legislation in this country.

Edwin E. Hughes, Methodist Episcopal bishop, California:

This bill seems to me admirably adapted to accomplish by Federal was distinct curtailment in industrial child labor in our great country, sincerely hope it may become a law.

Charles E. Jefferson, Broadway Tabernacle, New York City: It seems to me that the Keating-Owen bill to regulate child labor is an excellent one, and I hope it will pass. The American people are getting their eyes open to the dimensions of the tragedy of child labor, and our legislators will, no doubt, be ready to put into legislation what our people demand.

Francis J. McConnell, Methodist Episcopal bishop, Colorado: I am heartily in favor of the passage of the Keating-Owen child-labor

Charles Stelzle, New York City:

The Keating-Owen bill should be adopted. The bill is reasonable as well as humane. Any industry which can not live without child labor has no right to live at all.

Stephen S. Wise, Free Synagogue, New York City:

The Keating-Owen bill should be enacted into law, the President and Congress owing its enactment to the children of the Nation as well as to the Nation. Child labor involves a nation-wide problem and it can be solved best and most equitably through such a measure as the Keating-Owen bill which sets up one standard for the whole country.

JOURNALISTS.

Mark Sullivan, editor Collier's Weekly:

I am unqualifiedly in favor of the principle and the method of approach to the child-labor problem which are embodied in the Keating-Owen bill. It is the only way to approach the child-labor problem with fairness to all employers. I earnestly hope the bill will be forced to an early debate and vote.

Charles Hanson Towne, editor McClure's Magazine:

I know of no bill more important to the welfare not only of this but of the coming generation than that for the prevention of interstate commerce in the products of child labor. The whole country should indorse it and urge its speedy passage.

Frank P. Walsh, editor Kansas City Post, Missouri:

I regard the passage by Congress of the child-labor bill as a matter of the most vital and urgent importance to this Nation.

Talcott Williams, school of journalism, Columbia University: I opposed Federal legislation on this subject for many years, because I believed it would never be efficient until the standard had been raised in enough States to furnish a supply of manufactured goods made under conditions just to the child, to the family, and to the community. I have for several years favored this legislation, because this time has

AUTHORS.

Booth Tarkington, Indianapolis, Ind.:

It is inconceivable that there should be opposition to the Federal child-labor bill. Two ways of looking at child labor are like two ways of looking at massacre.

James Oppenheim, New York City:

No one who cares for America can oppose this bill.

Inez Haynes Gillmore, San Francisco, Cal.:

Of all the great world problems, I believe the labor problem to be the most important. Of all aspects of the labor problem, I believe that child labor demands the most instant and complete alleviation. Of all forms of industrial slavery, child labor is the most abhorrent. I believe with every ounce of conviction there is in me in the work of the national child-labor committee. I heartily indorse the Federal child-labor bill.

Henry Sydnor Harrison, Charleston, W. Va.:

It is increasingly perceived that only by the action of the Federal power can industrial morals in America be effectively regulated and standardized. By all means the Keating-Owen bill should pass and pass quickly.

Sarah N. Cleghorn, Manchester, Vt.:

I wonder if there could be any surer way to incur that unenviable dictum, "It were better that a millstone were hanged about his neck," than to vote against the Keating-Owen bill.

WHAT THE PRESS SAYS.

Mr. Speaker, the following extracts from editorials which have recently appeared in the great daily newspapers of the country indicate how the press of the land stands on this ques-

[Chicago (III.) Tribune, Aug. 5, 1915.]

Chicago (III.) Tribune, Aug. 5, 1915.]

The demand for national action is apparent from the standpoint of accomplishing something within the next decade. Georgia has a decent standard for the protection of the child, but an inadequate appropriation for enforcement. Alabama has an efficient enforcement of a fair law, and an attack is now being made to abolish the office. Illinois defeated the legislation upon the plea that it is unfair, and New York has made a shameless record. National legislation will have the good effect of equalizing the conditions and insuring wide enforcement.

[Memphis (Tenn.) Commercial-Appeal, Jan. 4, 1916.]

But the right to grind the hone and health and joy out of little.

[Memphis (Tenn.) Commercial-Appeal, Jan. 4, 1916.]

But the right to grind the hope and health and joy out of little children by long hours of hard labor in close factories or dark mines belongs to no man and no corporation of men. And it is against the greed of these would-be grinders that the child-labor committee has formulated its bill. The members of this committee are not speaking from hearsay information. They have personally inspected the mills, the sweatshops, and the mines where the blood and hope of the undeveloped children have been coined into factory products. It is in behalf of these children that they are seeking to arouse public sentiment that Congress may be induced to pass a national law that will be effective and protective. be effective and protective.

be effective and protective.

[New York (N. Y.) Tribune, Jan. 19, 1916.]

Nobody now attempts to defend child labor as an abstract problem. Concrete attempts to retain it for what seem to be individual or locality benefit, therefore, stamp themselves as clear, unadulterated self-ishness. "Where the child is wronged, the Nation and its industry is wronged," as the House committee's report well says. It remains for Congress by passing this measure to see that neither individual children nor the Nation can be wronged in the future.

Children nor the Nation can be wronged in the future.

[Philadelphia (Pa.) Public Ledger, Nov. 16, 1915.]

As the bill goes no further than a prohibition of interstate commerce in the products of children under 14 employed in factories, limits the working hours of children under 16 to eight hours a day, and forbids the employment of children under 16 in mines and quarries, it can not be called either extreme or radical. Now that public attention is being again concentrated on the measure, the child-labor committee is hopeful

that the influences which prevented its enactment will be swept out of the way by the force of humane and progressive public opinion.

[Dallas (Tex.) News, Jan. 19, 1916.]

[Dallas (Tex.) News, Jan. 19, 1916.]

The consequences of child labor make too big a social price to pay for the rather meager material prosperity that cotton mills yield to a community. It was disclosed during the committee hearing on this bill that in North and South Carolina it is permissible to work 12-year-old children in cotton mills 11 hours a day. The physical, intellectual, social, and moral consequences of such unremitting labor in a cotton mill on children whose minds and bodies are yet plastic are obvious. Their earthly destiny is, in most instances, the poorhouses, the hospitals, the asylums, and the jails. The dividends their labor makes are in reality paid by the community that tolerates the evil cause in the form of taxes to support the large and ever-expanding institutions for which the demoralizing, dehumanizing, and decivilizing process makes need. The human product of cotton mills that work children in the way they are worked in the Carolinas makes their commercial product a loss to the community.

It is to be hoped that the bill which has been reported to the House will be enacted into law. If that should result in the removal of cotton mills from the South, the South can witness their departure without regret.

[Milwaukee (Wis.) Leader, Jan. 8, 1016.]

[Milwaukee (Wis.) Leader, Jan. 8, 1916.]

This is the bill for which every union in the United States stands. It is the bill that is supported by every professional philanthropist and by every person who has made any study of the effects of child labor. It is a bill against which there is but one single argument. That argument, however, is one which has prevailed against a multitude of desirable laws. The argument is the profit to be made from the labor of children. of children.

[Brooklyn (N. Y.) Eagle, Jan. 19, 1916.]

It is a condition and not a theory which confronts Congress, and the condition is fraught with so much danger to future generations that its correction is likely to override philosophic scruples about interference with the welfare of the States.

[Kansas City (Mo.) Post, Jan. 18, 1916.]

Passage of this law will throw a State's shame back on itself. * * *
If any State is willing to assume for itself this burden of illiteracy, of crime, of delinquency, of starved souls and bodies, let it. But the people of the whole United States should not be made a party to the gross injustice and its utter lack of consideration to every principle of right living

[Boston (Mass.) Morning Globe, Jan. 19, 1916.]

Fairness demands that some check be placed upon sections of the country which can use labor in ways impossible for us under the law. The only sure way in which this can be done is by an embargo upon the interstate shipment of such goods.

the interstate shipment of such goods,
[Minneapolis (Minn.) Tribune, Jan. 15, 1916.]

It is difficult to conceive of any friend of the child hesitating about the removal of the last stand of the exploiter of the labor of little children—the plea that they do it in other States, and competition, therefore, compels it. When the Federal Government regulates child labor the regulations will be alike in all parts of the country, and the failure of States to protect their childhood will be overruled by a higher power.

PLEA OF THE OPPOSITION.

I submit, Mr. Speaker, that is a pretty convincing array of

testimony. What do our opponents offer in reply?

Dr. T. W. M. Long, of Roanoke Rapids, N. C., a mill doctor and physician, who testified that his job was at the mercy of the mill owners of Roanoke Rapids, gave it as his professional opinion that boys and girls 12 years old might be worked 12 hours a day in a cotton mill "without deleterious effect."

Mr. Douglass C. Ruffin, a cotton-mill owner, of Mayordin, , testified that in his judgment, after years of experience, a boy 10 years old might be worked 12 hours a day in a cotton mill without injurious effect.

Now, Mr. Speaker, I submit that men who give that kind of testimony may be living in the twentieth century, but they

are thinking in the eighteenth century.

Let it be recorded to the credit of the medical profession that Dr. Long was the only physician who could be induced to risk his professional reputation in support of the mill-owners' position. They did put another physician on the stand, Dr. McBrayer, but you will see from an examination of the hearings that this physician declared that he did not wish the committee to understand that anything he had said was intended as an argument against limiting the hours of labor of children in cotton mills. In order to make this point clear I will insert an extract from Dr. McBrayer's testimony:

Mr. Keating. Doctor, as a physician who has had a great deal of experience in the South, at what age do you believe that girls should be permitted to work in a cotton mill, or have you given any thought to that subject?

Dr. McBrayer I have not investigated that fully.

Mr. Keating. Weuld you consider that a girl might be admitted to work in a cotton mill at 12 years and work 11 hours a day with safety?

Dr. McBrayer. Well, I think it is pretty hard work for a grown man. If I had my way about it, we would not—

Mr. Keating. You do not wish the committee to understand that anything you have said here to-day is an argument against limiting the hours of labor of children in cotton mills?

Dr. McBrayer. Not at all.

EIGHT-HOUR DAY FOR CHILDREN.

It should be stated, too, in justice to some of the mill owners, that the majority did not support the extreme views presented by Mr. Ruffin. I think I am well within the facts when I say that a majority of the witnesses placed on the stand by the opponents of this measure admitted that all the provisions of the bill were reasonable, with the single exception of the provision forbidding the employment of children between 14 and 16 years for more than eight hours a day or six days a week.

Their objection to that provision was based on the fact that adults were compelled to work 11 hours a day in southern mills, and they argued that it was impossible for them to work a part of their employees 8 hours a day and another part 11

hours a day.

Fortunately we have the most convincing evidence that there is nothing in that contention. When the Massachusetts Legislature was considering child-labor legislation, the mill owners of that State set up exactly the plea that the mill owners of the South are now making to Congress. They said that if the legislature limited the hours of labor of children between 14 and 16 it would mean that the mills would have to dispense with the services of such children, and that they would be thrown out on the street and their families deprived of their assistance. But the Legislature of Malsachusetts ignored the plea of the mill owners and passed the law, and I hold in my hand a report showing that the fears of the Massachusetts mill owners have not been realized. Children between 14 and 16 years continue to work in the mills of Massachusetts, but they work eight hours a day six days a week, and they do not work at night.

Now, Mr. Speaker, what the Massachusetts mills have done the southern mills may do. So the opponents of this bill who based their opposition on the unreasonableness of the provisions of the measure are left without a leg to stand on.

QUESTION OF CONSTITUTIONALITY.

And now, Mr. Speaker, we have reached our opponents' last

line of trenches-the constitutionality of the bill,

We are told, Mr. Speaker, that his satanic majesty is a keen student of the Good Book, and that when occasion demands he can always find scriptural authority to support his schemes to demoralize mankind.

We know from our own experience that clever and not always scrupulous lawyers do not hesitate to transform the palladium of the people's liberties—the Constitution of the United States-into a bulwark for the protection of greed and

I do not intend to make an extended constitutional argument. I will leave that phase of the discussion to the distinguished

lawyers who will follow me in support of the bill.

may say in passing that the friends of this bill are not in the least apprehensive concerning what the Supreme Court will We hold do when this legislation comes before that tribunal. that when the original 13 States adopted the Constitution they granted Congress absolute power to regulate commerce between the States, with foreign nations, and the Indian tribes.

The only limitation on that power which you can find anywhere in the Constitution is to be found in the fifth amendment, which declares that citizens shall not be deprived of life, liberty, or property without due process of law. The Supreme Court has repeatedly construed the commerce clause of the Constitution and the limitations fixed by the fifth amendment. We contend that the court has uniformly held that Congress may regulate interstate commerce in the interests of the public health, the public safety, the public morals, and the public welfare, and that the only limitation recognized by the court was that the exercise of such power by Congress must be a reason-

THE BLOOD OF INNOCENTS.

There is our case in a nutshell. We hold that child labor is immoral; that a moral taint attaches to the products of child labor; and that Congress, in an effort to safeguard the public morals and the public welfare, may exclude this pestilential thing from the channels of interstate commerce.

Gov. Kitchin, of North Carolina, the attorney for the mill owners, in his remarks before the Committee on Labor of this House, made much of the fact that you might take two pieces of cloth produced in a southern mill, one made by adult labor and the other by child labor, and that you might submit those pieces of cloth to microscopic tests and that you could not tell one from the other. But, Mr. Speaker, whatever the microscope may show, the truth is that on one piece of cloth is the blood of little children, and I venture the assertion that the distinguished judges of the Supreme Court can not be blinded to that fact by the sophistries of attorneys who may raise the question of the constitutionality of this law.

NOT A PARTISAN MEASURE.

Mr. Speaker, this legislation is not partisan legislation, it is not sectional legislation, it is not class legislation. In the last Congress it was introduced by a Democrat, the distinguished

gentleman from Pennsylvania, Hon. A. Mitchell Palmer. favorably reported to this House by a committee, two-thirds of whose members were Democrats, and when it was passed by this House every Republican Member present, with one exception, voted for it. In the last national campaign the Progressive and Republican Parties specifically declared for national legislation in relation to child labor, and while the Democratic platform was silent on the subject, the activities of Democrats on the floor of this House have demonstrated that the party to which I have the honor to belong is not indifferent to the welfare of the children of the Nation.

This is not sectional legislation, although the opponents of the bill are earnestly endeavoring to make it appear that we are

striking at the South.

The small group of mill owners who are fighting this bill have no authority to speak for the people of the South. The people of the Southern States are no more in favor of permitting certain greedy interests to exploit their children than are the people of any other section of this Nation.

A few moments ago I read you the resolution adopted by the Farmers' Union of the South in national convention assembled. I believe that the farmers of the South are in closer touch with public opinion and express it more accurately than do the cottonmill owners of the South or their paid representatives.

When this bill was before the House during the last Congress the majority of the Congressmen from only five Southern States

voted in opposition.

A few years ago when the voters of Arkansas were given an opportunity to pass on a child-labor law they adopted a very good law by a vote of 3 to 1.

SAVE THE CHILDREN OF THE SOUTH.

Mr. Speaker, no section of this country is more vitally interested in the elimination of child labor than is the South.

Prior to 1865 the black children of the South were chattel slaves, and I want to call the attention of this House to the fact that to-day we are fighting to emancipate the white children of the South from industrial slavery. Testimony presented before your committee shows that negro children do not work in these southern cotton mills. One of the witnesses in opposition to the bill boasted that the little tots who labored 11 hours a day in his mill were Anglo-Saxons, and another witness testified that the spectacle was often presented in these inill towns of negro children on their way to school passing white children on their way to work in the mills.

I submit to Representatives of Southern States on this floor that as a matter of self-preservation they can not permit this condition to continue. I rejoice when I am told that the doors of southern schoolhouses have been thrown open to the black boy and black girl, but I demand that the same opportunity be extended to the white boy and white girl of the South.

A GREAT SOUTHERNER'S PLEA.

Mr. Spesker, a few days ago the Hon. Clarence Poe, editor of the Progressive Farmer, one of the great agricultural journals of the South, addressed the following letter to every Member of the North Carolina delegation of this House. I submit, sir, that this great journalist more accurately represents the sentiment of the people of the South than do the gentlemen who compose the lobby maintained by the cotton-mill interests. Poe's letter is as follows:

RALEIGH, N. C., January 22, 1916.

RALEIGH, N. C., January 22, 1916.

Dear Sir: I hope you can see your way clear to support the Keating child-labor bill. I should much rather have seen child labor regulated by State action, and as chairman of the North Carolina child-labor committee I strove for years to get reasonable regulation enacted in cooperation with public-spirited manufacturers, but every time I got a few public-spirited manufacturers in line a still larger number of other manufacturers would rise up and bring the power of wealth and influence to bear on the legislators and defeat this end. The same thing has happened time after time in other States.

Moreover, the manufacturer's cry here was, "Well, if North Carolina enacts stringent legislation we are put at a disadvantage as compared with South Carolina or Georgia or Alabama," etc. Nation-wide legislation is not open to this objection.

To protect child workers is a solemn duty we owe humanity; and to my regret the manufacturers have irretrievably transferred this duty from the States to Congress. I hope our North Carolina Congressmen will meet this duty in the spirit of service to humanity rather than obeisance to wealth.

With best wishes, I am, yours, sincerely,

CLARENCE POB,

President and Editor the Progressive Farmer.

President and Editor the Progressive Farmer.

And, Mr. Speaker, here is an editorial from the Hickory (N. C.) Daily Record, which should be read and pondered by every Member who believes that the people of the Southern States are opposed to proper child-labor legislation:

[Editorial from the Hickory (N. C.) Daily Record.]

INJURING THE STATE.

The Record has followed with a great deal of interest the newspaper accounts of the proceedings before the House Committee on Labor. The matter before that committee is a bill to prevent the shipment of

goods from one State to another where children under 14 years of age are engaged in their manufacture. Well, we are going to have a law as drastic as that one of these days, but that is something else.

Southern cotton manufacturers appeared before that committee and fought, with the aid of former Gov. Kitchin, Federal regulation of child labor. Mr. David Clark, a splendid young man of Charlotte, editing a textile paper, told the committee that southern cotton manufacturers would have to bribe Federal inspectors if the bill were passed. He preferred to allow the county superintendents of public instruction to enforce what child-labor laws the State might enact, realizing, of course, that county superintendents would be influenced by the pressure that could be brought to bear on them in their communities.

If the State of North Carolina had done its duty. Mr. Clark and Gov. Kitchin would not be making statements in Washington calculated to injure their cause. The Weaver bill was defeated in the State senate in 1915 by an overwhelming majority after a lobby of manufacturers and their agents descended on the capitol. The proceeding there was so bad as to cause one of the opponents of the measure to change his mind and to cause another member of the senate. Mr. Frank Nash, of Orange, to assert that he was amazed at the tactics pursued.

There are only a few defenders of those who would stand up for the system in North Carolina. A rich Commonwealth can not afford to be backward in the matter of child labor, and North Carolina manufacturers should let the world know that they are willing to go as far as any. State in practical welfare legislation.

Wholesome legislation is coming, and it would be much better for the South if the broad-minded men among the manufacturers would take it upon themselves to see that good laws are made and then obeyed.

A TEXAN'S POINT OF VIEW.

The following editorial from the Daily News, Galveston, Tex., presents the point of view of the big-hearted men and women of the Lone Star State:

the Lone Star State:

[Editorial from the Daily News, Galveston, Tex.]

A filibuster prevented consideration of the Keating child-labor bill in the House Wednesday. The filibuster was led, to quote the press dispatch, "by southern Congressmen." The one who forged to the forefront of the opposition was Representative Ragsdale. Representative Ragsdale halls from South Carolina. In South Carolina they are permitted to work 12-year-old children 11 hours a day in cotton mills. Maybe Representative Ragsdale thinks he is fighting for the sacred rights of these children to sell 11 hours of labor for 50 cents. Or he might say that he is fighting to protect the interest of southern cotton mills. If it is this idea which animates his efforts, be somewhat deludes himself. It is not quite accurate to speak of these institutions as southern cotton mills. They are literally that, of course, in the geographical sense. But in the sense of ownership they are very much less than that. There may be a few cotton mills in the South that are owned wholly by southern people. There may be more the controlling power of which is held by southern people. But the sum of these two classes is a minority of the whole. Most southern cotton mills are owned and controlled by people who do not live in the South. The stock of them is widely distributed, but in most instances the majority stock is held in New England. This fact does invalidate a good many of the arguments that are made by southern Congressmen.

OPINION IN GEORGIA.

Then, Mr. Speaker, I have the following from the Daily Ledger, of Columbus, Ga., and I submit that no northern or western editor could present the issue with greater force and clarity:

[Editorial from the Daily Ledger, Columbus, Ga.] "CHILD-LABOR DAY."

Next Sunday is to be observed all over the country as "child-labor by." Just what this day is and what it means is of especial interest

Next Sunday is to be observed all over the country as "child-labor day." Just what this day is and what it means is of especial interest at this time.

As we understand it, this is the day on which clergymen, educators, the public press, and other agencies make an effort to focus the public mind on the subject of the elimination of child labor from the country as far as possible. People in comfortable homes, whose own children are growing up normally, with no more acquaintance with "child labor" than an occasional bit of helping father or mother with dally chores are apt to forget that in the great industrial centers thousands of children are having their vital forces sapped, their minds and bodies stunted by long hours of work in mills, factories, and sweatshops. It is these children, grown to adult years but not to adult strength or mentality, who fill the jails and almshouses and who make the big drains on public and private charities. Eliminate child labor, see to it that every growing child has a fair amount of fresh air, good food, time and space to play, sensible and thorough education, and most of the social problems now vexing the Nation would disappear.

"Child-labor day" should be generally observed. Conservation of the littles ones is of the greatest importance. Let us all keep this fact in mind.

A protest from florida.

A PROTEST FROM FLORIDA.

Finally, Mr. Speaker, permit me to submit the following from the Daily Times of Tampa, Fla.:

[Editorial from the Daily Times, Tampa, Fla.]

[Editorial from the Daily Times, Tampa, Fla.]

Former Gov. Kitchin, of North Carolina, told a story to the Labor Committee of the House of Representatives at Washington the other day that should make the good people of North Carolina bow their heads with shame. It must be very humiliating to have one of the "biggest men" of a State go before a national body and say, as Mr. Kitchin said, that child labor is an economic necessity in his Commonwealth. Now, Mr. Kitchin did not use exactly those words, but that is what he meant when he defended the employment of children in the cotton mills of North Carolina. He was "ably" backed in his statements by David Clark, who edits a journal at Charlotte devoted to the textile industry. We take it that Mr. Clark is devoted to the business that brings him his bread. Not to be wondered at, of course, but it is not quite so comprehensible that a man would lend himself to the enslavement of helpless children in such a behalf.

Mr. Kitchin told the committee, which had under consideration the Kenting-Owen bill, designed to prevent interstate shipment of goods manufactured with the aid of child labor, that "We of the South oppose this measure, because we believe our people who have to work

should be permitted to do so. We have many of this class and the cotton mills afford them an opportunity to earn a good living. I think it cruel to drive a 15-year-old boy out of a mill if he has anyone to support."

In answer to the question whether mothers' pensions would not remove this alleged necessity, Mr. Kitchin made this remarkable statement: "Our State is unable to take care of its poor." He could more truthfully have said, "Such men as myself in our State do not care to assume the burden of alding the unfortunate." It would have been much closer to the actual truth.

But let go at that. The fact is it is the Kitchins of this world who are determined to reap profit from the twisted, stunted bodies, and undeveloped minds of the helpless young. They are willing to deprive the helpless, to the profit of their own pockets. A sin? Yes; and more. They need to be set aside, and if legislation, such as that contemplated in the Keating-Owen bill, be necessary to set them aside, the quicker it is passed the better.

Thank heaven, the Kitchins are not representative of the good people of the South. They are merely an undesirable class; the Scrooges, as it were, who have not yet awakened to the rights of the Tiny Tims of the land!

In view of these expressions from the great newspapers of

In view of these expressions from the great newspapers of the South, who will dare tell this House that the people of the Southern States are opposed to the pending legislation?

GENUINE " CONSERVATION."

Mr. Speaker, a few days ago this House approved what are popularly known as the "conservation bills." To-day we are asking you to consider another conservation bills." To-day we are
But the measure we are produced to bill.

But the measure we are urging on your attention now is of vastly more importance than the bills you passed with such unanimity the other day. They had to do with coal, oil, and phosphate lands and water-power sites—the tremendous natural resources of our western empire. This has to do with the conservation of the childhood of the Nation.

Nineteen hundred and fifteen years after the birth of Christ it is unnecessary in the American House of Representatives to argue the justice or wisdom of child-labor legislation. The social conscience of the Nation has long since passed judgment on that question. It only remains for the Representatives of the greatest democracy on earth to record that verdict on the statute books of our country.

te books of our country.

Do ye hear the children weeping, O my brothers,
Ere the sorrow comes with years?

They are leaning their young heads against their mothers,
And that can not stop their tears.

The young lambs are bleating in the meadows;
The young birds are chirping in the nest;
The young fawns are playing with the shadows;
The young flowers are blowing toward the west—
But the young, young children, O my brothers,
They are weeping bitterly!

They are weeping in the playtime of the others,
In the country of the free.

Child Labor.

EXTENSION OF REMARKS

HON. ADDISON T. SMITH.

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. SMITH of Idaho. Mr. Speaker, the public conscience has been awakened during the last dozen years, and we have heard a great deal about the conservation of the natural resources of the country. Our great forests were being ruthlessly destroyed; the vast coal fields were being bought up by those who desired to exploit them in a way which would bring them the greatest immediate financial gain, without regard to utilizing the entire deposit; oil wells were allowed to burn, although it was known that the supply was not inexhaustible; the great power sites on our rivers were being gobbled up by men of wealth with a view of controlling the price of light and heat, regardless of the fact that all the people had an inherent right to enjoy these natural resources. Finally, public sentiment demanded that this great national waste should cease, and legislation was enacted by Congress calling a halt and providing restrictions, in order that these great natural resources might be conserved for the benefit of the present and future generations.

The value of these resources amount to billions of dollars, and yet they are not to be compared in importance to the potential value of another natural resource—the children of the country.

How jealously conscientious parents guard the life, health, education, and general welfare of their children. Every possible sacrifice is made to give them the creature comforts, to train them by example and precept for assuming the great responsibilities of life. Such children do not need the protection of the law; but there is another class, who, but for the enactment of laws to which I shall make reference, would because of the greed of industrialism, be ruined physically and morally and leave behind them other children stunted in growth, warped in intellect, and utterly unfitted for occupying any position other than that of abject slaves.

Because of the keen competition in many lines of manufacturing and business and the heartlessness of employers there has been gathered together in our industrial centers multitudes of eager young creatures from everywhere who are willing to work for meager wages and whose employers prosper on their labor. Little children entering their teens and young girls suddenly released from the protection of home are enticed to work in these death-breeding factories and workshops under the most unsanitary and laborious conditions.

The stipend which these children can earn has induced the parents to take them from school and allow them to grow up in ignorance instead of requiring them to avail themselves of the facilities for securing an education so generously afforded by our splendid public-school system.

There may be many instances where stern necessity forces children into the factories and mills. Through accident or ill health the father, the natural breadwinner, may be deprived of employment, or the grim reaper may have cut him down, leaving no support for the family. But in a great majority of the cases the children are compelled to work because of the improvidence of the parents or the intemperance of the father, making it impossible for him to secure regular employment.

It is difficult for those living in agricultural communities to realize that nearly 2,000,000 children, many of them as young as 10 years, work from 10 to 12 hours per day in the cotton mills, cigar, cigarette, tobacco, and snuff factories in the industrial cities in the country. Others are employed in coal mines and glass factories. Thousands are also engaged in factories making candy, jewelry, woolen and worsted goods, rubber and elastic goods, and numerous other articles.

A report of the bureau of labor in New York State shows that children as young as 4 and 5 years in large numbers are employed in home industries in New York City. Returns from authentic sources show that thousands of boys as young as 8 years are engaged in selling papers in the larger cities.

We can easily imagine how disastrous to the health of these child workers are the unsanitary conditions which surround them. Statistics show that the death rate among them is enormously high, and that only about one-half of the children born of those who have worked in these factories live beyond 2 years.

The unsanitary conditions which surround their homes are almost as conducive to ill health and an early death as are those in the factories. We all know that the best health conditions prevail where each family lives in its own home, on its own plot of ground; but in these great factory cities such a luxury is impossible in many instances, and the wage earners are compelled to live in tenement houses, often as many as 10 in one room. The problem of misery in an industrial city is one of long standing which is yet unsolved.

A country's greatest asset is its boys and girls; and when it became evident that hundreds of thousands of them were being ruined in health because of the diabolical system of exploiting child labor, which had fastened itself upon society, public sentiment cried out and demanded relief for these innocent children, burdened with responsibilities, for which their youth and innocence unfitted them.

A noted authority on child-labor problems, Mrs. Florence Kelly, who for over 30 years has been active in endeavoring to get better legislation for the protection of the children, made the following statement before the Committee on Labor in the House of Representatives last Congress, which illustrates the necessity of vigorous and early legislation:

of vigorous and early legislation:

I believe there are more children under 16 years old working to-day in dangerous occupations than there were when I began, because our manufacturing industries have increased stupendously and our State legislation has halted. There has been no unity in our progress. The 48 States suggest the legs of a centipede, some going forward and some paralyzed, the total progress lamentably slow. This Republic is one, and we can not go on forever with a favored class of children in the Northwestern States, where there is a requirement that the children shall not work until they are 15 years of age, and they are kept in school throughout the eighth grade, while in the southern cotton-manufacturing States there is no compulsory education, and either entire lack of legislation by the State or a collection of nugatory laws. South Carolina at one time restricted the work of children to 10 hours a day, but afterwards decided that life was too easy for them, and prolonged the hours to 66 hours a week and permitted 11 hours a day for young children. We can not, as one Nation, go on having favored children in the Northwest and oppressed, helot children in the Southeast. We can not go on having such a relation as that now in Pennsylvania, where children 14 years old may work all night in the glass works, and in West Virginia there is no enforcement whatever of the child-labor law. They work at any age.

I was at one time chief inspector of factories and workshops in the State of Illinois. I found great numbers of children working at night—working illegally. The superintendent of a glass-bottle company told me himself that this occurred once when he was rushed with work: A widow had come to him bringing two little boys, one still in kilts and one in knee breeches. She told him that their father had just been killed on the railroad and that they were penniless, and she wanted the older little boy to go to work in the glass works, where he would get 40 cents a day. The superintendent was pressed for boys, and said, "I won't take the bigger fellow alone, but if you will take the baby back home and put him into knee pants, and then bring them both back in trousers I will take them both." She did so, and those two little fellows, aged 7 and 9 years, began their work on the night shift. That was illegal. I prosecuted that concern for its illegal employment of children. I brought the officers before a local magistrate, and the case was thrown out. Our magistrates in New York City have done that same thing within a month. They have refused outright in the court of special sessions to consider a case they did not wish to hear. I then brought suits against the Illinois Glass Co. in four adjacent countles, and all the magistrates refused to entertain a case. It was not until after my term of office came to an end that my successor began bringing cases in the northernmost counties of Illinois. This glass company was down in Alton, in the south of the State, and it was not until my successor adopted the method of bringing the officers of that company and all his witnesses entirely across the State to the northern counties that he could get a hearing at all. I believe that in the linterest of the children one of the greatest benefits that would accrue from the passage of this bill would be the transfer of cases like that from local courts, terrorized by local large manufacturers, to Federal courts, where such terrorism does

One of the first organizations to endeavor to secure necessary legislation to prevent the employment of child labor was the National Child Labor Committee, which has been active for the past 10 years. The activities of this committee have been supplemented by the cooperation of women's clubs, ministers of the gospel, and the Christian people throughout the land in creating sentiment which has been sufficient to convince the State legislators of the importance of placing a check on the employment of child labor, and every State in the Union has now a law which prohibits or regulates the evil.

The employers of labor, some of whom were heartless in their

The employers of labor, some of whom were heartless in their demands on these children, are coming more and more to see, as St. Paul said so many years ago, that we are, in very truth, "members one of another."

The community, the State, the Nation, is indeed an organism for the welfare of which all must be sound and whole.

Public health is of the greatest importance to the entire Nation and is a matter of public concern. The miserable conditions under which some people are working and living result in the development and spread of disease germs, which are conveyed to others and warrant the enactment of the most stringent legislation for the protection of the health of the community.

It must not be understood that these laws regulating child labor in the various States were enacted without opposition or that they are as stringent as the friends of the children would have them. In some States they were tenaciously opposed by greedy employers. In Georgia, for instance, a State which has perhaps one of the most barbarous child-labor laws, the opponents of this class of legislation have prevented the enactment of the kind of a law recommended by the National Child Labor Committee. In July last the lower house of the Georgia Legislature passed a child-labor bill indorsed by the committee and approved by the people, but the factory owners of the State appeared to have sufficient influence with the members of the senset to prevent the measure becoming a law.

senate to prevent the measure becoming a law.

In 1906 public sentiment forced the enactment of a child-labor law in Georgia, but it was full of loopholes and was of little avail. While children under 12 years of age were prohibited from working, the law contained a provision that if a child had a widowed mother or a dependent father it might work 11 hours daily from the age of 10 years. As a result the lazy father who had children had them employed while he spent his time in loafing.

The Georgian, of Atlanta, which championed more stringent legislation, reports after a careful investigation that 44 per cent of the children in the mill districts are illiterate, while the negroes are becoming better educated. The white children would not work with them, and the negroes went to school while the whites worked.

Notwithstanding the fact that every State in the Union has some sort of a law on its statute books regulating child labor, much remains to be done before adequate preparation of the American child for citizenship is attained. Many of those affected employers, parents, and children resent the enactment of these laws, and connive together to prevent their enforcement, notwithstanding the fact that there are hundreds of inspectors charged with seeing that these laws are observed. Accompanying the enactment of these child-labor laws are positive laws for school attendance, passe, by all the States excepting Alabama, Florida, Georgia, Louisiana, and Texas; and yet it is difficult to enforce these laws in some sections because of the opposition of parents to having their children in

school, preferring the small income they can bring to the family rather than that their children should have an education.

The difficulties encountered in the enforcement of State laws is indicated in a statement made to a congressional committee by Mr. A. J. McKelway, secretary of the national child-labor committee for the Southern States:

committee for the Southern States:

I suppose there has rarely been a case when an effective child-labor law has been presented to the legislature of a State in which the employers of child labor did not cite the laws of bordering States as the reason why a bill before their own legislature should not pass; and I think I am witrin bounds in stating that the whole general movement for the reform of child-labor conditions, to result in the abolition of child labor, as we hope, has been held back a score of years by this argument of the competition between States. And I think I may say that if anyone knows what he is talking about with regard to the difficulty of securing adequate protection for the children through State legislation I am the one who is competent to testify.

As to the effectiveness of a Federal law once it has been put upon the statute books and, perhaps, runs the gauntlet of the courts, of this I have no sort of doubt. Of all laws a child-labor law is one of the most difficult laws to enforce through the verdict of a jury of the vicinage. It would be difficult, for example, to get the jury in a cotton-mill county, upon which there would, in all probability, be some loahing father who wished to employ his own children, to convict either a parent or an employer of a violation of the child-labor law.

I can tell you of an interesting example of this down at Danville, Va. As I have said, they have a better law in Virginia than they have in North Carolina, and Virginia has a State factory inspector who has been very diligent in the performance of his duties. He found 85 violations of the child-labor law in the plants in Danville. He took a minister with him who had worked in some of the mills in North Carolina, and he found a great many who had gone over there to the Danville mills from North Carolina. He found evidence of the violation of the largest stockholder in the Danville Cotton Mills, the manager of the American Tobacco Co. and in cotton mills in Danville. He took a minister with him who had

The child-labor problem can never be properly solved until the States have uniform laws on the subject and the enactment of a statute by Congress governing the interstate shipment of the

products of child labor.

Under existing conditions an employer who observes the childlabor laws of his own State can not successfully compete with concerns in an adjoining State which has a less stringent law. Only by the adoption of uniform State laws can this difficulty be successfully removed. The national conference of commissioners of uniform State laws has recommended the enactment of a law containing the following provisions:

of a law containing the following provisions:

The labor of children under 14 years is prohibited in factories, mercantile establishments, and 23 other specified occupations. It is made unlawful to employ a child under 14 in any business or service whatever during school hours. The employment of children under 16 years of age in 7 specialized occupations, including the adjusting of belts to machinery, the oiling or cleaning of machinery, the operating or assisting in operating of certain specified machines, and all work upon railroads, steam or electric, and boats engaged in navigation or commerce. Children under 16 are forbidden to be employed in any capacity whatever in certain specially hazardous or dangerous occupations. Employment certificates and records of school attendance are required. Children must be able to pass the fifth-grade examinations. The employment of children under 18 years of age is forbidden in 15 specified occupations, and no person under 21 years of age shall be employed in connection with any saloon or barroom where intoxicating liquors are sold. The eight-hour day is prescribed for boys under 16 and girls under 18, and the hours of employment must be after 7 o'clock in the morning and before 6 in the evening. No boy under 12 and no girl under 16 shall in any city of the first or second class sell newspapers, magazines, or periodicals in any street or public place. Boys under 16 school attendance. Suitable penalties are prescribed for violations of these laws.

If the various State laws on child labor could be adjusted

If the various State laws on child labor could be adjusted along the lines proposed much of the objection to this class of legislation would be eliminated, as the employers of child labor would be placed on an equal footing and those of a particular State would be at no disadvantage in competing for busi-

In the enactment of the child-labor laws provision was made for exceptions in their enforcement, so that no great hardship would result in cases where necessity demanded that the children be allowed to work. For instance, in the District of Columbia the child-labor law provides:

That the judge of the juvenile court of said District may, upon the application of the parent, guardian, or next friend of said child, issue a permit for the employment of any child between the ages of 12 and 14 years at any occupation or employment not in his judgment dangerous

or injurious to the health or morals of such child, upon evidence satisfactory to him that the labor of such child is necessary for its support or for the assistance of a disabled, ill, or invalid father or mother or for the support in whole or in part of a younger brother or sister or a widowed mother. Such permits shall be issued for a definite time, but they shall be revocable at the discretion of the judge by whom they are issued or by his successor in office. Hearings for granting and revoking permits shall be held upon such notice and under such rules and regulations as the judge of said court shall prescribe.

The method of issuing certificates to work is as follows:

The method of issuing certificates to work is as follows:

The child who wishes a permit must first have a job. He procures an employment ticket on which his employer states the nature of the work at which he will be employed and in what industry, and signs the statement. The employment tickets are distributed widely, in settlements, schools, public places, and are at the bureau of statistics and information. The child then takes this ticket, duly filled, to his school principal, who gives him his school record. This states that the child has completed a course of study equivalent to the five grades in reading, spelling, writing, English language, and geography, and is familiar with fundamental operations of arithmetic covering fractions. The child also gets a christening certificate from his church or some other paper showing age. With these three papers—employment ticket, school record, and one showing proof of age—the child goes to the burean of statistics and information with one of his parents or guardian. The paper purporting to establish the age of child is examined and if satisfactory the child is tested as to reading and writing of simple sentences in English and required to solve problems in addition, multiplication, and division of fractions. The parent or guardian is sworn and is questioned as to age of child and as to his reasons for sending the child to work. The parent and child are required to write signatures on schedule of information. The child states also the wages expected and as much as possible regarding the nature of work to be performed. The interviewer approves the educational test, the proof of age, and in some cases the nature of the work before the child is examined by the physician. If the physical examination is passed satisfactorily the child is granted a permit to work in the establishment at the occupation for which he made application. This employment certificate states the name of child, of employer, occupation, and information. When the child has compiled with the provisions

Congress has not been inactive concerning the child-labor problem, but while the States have unquestionably made great advance in combating the evils of child labor, no general legislation has been enacted by the Federal Government controlling the interstate shipment of the products of child labor.

The agitation of the question resulted in the passage of an act of Congress approved by the President January 29, 1907, providing for an extended investigation on the industrial, social, moral, educational, and physical condition of child workers in the United States with special reference to their age, hours of labor, term of employment, health, illiteracy, sanitary and other conditions surrounding their occupation, and the means employed for the protection of their health, person, and morals.

An exhaustive report was made after a very minute study of the question by experts in the Department of Labor. Several child-labor bills have been introduced during the last six years based on the findings of this report, but the opposition to the proposed legislation has prevented action. The bill introduced in the Senate by Mr. Owen, of Oklahoma, and in the House by Mr. Palmer, of Pennsylvania, during the last Congress, embodies the provisions advocated by the child-labor committee. It simply makes it unlawful for any producer, manufacturer, or dealer to ship or deliver for shipment in interstate commerce the products of the labor of children under the age of 14. The opponents of this proposed legislation claim that it is unconstitutional; that it would not prevent children from being employed in the manufacture of goods to be sold within the State, and that the provision for preventing the sale of child-labor products outside the State could be easily evaded; that the products of child labor are not injurious to the people; and that the Federal Government therefore has no right to prevent their interstate shipment, and that is a matter for the States to deal with exclusively.

Regardless of the opposition, it is confidently believed that the present Congress will enact the pending legislation.

No conditions in industry should be allowed to continue if they threaten a workman's life, limb, or health. Safe conditions, reasonable hours, and fair wages are essentials in the industrial life of any community that aspires to the highest degree of efficiency, and to bring the greatest comfort and happiness to the people.

A humane and Christian spirit should prevail in the consideration of questions of labor, especially where children are concerned.

Good homes are the backbone of society, of morality, and of every constructive advance in social welfare. Good homes mean happiness, ability in people to carry their own burdens, and the rearing of children on a higher plane than their parents enjoyed.

The home, in conjunction with the Sunday school and church,

affords the best moral training.

We must so safeguard the rights of our children that their unfolding lives be not warped by cruel treatment or neglect. We must make the ideal of the home so strong, so compelling, and so attractive that to build it true, to defend it from contamination, and to make it efficient shall be our highest aim, and one more worthy of attainment than great riches or a life of ease.

Child Labor.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. AYRES,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. AYRES. Mr. Speaker, we have listened to great speeches delivered at great length on the question of tariffs, the income and emergency tax, on prosperity and the lack of it, multitudinous discussions on the question of "preparedness," and the authors of these fine speeches and discussions have seemed anxious to let their constituency know early just where they stand on these great questions. To my mind the measure that is now being considered on the floor of this House is one of the most important, if not the most vital, questions that has been before Congress for many days. It is important and vital because it deals with the very life and blood of the Nation; that which is intended to protect not only the present generation but to build up great men and women and perpetuate them for all time.

Mr. Speaker, a nation to be great can not be peopled with weaklings, physically or mentally. There is only one way to prevent this condition, and that is to protect and educate the children of our Nation. We know that no child of tender years can work in a factory, a mill, or a workshop without injury to its health. This fact needs no scientific investigation to establish it as a truth. No argument is necessary to convince the ordinary mind that a boy, stunted and dwarfed physically in childhood and neglected in his mental development, can not be a stalwart defender of this Nation; no girl who has been deprived of the tender care due her at this critical time of life, when her environments and teachings should be the most wholesome, can develop into the charming graces and virtues of beautiful womanhood and useful motherhood. Deprive this Nation of these blessings, and you will deprive it of its very life and its very existence.

Investigations have shown that stringent laws should be passed to prevent child labor; these investigations have shown that children under the age of 16 years were usually unfit for the arduous tasks they were expected to perform. By reason of their tender years, by reason of the unsanitary condition of the workhouse and the unhealthy class of work required to be performed, they are more susceptible to sickness and disease. Without going into statistics, it is enough to say that the alarming increase of the victims of the dread white plague is appalling, all of which is appealing to us as Representatives to place the seal of disapproval on such vicious commercialism.

I am aware that there have been some able arguments made against the passage of this bill, because it is claimed that it is unconstitutional. I do not pretend to say whether it is constitutional or not; this will have to be decided by the tribunal created for that purpose. We can never know for a certainty that any law of this character is constitutional or not until this tribunal so declares. It is true that practically every State in the United States have seen fit to pass adequate laws for the conservation of the health and education of our children. The principal objection to this bill, therefore, is that each State should have the exclusive and sovereign right to enact such laws and enforce them as best suits its convenience and the desires of its people.

This question is not exclusively local in its scope. It deals with the question of health, the physical development, and the general welfare of the child of humanity, and for that matter the Nation itself. This bill only intends the prohibition of interstate products manufactured as a result of the labor of the child under 14 years of age, and in addition thereto limits the working hours of those 16 years of age to eight hours per day and also

prevents the employment of children under the age of 16 years in damp places, like mines and quarries.

Mr. Speaker, I can not conceive how any man can say that such a prohibition or regulation is unreasonable or unjust.

The main contention of the opposition to this bill is, first, that it is unconstitutional, and further, that it is a question that should be left to each State to regulate. I repeat, this is far more than a local matter. If left to State regulation there is nothing to prevent some States enacting laws making the prohibition or limitation much greater than provided by this bill, nor, on the other hand, is there anything to prevent a State from passing a law that gives no protection whatever to the children. The Nation as a whole is interested as much in the children of the far East, the extreme West, or the North, or the South as it is in the Central States. The Nation should be interested in all, regardless of where situated or domiciled.

In my own great State of Kansas we have been operating under this beneficial regulation for years, and no happier, more contented, and prosperous people live anywhere in the United States; our children, both the poor and well to do, are educated and have wonderful educational advantages. The facts show that we have taken advantage of these great opportunities, for we have less than 2 per cent illiteracy in Kansas and it is growing less as the years roll on. Nor is this all that we can boast. Kansas is known far and near for her salutary and invigorating sunshine. It is well known that the human organism can no more be developed in shadow than can any form of plant life, All things living must come to their highest state of development under the environments of pure air and wholesome sunlight. The healthful and sanitary condition of urban life in Kansas is not far behind that of our rural communities. The results of these elevating conditions are evident when we look upon our rising generation. With our 600,000 rosy-cheeked and stalwart boys and girls now in our schools, preparing and training their minds for the strenuous business of the future, we are fortifying them for life's duties with strong and vigorous bodies that they may be able to do their parts efficiently We know what it means to educate and protect them; we know what it is to live in a State that has on its statute books laws that will protect the young as well as the old; but, notwithstanding our good laws, we are not selfish; we do not want to retain for local use only these benign benevolences, but believe that these benefits should extend to all parts of this great Union, and this act will prove to be of vital interest to all the children throughout our land; also for the Nation's welfare, its honor, and its safety.

Child Labor.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. CLINE. Mr. Speaker, under the privilege extended to me to extend my remarks in the RECORD upon the subject of child labor, I desire to say since my service in Congress began I have improved every opportunity to vote for and advocate every measure intended to give the child recognition. From the establishment of a Children's Bureau to this act, where the Congress could express itself on the emancipation, morally or physically, from detrimental environments of the child, it has not hesitated to do so. I have no patience with any scheme that seeks in any way to make merchandise and profit out of the labor of the child. I was very early bent in this direction of reform because of my acquaintance and association with two English families, who very frequently detailed to me the conditions of the poor people in England who were employees in the great textile institutions of that country. The long hours, beginning very early and extending into the night, during which time children and grown people were compelled to labor for a mere existence, the scarcity of food, insanitary conditions, high death rate in consequence thereof, made such an impression upon me that I became so confirmed in my view on this subject that I want to invite every opportunity to lighten the burden, not only of the child but of the laborer as well. Some constitutional questions have been injected into the discussion of this bill. The question of unconstitutionality is always the last refuge of the man who is answered on every other proposition. From the time of the

decision of that great case Gibbons v. Ogden to the present time whenever the Federal Government attempts to legislate for the whole people, to do things for all the people that the in-dividual States can not or will not, then the ghost of State rights bobs up and screams about Federal interference with their reserve power. The question of the constitutionality of this bill does not haunt me. I propose to strike a blow for the emancipation of the girl or boy by my vote whenever I can do The deceptive and insincere argument that you can only develop a man of a boy by putting him on his own resources—by putting him at work—and developing him physically and mentally; and hence, as a necessary corollary thereof, you must have a sweatshop or an antiquated cotton mill or a Massachusetts woolen mill to give him the opportunity to develop, does not follow. There are many occupations that children can be employed in through which they may be taught the value of industry and economy—not hidden under a corporate seal. I am in no way opposed to corporations more than partnerships if they are properly equipped for employing labor. I believe in industry, in labor, and in economy, but not in the greed, the unsanitary toil, the exacting conditions of the workshop. I am not in favor of making childhood an asset for selfish, corporate dividends. want to see the girl and boy of proper age employed and taught the wholesome lesson of that rigid economy and industry that results in making splendid citizens. At the same time I want to see them reap the benefit of their labor. I do not want to see the fruits of grinding toil by undeveloped children made the subject of interstate commerce. I welcome this opportunity to vote for the bill and any other that will tend to elevate and liberate labor.

Flood Prevention Committee.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

IN THE HOUSE OF REPRESENTATIVES, Thursday, February 3, 1916.

Mr. CLINE. Mr. Speaker, I shall vote for this resolution to create a new Committee on Flood Prevention, because it marks a new era in the economics of this country. I shall vote for it, because I represent a district that is subject to the devastation of flood waters. The Maumee River has its rise in the heart of the city of Fort Wayne, Ind., by the junction of the St. Mary and the St. Joseph Rivers. Both these streams are interstate streams with a watershed of more than 2,000 square miles. The water from this great drainage surface is piled up in the city of Fort Wayne, a city of more than 80,000 people, at short intervals inundating large sections of the city and destroying vast amounts of property. In flood periods more than 35,000 cubic feet per second is emptied into the city of Fort Wayne by these two

rivers forming the Maumee.

In the year 1913 the property loss was estimated at more than \$1,000,000. At two periods since that time the lower sections of the city have been flooded and great damage done. All three of these streams-the Maumee, St. Joseph, and the St. Mary-are interstate streams. The Federal Government, through its Army engineers, has assumed jurisdiction over the Maumee. After the flood of 1913 Congress by resolution directed an investigation of the flooded district of the Maumee, the Wabash, and the Miami Rivers. The object of the investigation was undoubtedly to determine some method of preventing a recurrence of condi-tions which had so lately prevailed. When the Sixty-fourth Congress opened, I introduced a bill asking the Government to deepen, straighten, and widen a section of the Maumee so that the great reservoir of water piled up in the city at flooded periods could escape. The Committee on Rivers and Harbors, to which the bill was referred, answered that it could not be entertained unless navigation was directly concerned. That gave rise to a very important reason why a committee with competent jurisdiction should be created to consider propositions of that char-The Committee on Rivers and Harbors has so restricted and limited its jurisdiction that bills directly affecting the subject of flood prevention can not be reached. There is a field of work proposed by this resolution that is not within the jurisdiction of any great committee of the House. The recurrence of floods and the great damage they inflict is a matter of very serious importance. It is one of first merit in the internal development of the country. The time is here to find a means to deal with the subject. It would appear to be a very proper thing to do to relieve the work of the Committee on Rivers and Harbors by dividing their labors by the creation of a new committee. Many millions of dollars are annually swept away, and not infrequently many lives are lost that proper legislative action could prevent. Floods occur at seasons of the year when great distress follows as a result. The time is here now for the Congress to take action to protect the people against this increasing menace to their safety and to conserve their property rights.

Preparedness.

EXTENSION OF REMARKS

HON. C. WILLIAM RAMSEYER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 5, 1916.

Mr. RAMSEYER. Mr. Speaker, on last Saturday evening, January 29, 1916, in an address before the Iowa Society, of Washington, D. C., on the differences between the Middle West and the East since the outbreak of the European war, I spoke as follows:

"I have talked to you of some of the differences between the Middle West and the East, You may also be interested in knowing how the folks back home differ from the eastern people on some of the questions that have arisen since the outbreak of the conflict across the waters. In judging how the East feels and thinks on these questions I am dependent upon your eastern newspapers.

INTERNATIONAL LAW.

"On Monday following the sinking of the Lusitania I left for Cleveland, Ohio, as a delegate to attend the first session of the World Court Congress. On that day and on the day before I talked to between 20 and 30 citizens of my district, only one of whom was foreign born, about the great disaster, and, without expressing any opinion myself, each one of them, except one, expressed himself that those Americans who lost their lives had no business on that ship. That was at a time when the public mind was greatly excited and before the ex-

change of any diplomatic notes.

Now, we all know that, according to international law, we have a right to travel on belligerent ships. But we have a large number of people who thought at the time, and still think so, that it would have been better for this country, both for the present and the future, to have warned our citizens to stay off of belligerent ships the same as England did her citizens at the outbreak of the Russo-Japanese War. The submarine is a new and unusual machine of ocean warfare and it has come to stay. We have them and are going to build more for de-fensive purposes. The rules we insist upon now we are expected to live up to if we should get into war. To illustrate: Suppose we should get into war with Japan, which God forbid, and suppose one of our submarines should sight a Japanese ship known to be laden with munitions which would kill, if landed, 10,000, 20,000, or 40,000 of our boys, should the captain of our submarine be required to take the risk of letting that ship escape for fear that there might be a Chinese, English, or German neutral on board, or should he plug that ship with a torpedo and sink the death-laden cargo, intended for our boys, to the bottom of the sea?

"Laws change with changing conditions. A few years ago the automobile was an outlaw on the public highway. To-day we have laws suited to that modern invention. International laws change also. We have nothing to lose in a law prohibiting neutrals traveling on belligerent ships carrying munitions of war, and such a law would inure greatly to our benefit if in the future we should become involved in war with any foreign power. No belligerent should have the right to insure the safety of its munitions cargo with neutral lives. [Applause.]

"There has been a great deal of discussion concerning an embargo on arms and ammunition. The East is opposed to an embargo, insisting upon their legal rights under international law to ship arms and ammunition to any belligerent who will buy. A large portion of the Middle West insists it is morally wrong and contrary to the precepts of Christianity to contribute anything to the prolongation of this bloody struggle, and further that furnishing arms and ammunition on so large a scale as we do to one side of the conflict makes us in fact an ally of the entente powers. Conceding the propositions that it is legal for the citizens of a neutral country to sell arms and am

munition to a belligerent country and that up to this time it would have been an unneutral act for Congress to have placed an embargo on arms and ammunition, there are now two grounds on which such an embargo could be legally sustained:

"First. An embargo could be placed on all or part of our exports to Great Britain in retaliation for her lawless interfer-

ence with our commerce and mail.

"Second. The President in his addresses is telling the people 'The world is on fire; sparks are likely to drop anywhere. I do not know what a single day may bring forth.' Last Tuesday, Mr. Mann, the leader of the minority in the House of Representatives, in an earnest appeal to the House on the subject of preparedness, said, 'I have much more fear, in the end, of a war with England than I have of a war with Germany.' Here we are warned by two great leaders that the danger is imminent by one, and that the danger is England by the other. Then why do or should we deplete our country of these supplies by shipping them to the country which is most likely to use them against us? If these gentlemen are to be taken at all seriously, then an embargo should be placed on war munitions at once—not to aid Germany or to cripple England, but to protect ourselves.

WHAT OF THE HYPHENATES?

"When I arrived here last fall I found your metropolitan papers filled daily with charges against a certain class of our American citizens; and our President, misguided by the evidence gathered from the headlines of the daily press, denounced the disloyalty of certain naturalized citizens. I did not then and do not now fear any peril from any class of native-born or naturalized citizens. President Wilson, in his autobiography in the Congressional Directory, states that his ancestry on both sides is Scotch-Irish and that his mother was a native of Scot-The truth is we are all emigrants or the descendants of emigrants from European countries, except the Indians and those of the African race. In this European conflict it is not strange that the sympathies of a citizen of British birth or ancestry should be for England or that the heart of a citizen of German birth or ancestry should throb for the fatherland. As true patriotic American citizens, however, neither has a right to extend aid to either belligerent. It is impossible to be neutral in thought, but we can and should be neutral in word and act.

"The 'hyphen' before the present war indicated nothing but the land of the citizen's birth or ancestry, joining Anglo, Irish, German, Russo, Scandinavian, and so forth, to America in one loyal, prosperous pro-American population. It will take more than the statements of eastern newspapers and speakers to convince me that it has now become the sign of disloyalty and of anarchy. It must be gratifying to every American, and especially the German-Americans, against whom the denunciations were chiefly directed, that the recent grand-jury investigations fail to sustain the newspaper charges of disloyalty. The last month your papers have had nothing or little to say about it. We have State and Federal laws against destructions of property and the violation of our neutrality. If citizens of foreigners have violated such laws they should be speedily pun-

ished. None should be spared the rod.

"Ex-President Roosevelt has contributed his share to fan the flames of race hatred. He always speaks forcefully, but often passionately and without weighing his statements. I want to analyze one of his statements which was roundly applauded by certain of the unthinking portion of our population in the East. He said: 'If you are going to be in America, speak American, be American, or get out of America, and this thing of Holland settlements, German settlements, or Bohemian settlements should not exist within the boundary of the United States.' What do you think of that coming from a man who at one time graced the Executive office of the Nation? We have all those settlements in Iowa and who has ever thought of breaking them up? We have a Holland settlement at Pella, of which you all know. Now, what is the matter with that settlement? If Holland should be in war with either England or Germany, the sympathles of those Holland-Americans would undoubtedly be with Holland. But in case Holland should invade American rights which would involve us in war with her, not a Holland-American there but would stand by America first and all the time, [Applause.] And what is true of our Holland settlements is equally true of our German and Bohemian settlements.

"A man can be a loyal American citizen and at the same time love the customs, songs, and the people of the land of his nativity or ancestry. The citizenship of this country is made up of emigrants from all the European countries and they represent various sects and religions. We should have a mutual regard, respect, and consideration for all the nationalities of our American population, as we do have and always have had toward all

our people who hold to different forms of worship.

"My parents came from Switzerland, my ancestors lived there, as do now all my relatives abroad. Although I have never seen Switzerland, I was nurtured on Swiss traditions and ideals, and my regard and love for that ancient Republic, the cradle of European liberty, is only surpassed by my regard and love for the United States, the land of my birth and my activities. [Applause.] May the God of our fathers save us from the unpatriotic distemper and acts of man or organization engaged in any propaganda to incite and create sectional, creed, class, or race hatred and prejudice. We are all Americans, and I know of none, either native or foreign born, who, in case of national need, would be unwilling to sacrifice his all of property and of blood upon the altar in defense of our glorious flag. [Applause.]

THE COMMON DEFENSE.

"There is much talk about our being unprepared. The first necessity to meet any emergency is, we must be a united people. No nationality of our complex American citizenship has ever failed us in case of national need, and never will. Although many of us retain a warmth of affection for the land of our birth or ancestry, we are for America first. Let that be settled for all time.

for all time.

"The Middle West is usually put down as against preparedness. That depends on what you mean by preparedness. The East has gone insane on munitions profits. They consider any legislation that would decrease the blood-money prosperity of the last eight months as unpatriotic. We have no munitions plants in Iowa, we do not look upon war as a legitimate means to enrich ourselves, and we have nothing to inspire us to a preparedness program so as to have a ready customer for our wares when the European markets will no longer buy at the close of

this war

"I do not impugn the motives of all men who are for a large Army and Navy. But when we hear so-called patriotic organiza-tions as the Security League and the Navy League accused on the floor of the House of Representatives of being financed by men interested in the manufacture of munitions, and that without denials from those organizations, it will tend to make a Congressman from the Middle West somewhat suspicious of the program offered and advocated by these organizations. May it not be logically inferred that the enthusiasm of these gentlemen for a large Army and Navy may, in a small degree at least, be inspired by the hopes of profits they will be able to reap from the sale of war supplies to the Government? Some of us western legislators have urged that war munitions should be manufactured by the Government. Here are two of the reasons for it: First, the Government can make them cheaper than it can buy them. Tremendous profits have been made off the Government by the sellers of war supplies. And second, we hold it is immoral for any person or concern to make profits out of such a horrible calamity as war by the sale of instruments of destruction and death. This has offered the gentlemen of these leagues a wonderful opportunity to demonstrate the unselfish patriotism of their propaganda, but up to date none, to my knowledge, has indicated a disposition to adopt any program that would in any way hurt or impair the business of the war traffickers.

"Are you surprised that—in view of the large profits made by these munitions men, both in their sales abroad and to this Government, and further in view of the charge that they are the chief contributors to the organizations which are so wildly agitating preparedness—the people of the Middle West are suspicious of their whole program? The Middle West is not opposed to a reasonable preparedness. We do not want to see this country undefended. We must be so well prepared that no foe can lay waste our coast cities. We need a strong Navy and adequate coast defenses. Congress is the jury that must determine what that reasonable and adequate preparedness is; and I, for one, at least, in determining that issue, am just as anxious to hear the sentiments and ideals of the people as the opinions of so-called war experts.

"The people will insist that their representatives see to it that for every dollar appropriated for preparedness the Government gets a return of 100 cents. Before the outbreak of the European war our annual appropriations for the Army and Navy exceeded those of either Germany or France for the same purpose. Why are we unprepared? I wait for an explanation from our war experts or some member of the Navy League!

CONFUSION OF THE ISSUE.

"The question of preparedness should be treated in a nonpartisan way. There is much confusion, both in speeches made in Congress and outside, on this question. For instance, today on the floor of the House there were two speeches made, one

by Mr. Henry, of Texas, and the other by Mr. Venable, of Mississippi. The first gentleman spoke against preparedness. He, in substance, advocated sufficient preparedness to protect the homes and firesides of the land, and he wanted the rich to bear the burden of such preparedness. The second speaker spoke for preparedness. He, in substance, advocated sufficient preparedness to protect the homes and firesides of the land, and he, too, wanted the rich to bear the burden of such preparedness. remarks of the first gentleman were applauded by those opposed to preparedness and the remarks of the second gentleman were applauded by those favorable to preparedness. And yet if the fundamental ideas of those two gentlemen could have been analyzed there might have been found little or no difference on this issue. Remember this, so far no reasonable person, either in or out of office, has advocated unpreparedness. The difference between those who are for or against preparedness is not whether we should or should not be prepared. The difference is in the measure or extent of the preparedness to be adopted. Thus far no specific program has been offered in either the Senate or the House of Representatives.

"The sentiments I have given you, I believe, in part at least, reflect those of the folks back home in Iowa. As to the specific program to be adopted, I am frank to confess that I have as yet not sufficient information to express myself. I shall await the reports of the various committees intrusted with that duty. I believe we can and shall be able to determine upon such a rational program of preparedness that will at the same time preserve the traditions and ideals of the people and secure the safety of our beloved country for all time. [Applause.]

Child Labor.

EXTENSION OF REMARKS

HON. THOMAS D. SCHALL. OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. SCHALL. Mr. Speaker, Congress has the right to regulate child labor engaged in the manufacture of articles that are sold to consumers outside their State. It is not unfair to the employers of child labor to compel them not to work the child between 14 and 16 more than eight hours a day and six days in the week. I am for this bill in seven different languages. shame is that Congress should be required to step in and do the thing that some of the States have criminally neglected to do. I am proud that the Minnesota Legislature has removed us from this class.

All work is noble and holy. "Blessed is he who has found his work." But the child must have time to develop his body and lay the foundation for understanding. For ignorance is slavery; intelligence, freedom.

I am in sympathy with the child. The experience of my child-hood is fresh in my memory. I have worked on the street, in the shop, in hot, in cold, in wet. I know what it is to push up a plank a wheelbarrow of brick—a man's work—at 14. I have worked on the farm. I have stumbled out of bed at dawn to the "Hi, there, get up there," of the meadow lark, through a weary round of milking, wood chopping, plowing, till I dropped into bed at night so tired I couldn't—

Lay flat enough, Jest dripped like 'lasses off the bed.

And I would no more than get to sleep than the meadow lark would pipe me up again. I know the longing of the child—to rest just a little, to mingle in play with other children for a while, to have time to dream a moment of coming manhood and what your life's work is to be. My childhood held no play. hands were shaped to the shovel and the plow handle before they had lost the dimples of childhood.

Skilled labor finds 10 hours a day too long. Surely, then, it is too long for the child. It is our shame that we are more awake to the breeding of our horses and cattle than our citizens. Who would think of working a colt or a calf? Then why lay a man's burden upon a child? To raise the point of constitutionality when childhood, precious beyond all valuing, is at stake is to put the letter of the law ahead of the spirit. The welfare of humanity supersedes technicality. Mankind is more than "money-kind." Child's rights are more than the dollar's rights. Light labor, they say. What of the "summer at the seashore" passed by the child of the oyster and shrimp canneries? Up at 3 in the morning-here they come: Tots of 4 to 7 years, unwashed, unkempt, rubbing their heavy eyes with the tiny hand that holds their breakfast—a crust of bread. From daybreak till dark for six long months they toil, picking with sore, bruised, lacerated, and bleeding fingers oysters from the dirty broken shells, which, strewn upon the ground in damp profusion, cut their bare feet. They handle ice-cold shrimps, and the corroding substance eats their fingers. If a 7-year-old works hard, he can make 25 cents a day; at 14 he can make 50 cents a day; and at 16, perhaps, \$1. That is the limit. A

full-grown man can make no more.

What of the weazened lad who "has not grown since he was 6"? What of the 10-year-old, lying groaning upon the porch, waiting for the "company doctor," ruptured by lifting too heavy a load of sheet tin? What of the girl of 14, who at the end of a year in the cotton mill is broken in temper and nerves and frequently deafened? What kind of heritage will these stunted, warped bodies, deadened minds, and barren spirits pass on?

warped bodies, deadened minds, and barren spirits pass on? Can society afford to pay for what industry saves in broken homes, wrecked lives, and ruined citizens?

Some companies, with sanctimonious air and unctuous rubbing of the hands, aver, "We educate our children"; and when asked how they do it, with benevolent face they beamingly explain, "The children work four hours, go to school four hours, and back to work again four hours." Is it any wonder that the teachers report small progress?

teachers report small progress?

Even the obviously inadequate census report of 1910 shows the appalling number of little tots at work. Because the census was taken in April children employed as berry pickers, cotton pickers, and in canneries were not counted. Many inaccuracies appear. To cite just one, no bootblacks at all are found in seven large cities. But even with all its omissions the tabula-tion shows that of children between the ages of 10 and 15 one out of six are at work. Two million children working! As late as 1913, in Georgia, 10-year-olds were privileged to work 11 hours a day. In Pennsylvania and West Virginia 14-year-old boys worked all night in the glass factories, and children of 10 put in a 10-hour day in the cotton mills of Tennessee.

Note the parallel between illiteracy and child labor in figures

picked at random.

State.	Per cent of chil- dren at work.	Per cent of population over 10 who are illiterates.	
Georgia.	36.9	20. 7	
South Carolina.	45.1	25. 7	
Maine	1.8	3. 3	

This same report shows that 895,976 between the ages of 10 and 13 were found at work and 1,094,249 between the ages of 14 and 15.

Industry, whose voice is loudest in protest, must learn that cheap labor is in the end the most expensive. Each child at work displaces an adult and cuts the adult wage. But the quality of the child's work is poor; he is wasteful, and requires more supervision; and supervision is expensive. He is , is more often hurt himself, and breaks machinery. To it does not cost much to replace the "broken child," careless, is more often hurt himself, and breaks machinery. be sure. but broken machinery costs money. Worse than all, more farreaching in its evil effect, as industry must find to its cost in the future, the overworked child makes an inefficient, workhating adult, and will breed that kind of men whose shrunken mental faculties can only voice their protest against society through the bomb.

Preparedness? Here is the place to begin preparedness. Here in its youth is the heart of the nation.

Is it nothing that American children shall have no home life. shall be bred up illiterate, shut out from school, with no outlook but a life of slavery, poverty, and—what wonder—crime? The majority of boys in the reform schools come from workers on the street.

This present age is preaching the gospel of play for the child. Imagine that child who, looking up dull-eyed from his work, a faint surprise stirred in him at so foolish a question, answered, "No: I have never played." "Children ought to work," says the gentleman from Florida, Mr. Clark. "I have no patience with this sentimentalism. Work never hurt anybody." My heart swells within me as I vision the army of little children from the canneries of Maine to the fields of Texas, with their dry lips, dull-red eyes, and pallid cheeks; their languid limbs dragging along their shrunken bodies, denied the wholesome development of play; with fingers, hands, and even legs and arms nipped off by the merciless machinery; I hear the cough

of the tenements; I see them "junked at 16"; and I say to you, Mr. CLARK, This is not work, but slavery. Childhood is consumed. We are murdering the children. Moloch was more merciful, for he did his work quickly.

Let us remember that it was the Master himself who made the first great plea for "these little ones." "He who helps a

child helps humanity."

They look up with their pale and sunken faces,
And their look is dread to see.

For they remind you of the angels in high places,
With eyes turned on Delty.

"How long," they say, "How long, O cruel Nation,
Will you stand, to move the world, on a child's heart—
Stifle down with a mailed heel its palpitation,
And tread onward to your throne amid the mart?
Our blood splashes upward, O gold heaper,
And your purple shows your path!
But the child's sob in the silence curses deeper
Than the strong man in his wrath."

Amending House Rule.

EXTENSION OF REMARKS

HON. JAMES A. FREAR.

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, February 3, 1916.

Mr. FREAR. Mr. Speaker, in the presence of any great calamity the Government has been prompt to give relief, and it is one of the evidences of close brotherhood of men that at such times no technical rules of legal or legislative conduct are allowed to intervene. No member will oppose the passage of a resolution designed to afford relief to flood sufferers, but the work of any committee charged with extending such relief will be watched with interest in order to determine at what point flood relief ends.

It is probable that the best means of handling the flood problem is to place it in the hands of a separate committee which may be held responsible for its recommendations. Heretofore the River and Harbor Committee has appropriated large amounts for the Mississippi River, and no better statement of the uses to which moneys have been put can be found than in the frank words of the able gentleman from North Carolina [Mr. Small], who has said in this debate:

Every intelligent Member of this House has voted for millions of dollars for the Mississippi River, knowing what he was doing, knowing that a large part of that money was for the protection of those fertile lands along that great river against floods; and yet because we realized that the problem was so stupendous that it was against the financial capacity of any State to protect its lands against that river, we have shut our eyes and have voted these millions of appropriations and have done it gladly, under the guise of improving the navigability of the Mississippi. That is the truth, and every Member knows it is the truth.

This statement from one of the oldest Members of the House indicates that in the future appropriations for reclaiming land will not be presented by the Rivers and Harbors Committee, which has jurisdiction alone of navigation, but hereafter will go to the Flood Committee. If any question existed as to this new committee, the chairman of the Committee on Rules [Mr. GARRETT] fully expressed the understanding of the Flood Committee's jurisdiction. When asked by the gentleman from Missouri [Mr. Borland] "whether flood control may not necessarily include a very important element, and that is the drainage of overflowed land," the gentleman from Tennessee responded "that would be broadening the idea which the Committee on Rules had in mind when it reported the resolution. As a matter of fact, I should assume that bills touching that question would be referred to this committee whether it is provided in the rule or not.

Whatever may have been the purpose of the resolution, this statement, made on the floor at the time of its passage, would undoubtedly determine jurisdiction, so that instead of appropriating millions of dollars annually for Mississippi River levees under a fictitious need for navigation, hereafter the matter will properly come before the Flood Committee, which committee will make its recommendations to the Appropriations Committee.

Again, it would appear that this disposition of land-reclamation projects along the river is proper and will place the matter where it belongs, for the Mississippi River Commission, displanting attempted improvement of payingtion has said in its

claiming attempted improvement of navigation, has said in its

While the levees have a certain degree of utility in the improvement of the channel, and are necessary to "promote the interests of com-

merce" by providing landing places for the interchange of traffic in times of flood and protecting the lines of railway behind them, their immediate and main value is the protection of the alluvial lands for the benefit of their owners.

This same state of facts presumably applies to land-reclamation proposals from Rock Island to Cape Girardeau, estimated to cover or uncover 780,000 acres of land, and also all reclamation projects farther down the Mississippi River, estimated to reclaim anywhere from 15,000,000 to 20,000,000 acres. In like manner this Flood Committee's jurisdiction will extend to the land reclamation along the Missouri River, estimated, according to official reports, at 500,000 acres, and also to the 1,000,000acre reclamation project along the upper Sacramento, known as the Feathers River project. Many other projects from Indiana to Arkansas have been suggested during this debate, so that the new committee, under the interpretation of Chairman Garrett, will have other great and important matters to handle whether floods are present or prospective.

It would possibly have been better to have placed the whole problem of flood relief and land reclamation in the hands of some other body that could make extended investigation and give permanent relief. We might also adopt some more equitable system in order that Congress would not use public funds without limita-tion for what the Mississippi River Commission describes to be the "protection of alluvial lands for the benefit of their owners." The whole proposal invites the strictest scrutiny, because it does not appear to be just and proper to use such funds, contributed by the residents of Minnesota, Iowa, Illinois, Wisconsin, or any other State, for the wholesale reclamation of private lands lying

along the great rivers of the country.

Many of the States have drainage laws whereby lands reclaimed from swamps or overflow have benefits charged against the owners, so that the different parcels of land carry the charge for reclamation. It would appear to be unjust and inequitable to give land-reclamation appropriations without restrictions or contributions to be furnished by those who demand relief.

Possibly no more unbusinesslike handling of the problem will occur in the future than in the past, but the new committee has within its hands the determination of certain principles of Federal aid that ought to be extended to all communities alike. Such is not the case to-day. This resolution has been prepared and acted upon with brief consideration, introduced, heard in committee, and presented on the floor within a period of two or three

days, according to statements made here in debate.

The courtesy which every Member of the House is glad to extend to the distinguished gentleman who introduced the resolution would prevent question as to its future usefulness or of its imperative need at this time, nor will any Member be found to withhold relief for genuine flood sufferers or for any other stricken people wherever located. Such aid is ordinarily extended without quibble or question; but problems are sure to come before the Flood Committee that will require wisdom and caution to determine, in order that the private interests of owners of alluvial lands shall not be cared for in such manner as to work injustice to the great mass of the people who contribute the funds used for reclamation purposes.

Mexican Situation and National Defense.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS,

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 5, 1916.

Mr. DAVIS of Texas. Mr. Speaker, on Wednesday I asked consent to be heard this afternoon on the Mexican war problem and national defense for 20 minutes. The gentleman from Illinois [Mr. Mann] objected. I then prepared these remarks, in order that I might go to the country with the truth as I see it.

The world has "warphobia," and military mania is raging everywhere. "Like begets like" is a fixed law of the universe, and warlike nations always find war. Germany's warlike attitude for 20 years has resulted in a world's cataclysm of cruel war. Her perpetual preparedness made her a military maniac, as it will any country where the war spirit dominates.

The mad-brained enthusiasts for war in this country want us to follow Germany's example. God says, "A soft answer turneth away wrath." The war traffickers say, "A big stick turneth away wrath."

Subject to all the bias that may sway the average Democrat, I want to say that I have heard many fine and patriotic speeches on the Republican side of this House; yet I have been forced to sit day after day and listen to other Republicans whose chief attraction seemed to be a chronic effusion of vocal tirade against Woodrow Wilson and Secretary McAdoo with acrimonious venom; then clamor for a great Army and Navy and to reinstate the old chestnut—fraudulent protective tariff—to pay the cost

They call us who stand for Americanism against imperialism and conscription, mollycoddling, flabby-sided pacifists.

Those are pet names, and I return the compliment by stating that if we are mollycoddling, flabby-sided pacifists now, the President, Secretary Garrison, Admiral Fletcher, and the noted gentleman from Illinois, Mr. James R. Mann, were all mollycoddling, flabby-sided pacifists last year, for the record shows they stood then just where Gen. Miles, Mr. Kitchin, and most leading Democrats stand now as regards the size of our Army and Navy. I want it understood that as long as I have sense enough to obstruct the proceedings I will fight every method of conscription unless we can conscript money the same as men. I would consider it a piece of crowning villainy to support a law to go among the soot and cinders and sweatsoaked tenement renters and common walks of life and drag out the poor homeless workers of our country with handcuffs and make them stand up and be fed to cannons to save the millions and mansions of the Carnegies, Astors, Rockefellers, and a few thousand trust masters and tariff barons who have been allowed, through special privilege and protection, to rake in the labor of millions of people and call it theirs, who disdain America, and are now building castles among England's

If we can pass an army classification act and make wealth bear its part of Army, Navy, and war expenses, then I would like to see the regular soldier dignified, paid \$40 to \$60 a month, and put the standing Army to building military roads at least three weeks out of each month. In this way we could soon crisscross the country with fine roads, useful in peace as well as in war.

The clamor for military conscription made with such vehemence by a lot of eastern papers and urged by many leading supporters of the imperialistic program is forbidden by the thirteenth amendment to the Constitution, which says that—

Neither slavery nor involuntary servitude, except as a punishment for crime, * * * shall exist within the United States or any place subject to their jurisdiction.

Conscription for Army service is involuntary servitude and not as a punishment for crime. This amendment was made to protect a poor and helpless race—the southern negro—from laws that might be made by a haughty superior race who had been his masters. I now thank God that I can interpose it to shield not only the black man, but millions of poor and helpless whites who are under the domination and control of a lot of trust masters more haughty, austere, and cruel than ever the sloveholder was

I fear our Democratic President when he turns down the council of that noble band of patriotic Democrats headed by Bryan, out in the ranks, and Claude Kitchin, our splendid leader in Congress, and leans up in the arms and listens to the siren songs of well-known reactionary Republican leaders to carry out this stupendous military program, is not only resting on a broken reed, but he is being kissed by a Judas who seeks to betray him, hugged, caressed, and courted by a Delilah, a Philistine liaison, who seeks to have our Samson's head shorn and his Democratic eyes punched out.

Not long since my honorable colleague, Mr. Henry, while making a speech, in which he laid bare many hideous deformities of the \$2,000,000,000 war-crowd plan and demanded repeal of the "odious stamp tax" brought forth a chorus of applause from the Republican side.

The stamp tax is odious and offensive. It is the spawn of rank Republicanism, begotten of Mark-Hanna, whose policy was to tax the masses and feast the classes. It came through the womb of the Republican Party and was adopted during the War with Spain, when the Republican Party was either too cowardly or too craven to enact an income tax upon the millionaire it had created.

Let the Democratic Party purge itself of this Republicanism by putting a tax on large incomes, inheritances, and millionaire war traffickers, thus speaking into life and law sound traditions and principles of Democracy.

I am not a hyphenated American. I had seven granduncles in the Revolution of 1776. At Brandywine and Yorktown my ancestors stood for the Republic. Welch, Scotch, and Irish make up my pedigree of over 200 years in America. Yet I say in all

candor that the old Tory stock of English snobocracy that gathered around Alexander Hamilton in the beginning are to-day the greatest impending danger to our Republic. Their immense wealth gives them great prestige and influence, making their treachery all the more dangerous and damnable. For 40 years they have been drawing the forms of English government over they have been drawing the forms of English government over us and intermarrying and paying millions for royal titles, and even so conservative a man as Mr. Taft tells us they have "gathered their wealth by all forms of iniquity." Roosevelt says they are the "criminal rich." Bryan calls them the "predatory classes." Tom Lawson calls them the "frenzied financiers." La Follette calls them the "wealthy malefactors" and "malevolent rich." Hearst calls them the "American plunderbund." Tom Watson calls them "purse-proud plutocrats." In all these terms I concur and go further and say that they are always terms I concur and go further and say that they are always venal vampires sucking the lifeblood of liberty and coining the misery and misfortune of the plundered masses into wealth through the great corporations they control. It was the leading envoys of this class that met at the Gary dinner a few weeks ago. Touching knees under a table in a gorgeous feast representing untold millions of loot legally extorted from a helpless people, they met to devise ways to put Woodrow Wilson in ignominious defeat by the corrupting and debauching influence of their ill-gotten millions and to destroy Democracy and put Roosevelt at the head of "their" Government with an imperial army and navy to do "their" bidding. What Brutus was to Cæsar, what Judas was to Jesus, they are to this Republic. When W. L. Yancey, Robert Toombs, Jeff Davis, and others met to extend slavery by the annexation of Mexico and Cuba as slave country south of Mason and Dixon's line and later to secede from the Union to save their special privilege to appropriate the labor of slaves as legal, they never had a more damnable design on American liberty than that bunch which met at that millionaire carouse of the war traffickers and trust masters which made up that Belshazzar feast. And the slave traffic with all its infamy never represented more than one-tenth the wealth said to have been represented in that gold-bound, diamond-tipped cabal of conspirators. When the slave masters met they, with complacent aristocratic minds, covered their sordid, knavish designs under the sweet and sacred terms of State rights. When these trust masters met they covered their knavish depravity under the euphonious term of "protection" to American labor. These sweet-scented millionaire plutocrats represent the same kind of protection to American labor that the Pharaohs did to the children of Israel and the Roman masters had for the poor, helpless plebeian. Risk them to save this Republic? You had as well risk the devil to preach the gospel.

When the moon shall cease to shine at night,
And the stars shall fade away.
And the sun refuses to give light,
And there is no coming day,
When water falls to flow down hill,
And you find the ocean dry,
When the earth is gone and there is no God
Beyond the vast blue sky,
When Judas becomes a patron saint,
And Christ a base betrayer,
When Cain becomes an innocent man,
And Abel becomes his slayer,
When hell becomes a health resort,
And heaven a haunt of sin,
When God vacates His heavenly home,
And the devil enters in,
Then that crowd all saints may be
And help to set this country free.

The Hon. James R. Mann, in that recent able and impassioned speech, adroitly breathing warphobia at every period, its music all set to an imperial Army and Navy, with all its conscription and accursed methods, in rounding out one of his intense vocal outcroppings, called for an army of 300,000 men; then, to prey upon the fears of the country with gorgons and hobgoblins, he made his voice quiver as he said, "I have much more fear of war with England than with Germany."

Do these people afflicted with warphobia think the American people are fools enough to take such Republican rot as patriotism? The Steel Trust, the Money Trust, the Powder Trust, and allied pals in plunder having, with millions of profit, armed, equipped, and supplied England, the greatest war power on earth, now bring the champions of a protective tariff forth to make the imperative demand that this Democratic administration must load labor with staggering taxation, famish the farmer, and stagnate the common channels of business with untold millions in taxes to drag 300,000 of our best, able-bodied young men from their homes, in the peaceful walks of life, in handcuffs, under conscript laws, to pile a few more billions into the rapacious maw of these trusts by contracts with them for preparation to fight England, whom they have already prepared to fight us.

Such brazen effrontery, such craven conduct, such selfish and unscrupulous greed as these war traffickers and knavish lords of the Navy League bring forth ought to put a blush of shame

upon the cheek of even the most sordid Republican.

If I felt as the distinguished gentleman from Illinois feels and saw the frightful prospective horrors of a war with England, I would ask some of my Democratic friends, in a spirit of nonpartisanship, to please introduce a resolution to place an immediate embargo on arms, and insist upon every Republican vote being cast to enact the bill.

I fear another mistake the President made was when he went to speak at the Waldorf-Astoria to get Democratic inspira-

tion on the question of our national defense.

The real Democrats of this country rarely ever live higher up than \$2-a-day hotels. They write to me by the thousands that they oppose the whole military program as a plan of plutocracy to rob us of our liberties.

The Railway Business Men's Association has never been known as a Democratic crowd at the Waldorf Astoria, and of

course, is always for the military program.

These railway magnates are the most lordly luxuriant looters this country ever had. They have plastered our country three-ply deep with forged, fictitious, fraudulent, watered railroad stocks and bonds, in many cases issued to themselves thereby forcing the toil, energy, and honest business of the country to pay interest thereon. They have robbed the roads they claim to own, like robbing bee gums; then put these roads in bankrupt courts, and go to the country and depict the "depleted condition of their treasury," asking a raise in rates to fill up, while many good men went into Mexico and perhaps lost their all and deserve profound sympathy.

The situation has recently been expressed in such truth by Senator LA FOLLETTE that I want to do myself the honor of quoting that patriotic Republican which fortifies our President with a wall of adamant against the vicious attacks of Republican floor leaders who brand the Wilson administration as cowardly and exasperating because the President has not made war on

Mexico:

The interests are very powerful. They can always command the backing of a large section of the press. They would force the Wilson administration into war with Mexico.

The Government of Mexico under Diaz was a military despotism. It plundered the Mexican people and traded their birthright to the masters of American fluories.

plundered the Mexican people and traded their birthright to the masters of American finance.

The special interests which are exploiting the American people through a control of our timber, coal, oil lands, and water powers coveted the mineral wealth of Mexico.

When the Mexican people revolted under the patriotic Madero the special interests, through their press in this country, clamored for intervention. How nearly they succeeded under the Taft administration the public will never know. A large army was rushed to the Mexican border. Madero established an orderly government for that unhappy country. He was opposed at every step by our special interests. Revolts were encouraged—financed it was alleged by American money.

Madero was betrayed and murdered. Huerta set himself up as ruler. It was another military despotism. Our special interests were for the lluerta government.

uerta government.

The Mexican people again revolted. Carranza led the revolution. He is established a de facto government now in control of most of the

country. The same American special interests understand full well that Carranza's high aim is to establish a government for the Mexican people. Doubtless Carranza could win their favor and cooperation if he would adopt the Diaz policy and rob his country of its natural resources for the benefit of the special interests which so largely own and control the natural resources of the United States.

Our special interests and their press sought to force this Government to intervene to maintain the Diaz government. They used all their power to maintain the Huerta government.

And now that a government has been established in Mexico which is manifestly making the interests of the Mexican people its paramount object, they are raising another hue and cry throughout the country for intervention.

But most of the Republican leaders in discussing the Mexican situation slander Wilson with the most vindictive bitterness. traduce the career of Bryan in terms of unrelenting venom and sarcasm, assail Carranza with acrimonious derision, and usually close their remarks in lauding and extolling that old midnight assassin and venomous tyrant, Victoriano Huerta.

The Mexican situation is horrible and has been from the beginning, but with all my heart I thank God that President Wilson has handled all its serious and complex conditions in a manner to preserve honorable peace and forestall a bloody plunge into the wretchedness of that country. It would take us but a short while to whip Mexico, and if Wilson were not the patriot that he is and had been as crafty and self-serving as these Republican leaders say he is he would make those bloody butchers and bandits a basis for the indictment of the whole Mexican Republic, and issue a soul-stirring appeal to the people in a declaration of war, invade Mexico to avenge the unlawful, outrageous slaughter of American lives and thereby insure his reelection. I beg these flamboyant political parti-

sans, filled with malice and bias against all real Democrats, not to carry their aggravating, tormenting tirades much further, for they may provoke such a situation that the President, in order to preserve his own honor and the honor of the great office he holds, the great Republic he serves, and the party that elected him, may be forced to yield to a clamor for an unholy

Huerta was not only a greedy plutocrat, but a murderous, marauding tool of plutocracy and autocracy, which great accomplishments seem to have made him commendable in the estimation of many leading Republicans, who for years have manifested a thrill of joy when a group of helpless workingmen were shot down, their tenements bombarded and burned, and helpless women and children torn from the dead embrace of

husbands and fathers.

I am often asked by Republicans, who, in their partizanship, want to impugn the motives and condemn the conduct of a Democratic President for not intervening in Mexico, if I am not shocked and chagrined at the slaughter of a dozen of our citizens on Mexican soil? I answer yes; shocked, angered, and made mournfully sad; but these men knew they were going into a foreign country infested with danger against which the President had warned them prior to their embarkment in that savage and bloodthirsty land. But I have seen slaughters in our own land that gave me far more concern. More than 20 years ago, at Homestead, Pa., where the foundations of Car-negie's castles were laid in the blood of three times the number of men just massacred in Mexico; in Colorado two years ago we reached the climax of internal slaughter, when helpless labor lay languishing by the score in the red blood that drenched the earth and the widows' wail of slaughtered husbands and the screaming cries of children, made orphans by that slaughter, rent the air with agony, while the masters of these helpless wage slaves sat on the sofas in their palaces in New York surrounded by gorgeous and imposing splendor, con-templating, with an insolent indifference, this reign of terror born of inordinate greed, and sent the President of this great Republic word that there was nothing in Colorado to arbitrate.

For 20 years I have been beseeching, in the name of outraged, wretched, and impoverished labor, that this Republic "intervene" to stop these corporation cannibals, these Pancho Villa commercial bandits from wholesale slaughters and murderous

labor

But Republicans who have nightmares and rage with scorn at President Wilson's patient plan of watchful waiting in Mexico have been carrying on a plan of watchful waiting in these home massacres for 20 years. They have watched labor go down in despair, made homeless in a land where God's storehouse is teeming with natural wealth. They have been watchful and waiting until the corporation, by its venal and greedy manager, has appropriated the earth-that God gave to manand the fullness thereof.

They now not only refuse to intervene and "establish justice, insure domestic tranquillity," but they turn with impudent accusation and rail at him who dares defend helpless humanity.

These gold-trimmed, diamond-bedecked masters of our country are more dangerous to the liberties of our people than a hundred dens of red-shirted, flannel-mouthed anarchists; for the anarchist is opposed to all government and all law, while these soft-pedaled, pussy-footed pirates in politics and marauders in business, without one restraining sentiment for the love of God or the respect of human rights, would make government a mighty machine to rob, plunder, and pillage a helpless people

under pretext of law.

To perpetuate their sway they overawe the weak, shackle the strong, corrupt the venal, suppress the truth, and elevate falsehood in a thousand ways in the conflict between capital and

God bless Gen. Miles, that righteous old veteran, whose recent utterances before the Committee on Military Affairs have the ring of true patriotism, not the metallic ring of war traffickers, counting dollars by the million while they arm England and ask a Republican leader to tell us we must chink metal in a billion-dollar pile for them to prepare us to fight England.

Listen to the logical and patriotic language of the general, when he says:

There is nothing to indicate that a larger military force will be required in the near future, if ever. I am not alarmed by the reported ability of any strong European belligerent to land a force of 300,000 men and sweep our coast line. If such a feat were possible, and this army of invasion could not be destroyed by the uprising patrictism of the American people while the ships that brought it were going back for another load, I would prefer to live in some other country.

The following letter; written by Maj. R. W. Hurdle, a Virginia veteran of Stonewall Jackson's army, signed by a hundred men in the town of my boyhood, inspires me beyond measure, and shows how the heart throbs of the masses beat in Texas:

WINNSBORO, TEX., January 27, 1916.

Winnspord, Tex., January 27, 1916.

Hon. J. H. Davis,

Washington, D. C.

Dear Jim: I wish to compliment you on the high position of statesmanship you have taken on the so-called military preparedness measure, in which 100 of your neighbors here where you were raised most heartly join me.

We believe that America is for Americans; that no foreigner should be allowed to hold land property in the United States until he shall have taken an oath of allegiance to this Government disavowing allegiance to any other Government.

We are unalterably opposed to a large standing Army. The present plan is a serious departure from a government of democracy to a government of militarism. The Government should manufacture its own implements of war, of the most approved and improved variety, sufficient to meet our ordinary needs for common defense, Our present Navy will be adequate after the completion of present contracts.

This war demonstrates that great navies neither win battics nor crush enemies.

We believe in a State militia with national aid, and in national aid to the military departments of State schools.

The great danger to our country consists in the pillage of the masses by the great corporate classes within our own borders and on the continents of Europe, who will honeycomb our society with an immigration breeding anarchy, Ignorance, and vice at the close of the present war.

R. W. Hurdle, A. A. Angle, H. C. Mitchell, Jack Gilbert,

reeding anarchy, ignorance, and vice at the close of the ar.

R. W. Hurdle, A. A. Angle, H. C. Mitchell, Jack Gilbert, E. E. Lunsford, F. M. Henessoner, A. J. Laird, M. A. Picre, J. I. Browning, G. E. Russell, R. H. Patrick, Thos. L. Sheeton, S. J. Here is a voice from down in the ranks, patriots from the plowhandle. This letter is replete with righteous truth:

SCLPHUR SPRINGS, TEX., January 8, 1916.

Hon. J. H. (CYCLONE) DAVIS, Washington, D. C.

Washington, D. C.

Dear Cyclore: Your friends here generally are delighted over the position you have taken against this mania for more military power. Far more armies have been used to destroy liberty than to protect it.

Our President has truthfully stated: "This Army is to protect the wealth of the country." He speaks of the patriotism of the employers in allowing their employees to join the Army, stating that it is for the protection of the employers that the Army is needed. The same old story. Men must march forth to meet death and slaughter to protect money. We would ask our President who the employers of this country are? Are they not the gigantic corporations, trusts, against which every patriot for 30 years, including Wilson himself, has so seriously warned us?

Mr. Teft's suit against the Steel Trust above the serious over the position of the suit against the Steel Trust above the serious over the position of the same of the same

are? Are they not the gigantic corporations, trusts, against which every patriot for 30 years, including Wilson himself, has so seriously warned us?

Mr. Taft's suit against the Steel Trust showed its grip on almost overy important business in the land and its fangs in the very heart of greed concern to have the very commercial life of our country in its clutches. The Oil Trust is known to be one of the most corrupting and dominating forces, striking at the very foundation of our Republic. The Transportation Trust spans the continent in its cruel combine and largely forbids the use of rivers, iscke, or oceans as competitors. These divides the result of the control of the strength of the prime causes for all the tears of be readed whole and the control of the strength of the prime causes for all this for profit.

Mr. Taft's suit against the Steel Trust showed its grip on almost overy important business in the land and its fangs in the very benefit of the proper trusts of the proper trusts of the proper count, but it is clutches. The Oil Trust is known to be one of the most corrupting and dominating forces, striking at the very boundation of our Republic. The Transportation Trust spans the continent in its cruel combine and largely forbids the use of rivers, with their allied and interlocked partners in plunder, employ and dominating forces, striking at the very benefit of trusts, with their allied and interlocked partners in plunder, employ and the stream of the stream of trusts, with their allied and interlocked partners in plunder, employ and the stream of the stream of trusts, with their allied and interlocked partners in plunder, employ and the stream of trusts, with their allied and interlocked partners in plunder, employ and the stream of the stream of trusts, with their allied and interlocked partners in plunder, employ and the stream of the stream of the stream of the stream of the constitution of the constitution of the constitution of the constitution with would open mit completely and with the constit

to detract attention from the sacred promise made by Democracy last year to give the farmers an honest system of rural credits, equal in benefit to that already given to the banking and commercial world.

The glorous fight, led by Bob Henry in the House and Hoke Smith in the Senate, last year is still fresh in the farmers' heart, and we feel that our own Cyclone Davis will be a stalwart recruit to the patriotic forces that we hope and pray to God will give us victory.

F. W. Betts,

President Hopkins County Farmers' Educational and Cooperative Union.

C. H. HOLLEY, Secretary.

J. T. Srale, Ex-President.

N. M. Mathews, Ex-Secretary.

A. P. Landers, Ex-Secretary.

A. P. Landers, Ex-Secretary.

These men represent the yeomanry of one of our best east Texas communities. I have received more than 2,000 letters of the same sentiment:

GLADEWATER, TEX., January 29, 1916.

Hon. J. H. Davis, Washington, D. C.

Hon. J. H. Davis, Washington, D. C.

My Dear Sir: We the undersigned citizens of Upshur County, Tex., are opposed to the President's plan of preparedness. We believe that the munition manufacturers are at the bottom of all this preparedness agitation for profits. We see no reason for a larger Navy or larger Army. Therefore we ask you to oppose with all your power any effort to increase the Army or Navy, for our taxes are very burdensome already, and we see no cause for alarm. Therefore we ask you to oppose any preparedness legislation, and oblige the undersigned voters.

This letter is from one of the leading minds and grand men

This letter is from one of the leading minds and grand men of Texas-a tribune of the people, prominent in State affairs for 40 years:

SAN ANTONIO, TEX., January 31, 1916.

Hon. James H. Davis, Washington, D. C.

Hon. James H. Davis, Washington, D. C.

Dear Sir: Am very glad to see that yourself, Representatives Callaway, and Dies are vigorously opposing the preparedness program. The country will bless and honor you for this course when it returns to sanity. The movement had its genesis with the eastern "melon cutters" who have so enjoyed the julcy slices from the foreign field that they now wish to provide a new patch at home for their uses as soon as the foreign supply falls. They have deceived the President and run him "hog wild" on the subject. He is now leading the Democratic Party straight to destruction and the country straight into the hands of the eastern money power, whence we thought we had redeemed it by his election. He has changed his mind on the subject of preparedness, on the subject of a tariff commission, and God knows how many other subjects. Judging from the sham antitrust law passed at the last session, he has changed his mind on that.

I think that the next Democratic platform should contain a plank prohibiting a President from changing his views on vital questions after election, at least prohibiting him from trying to enforce such changed views.

In my opinion the one way by which Members of Congress may kill this whole preparedness propaganda is to apparently fall in with it to a limited extent, but strenuously insist that the cost shall be pald by a tax on large incomes, and that the Government alone shall manufacture everything necessary to carry the program into effect. If there appears the least danger of such provisions being adopted by Congress, you will find the National Security League, the Navy League, and other manufacturers of artificial public sentiment for preparedness will dissolve. Whenever the great corporations and their rulers find that they are going to be taxed to pay the cost they will kill the movement.

Permit me to suggest a constitutional question upon the point of compulsory military service. The thirteenth amendment to the Constitution of the United States provides tha

Sec. 2. That all personal incomes, family incomes, or joint incomes of husband and wife in excess of \$75,000 per annum shall be assessed, and the owner or owners thereof shall pay into the Treasury each year in time of peace a sum equal to the average annual cost of one soldier or sailor for each \$25,000 of said income in excess of \$75,000 per annum, and in time of war for each \$12,000 of said incomes in excess of \$12,000. That in assessing the values provided in this section the values set by State courts shall be accepted.

Sec. 3. That any dowry, inheritance, bequest, legacy, income, or other sum of money arising or accruing from property or investments in the United States to a foreign potentate, principality, corporation, firm, or individual, other than for charitable, educational, or benevolent purposes, shall be assessed, and the owner thereof shall pay into the Treasury in time of peace a sum equal to the average annual cost of a soldier or sailor for each \$25,000 of said funds received in excess of \$50,000 per annum, and in time of war for each \$12,000 of said funds received in excess of \$10,000 per annum.

Sec. 4. That in order to ascertain the average annual cost of one soldier the total number of soldiers and sailors, active and retired officers in the Army and Navy, shall be divided into the total annual cost of said soldiers, sailors, active and retired officers, and the result shall represent the annual average cost of one soldier as contemplated by this bill.

Sec. 5. That the Secretary of War and the Commissioner of Cor-

of said soldiers, sailors, active and retired officers, and the result shair represent the annual average cost of one soldier as contemplated by this bill.

Sec. 5. That the Secretary of War and the Commissioner of Corporations shall have power to prescribe rules and regulations governing the execution of this act, and shall provide for collection through the Treasury Department.

Sec. 6. That all members or officers of corporations, all citizens or residents of the United States subject to impressment or assessment under the provisions of this act, who refuse or fall to comply with such provisions shall be deemed guilty of desertion, and upon conviction shall be punished as provided by law in case of desertion. That the incomes, dowries, inheritances, or legacles, etc., accruing to foreigners, described in section 3, shall escheat to the United States upon the decree of any court of competent jurisdiction if said foreigners fail to comply with the provisions of this act.

Sec. 7. That corporations, associations, or individuals engaged solely in religious, benevolent, charitable, or education work shall not be subject to the provisions of this act, whether such corporations, associations, or individuals are domiciled within the jurisdiction of the United States or abroad.

If we must fight England, then every call for extensive arma-

If we must fight England, then every call for extensive arma-

ment is a call for an embargo as a measure of defense.

On January 31, 1916, I submitted the following resolution, which was referred to the Committee on Rules and ordered to be printed:

Resolution.

Resolution.

Whereas the gentleman from Illinois [Hon. James R. Mann], chosen leader for the Republican Party on the floor of this House, in an impassioned and intense speech advocating a huge Army and Navy, urging that we tax our people billions of dollars to organize and maintain an Army of 300,000 men and a Navy "equal to the best in the world," told us in serious accent and quavering octaves that England was the country that we would have to fight, saying "we must prepare, and prepare now"; and
Whereas the great daily papers have, with remarkable unanimity, regardless of former political alignments, extolled that speech as wise, statesmanlike, and patriotic, and pronounced the gentleman from Illinois [Mr. Mann] a great leader; and Whereas England is the only nation that eyer did make war on us and invade our country; and
Whereas we believe she is the only power that could make war on us with any hope of success, having Canada on the north, furnishing an excellent base of supplies and a strong arm of support, and having Japan, her yellow ally, who could attack us on the Pacific coast, and having Pierpont Morgan, one of our American Tories, now serving in every aspect as resident envoy and minister plenipotentiary with the officers of the Steel Trust and Powder Trust as minister of munitions; and

officers of the Steel Trust and Powder Trust as minister of munitions; and
Whereas the same crowd of leading Republicans and leading papers
and the special interests and war traffickers that are urging this
massive military program are, many of them, maligning, castigating,
and traducing our President because he does not invade Mexico, so
England could have that country-as an ally to engage us on the
south while she stormed us on the Atlantic, Japan on the Pacific, and
Canada on the north; and
Whereas it is criminal negligence, extreme folly, and wantonly wicked
on our part to allow these Anglo-Americans, these mercenary tories,
these war traffickers to make billions of money in preparing England
to fight us and then demand that we pile a billion dollars into their
tills to prepare us to fight England: Therefore be it

Resolved, That we authorize the Speaker of this House to appoint a
committee of five, three of whom shall be the chairmen of the Ways and
Means Committee, the Committee on Military Affairs, and the Committee
on Naval Affairs, to confer with the President and his Cabinet to consider, in the face of these possibilities and serious conditions, the question of laying an immediate embargo on the exportation of arms and
munitions as the first step in preparedness and national defense.

Coinage of a McKinley Souvenir Gold Dollar.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN, OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 7, 1916.

Mr. AUSTIN. Mr. Speaker, availing myself of the privilege to extend my remarks on the pending bill "For the coinage of a McKinley souvenir gold dollar in commemoration of the erection of a memorial to William McKinley, late President of the United States," I offer the able oration of Hon. Joseph G. Butler, jr.,

of Youngstown, a leading citizen of Ohio and the founder of the McKinley Memorial at Niles, Ohio, delivered on November 20, 1915, at the laying of the corner stone of the memorial.

The oration is as follows:

ORATION OF HON, JOSEPH G. BUTLER, JR.

Fellow citizens, patriotism, protection, and prosperity were the combined watchwords and slogan of William McKinley. He was a patriot from boyhood up and a protectionist from principle and conviction, and a harbinger of prosperity until the end.

William McKinley was born almost on the exact spot of this memorial building January 29, 1843. The little old white schoolhouse which he attended was a part of the location of the memo-

rial building.

Pride of ancestry had no place in the make-up of President MiKinley, nor had it in the mind of his honored father, William McKinley, sr. The McKinleys are of Scotch-Irish descent, and McKinley, sr. The McKinleys are of Scotch-trish descent, and no doubt could trace their origin back to a remote period should anyone take the trouble. It is known that the family in America came from the Donegal Valley, a good old Irish name. This valley is in Lancaster County, Pa. There the old Donegal Presbyterian Church, built early in the eighteenth century, stands. The history of this church is somewhat scant, but a tablet of markle attached to the wall talks that the church was founded. marble attached to the wall tells that the church was founded by Arthur Patterson in the year 1722, and that in 1740 the church received a patent from John Thomas and Richard Penn. During the Revolution the pastor of the little church was a follower of the King, but one day after service his congregation took him out and made him swear allegiance to the colonies under a white oak tree in front of the church. The tree still stands in solemn majesty and is known as the witness tree on account of the church. In this historic church, visited as a shrine by the admirers of the late President McKinley, worshiped his great-great-great grandmother, Sarah Gray, who was married to David McKinley on December 10, 1780.

great-great grandmother, Sarah Gray, who was married to David McKinley on December 10, 1780.

David McKinley was a soldier in the Revolutionary War and achieved an honorable record. The second son of David McKinley and Sarah Gray McKinley was James Stevenson McKinley, born September 19, 1783. He removed to Mercer County, Pa., where he married Maria Rose, who was born in Mercer County, Pa., November 15, 1788, and died at Niles, Ohio, August 20, 1847. Their son, William McKinley, was born in Mercer County November 15, 1807, and was married to Nancy Allison on January 6, 1829. Nancy Allison was born at New Lisbon, Columbiana ary 6, 1829. Nancy Allison was born at New Lisbon, Columbiana County, Ohio, April 22, 1809. The third son of William McKinley and Nancy Allison McKinley was born at Niles, Trumbuli County, Ohio, January 29, 1843. He was elected twenty-fifth President of the United States of America on November 3, 1896,

and reelected November, 1900.

William McKinley, sr., was one of an old-time sized family— 14 children in all. They were Elizabeth, William, David, Andrew, Celia, James, Mary, Sarah, John, Ephraim, Hannah,

Martha, Helen, and Benjamin.

William McKinley, sr., the father of the President, was a founder or manager of blast furnaces by trade or profession. He had charge of various charcoal furnaces in different localities. The duties of a charcoal-furnace manager in the pioneer days were severe and varied, requiring much skill and knowledge as well as hard work and a strong physique. He was obliged to superintend the making of charcoal used for fuel, which was then done in open mounds and widely scattered about, the chopping of wood, the mining of the ore, managing the furnace, and, in fact, had full charge of all the details of manufacture until the resultant product, charcoal pig iron, was ready for the market, where his duties ended.

William McKinley, sr.'s educational advantages were confined entirely to such facilities as were afforded by the common-school system, and which, in those early days, were meager enough, but he was naturally bright and absorbed all there was to be had. He commenced earning his own living at the early age of 16. He was baptized in the Presbyterian falth, but with his family affiliated with the Methodist church. He died a peaceful death at Canton, Ohio, November 24, 1892, at the ripe age of 85

On account of the enforced absence from home of her husband, the education of the family devolved almost wholly on Mother McKinley as she is now familiarly known. She was a woman of McKinley as she is now familiarly known. She was a woman of strong, rugged, positive character. Her old neighbors at Niles say of her that she was known as a peacemaker, always doing some good, kind act, ministering to the sick, helping the poor and needy, and doing other Christian work. It was the custom in the early days for the schoolmasters to board around, each family that was able boarding the teacher a week or more. teachers were always glad to find shelter in the McKinley home.

McKinley's first teacher was named Alva Sanford and was locally known as "Santa Anna." He came to Niles soon after the Mexican War and had charge of the Little White Schoolhouse for a number of years. He was called Santa Anna from some supposed slight resemblance to the great Mexican general, but it was possibly because of his peaceful nature. He was a character and his methods of discipline and punishment were unique, running largely to ridicule. The boys and girls were on opposite sides of the schoolhouse, and one mode of punishment was to send a boy to the girls' side of the house and place him between two girls. This once happened to young McKinley, and the relator says he seemed to enjoy it.

His next teacher was William V. Morrison, who afterwards became a clergyman, having a charge at Providence, R. I.

Mr. Morrison wrote of President McKinley:

He was a genial, clean, bright boy and a general favorite. As a student his recitations were well prepared, but it seemed difficult to determine that he had spent any time over them. On account of his leisure time I frequently invited him to a seat near me in order to give other students a chance to plod through what he seemed to learn at a glance.

The martial spirit which prevailed for many years at Niles after the close of the Mexican War caused the male students to form training bands of young soldiers. The youths wore paper caps and wooden swords, and the regular Saturday half holiday was spent in marching and maneuvering. McKinley was a private in one of these juvenile companies and often referred to it in conversation. The early school days at Niles ran through a period of free trade. It is certain that Mc-Kinley's protection and sound money views were rooted and grounded by his youthful observations. The Wards had an ironrolling mill at Niles, which pulled along and gave employment to a great many men and fed a great many mouths, but it had a constant struggle for existence. Money was scarcely known. The men were paid a dollar or two on Christmas and Fourth of July in State bank bills. The men took good care to spend the money before a counterfeit detector could be consulted to see if the bills were of a broken bank. All of the balance of the wages earned were traded out at the company's store. Supplies were had by trading nails and bar iron, which were teamed in some instances over 30 miles.

The McKinley family removed to Poland in 1854 on account of the better educational facilities afforded by that place. . Mc-Kinley's school days at Poland and his subsequent transfer to the college at Meadville and the finishing of his education at the Albany Law School are well-known historical facts.

On October 31, 1896, just prior to the presidential election, a delegation of more than 12,000 from Mahoning Valley paid a visit to William McKinley at his Canton home. After passing in review, President McKinley spoke as follows:

in review, President McKinley spoke as follows:

My fellow citizens and friends of the Mahoning Valley, I am grateful and appreciative of this splendid demonstration from my old friends and constituents. This audience is remarkable not only for its numbers but in the character of those who are here assembled. It is not only an audience representing my old constituents but it is an audience representing the home of my birth and early manhood and it is also made up of representative citizens of the home of my later years.

And here to greet you as friends of my boyhood and manhood are representative people of the city of Canton. Their voices are mingling with yours in a chorus of patriotism that stirs my heart and gloriously sustains the great cause in which we are engaged. It is like a reunion of old friends. It is a reunion of old friends, and revives a multitude of sweet and tender memories, for you come from my birthplace, the home of my boyhood and early manhood, and the dear old town where I as a boy enlisted in the service of the country. This presence recalls precious memories of the past. It is as welcome as a benediction from those whom we love. Looking into the faces of this great audience I see some of my schoolmates, some who afterwards taught in the district schools, and some who enlisted, with or without the consent of anxious parents, in the Union Army at the breaking out of the Civil War; but how much larger the number of those whom we all recall that have answered the roll call on the other shore. Peace to their ashes.

The National McKinley Birthplace Memorial Association was born at Niles, Ohio, February 4, 1910. I was invited to attend a banquet and meeting of the board of trade held on that date, my subject being "The Town Beautiful." During my brief talk it came to me, as an inspiration, that something should be done in a substantial way to honor the memory of this great man at his birthplace. I thought that something more should be here other than a tablet certifying to the exact spot on which he was born. My idea was to build something of an educational nature, and I made the suggestion at this banquet that I would undertake to raise a fund for the purpose indicated. Upon bringing the project to the attention of my friends, more particularly in the iron and steel trade, I was gratified by the cordial reception with which the idea was received. Encouragement came from all points. The project was indorsed by William H. Taft, who was at that time in the presidential chair; by Hon. Whitelaw Reid, then ambassador to the Court of St. James; Judge Gary, president of the United States Steel Cor-

poration; his Eminence Cardinal Gibbons; President Roosevelt; and my good friend, ex-Ambassador Herrick, who is with us to-day; and business friends too numerous to mention. The enterprise "grew from what it fed upon," and from a proposition involving the expenditure of fifty to one hundred thousand dollars it grew and expanded. In a brief conversation with Mr. H. C. Frick, whom I had known from his early manhood. I explained what I had in mind, and he promptly subscribed \$50,000. Other friends subscribed substantial amounts, and our subscriptions to date are about equal to the contract for the building; but we need funds to complete the library and the auditorium room, and we also intend to raise a substantial endowment fund, so that that building and property will be taken care of for all time to come. The citizens of Niles have been most generous and have arranged to purchase practically the entire square, which, when the building is completed, or possibly before, will have been transferred into a beautiful

The National McKinley Birthplace Memorial Association was chartered by Congress and the bill signed by President Taft March 4, 1911. The bill was passed unanimously in both Houses. A statement was made by the committee reporting the bill that the United States Government would never be asked

for any aid, and this has been strictly adhered to

The trustees of the association are John G. Milburn, an eminent lawyer, residing in New York, and at whose house President McKinley died September 14, 1901; J. G. Schmidlapp, a well-known philanthropist of Cincinnati and a dear personal friend of President McKinley; Myron T. Herrick, former governor of Ohio, and who rendered inestimable service as ambassador to France; the other two trustees, W. A. Thomas, a resident of the city of Niles, and the remaining trustee, a childhood friend and intimately associated with the late President from his birth until the end.

The architects of the building are the well-known firm of Mc-Kim, Mead & White, who secured the contract by what is known as invisible competition; in other words, plans were submitted by six noted architectural firms, and it was not known until after the plans were selected who the author was. The building will be of Georgia marble, 283 feet in length, 136 feet in width, and 38 feet in height. The court of honor in the center of the building will be supported by 28 monolithic columns. The building will contain a library, an auditorium, a relic room, and other useful adjuncts. Among other features in the building will be a memorial room dedicated to the order the Grand Army of the Republic and the United Spanish War Veterans.

In the court of honor we contemplate having busts and tablets erected to the memory of men who were closely associated with President McKinley. We have already arranged for a bust of President Taft; Senator Marcus A. Hanna; James Ward, a pioneer in the rolling-mill business at Niles; B. F. Jones; Henry W. Oliver; and A. M. Byers, of Pittsburgh. Negotiations are also under way for statues and busts of Gov. Tod, Senator John Hay, ex-President Roosevelt, and others.

In front of the building will be a statue in marble of President McKinley 12 feet in height. This statue is now being sculptured by the well-known sculptor, J. Massey Rhind, New

The contract for the building was let to the John H. Parker Co. and calls for its completion by September 1, 1916.

The proposition is educational in every respect. It will be a permanent memorial.

It is the aim of the trustees to have a large number of people interested in this memorial building, and to further that end we have arranged to issue handsomely engraved life-membership certificates, at a cost of \$1 for each certificate.

10,000 of these certificates have been disposed of with but little effort.

I want to call your attention to the cosmopolitan character of the subscribers and the indorsements, Catholics, Protestants, and societies of all kinds show the universal love and esteem in which the late President McKinley was held by his country-

This memorial will be a permanent memorial of American patriotism and progress, dating from the titanic struggle which resulted in the preservation of the Union down to the recent war with Spain, from which America emerged as a world power. The central figure in this shrine will be William McKinley; around him will be clustered tributes of his fame as a soldier and statesmen, representations of the marvelous industrial developments of the times to which his economic policies so markedly contributed, and statues and portraits of prominent men identified with his career. It will not simply be a monument; it will not be merely a memorial building; it will be both-and more. All classes and conditions of contemporane ous American citizenship and of American endeavor will find in this undertaking an opportunity to pay respect and reverence to the most beloved character in our national history next only to the immortal and incomparable Lincoln himself; and, in passing, it is to be noted that in pureness and loftiness of patriotism, in gentleness, in patience, in serenity of disposition, in undemagogic democracy, in absence of malice, and in broad sympathy with human kind, there are no two characters in American history more akin than Abraham Lincoln and William McKinley

But all-inclusive as the birthplace-memorial idea is in its appeal to every phase and class of our nationality, it is especially dear to the old soldiers. McKinley was the last member of that unconquerable grand Army to reach the very pinnacle of fame which this earth can give to man—the Presidency of the United States of America. He entered that Army a boy, as a United States of America. He entered that Army a boy, as a private. He marched and bivouacked and fought and suffered for over four years under the flag, and he came forth from the war a major in rank and a man in stature and in set principles and established character. Fate took him along the perilous path of active politics, but he walked down its course unscathed and clear of mire. The deep and complicated problems of economics and statecraft were his daily vocation, and when stricken by the dastard's hand he was full of the responsibilities of his great office. Through all these years of study, of struggle, of turmoil, and of political triumphs there was one thing dearer and closer to him than all else, next to kith and kin, and that was the associations connected with the Civil War, and to him every companion in arms was indeed a comrade through life. So the old soldiers, officers and men, on their part think of McKinley; to his memory go out their tenderest and most affectionate reverence.

It is early yet to estimate the value of William McKinley's life and its effect upon American history. Even now great statesmen and world historians have agreed that the McKinley administration marked a most important epoch in American statesmanship in its far-reaching influence upon the future of all nations. It was William McKinley who, though himself from the North, yet won the love of the South and knit the Nation closer together. His administration brought prosperity. factory chimneys aglow all over the country are in themselves inanimate monuments to the memory of McKinley.

THE BILL.

Copy of the bill as it passed the House of Representatives on February 7, 1916.

A bill for the coinage of a McKinley souvenir gold dollar, in commenoration of the erection of a memorial to William McKinley, late President of the United States.

President of the United States.

Be it enacted, etc., That for the purpose of aiding in defraying the cost of completing in a suitable manner the work of erecting a memorial in the city of Niles, Ohio, to William McKinley, late President of the United States of America, the Secretary of the Treasury shall be, and is hereby, authorized to purchase in the market so much gold bullion as may be necessary for the purpose herein provided for, from which there shall be coined at the United States Mint, Philadelphia, standard gold dollars of the legal weight and fineness, to the number of not exceeding 100,000 pieces, to be known as the McKinley souvenir dollar, struck in commemoration of the erection of a memorial to William McKinley, late President of the United States of America, in the city of Niles, Ohio, his birthplace, the devices and designs upon which coins shall be prescribed by the Secretary of the Treasury; and all provisions of law relative to the coinage and legal-tender quality of the standard gold dollar shall be applicable to the coins issued under this act, and when so coined said souvenir dollar shall be delivered, in suitable parcels, at par, and without cost to the United States, to the National McKinley Birthplace Memorial Association and the dies shall be destroyed.

Child Labor and Humanitarian Laws.

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL, OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. RANDALL, Mr. Speaker, there is under consideration to-day H. R. 8234, a bill to prevent interstate commerce in the products of child labor. The power of the Federal Government does not extend to the prohibition of child labor in the various States, that power being conferred upon the States by the Federal Constitution. But having reserved to itself the power to regulate interstate commerce, the Federal Government can reach some evils which, for reasons not creditable to certain States, have not been corrected by those States.

For example, some years ago Congress enacted the pure-food act, which most persons feel is a prohibitory law against adulteration of foods. It is simply an act prohibiting interstate commerce in adulterated food, and even with such a limited power of regulation has become very effective.

There is under consideration by this Congress a bill introduced by me which would eliminate alcoholic liquors from privileges of interstate commerce, and its enactment would as effectively destroy the commercial profit of the liquor traffic as a similar law has destroyed the traffic in adulterated foodstuffs and as the bill now under consideration will eliminate child labor from every mill, mine, and factory in the United States.

Child labor is a blot upon the name of this Republic. It is a disgrace to civilization. It is high time that a little more humanity be written into our laws and a little less dollar coaxing.

Flood Committee.

EXTENSION OF REMARKS

HON. WILLIAM A. OLDFIELD.

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, February 2, 1916.

Mr. OLDFIELD. Mr. Speaker, I want to state in the outset that I am heartily in favor of this resolution. I think the rule ought to be adopted which will create a committee of this House on flood control. The question of flood control and drainage, to which committee drainage bills will be referred, are two of the

most important questions confronting the people of the South.

Last August we had an unprecedented flood in Arkansas. In 1914 the people of my part of Arkansas were afflicted with one of the most severe droughts in the history of that part of the country. In 1915 we had the finest prospects for crops we have ever had, but in August, as the crops were beginning to mature, the great flood came and destroyed absolutely all crops on the rivers of my district, and I think it was general over the State of Arkansas. As soon as the water got off the land and the land dried out the people plowed up their corn and their cotton and sowed a great deal of wheat and oats. It became necessary to do this because this would furnish pasture for the winter. But now, at this time, there is even a greater flood in my district than the flood last August. Some of the people are in destitute circumstances, and I sincerely hope that this House will pass a bill which I have introduced to appropriate \$250,000 to help the destitute persons in Arkansas. I received a telegram on last Monday, the 31st, telling me that conditions were more serious than last August, and asked me to have the Government send a Government boat to certain points on upper White River and prevent the loss of human life. I did this, and I understand that no lives have been lost on the White River. I had a telegram from the governor of the State telling me that the Federal Government aid was necessary in various communities of Arkansas, and the Arkansas delegation are united on the proposition that the Federal Government ought to act. The Government has acted in similar cases, and I believe the Government ought to act in this particular case, and I believe the Government will act.

This committee which we are about to create on flood control will be one of the most important committees in this House, especially to the Southern States. Therefore, Mr. Speaker, I hope and trust that the rule will be adopted and the committee created. There are millions of acres of as fine land as there is on this earth in Arkansas and other Southern States that is almost valueless because water remains on it for a large portion of the year. I think, Mr. Speaker, it is just as important to take the water off of the wet lands of our country as it is to put water on the dry and arid lands of our country. I give this resolution my hearty support. [Applause.]

We have just passed in the House a bill appropriating \$25,000-000 for the purpose of helping the various States of the Union build good roads for the people, and we all hope this bill will pass the Senate at this session of Congress and become a law. And, Mr. Speaker, we are going to pass at this session of Congress a rural-credits bill which will enable the farmers of our country to borrow money on long time at low rates of interest. These are important measures to Arkansas and to the South generally, and I believe when this legislation is placed upon the statute books our country will prosper as never before. [Applause.

Child Labor.

EXTENSION OF REMARKS

OF

HON. FINLY H. GRAY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. GRAY of Indiana, Mr. Speaker, if there is a question as to the constitutionality of the pending child-labor bill, I am going to resolve all doubts in favor of the children, in favor of their education, in favor of their physical and mental development, their well-being, and their opportunity to become strong and qualified men and women. But no provision of the Federal Constitution is plainer and more unequivocal than the power granted to Congress to regulate commerce between the several States. This provision has been before the Supreme Court time and again, and this right of Federal control has been conclusively sustained and is no longer a question in dispute.

While it is true that each State has power to pass a child-

While it is true that each State has power to pass a childlabor law, yet it is clear that no effective legislation for the
protection of children can ever be secured in this way. No
State will pass a law restricting employers of that State in the
right to employ children while such employers must sell their
goods in competition with manufacturers of other States who
are not so prohibited. It may be the earnest desire of a State
legislature, in response to the public opinion of that State, to
afford this protection to children, yet while the manufacturers
of another State are allowed to employ children without restriction such State legislature would hesitate to so restrict
their own manufacturers and thereby place them at a disadvantage to compete in the markets of the country. It would
be putting its own citizens at a disadvantage in trade with the
citizens of other States. But national legislation obviates this
objection and places the employers of all States on an equality,
leaving the way clear to provide full and ample protection to
children without favor or discrimination against the citizens of
any State.

We have heard much about the conservation of our resources in coal, iron, minerals, and timber and much legislation has been enacted to effect such conservation. But the greatest of all resources, the children of the country, has been overlooked and neglected. There are now more than 20,000,000 children of school age. A large number of these are not in school to prepare themselves for future manhood and womanhood, but are dwarfing their bodies and minds by overwork and close confinement and will be left handicapped and at a great disadvantage through their entire life. It is not only due to them for their individual welfare, but is due to the country for the general welfare that these children should be in school at least until they complete the common branches of study, if not the high-school grades, in order to be prepared for the problems and undertakings of life and to meet competition from the educated and trained.

While this bill, if enacted into law, will take thousands of children from our factories and workshops and mines, this loss in production will be trivial to the loss the country is now suffering in allowing children to be neglected and to grow to manhood and womanhood dwarfed in body and mind and left unprepared and disqualified for future life. This loss in production will be paid a thousand times in the betterment of the future manhood and womanhood of the country, in the improved conditions of life thereby resulting, and the higher standard of citizenship to be gained.

It is true that many of these children are now working to supply themselves with the necessaries of life, but if the public welfare requires that State and Nation should provide for the education of the children of the country, it is equally imperative that State and Nation should likewise contribute support to children where they are without means for their maintenance while being educated.

But there is a double crime in child labor, a crime against the child itself and a crime against the workingman who with a family of children to support and maintain in school must work in competition with overworked and underpaid child labor. There are enough men to perform the labor of the country while

the children are being educated.

The true facts of the situation and the cruel inconsistencies with which as a Nation we are confronted can not be more in-

telligently summarized than in a sentence or two from a statement made by one of the most distinguished women of the country, a pioneer in the fight for the protection of children, Mrs. Florence Kelly, and I quote her in part:

Mrs. Florence Kelly, and I quote her in part:

It is over 30 years since I enlisted in the effort to get better legislation for the protection of the children. I believe there are more children under 16 years old working to-day in dangerous occupations than there were when I began, because our manufacturing industries have increased stupendously and our State legislation has halted. There has been no unity in our progress. The 48 States suggest the legs of a centipede, some going forward and some paralyzed, the total progress lamentably slow. This Republic is one, and we can not go on forever with a favored class of children in the Northwestern States, where there is a requirement that the children shall not work until they are 15 years of age, and are kept in school throughout the eighth grade, while in some cotton-manufacturing States there is no compulsory education, and either entire lack of legislation by the State or a collection of nugatory laws. South Carolina at one time restricted the work of children to 10 hours a day, but afterwards decided that life was too easy for them and prolonged the hours to 66 hours a week and permitted 11 hours a day for young children.

Child Labor.

EXTENSION OF REMARKS

OF

HON. JOHN I. NOLAN,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. NOLAN. Mr. Speaker, I am in favor of the passage of the bill now before the House (H. R. 8234) to prevent interstate commerce in the products of child labor, and for other purposes. I had the opportunity as a member of the Committee on Labor, both in the Sixty-third and in the Sixty-fourth Congresses, to listen to the proponents of this bill, as well as to many others in opposition to the measure, and it has given me an opportunity to inquire into the needs of legislation of this kind. And I want to say, in passing, that I consider this bill one of the greatest pieces of constructive legislation in a humane way that the Congress of the United States has ever been called upon to deal with.

The question of the constitutionality of the legislation has been raised, both in committee and on the floor of the House. Court decisions and authorities on international law have been quoted on both sides of this question with equal force, And while I realize it is the duty of every Member of the House of Representatives to give due consideration to the constitutionality of every measure that comes before the House, in line with his oath of office, I have no conscientious scruples in voting in favor of the passage of this measure, as I believe, with the conflict of opinion from many high authorities, there is only one way in which it can be definitely settled as to the right of Congress to enact such legislation at this time, and that is to pass it up to the court of last resort—the Supreme Court of the United States—so that we may be guided in the future in our action on similar measures, and to know to what extent Congress is restricted in regulating commerce of a questionable character.

Passing on to the moral principle involved in this bill: Over 40 States in our Union have enacted legislation limiting the hours and prescribing the age and the conditions under which children may work, so that now the principle has been laid down generally throughout our country that it is the duty of the State to throw its protecting arm over the boy and the girl of to-day who will be the citizens of to-morrow.

Along with child-labor legislation has gone compulsory education laws, and the two go hand in hand. And when this measure passes and becomes a law every State in the Union will be glad to observe this law and to see to it that the children of their respective States are given an ample opportunity in the way of increased school facilities, as well as to see that they will attend school and receive proper educational training.

The main opposition to this bill, both in committee and on the floor of this House, comes from several of our Southern States, particularly those where the cotton-mill industry is flourishing. The hearings before the Committee on Labor show that most of the men who testified on behalf of the cotton-mill owners of the South stated that, so far as their particular establishments were concerned, the number of children employed beyond the ages prescribed in this bill were few indeed; but they were

fearful, even with the few that might be affected, that it might not be the child affected by the passage of this bill that would disturb the condition in their cotton mill, but openly stated that if these children were removed from the mills the families of the children would take themselves to other communities, and that would be a serious handicap to the operation of their particular mill.

I call your attention to this particular phase, because the witnesses testified that it was necessary to have the child employed in the cotton mill, as it took the aggregate earnings of the adults and the children to properly support the family. Notwithstanding the fact that they also testified that house rent. fuel, and other necessities were low in comparison to other localities-the houses and fuel being furnished by the mill at a very low cost. This being the case the natural supposition would be that it would be very easy for the family to exist in a would be that it would be very easy for the family to exist in a cotton-mill town. The very opposite is the case, however, because the earnings of all the family, including the children, are necessary, according to the testimony of the mill owners, to keep the families in the vicinity of the cotton mills. The real reason, to my notion, is that if the child is taken out of the cotton-mill industry in the South the family, not having enough income to instifut it in the course in the south the family. income to justify it in staying in the community, will move away. Either that, or the real reason for the opposition of the cotton-mill owner is apparent—that he must raise the wages of the adults and older children of the family. That is something the cotton-mill owners do not want to do. It is not so much the labor of the child they desire as it is the labor of the child they desire as it is the labor of the child they labor of the child they desire as it is the labor of the child in conjunction with the rest of the family, as in this way they only earn enough to provide a living income so that they may maintain their family in a proper manner.

I call your attention to one circumstance in connection with the appeal of the southern cotton-mill owners and the Representatives on the floor of this House from the several States affected. Not in one instance did they bring a woman to testify on their side or to protest against the enactment of this legislation. It is true that Mr. Clarke, the editor of the Southern Textile Magazine, representing the cotton-mill owners, testified that some of the mill operatives sent petitions opposing this measure; but it is also true that Mr. Clarke testified that, in the main, these petitions were gotten up and circulated by the cottonmill owners, and each and every operative was supposed to sign his or her name either in favor or against this measure so that his or her position might become known. In no other way did they show a desire upon the part of the women of the South to maintain a condition that meant the exploitation of the children of the Southern States.

This measure will pass and become a law, and the cotton-mill owners of the South, as well as the manufacturers in all sections of the country, will continue to remain in business, and as time goes on will consider it one of the greatest blessings in the way of legislation ever enacted by the Congress of the United States.

I wish to incorporate in my remarks a pamphlet issued by the National Child Labor Committee entitled "What the Newspapers Are Saying about the Keating-Owen Bill," which will give you some idea as to how the leading newspapers of the country feel upon this very important and humanitarian measure, and showing the sentiment not alone in the North but even in the South in favor of this bill:

NATIONAL CHILD-LABOR COMMITTEE, New York City, January, 1916.

WHAT THE NEWSPAPERS SAY ABOUT THE KEATING-OWEN BILL. [From the Chicago (Ili.) Tribune, Aug. 5, 1915.]

The demand for national action is apparent from the standpoint of accomplishing something within the next decade. Georgia has a decent standard for the protection of the child, but an inadequate appropriation for enforcement. Alabama has an efficient enforcement of a fair law, and an attack is now being made to abolish the office. Illinois defeated the legislation upon the plea that it is unfair, and New York has made a shameless record. National legislation will have the good effect of equalizing the conditions and insuring wide enforcement.

[From the Memphis (Tenn.) Commercial-Appeal, Jan. 4, 1916.]

But the right to grind the hope and health and joy out of little children by long hours of hard labor in close factories or dark mines belongs to no man and no corporation of men. And it is against the greed of these would-he grinders that the child-labor committee has formulated its bill. The members of this committee are not speaking from hearsay information. They have personally inspected the mills, the sweatshops, and the mines where the blood and hope of the undeveloped children have been coined into factory products. It is in behalf of these children that they are seeking to arouse public sentiment, that Congress may be induced to pass a national law that will be effective and protective.

(From the New York (N. Y.) Tribune, Jan. 19, 1916.1

Nobody now attempts to defend child labor as an abstract problem, Concrete attempts to retain it for what seem to be individual or locality

benefit, therefore, stamp themselves as clear, unadulterated selfishness, "Where the child is wronged, the Nation and its industry is wronged," as the House committee's report well says. It remains for Congress, by passing this measure, to see that neither individual children nor the Nation can be wronged in the future.

[From the Boston (Mass.) Transcript, Jan. 22, 1916.]

Honest workmen, fathers of families, do not want to compete with little children, and certainly not with their own children. There could be little local opposition to adequate legislation, if that legislation were national. There is but one answer to the demand, and that is the passage of the Keating-Owen antichild-labor bill.

[From the Philadelphia (Pa.) Public Ledger, Nov. 16, 1915.]

As the bill goes no further than a prohibition of interstate commerce in the products of children under 14 employed in factories, limits the working hours of children under 16 to eight hours a day, and forbids the employment of children under 16 in mines and quarries, it can not be called either extreme or radical. Now that public attention is being again concentrated on the measure, the child-labor committee is hopeful that the influences which prevented its enactment will be swept out of the way by the force of humane and progressive public opinion.

[From the Dallas (Tex.) News, Jan. 19, 1916.]

[From the Dallas (Tex.) News, Jan. 19, 1916.]

The consequences of child labor make too big a social price to pay for the rather meager material prosperity that cotton mills yield to a community. It was disclosed during the committee hearing on this bill that in North and South Carolina it is permissible to work 12-year-old children in cotton mills 11 hours a day. The physical, intellectual, social, and moral consequences of such unremitting labor in a cotton mill on children whose minds and bodies are yet plastic are obvious. Their earthly destiny is, in most instances, the poorhouses, the hospitals, the asylums, and the jails. The dividends their labor makes are in reality paid by the community that tolerates the evil cause in the form of taxes to support the large and ever-expanding institutions for which the demoralizing, dehumanizing, and decivilizing process makes need. The human product of cotton mills that work children in the way they are worked in the Carolinas makes their commercial product a loss to the community.

It is to be hoped that the bill which has been reported to the House will be enacted into law. If that should result in the removal of cotton mills from the South, the South can witness their departure without regret.

[From the Milwaukee (Wis.) Leader, Jan. 8, 1916.]

This is the bill for which every union in the United States stands. It is the bill that is supported by every professional philanthropist and by every person who has made any study of the effects of child labor. It is a bill against which there is but one single argument. That argument, however, is one which has prevailed against a multitude of desirable laws. The argument is the profit to be made from the labor of children.

[From the Brooklyn (N. Y.) Eagle, Jan. 19, 1916.]

It is a condition and not a theory which confronts Congress, and the condition is fraught with so much danger to future generations that its correction is likely to override philosophic scruples about interference with the welfare of the States.

[From the Kansas City (Mo.) Post, Jan. 18, 1916.]

Passage of this law will throw a State's shame back on itself. * * 6
If any State is willing to assume for itself this burden of illiteracy, of crime, of delinquency, of starved souls and bodies, let it. But the people of the whole United States should not be made a party to the gross injustice and its utter lack of consideration to every principle of right

[From the Minneapolis (Minn.) Tribune, Jan. 15, 1916.]

It is difficult to conceive of any friend of the child hesitating about the removal of the last stand of the exploiter of the labor of little children—the plea that they do it in other States, and competition, therefore, compels it. When the Federal Government regulates child labor the regulations will be alike in all parts of the country and the fallure of States to protect their childhood will be overruled by a higher power.

[From the Hickory (N. C.) Daily Record, Jan. 15, 1916.]

There are only a few defenders of those who would stand for the system in North Carolina. A rich Commonwealth can not afford to be backward in the matter of child labor, and North Carolina manufacturers should let the world know that they are willing to go as far as any State in practical welfare legislation. Wholesale legislation is coming, and it would be much better if the broad-minded men among the manufacturers would take it upon themselves to see that good laws are made and then obeyed.

The Child-Labor Bill.

EXTENSION OF REMARKS

HON. WILLIAM J. CARY, OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 26, 1916.

Mr. CARY. Mr. Speaker, this bill is one that should have been on the statute books of our country years ago. The senti-ment of the people has been on the side of such legislation for many years, and the condition which it proposes to rectify has been the object of attention on the part of all sociological students for a long time.

The evil of child labor is a modern problem. It has only been a problem of much importance during the last half century, for while children have been subjected to abuse all over the world for centuries, such abuse has been more or less confined to individual cases or at least to small sections of the world and country until the recent development of machine industrialism.

Machine industrialism has undoubtedly brought many beneficent results to humanity and I would not for a moment minimize them; but it has also brought a long train of abuses, and to my mind the worst abuse of all has been in the employment of very young children in the most unhealthful kind of work.

Statistics can not show, and will never be able to describe, the unlimited amount of evil that has been wrought on the past generation and on generations yet unborn by the employ-ment of children in factories, shops, and mines; but no thought-ful student of humanity can fail to notice the effects if he has any acquaintance with such labor and its inevitable result.

We are talking much of preparedness in these days and have much to say of battleships, armament, and armies, but supposing we have all of these, supposing we have the ships and the arms and the munitions, who will man the ships and who will fill the ranks of the armies? The sons of the tolling masses have always done it before and they will be called upon to do it again.

But do you suppose, can you imagine, that the boy whose youth was stunted, whose physique was dwarfed, whose spirit was crushed by hard years of arduous work in early youth in a dismal and unhealthy factory will be fit or able to fight a battle or stand the rigors of a campaign? Do you suppose that the girl whose vitality was sapped by premature toil will be fit to bear and rear a strong and virile fighting race of men?

This is only one of the many serious aspects of this matter, but it is an important one. The future armies and navies of America are being defeated in every shop and factory in the land where children are employed, and we would be recreant to our plain duty if we did not do something to check the evil before it grows too grave.

We have heard much in the last few years of conservation of our resources. I agree in every way that we should conserve our resources and prepare for the day after to-morrow, but to me a child is far more important than a tree or a plant, and I think for one that to conserve our future manhood and womanhood is a task not only nobler but far more practical and utilitarian.

I have listened with interest to the remarks of the gifted gentlemen from Maryland and Colorado [Mr. Lewis and Mr. Keating], who speak of this evil from first-hand experience, and I can add my testimony to theirs. I was obliged to work from the age of 9 and at 11 had the support of younger brothers and sisters to look out for. I weathered those days of laborious childhood and have perhaps been moderately successions of a distillation without schooling or ful, but the bitterness of a childhood without schooling or recreation, the rightful heritage of every child, is with me still. Men say that a child in such a position learns much that he could not learn otherwise. I know that I learned much of the seamy and evil side of life when I was a telegraph boy that I often wished I had never learned, and am only thankful that the earlier childhood lessons of a pious and devoted mother helped me breast the pitfalls that child work beset me with.

There is no necessity—absolutely none whatever—for the employment of young children in a factory of any kind, and no excuse for it either. The only reason why it is done is to swell the pockets of an already too wealthy manufacturer who pays starvation wages, and not content with earning enormous dividends at the expense of adult manhood, lowering the standard of his workman's living, that he may feast more luxuriously, a scholar, a genius, and a gifted poet. He has cont but must drag childhood into this devil's maelstrom and grind rare verses to the poetic literature of our country.

youth and all that it means into a pulp of wrecked humanity to satisfy his extravagancies and satisfy his lust for wealth

Let us not have it upon our conscience that we helped to place this awful burden upon childhood. Remember the words of our Lord, "Snffer little children to come unto me and forbid them not, for of such is the kingdom of heaven." there any man who does not love the prattle of artless childhood, who does not enjoy their innocent frolic, their spontaneous affection, their wise, though childish, faith in life and love? When he looks into the smiling faces of his own children let him reflect would he wish his own child tied to the grindstone of daily toil? God forbid that a child of mine should suffer the wrongs of child labor, and God forbid that any other man's child should suffer what I wish to keep from my own. Remember, the child of the poorest workingman is as dear to him as the child of your own affection. Every blessing of youthful happiness is the right of that child as much as it is the right of your child, and let us pass this bill and make the hearts of mothers rejoice in every part of the country at the glad news that their children and children's children shall not bear the bitter burden of premature toil.

The Poem "Growing Old."

EXTENSION OF REMARKS

HON. CHARLES H. DILLON,

OF SOUTH DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 7, 1916.

Mr. DILLON. Mr. Speaker, I am presenting an editorial by C. M. Day, of the Argus-Leader, Sioux Falls, S. Dak., as follows: R. J. WELLS HONORED.

R. J. WELLS HONORED.

According to the Congressional Record of January 23, R. J. Wells. now, as for many years past, an honored citizen of Sioux Falls, was highly honored by having bis Nation-known poem, entitled "Growing Oid," quoted in full by Congressman Hulbert and printed in the Record of that date.

The occasion was a memorial address by Congressman Hulbert in appreciation of the life of the late Joseph A. Goulden, Member of Congress from New York, who died suddenly of apoplexy in the Pennsylvania Railroad Station at Washington last May. In his pocket was found a copy of Mr. Wells's poem, which he had intended to use the next Saturday at a dinner of his Grand Army comrades.

Congressman Hulbert did not give credit to Mr. Wells for the poem, and his name appears to have become detached from his classic in its wanderings over the country. It was first printed in the Argus-Leader a number of years ago, and has since been republished in many portions of the country. It has been credited to a number of others and has also frequently been printed with the credit "author unknown." The poem is published in a book of poems printed by Mr. Wells, and perhaps after a while the author of it will secure the proper credit. Meanwhile the copy of the Congressional Record of January 23 is a very interesting publication to Sloux Falls people.

The poem referred to follows:

The poem referred to follows:

GROWING OLD.

A little more tired at close of day,
A little less anxious to have our way;
A little less ready to scold and blame,
A little more care of a brother's name;
And so we are nearing the journey's end,
Where time and eternity meet and blend.

A little more love for the friends of youth, A little less zeal for established truth; A little more charity in our views, A little less thirst for the daily news; And so we are folding our tents away, And passing in silence at close of day.

And passing in silence at close of day.

A little less care for bonds and gold,
A little more zest in the days of old;
A broader view and a saner mind.
A little more love for all mankind;
And so we are faring adown the way
That leads to the gates of a better day.
A little more leisure to sit and dream,
A little more real the things unseen;
A little nearer to those ahead,
With visions of those long loved and dead;
And so we are going, where all must go.
To the place the living may never know.
A little more laughter, a few more tears. A little more laughter, a few more tears,
And we shall have told our increasing years;
The book is closed and the prayers are said
And we are part of the countless dead.
Thrice happy if then, some soul can say,
"I live because the Grand Army passed my way,"

Mr. Speaker, R. J. Wells, the author of these beautiful lines, has lived many, many years in my congressional district. He is a scholar, a genius, and a gifted poet. He has contributed many Child-Labor Bill.

EXTENSION OF REMARKS

HON. JOHN R. K. SCOTT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. SCOTT of Pennsylvania. Mr. Speaker, from the discussion on the floor of the House during the consideration of H. R. 8234, known as the Keating-Owen child-labor bill, it appears that there are a number of Members in this House who, while admitting the meritorious features of this bill and the great good to be derived from its enactment as a law, yet hesitate to cast their vote in favor of it because of its questioned constitutionality. If the desirability of this proposed legislation is conceded, then in view of the preponderance of opinion in favor of its constitutionality among so many authorities on constitutional law I take it that it is proper for these Members to vote in favor of this measure, even though they as individuals are of opinion that the bill conflicts with the constitutional limitations placed upon the powers of Congress.

On a great many questions of law we find a division of legal opinion, even in the courts, as is evidenced by the dissenting opinions filed in many cases. It is not strange, therefore, that in this particular instance men well versed in the subject do not agree. However, in view of the conflict of opinion of those best able to judge of the validity of this proposed bill, I submit that it is not right or proper for us, as a law-making body, to usurp the functions of the judicial branch of this Government and pass judgment upon a question over which there is such a conflict of legal opinion.

Of course if there is no question of doubt in our minds but that the courts of this country will consider this bill unconstitutional, then it is clear our duty is to vote against it. If, however, we believe that the ultimate decision of our courts upon this question is in doubt, and in view of the mass of legal opinion contained in the report of the committee, we must in fairness admit that the question of the constitutionality of this bill can at the most be considered to be only in doubt, then it is our duty to consider the merits of the bill only.

In other words, it is proper for a Member of this House to reason thus: "While I personally think the act is unconstitutional, nevertheless being convinced of the great benefits to be derived by its enactment, and admitting that the question of its constitutionality is on open question, since great legal minds are divided upon it, I will concede that possibly my own personal opinion may be wrong, and will therefore vote in favor of the bill, leaving to the judicial branch of this Government the final determination of its constitutionality."

Personally I do not consider the question of the constitutionality of this child-labor bill to be in doubt. The splendid and comprehensive discussion of judicial decisions on the powers of Congress to regulate interstate commerce, so intelligently reviewed by Prof. Thomas I. Parkinson, as appears in the Congressional Record of January 31, should convince the most skeptical Member of this House that the scope of this act is within the constitutional powers of Congress.

There appeared before the Committee on Labor in opposition to the approval of this bill a number of gentlemen representing certain industrial interests in the South. The opposition of these gentlemen was based upon the argument that the measure was an encroachment by Congress upon the powers vested exclusively in the State authorities, and that the bill, if approved, would ultimately be declared unconstitutional.

Mr. Speaker, when some of the large industrial organizations of this country become so primed with devotion to the law and infected with such a zealous regard for the preservation and integrity of our United States Constitution as to send their advocates before our congressional committees to aid us in avoiding violence to our constitutional prerogatives, it behooves us to carefully seek out and consider the real motives and purposes of these self-appointed "defenders of our liberties." The history of our country does not disclose any evidence that these large industrial interests have in the past been overzealous in the careful and obedient observance of our laws. On the contrary, we will probably all agree that in the past they have been the first to seek the loopholes in our legislative acts. We therefore may properly ask ourselves why it is that these certain interests are now so fearful lest Congress usurp the rights and

powers of the States. The answer to these questions appears to be clear and convincing.

The opponents of this bill lack the courage to come out and squarely attack the measure upon its merits. Instead they are attempting to becloud and confuse the real issue and conceal their real objections by bringing forward a feigned and fictitious reason to sustain their opposition. They will not and dare not attack this bill upon its merits. They lack the audacity to come forward and argue in favor of the exploitation of the children by the merciless, avaricious industrial interests of the South, and so they proceed to contemptuously attack the provisions of this most meritorious piece of legislation by raising the hue and cry of constitutional infringements. I will not dwell any further upon this phase of the question. The methods pursued by the opponents of this bill appearing before our committee are to my mind conclusive as to its real merit and worth. Noted legal students of constitutional law have given us their opinion that Congress, under its authority to regulate interstate commerce, has the power to prohibit the transportation from State to State of the iniquitous products of child labor. The advantages of the measure, the immeasurable amount of good that is to be derived from its enactment, is sufficient justification for Congress, in view of the overwhelming preponderance of opinion in favor of its constitutionality, to deem this bill constitutional for legislative purposes and pass it without further discussion as to its legal aspects.

This country has for a long time devoted much time and thought and has expended large sums of money for the conservation and preservation of its natural resources, for its rivers and harbors, for its forests, and its animal life, and it is now time that we boldly and unhesitatingly take definite steps for the conservation and preservation of that which is infinitely more precious than all of our natural resources—our little ones, the children of to-day, who to-morrow will form our American manhood and womanhood.

The system of child labor as practiced in some of the cities and manufacturing centers of this country is surely a most disgraceful blot on the escutcheon of American freemen, and one which, if not checked, will entail ignorance, misery, and degradation on our children to the end of time. It is a national disgrace that we in this enlightened age permit our little ones to become the abused hirelings of ruthless exploiters of labor. My own native State as early as 1848 saw the pernicious results of unrestricted child labor, and in that year passed its first child-labor law, prohibiting the employment of children under 12 years of age in cotton, woolen, and silk factories and mills. That year saw the start in the development of our child-labor legislation, and in the past year our legislature, under the able and inspiring guidance of our governor, Martin G. Brumbaugh, placed upon the statute books of this Commonwealth the most advanced law regulating the employment of children that exists in any State of this Union.

It is recognized throughout the country that to-day Pennsylvania has the best, the most modern, and model legislation regulating this most important branch of labor law; and I take great pleasure in acknowledging the debt of Pennsylvania to our wise and sagacious governor, Martin G. Brumbaugh, the man to whom more than any other Pennsylvania owes most of her progressive humane legislation. Not only does our law prohibit the employment of children in the State under a certain age, but it also prohibits the employment of any minor in certain occupations which are in themselves unfitted and unsuited to the labor of children. It further makes provision for the education of children even after they have reached the age permitting them to be employed, and fixes a minimum number of hours per for their education even while they are actuall; employed. This education consists of attendance for a period or periods, equivalent to not less than eight hours each week, at a school approved by the State superintendent of public instruction.

The school may be conducted in the establishment where the minor is employed, or in a public-school building, but at all events must be approved by the department of public instruction. The school hours may not be on Saturday, nor before 8 o'clock in the morning nor after 5 o'clock in the afternoon of any other day. No minor under 16 years of age is permitted to work for more than 51 hours in any one week, or more than 9 hours in any one day, or before 6 o'clock in the morning or after 8 o'clock in the evening. The industrial board of the department of labor of the State has authority to prohibit the employment of any minor under 18 years of age in any occupation which the board shall, from time to time, after public hearing thereon, deem dangerous to the life or limb or injurious to the health or morals of such minors. Proper provision is made for the effective enforcement of all these regulations.

It will thus be seen that, judging by the standards set by the laws of the State of Pennsylvania, the provisions of the childlabor bill before the House can not be considered oppressive or

Notwithstanding the undoubted meritorious provisions of this proposed act, I feel that the measure deserves the unqualified support of every Republican Member in the House, because the fundamental principle of Republicanism-namely, protectionis embodied in the features of the bill. It applies as between States the same principle of protection which the Republican Party would wisely apply to the country at large. Nearly all of the States of the Union have drastic legislation and laws prohibiting and regulating the employment of child labor in their factories, mills, and industrial plants. A few of our States permit the merciless exploitation of children, and it is not fair or just to the industries in the more advanced communities of the country that they should be compelled to compete with those industries in other sections of the country which are enabled to produce their goods at less cost by the use of ill-paid, helpless, child labor.

This proposed act, if enacted into law, will mark a step forward in the industrial development of this country, and the benefits which will be derived from it will more than compensate us for the temporary loss sustained from the rearrangement of business conditions necessitated in some of our States.

Right of Congress to Regulate the Shipment of the Products of Child Labor as a Part of Interstate Commerce.

EXTENSION OF REMARKS

HON. FREDERICK C. HICKS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. HICKS. Mr. Speaker, I know of no better subject on which to make my entrance into the deliberations of this House than to raise my voice in behalf of the children of the Nation.

I believe the question of child labor is one of the most vital questions before the people to-day, for on the education, development, and virility of future generations depends the perpetuation and the advancement of our American institutions, I intend, Mr. Speaker, to support the bill now under consideration, prohibiting the entry into interstate commerce of articles produced by child labor. I do so in the belief that such a course will meet with the approval of the constituents I have the honor to represent, and with the conviction also that this measure will promote the welfare of society. My own conscience as well prompts me to vote in favor of its passage.

The district whose commission I hold knows nothing of child labor by actual experience. It is free from this evil. The Long Island district is unique in its composition. Part of it lies in the great city of New York; a portion of it is suburban; much of it is devoted to agriculture and the industries pertaining to the sea. From our ports in times past ships built in our yards carried the American flag into distant oceans. Many manufacturing enterprises add their industry to our ever-increasing prosperity. Thriving towns and fertile farms attest the energy and thrift of our people. By day and by night, under the starlit heavens or under the scudding clouds of a tempest, our seagirt shores are patrolled by the Coast Guard, sturdy Americans, listening for the call for help which may come from the deep as some storm-tossed ship pounds on the bar. Our coasts are the last the ocean traveler sees, the first to welcome him home to his native land. Along our southern shore stretches a series of bays and channels which some day when the Nation awakens to its real needs will become a great artery for com-merce and a means of transit for submarines in time of war.

We have expended millions in the construction of our roads and the improvement of our highways, while upon every hand rise magnificent school buildings, the most conspicuous as well as the noblest tribute of our patriotic citizens to the advancement of the Republic. We realize the importance of education; we appreciate the value of inculcating in the hearts and minds of our children love of country, devotion to the flag, and those high principles of religious thought, pure morals and lofty ideals, which will enable them to carry forward and onward the ever-advancing civilization of our Nation. For what we are doing we seek no glory; we desire no stilted praise. We wish

only that other districts and other States might emulate our deeds.

On the floor of this House we have heard much of conservation, of development of our resources, and of preparedness. take no exception to those meritorious measures; but, Mr. Speaker, in my opinion, above the construction of highways, above the development of our waterways, above the opening of new lands in the West, above the necessity for an increase in our armaments rises supreme and mandatory our obligation to protect the health and lives of our children and improve the environment in which they dwell. Conservation can reach no higher plane than in the conservation of human life. ness can have no nobler purpose or grander reward than in the preparation of our future citizens for the duties which will devolve upon them in developing and perpetuating our triumphant democracy.

The question of constitutionality has been raised in opposition to this bill. The distinguished gentlemen who oppose it on that ground are actuated, I doubt not, by a high sense of They are eminent lawyers, versed in their profession. Gentlemen equally able and as conscientious in the discharge of their duties maintain that this bill, should it become a law, will

be constitutional.

Believing the Constitution to be a live, virile instrument of government, intended to augment, not retard, our development; to advance, not hinder, our civilization, I am content to abide by and accept as conclusive the broad interpretation of that document rendered by Chief Justice Marshall when he said, in discussing the power of Congress over interstate commerce:

What is the power? It is the power to regulate; that is, to prescribe the rule by which commerce is to be governed. To construe the power so as to impair its efficacy would tend to defeat an object in the attainment of which the American public took, and justly took, that strong interest which arose from a full conviction of its necessity.

We who were born and reared on a farm know that in the raising of horses it would be injurious and would impair their future usefulness to put colts into harness before they had reached a certain age. The same is true of boys and girls in their physical growth and many more times true in their mental development. Children are of our own flesh and blood; they are the guardians of the race, the trustees of the future, and it behooves us to pause and consider well ere we legislate against them or fail to enact legislation in their favor. We owe a duty to the children and the children have rights which we are bound to respect, rights we should safeguard as lawmakers, rights we should heed as fathers, rights we should recognize in the presence of Him who created the children of the world.

As Emerson has said:

The truest test of civilization is not the census, nor the size of cities, nor the crops; no, but the kind of men the country turns out.

Child Labor.

EXTENSION OF REMARKS

HON. DENVER S. CHURCH, OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. CHURCH. Mr. Speaker, it is with the utmost earnestness that I give my whole-hearted support to H. R. 8234, known as the child-labor bill.

There is great room for question and argument in regard to many of the measures we have under consideration in this House, but when it comes to this humanitarian bill, I see no

room for a difference of opinion. [Applause.]

According to the United States census report, there were in 1910 nearly 2,000,000 children under 16 years of age engaged in different industrial occupations, about 5 per cent of all the laborers in the United States. Nearly 50 per cent of this vast army of little workers were under the age of 14 years and many little workers were times the age of 14 years and many little fellows of only 10. Six hundred and thirty-seven thousand were little girls; 41,076, under the age of 16, were employed in the cotton mills; 11,811 were mere babies, between the ages of 10 and 13 years, 5,500 of whom were little girls.

Mr. Speaker, when I read these figures it made me sad and sick at heart, and I said to myself, "In this, my country, is it possible this is true?" and as I reflected on the situation I seemed to have a vision of the whole wretched scene. It is a cold and cheerless winter morn; the great town clock is strik-

ing the hour of 5; the eastern horizon is yet shrouded by the darkness of night; 5,500 little girls between the ages of 10 and 13 years are dreaming in their beds, dreaming of toys and dolls and other childish things. The alarm clock sounds and the great factory whistles blow and 10,000 tiny feet strike upon the cold and carpetless floor. A few minutes later, pale and sad of face, half clad and fed. I see the throng of little workers marching to the mills. They pass a thousand homes of other children still dreaming their childish dreams, in slumber sweet. The hair of some is tied, while that of others falls loosely on little shoulders that show the signs of toil. Some wear little aprons, others have faded sweaters on. Some are bare of foot, some have shoes too large and others shoes too small. Some seem happy and some are crying as they trudge along, but all seem worn and pale. I look again, 5,500 little girls with bowed shoulders working in the mills. It is now half past 8, and hundreds of other children with well-filled dinner pails pass along the road to school. Again; it is evening time, and the little ones worn with their ceaseless daily toil trudge slowly to their homes, and there, too tired almost to eat, many fall asleep and are carried to their little beds.

Mr. Speaker, when I saw that picture it seemed to me I discerned among those infant toilers my own sweet child of 12. It seemed that her cheeks had become pinched and pale, that her shoulders were stooped and round, that her eyes were dull, her step was slow, her voice was sad, and her cheeks showed

signs of tears.

I have said enough. I can not imagine a man who is the father of a tender little child who could be opposed to this bill. I can not imagine a man who ever had a little brother or sister who would or could oppose it. I can not imagine a man whose memory bears him back to his own springtime of life who would not favor this bill. Suppose the morning of your life had been robbed of its sunshine, of its dewdrops, of its buttercups, and bird's song; suppose your childhood dreams had been changed into nightmares caused by the whistle of the mills and the sound of the great clock at the unearthly morning hour of 5.

We hear a great deal in these times about conservation. We appropriate vast sums to conserve the forests; vast sums to conserve the oil and other industries. We make great appropria-tions in the interest of agriculture, in the interest of animal industry and plant industry. We spend large sums of money to conserve the fish and game of this country, but what about the

fatherless, motherless, and friendless children?

Mr. Speaker, I am in favor of this bill because it conserves the childhood of our country. It conserves their strength and gives them time to grow. It conserves their intellect and gives them time to go to school. It conserves their health by removing them from poisonous gases and filthy air. It conserves their lives by taking them away from vicious wheels and belts and revolving drums, and it conserves their childhood days by permitting them to have time to sleep and play, wander and wonder, grow big of soul and sweet and kind of heart.

I do not like a robber and I despise with all my heart a person who forces away the property of his fellow man. He is a heartless robber indeed who steals the charm of childhood lives, that takes the sparkle from childhood's eye and the color from childhood's cheek, and causes the hearthstone and the threshold to

become only places of refuge for tired feet.

Mr. Speaker, with all my heart I support this bill. [Applause.1

Colombian Treaty Politics.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 8, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, the Colombian treaty is again up for public discussion. It now involves the question whether the United States shall pay \$15,000,000 or 25,000,000 for Colombia's interest in the Panama Canal. Mr. Bryan, when Secretary of State, saw it, our financial liability to "salve" the wounded feelings of Colombia was fixed at the higher amount, and it was to be accompanied by an apology approaching the abject.

As I pointed out in July, 1914, and again in December of the same year, there seemed to be no good reason for the apology, even if there was reason for paying Colombia any large sum in

cash. In the two speeches referred to I quoted extensively translations by Mr. Wilfred H. Schoff, secretary of the Commercial Museum of Philadelphia, of documents found in the Colombian records. These translations indicated that the politicians of Colombia were not wholly oblivious of their possible "strangle hold" upon the Treasury of the United States, seeing that this country had entered upon the Panama Canal enterprise and might be willing to bid a little higher than the terms agreed

In my remarks of December 18, 1914, I introduced certain translations of official papers with this statement:

translations of official papers with this statement:

Usually there are two sides to every question, but in this instance, from the viewpoint of the Secretary of State, there was nothing for the United States to do but to pay what Colombia demanded. Since then, however, additional information has been brought to the United States which indicates that there was some bartering over and above the mere matter of \$25,000,000. It now appears from official data translated and forwarded to me by Mr. Schoff that the Colombian Government asked for \$30,000,000 plus \$250,000 per annum for 100 years; that this was countered by an offer of \$20,000,000 from the United States; and that finally, in order to "blot" the estrangement entirely from memory the compromise figure of \$25,000,000 was substantially agreed to.

The construction of the Panama Canal has already proven a heavy drain upon the resources of the United States, and its maintenance, especially in the event of war, will continue to draw heavily upon the people of this country. It is interesting, therefore, to contemplate the early probability of another outlay of \$25,000,000 to "salve" the wounded feelings of Colombia.

COLOMBIAN MINISTER'S STATEMENT.

COLOMBIAN MINISTER'S STATEMENT.

That there are still two sides to the question appears from the more recent discussion of the proposition to reduce the in-demnity the United States shall pay Colombia from \$25,000,000 to \$15,000,000. The Colombian minister, Julio Betancourt, as quoted in the Washington Post February 4 last, takes the one side in a statement expressive of disappointment that the side in a statement expressive of disappointment that the indemnity is to be reduced. Since I intend to extend my remarks by referring again to "the other side" of the question, it is fair that the statement attributed to Minister Betancourt should be printed in full. So far as the Washington Post prints the minister's statement, it is as follows:

I can not conceive the reason why it is sought to make the expression of regret mutual. It is as though a weak man who has been hit over the head with a big stick by a strong man should be asked at the time of reconciliation to applogize for having been assaulted. It is quite natural that Colombia profoundly regrets the loss of the Isthmus of Panama. An expression of regret by her in the treaty of April 6, 1914, would have been an irony without precedent in the annals of diplomacy.

NOT TENTH PART OF DAMAGE.

As far as the indemnity is concerned, the \$25,000,000 offered in the treaty does not cover even the tenth part of the damages done to Colombia, taking into account only the actual value of the isthmus, the value of the Panama Railroad, which belongs to Colombia, the annuity from the canal, etc.

Neither does the \$25,000,000 begin to cover half of the dues from which the United States was exempted during many years by the freedom of transit across the Isthmus, which freedom of transit was conceded by Colombia to the United States as payment for the guarante of her rights of sovereignty and property over the Isthmus of Panama.

This is clearly set forth in article 35 of the treaty of 1848. Everybody knows how the United States fulfilled its guarantes.

DENIES "GRAFT" CONTEMPLATED. Confident that the Senate of the United States would approve the treaty signed in Bogota on April 6, 1914, at the instance of the American Government, my Government had decided to apply the entire amount of the Indemnity to the sanitation of the-ports of Buena Ventura and Cartagena, to the construction of various railroads and other public works, from all of which American Industry and commerce would have profited.

It is absolutely false that any part of the \$25,000,000 would have gone to pay lawyers or commissions of any kind whatsoever. This is but one of the many calumnies spread abroad to prevent the accomplishment of an act of justice worthy of the country of George Washington.

WORK FOR FRIENDSHIP VAIN.

At this moment—and this is my personal impression—I feel that all the efforts, all the sacrifices made during the past 13 years to reestablish a legal status, to bring back confidence, and to renew the bonds of friendship between my country and this great Nation have

bonds of friendship between my country and this global been in vain.

To repair injustice and restore the ancient friendship that existed for more than a century between our two countries has been my constant aim, and to that end I have devoted more than three years of patient diplomatic labor. I can only trust that in this unhappy moment I may be spared the repetition of injurious slanders against my country, for even among the pagans of antiquity the victims selected for sacrifice were crowned with flowers. They were not insulted.

What the Colombian minister has said is entitled to fair consideration, but as there has been a disposition since Secretary Bryan's suggestion of an "abject" apology with a financial olive branch to find fault with the United States for its apparent harshness to a less powerful country, we may be pardoned for again invoking Colombian testimony upon so serious a matter. In thus presenting "the other side" I shall introduce the testimony of the administration of Gen. Rafael Reyes, Second Vice President of Colombia at the time the Hay-Herran treaty was being made the football of Colombian statesmen and who immediately thereafter became President of the Republic. According to Mr. Schoff, who has been a careful student of the Colombian situation, an official book entitled "Por Honor de Colombia" affords interesting reading for those who would unwittingly place the honor and integrity of Colombia above that of the United States of America.

During the administration of Gen. Rafael Reyes as President of Colombia-

Says Mr. Schoff-

Says Mr. Schoff—
he was bitterly attacked by the same political groups which brought about the defeat of the Hay-Herran treaty, and the charge was openly made that he had conspired with Mr. Beaupré, United States minister at Bogota, and Señor Obaldia. Colombian governor of Panama, to bring about the revolt of the Isthmus. In refutation of these charges, his administration issued at Hogota, from the national printing office, a book entitled "Por Honor de Colombia." which gives intimate details of the political conditions in Bogota during the canal negotiations and of the hopeless incompetence and corruption of the Government. From this book, issued as an official document, and in effect as the party plea of the Reyes administration, the following passages are translated. They afford no basis for the proposition that an apology is now due from the United States to Colombia.

NO CONSTITUTIONAL INFRINGEMENT,

No CONSTITUTIONAL INFRINGEMENT.

Over the tremendous problem of the Hay-Herran treaty the weightest brains of the two disputing countries have been consulted; all have viewed it from many sides; all have expressed many doubts; all have brought forward chreumstances in favor and against its propriety; all proposed changes according to their judgment, but no one of them has been able to say with certainty that it was absolutely good or absolutely bad. Only Senor Perez y Soto has, and has had no doubt on this particular. Since before the closing of negotiations he had deciared everything connected with it to be a crime. The treaty was a crime and would always be a crime in his infallible judgment; and the proof that his opinion about the treaty is bilind, born of passion and not of deep study, is that he has never told us on what he founds it, nor why this treaty violated our sovereignty, nor what article of the constitution it infringed—nothing, in short, to reveal his erudition in the matter. Nevertheless, once the Hay-Herran treaty was defined by his ex cathedra as a crime and ignominy, he must proceed logically to condemn to eternal fames with tranquil conscience all those who in any manner intervened in negotiating it—that is to say, in the commission of the crime—but through an aberration from his dogmatic judgment he brings this charge against Reyes. Why? Because Reyes did not participate in the crime? No; rather, because he did not prevent it.

Setting aside Señors Martinez Silva, Concha, Herran, and all the others who took part in the negotiations with the American Government, all who approved them, all who applauded them, he violently attacks Reyes because he could have impeded and did not impede the signature of the treaty; but Reyes could not intervene in the negotiation even if he had tried.

COLOMBIAN LEGATION SHOULD HAVE BEEN SUPPORTED.

Since the negotiations for the construction of the canal were begun with the American Government, our chancellery intrusted them and all their ramifications, such as canceling of contracts, transfer of shares, etc., solely and exclusively to the representative of Colombia in Washington. Exclusively, we say, and this was a most important circumstance in which our Government took careful interest for an infinity of reasons—unity of action, indispensable in so vast and delicate a matter; harmony and coordination, which should exist between the diverse details in order that all should run jointly and opportunely to the final conclusion of the matter; reserve, impossible to secure when many persons are holders of the same secret; and, finally, elementary precaution to prevent discordant or meddlesome intervention in every case disagreeable and hurtful. * * In truth, to this fact any person might testify who had followed the negotiation in its details, but we refer particularly to Messrs. Concha, Paul, and Uribe and to the records of the ministry of foreign relations. * * *

COLOMBIA'S FATE SEALED BY HER REJECTION OF HER OWN TREATY. When the Cabinet at Washington received the baleful and unbelievable

When the Cabinet at Washington received the baleful and unbelievable news that the Senate of Colombia had rejected the treaty, without entering into further discussion, our fate as regarded Panama was settled. It was settled in advance, as we may see when we study the record, because of the fact that it would be impossible further to deal with the Government of Colombia. This was clearly expressed by the Department of State; this was shown by Beaupre and printed in the official and private press of both nations. Only the Senate of Colombia and certain "partiots" did not comprehend this, and were still confident—we know not whether by our right or by our strength—that the United States would submit to all our demands. Such confidence could have been held only by those who based their right on guns and warships, because the exterminating angel, the ally of the weak, has not chosen since the time of Sennacherib to destroy the conquerors.

Three months after that precipitate rejection of the treaty Panama ceased to be ours.

OPPOSITION OF COLOMBIAN SENATE DUE TO SPITE AND NOT TO STATESMANSHIP.

MANSHIP.

We already understand the resentment of Perez y Soto against Reyes. We have the key to his anger against the general. He gives it to us when he complains that Reyes counseled the governor of Panama to nominate Dr. Pablo Arosemena senator. Perez y Soto was the candidate of Gov. Mutis Duran, his intimate friend, and he has not forgiven Reyes for endeavoring to deprive him of the honor of representing his home land in the senate. But how much the Colombian Senate would have gained in receiving Dr. Arosemena from Panama instead of Juan Perez y Soto; how much light would have been brought into the canal debates. The Liberal Party would have been brought to listen in the senate to the voice of one of its old fighters, and the treaty, the rejection of which has brought us so much harm, would have met a different fate. The politics of anger is ridiculous and dangerous for weak peoples.

The coming of Dr. Arosemena would have been a truly helpful event. The eminent orator would have shown that body and the public the facts about the canal. If there was anything luminous and partfolic brought about by the debate on the treaty, it was the opinion put forth by Dr. Arosemena when it was requested of him by the Government. He was not a partisan of the treaty, but still less did he consider it a diabolical creation. He was not a separatist, and entered into that movement only when borne away by the avalanche. He lamented the disnemberment of his country and cursed those who, blinded by anger, did not foresee and prevent that sad result.

If Reyes had really feared to make himself unpopular, there would have been no easier remedy for him than to follow the current which then attracted the people and to declare himself opposed to the treaty, as the candidate Velez did. To defend the treaty showed energy and honorable conviction. "To override the law" is a phrase which only an ignorant person can use with reference to Reyes. No one in this country has been more respectful than he toward the law nor has more scrupulously upheld it. From 1885 until to-day there have been many times when Reyes might have imposed his will upon Colombia with benefit to all, and that he has not done so is the occasion of Juan Perez y Soto charging him with "betraying his happy star"; but how much would even Perez y Soto have given during the last congress if Gen. Reyes had lent himself, in his capacity as designate, to taking the place of Vice President Marroquin?

How much we would give to-day if the Government, instead of showing itself so respectful of the passions of the senate, had orced the ratification of the Hay-Herran treaty. Everyone sees this to-day. It might have sacrificed its prestige, might even have laid down its life, but the country would not now be overwhelmed in sorrow and shame. COLOMBIAN SENATORS INEXCUSABLE.

Never was a graver fault than that committed by the Senate of

Never was a graver fault than that committed by the Senate of Colombia in confounding politics with the most important national problem ever known. Never was a more gross and inexcusable error than for it to make fun of the warnings of Roosevelt and to underrate the American power. Never was there a greater infamy than to provoke the ruin of the country in order to humiliate the Marroquin administration by inflicting upon it an adverse vote in the senate. Colombia can have no curses sufficient for those senators who placed hatred of a ruler above love of their country.

THE PLEA OF NATIONAL DIGNITY FALSE AND FARCICAL.

hatred of a ruler above love of their country.

THE PLEA OF NATIONAL DIGNITY FALSE AND FARCICAL.

But we heard Perez y Soto saying to his foolish followers that the senate so acted because in the treaty our honor was asked of us in exchange for \$10,000,000. He lied. That is the excuse of those who are ashamed of having sacrificed their country to a factious passion, now to pretend that they rejected the treaty to save their dignity, but that is a farce. In the treaty we were asked for a zone of land a few miles broad in exchange for the canal, \$10,000,000, and an annual allowance. That seems honorable enough. The Hay-Herran treaty was simply a matter of business. If perchance it was not overgood for us, it was at least acceptable in that it conserved to us what we have lost. In almost all international questions there is involved some point of honor for the nations interested, but in the Hay-Herran treaty this point of honor was remote, and if not acceptable at least susceptible of decorous arrangement. It was a business question and only political passion could exaggerate that side of it to the extreme of its rejection on the ground of dignity, and Reyes stood forth as a decided advocate of its ratification. "I think he did the best that he could, but it was too late," reported Beaupre. That is true. He did what he could to obtain ratification of the treaty. That is to say, he took the only means remaining to avoid the loss of Panama. "But it was too late." Yes; it was too late, to the disgrace of the country—no one heard, no one saw; the senate was blind and deaf, preoccupied in the humiliation of the Government. Would that there had been time; would that theyes had been able to convince the minds and appease the anger; would that the senate could have held its personal hatred in hand and have stayed the pending mistake! Minister Beaupre thus reported: "The dominant note of the debate was a spirit of hostility against the Government. With the exception of one senator, there was no speaker who did not bitterly

NARROW CONCEPTS OF PATRIOTISM.

Federalist ideas, which we imbibed in infancy, and have never wholly given up, make us look with misgiving and even with aversion upon everything that has been done against the integrity and power of our second fatherlands, which for many are the first and only; that is to say, the Departments, formerly sovereign States; but when we overcame the first impulse of love of neighborhood, we rose to higher considerations and widened the horizon of our thoughts, and immediately understood the advantage and even urgency of doing away forever in spirit and in truth with these dangerous boundaries in the midst of what should be one fatherland—single, great, irrevocable. Our sparse population, scattered over an immense territory, divided by nature into totally different regions, lacking absolutely means of communication which facilitates contact and commingling, thus creating common interests and developing bonds of union between various districts, and this being aggravated with the local recognition of isolation, and with the inveterate custom of antagonism, it is miraculous that there should have been preserved, after so many years of mutual indifference, strong bonds out of which the evil could be remedied.

COLOMBIAN DISSOLUTIONS.

COLOMBIAN DISSOLUTIONS.

Material interests are the only ones that can create enduring ties. Progress and civilization consolidate nations and strengthen the union between the various elements in them more than time and glory. Peoples are living organisms in whatever concerns their instinct of self-preservation. Entities only prefer to cultivate platonic loves. Without going far in search of arguments in support of these ideas, let us remember our own history, and let us prove that the immediate effect of decadence is dissolution. First, Great Colombia was broken up, then Panama separated when it thought that it would prosper better alone, and let us remember how strongly and spontaneously the separatist idea was held in all parts of the country until we came to the way of misfortune and of incurable anarchy.

But with strong national government, progressive and honorable, with subsidiary governments concerned solely with the moral and material progress of their respective districts, we shall see this country rapidly transformed. deserving of good fortune, although we have despaired of its salvation.

* Political parties do not petrify in these centuries of busy movement, and if Liberalism is the party of progress it must mold itself to the progress of the times. The tendency in the whole world is taking powerful form toward an ordered, serious, and strong republic of the North American type, in which liberty and the laws are not struck down by the majesty of power. Let the imbeciles still hark back to the constitution of Rio Negro [1863, in which sovereign rights, including secession and nullification were reserved to the constituent States] and the license of other years, but let it not be

demanded to-day of sensible people. Some day we must see the last of extravagances and Utopias in all parties. That day will come when all shall sign the constitution and accept as a bond of union and as the immovable foundation of our nationality this principle which belongs to no party, but is an axiom: Only a strong government can guarantee order, and order is the guaranty of law and of liberty.

CONTEMPT FOR AUTHORITY:

When Gen. Reyes took the reins of government, the most serious of the country's diseases, the source of all those from which it suffered, was the absolute disregard of the principle of authority. This is notorious. It was in the conscience of the country, and from it arose the evils that had acquired such alarming characteristics that it was thought impossible to combat them with success and that they seemed inseparable from the national organism. All rulers, all parties in Colombia contributed to that fatal result. The Liberals, with the acquisition of liberties beyond the intelligence of the country, spread abroad the opinion that respect for rulers and enforcement of authority were incompatible with the full enjoyment of citizenship. Conservative government with their leniency and tolerance practically confirmed this same belief, of which theoretically they were the firm opponents. Their responsibility is much greater, because in permitting disorder, rebellion, and profanation they worked against their own conscience so far that liberal governments were almost on even terms with them. Every day the belief grew stronger that public happiness lay in the discrediting of the Government, in the denial of its authority, in the sapping of its strength, in the violent treatment of its agents, in the denial of any check or restraint on passions, and in the full use, without obstacle, of every means, even that of fratricide or war, for combatting authority. The press was then converted into the character of intransigence, defamation, and calumny. The pen could not be used unless dipped in the blood of those who exercised power and of their defenders. Public offices were sought for the same end, instead of their defenders. Public offices were sought for the same end, instead of their defenders. Public offices were sought for the same end, instead of their defenders.

CONTINUOUS CIVIL WARS.

collaborator into a formidable adversary of the Government.

CONTINUOUS CIVIL WARS.

Our civil wars had no other origin. The 3d of November, 1898, that shameful page in Colombian history, came from no other source. The 31st of July, 1900 [deposition and seizure of President Sanclemente on an unsubstantiated charge of insanity, and unconstitutional elevation of Vice President Marroquin to executive power], was the logical consequence of a series of acts, the gravity of which can not be denied, and hardly was the three years' war, the legitimate daughter of the Congress of 1898 and of the license of a long time, ended than we came back to the same path with criminal perseverance; and so precipitately did we race therein that when Gen. Reyes was declared President it seemed impossible that he should take his office in peace. It seemed hopeless to prevent the dissolution of the country, and a proceeding like that of July 31 seemed imminent. Fortunately the 7th of August arrived without disorder, owing to many circumstances which overthrew the plotters, and especially owing to the exhaustion of the country; but that did not prevent Congress of 1904 from being an aggravated edition of that of 1898, and as such it declared itself an implacable enemy of a ruler who had not yet begun to rule. [Yet Marroquin presumed to promise to the State Department favorable action on the Hay-Herran treaty by this same Congress.] It is useless to recall again the impossible situation in which Congress placed the President. It is useless to repeat that it undertook to destroy every hope of the country and of a chief magistrate who took up his powers full of good will and who was himself condemned to hopeless impotence and absolute barrenness; but this had been the fate of his predecessors in the Government—without power to do anything for the enforcement of the law, without ability to break with routine, every day more scorned and vilified, and every day seeing the country more the victim of discord and anarchy.

COMIC PRESIDENCIES.

S

Should President Reyes have resigned himself to fulfill the rôle assigned to him in the comedy? This was what the insensate majority desired, but it was to demand too much. The President was not disposed to leave his name and his country buried in order to truckle

disposed to leave his name and his country buried in order to Congress.

The separation of Panama was an act that the powers of Colombia could not prevent. Those principally responsible for what occurred were not obaldia nor Marroquin. They were the Colombian Senators who, in order to embarrass the Government, without discussion refused their support to the treaty signed in Washington, and demanded the gallows for the Colombian representative who signed that international document; and the separation of Panama was sanctioned by the recognition of all the powers of the earth. The pity of it came from the overweening pride of certain men whose black coats and white collars had not smoothed down the roughness of their necks.

LAW AND ORDER SHOULD BE PLACED ABOVE PRIVATE STRIFE.

LAW AND ORDER SHOULD BE PLACED ABOVE PRIVATE STRIFE.

If the parties represented in the legislative assembly could learn to sacrifice their extravagances on the altars of their country and to support with absolute good faith the Constitution and laws of the country we could be assured forever of public peace. The alternations of parties in power would not then imply demolition; would not invoive danger for anyone. They would not be able in future, in order to raise up the people to war, to exploit religious faith or love of liberty if the one and the other were guaranteed against the fury of the implous and the abuse of force. Let us once obtain stability and equilibrium and our future will be a surprise for the world. Foreign capital will not find a more propitious soil. The roads which to-day are a disgrace to us, will grow like a network of arteries in the land. The progressive and sure increase of public wealth will give immediate solution to our economic problems. The depreciated paper money, a reflection of national wretchedness, will soon recover its credit, and our life, which we lead to-day amid privations and wretchedness, will become easy, prosperous, and contented, and labor, now almost without return to the poor man, will be a source of private welfare and of social security.

PERPETUAL DISCORD AND DISUNION.

PERPETUAL DISCORD AND DISUNION.

PERPETUAL DISCORD AND DISUNION.

In the first page of one of his precious books Gaston Boissier recalls that never in the course of the ages has there been a government without opposition, and he advises that it be joined to the car of national politics as England does, rather than that the nation should range itself against the opposition. Honorable opposition is really inevitable because it is born of nature. There are no two minds in existence that will appreciate an act or an idea in the same way, any more than we can find two leaves alike in all the forests of earth. If in a current question of administration or politics it is impossible to find perfect accord in the opinions of men, how could there be unanimous agreement in any intelligent country in the infinity of matters

which come before the governing machinery of the State? This perplexity, this universal disagreement, the heritage of man, can, in certain peoples, acquire proportions entirely unknown in others. Colombia, for instance, is the home of party intransigence, of systematic opposition, and of perpetual discord, and why, we do not know. The only sure thing is that ideas considered in the races of the world as removed from discussion, among us are the object of most solemn controversy. The most antiquated theories have here their faithful; the most extravagant Utopias here find their proselytes, and one can hardly cite an instance in which any of them has triumphed with reason. From discussion light is not brought forth in Colombia. What comes forth with marvelous facility is the confusion of argument. In such subjects we profess the most out-of-the-way principles; the word "character" with us is the synonym of blind obstinacy. A man may not, without incurring infamy, change his opinions or ideas in any case or for any reason. When he has taken one step on a given road he must follow it to the point of falling in an abyss if necessary, because doubt is not permitted to him, and vacillation is an abominable fault.

A GOVERNMENT OF DOCTRINAIRES.

A GOVERNMENT OF DOCTRINAIRES.

Let it be understood that with such ideas all innovation in theory or in practice is impossible and that we are all brought up to the severest routine; that we mature with capital defects and that progress is thus removed from our grasp. Let it be understood also that opposition to the Government, elsewhere rational and orderly, with us takes the form of semibarbaric ferocity. This opposition is directed not only toward the acts or tendencies of the Government but also toward the person who governs or toward his personal ideas. Thus we see every day how censure is passed without analysis or applianse rendered without judgment and how plans or projects, essentially good, become the causes of bloody war.

A NATION ALWAYS AGAINST ITS GOVERNMENT.

The ruler who takes up the reigns of state thus begins as the victim

A NATION ALWAYS AGAINST ITS GOVERNMENT.

The ruler who takes up the reins of state thus begins as the victim of this fatal custom. Bollvar had hardly crossed the threshold when the nation was already divided into two perfectly separate bands—irlends and enemies—unconditional partisans and irreconcilable adversaries. His persen, well known and most worthy, called by popular vote to be chief of the Republic, was the target during the electoral debate of the most airocious calumnies and the most improbable charges. Everyone who did not support all his acts thought it his duty to curse him as an imbecile, and satisfied his conscience by acting as the bitterest enemy of a government hardly yet instituted. This, although ridiculous, would not be so scandalous if we had not also seen how [in 1903] the majority in Congress, which is or ought to be, more serious than the multitude, let itself be borne along by the current and finally decided to kill the Government in a corner, even though they knew that they were thus killing the Nation. Then we could understand how the disastrous consequences came out of these blind and insensate passions, because they left nothing undone to cause the total and irreparable ruin of the country. If they did not bring it about beyond repair, it was due to the energy and ability of the Government. But when we seek the final lesson in what is possible in Colombia from party hatred, how the spirit of passion debases the most exalted sentiments, how the passions pervert the conscience and destroy the judgment, it is sufficient to review calmly the history of the Colombian Scnate of 1903 in its debates on the Hay-Herran treaty. JUSTICE TO THE UNITED STATES

From the viewpoint of the Colombian minister it may seem that the United States, in taking over the Panama Canal, has disappointed Colombia, but there is surely room enough to justify the United States standing firm with a country so shaken by adverse winds of public opinion as Colombia was when it rejected the Hay-Herran treaty. Colombia's questionable reign over the less powerful Panama was certainly not less harsh than any treatment which the United States may have exercised with respect to Colombia. When Panama was liberated by a revolution of its own making, Colombia suffered the loss of one of its most profitable assets, but the whole world profited by the action of the United States in dealing with the Republic of Panama after Colombia, even for a price, refused to cooperate in the movement of uniting the two oceans. The people of the United States have borne the expense of this great work, and they are likely to assume greater burdens, that the world may profit thereby.

When Colombia sets forth her grievances in terms that reflect upon the honor and integrity of the United States, therefore it is not unreasonable that she should be reminded of her own moral weaknesses and imperfections, which, after all, were the real cause of her differences with the United States.

The Child-Labor Bill.

EXTENSION OF REMARKS

HON. EDMUND PLATT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES, Wednesday, February 2, 1916.

Mr. PLATT. Mr. Speaker, I intend to vote for this bill to prevent interstate commerce in the products of child labor, because I think it is in the main a good bill, and because I think it is time the few remaining States, nearly all in the South, that allow children under 14 to work in factories should be compelled to come into line with the rest of the Union. North and South Carolina, New Mexico, and Wyoming are the only remaining States that have no 14-year limit for children working in factories. More States have no 16-year limit for night work, and still more have no 8-hour requirements for children under 16 in factories and no 16-year limit for the employment of children in mines and quarries; but the only opposition to this bill from manufacturers personally appearing against it, according to the report of the committee, has come from the cotton-manufacturing sections of Virginia, North Carolina, South Carolina, and Alabama, and it is evident that the vast majority of States are either already in line with its main provisions or willing to conform to them.

I do not, however, look upon this bill as a sectional measure, as an effort to stop unfair competition in a few Southern States. It is a measure which in the long run will benefit the States which have been backward in enacting child-labor legislationbenefit not only the children, who will be given more of schooling and more wholesome out-of-door recreation, but the manufacturers themselves. According to the best authorities in economics, the movement against employing young children in factories in New England, New York, and other Northern States did not begin as a humanitarian movement, but rather as a movement for greater efficiency in manufacturing. It was found that the young children who could be employed to advantage under the old systems of somewhat haphazard factory management, with old-time machinery, could not be profitably employed in the constitution of the constitut employed in the operation of the more rapidly moving modern machinery. They were already pretty generally eliminated in the best factories from actual work involving constant machine operation before the laws were made to prevent their employment. The laws followed, in the main, the economic conditions created by the invention of new machinery and the effort to procure greater efficiency in shop management. It may be that conditions are somewhat different in the South, with its warmer climate, but child labor is everywhere relatively inefficient, and its continued employment in the South implies some lack of up-to-date machinery and management. The enactment of this bill will compel the modernizing of the plants that can be run with such labor, and in the long run will put them on a more favorable competitive basis than their present position.

Mr. Speaker, I am willing to admit that factory owners are generally not inhuman, that they do not desire for the sake of saving a few dollars to harm the young people they employ. I think it is doubtless true, as has been said, that some of the sentimentalists who have been drawn into this movement are people who never did a day's work in their lives and naturally consider all work a hardship. They have doubtless exaggerated conditions in factories that still employ children. Probably many children are not physically harmed by factory work, or at least children were not generally physically harmed by work under the old-time less exacting conditions. I have heard one of my colleagues from my own State say that he went to work in a factory at the age of 9 and kept steadily at work for many years. It did not kill him. Here he is in Congress, hale and hearty and prosperous, and scarcely looking his years; but 1 notice that he is for the bill; that he is willing to consider himself an exception.

If all boys were as strong as he must have been and had as good parentage and as good bringing up as he evidently had. I ould be of the opinion that these matters should be left to the discretion of parents and the good sense of each community, without either State or National laws of regulation, but we know that this is not the case. We know that the average child of to-day of 9 to 16 years of age can only obtain such education and such development as may fit him for the more exacting duties of modern life by remaining in school during those years and spending his out-of-school hours either in wholesome play or in some out-of-door occupation that is not too exacting.

There may be some question of the constitutionality of this bill. It does raise a few new points for the courts to wrestle with. As ex-Gov. Kitchin, of North Carolina, has said, never in the height of the antislavery agitation before the war was it supposed that the products of slave labor could be excluded from interstate commerce. The products themselves are harmless, unlike the impure food and drugs that the Pure Food and Drugs Act excludes from interstate commerce. Can the United States. under guise of regulating interstate commerce, go back of the goods produced and inquire into the conditions of their production? Is not that something that must be left to the States? I am sure I do not know, but the decisions in the Lottery Ticket case and in the pure food cases are sufficiently similar to make it seem probable that this measure, if it becomes a law, will be sustained, and its purposes are so meritorious that I do not see how anybody can vote against it solely on account of possible unconstitutionality. Being heartly in favor of the purposes of the bill I shall vote for it, and I expect to see it pass this House by an overwhelming majority.

Letter From the Secretary of the Navy in Regard to Battleships "43" and "44."

EXTENSION OF REMARKS

HON. LEMUEL P. PADGETT,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 9, 1916.

Mr. PADGETT. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include a letter from the Secretary of the Navy giving information relative to the bids on the battleships 43 and 44, in pursuance of a statement I made the other day in response to an inquiry whether I would furnish them. them.

The letter is as follows:

NAVY DEPARTMENT,
Washington, February 8, 1916.

DEAR MR. PADGETT: Complying with your verbal request for information concerning the bids, etc., for battleships 43 and 44, the bids from the private contractors were as follows:

One vessel in accordance with the department's design, subject to certain exceptions enumerated hereinafter_____ NEWPORT NEWS SHIPBUILDING & DRY DOCK CO.

One vessel in accordance with the department's design, subject to certain exceptions enumerated hereinafter_____ 7, 775, 000 FORE RIVER SHIPBUILDING CORPORATION.

Bid 1. One vessel in accordance with the department's design.

Bid 2. One vessel in accordance with the department's design. 7, 638, 000

7, 684, 000 Bid 3. One vessel in accordance with the department's design

Bid 4. One vessel in accordance with the department's design

7, 229, 500

These prices are subject to certain exceptions differing in each case as described below.

The following table gives the items which the respective bidders propose to omit from the contract plans and specifications as originally contemplated by the department, and opposite each item is given an estimate of the cost of including that item. In some cases these figures have been stated in the bids, but in some instances have been estimated by the bureaus: the bureaus:

Time of construction: The department's circular to prospective bidders on these vessels stated that no bids would be considered which proposed a period for construction in excess of 34 months. Prior to the opening, several of the prospective bidders protested against this provision, stating that under the prevailing conditions of the labor and material markets it would be impracticable to guarantee completion in that period. The contractors were then informed that a bid containing a time guaranty in excess of 34 months would not be thrown out on that account, but preference in consideration would be given to bids proposing the shortest time for construction.

The Newport News Shipbuilding & Dry Dock Co. in their proposal offered a constructional period of 40 months. The Fore River Shipbuilding Corporation proposed 34 months, but in a letter forming a part

The Newport News Shipbuilding & Dry Dock Co, in their proposal offered a constructional period of 40 months. The Fore River Shipbuilding a constructional period of 40 months. The Fore River Shipbuilding a construction of one of battleships Nos. 43 and 44, and to paragraph 12 of the confidential circular of requirements for bidders, which states that the maximum time allowed for completion of these vessels will be ended to consider the construction of the confidency of the con

guaranties of prompt delivery, and directions have been given to make like contracts for all material needed, so there will be no unnecessary delays. The machinery is now under advertisement. The price quoted for the steel needed in construction was slightly lower than the estimate previously made by the two yards awarded the contract.

The prompt action by the House of Representatives in authorizing the expenditure of \$600,000 of the \$1,920,769 between the lowest bids of the private shipbuilders and the navy-yard estimates will enable the Navy Department to lose no time in making every preparation so that the work can be pushed to the utmost as soon as the ways are clear.

Sincerely, yours,

JOSEPHUS DANIELS.

Hon. LEMUEL P. PADGETT, M. C., Chairman Committee on Naval Affairs, House of Representatives.

Embarge on War Munitions.

EXTENSION OF REMARKS

HON. EDWIN D. RICKETTS, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 9, 1916.

Mr. RICKETTS. Mr. Speaker and gentlemen of the House, since this session convened I have listened attentively to the many able orations that have been delivered upon the floor of this House, almost daily, touching the material questions which

this Congress is called upon to determine.

In all the addresses that have been made not a single word has been said by any Member of this House with reference to laying an embargo upon the shipment of war munitions and war equipment, which have been shipped, and are still being shipped, to the belligerent countries across the sea now engaged in war. To my mind, this question is the most vital of any that concerns this Nation and its future welfare at this session of Congress.

It has been the policy of this administration to remain neutral during the great bloody war that is being waged in the old country. I am heartily in accord and in sympathy with this policy, but to allow the exportation of war munitions and deathdealing war material by the great syndicates, monopolies, money changers, war trusts, and gigantic corporations in this country to the belligerent nations now at war in the Old World, is inconsistent with our pretended neutral policy. To allow this nefarious and iniquitous commercial traffic to continue, without limitation or qualification, is wrong, both morally and legally, and in my judgment is a willful violation of the law controlling the conduct and actions of neutral nations.

Mr. Speaker, the great war trusts, syndicates, and monopolies are reaping enormous profits, profits of practically more than \$3,000,000 per day, and millionaires are being made daily by the score. And these profits are being gauged and measured by the carnage and slaughter of humanity in the war zone. And yet it is claimed that we are a neutral Nation. It is unneutral as well as unfair where one belligerent receives arms to the exclusion of another.

This is made plain by President Wilson in his neutrality proclamation issued on August 18, 1914, wherein, among other things, he said:

The United States must be neutral in fact as well as in name during these days that try men's souls. We must be impartial in thought as well as in action and must put a curb upon our sentiments as well as upon every transaction that might be construed as a preference of one party to another We should not extend or withhold aid to or from either if actual circumstances were such that both parties were not equally befriended.

An embargo on the shipment of munitions and arms is legally right; it is morally right. Under the circumstances it is necessary for us to be neutral. It is the only peaceful weapon we can use to enforce our rights as a neutral Nation and stop the outrages that are being committed and the tremendous and unnecessary slaughter of humanity.

President Taft, in 1912, issued a proclamation forbidding the exportation of arms and munitions to Mexico. In 1913, President Wilson, continuing the policy of President Taft, said that "an embargo on arms follows the best practice in the matter of neutrality.'

Woolsey, on International Law, says:

If the neutral should send powder or balls, cannon or rifles, to a warring nation, this would be a direct encouragement of the war, and so a departure from the neutral position.

Germany did not permit her citizens to sell arms and munitions to Spain during our war with that nation in the year 1898.

On April 23, 1898, after the Spanish-American War had begun, the British Government placed an embargo on munitions

In my judgment we can not be neutral and permit this outrageous trade under international law, but we can be neutral

and prohibit it.

Shall this country be converted into a great arsenal, the business of which shall be to assist those now engaged in war, that millionaires may be made in this country; that munition stocks may de doubled, trebled, and quadrupled in value? This Nation, in its greatness, should have set the example of refusing to participate, either directly or indirectly, for commercial purposes or for any reason, in the slaughter of human beings that is now going on in the old country.

Our shot and shell are, in many instances, killing the citizens of a friendly nation, and there is no way by which we can justify ourselves by citing the laws of neutrality. looked upon by some of the nations now engaged in war as an ally. We send arms to belligerents that they may more effectively destroy human beings to be buried in the trenches.

Mr. Speaker, the Red Cross Society of America is most amiably ministering to the wants of the wounded, sick, and dying of those who have fallen in that most merciless struggle. Members of this great organization are soothing the misery and pain of these poor unfortunates and ministering every relief within their ability. Widows and orphans are homeless and penniless. No language can describe the misery, the pain, and the anguish which prevail in the great war zone. The United States, through this society and the generosity of our people. load one vessel with a cargo of clothing, foodstuffs, and the necessary material with which to bind up the wounds and soothe the pain and relieve the misery of those partially crushed by war's vengeance and to relieve the distress and the deplorable conditions of the widows and orphans who are suffering untold agony because of this most destructive of all wars. In another vessel we are loading a cargo of guns, cannons, and munitions and arms of all kinds with which the allies may be able to make more widows, more orphans, and add to the intensity of this bitter struggle.

This is wholly inconsistent upon our part. It is unneutral, and should not be tolerated by this Nation for a single minute. If there is one thing more than another that will eventually drag the people of this country into war or cause an invasion or an attempted invasion of the American soil by a foreign foe it is this cruel and blood-cursed traffic on the part of the rich

corporations and war trusts of this Nation.

There is no such thing as neutral ground between right and wrong, and I have been unable by any fair process of reasoning to harmonize our neutral policy with our damnable commercial policy, with reference to the shipment of munitions. The one or the other is wrong. Both can not be right. One is inconsistent with and repugnant to the other. We can not be neutral and participate. The people of this Nation do not want war. I do not want war. I am for peace. Yes; peace—everlasting peace. Not peace, however, at any price; but peace so long as the honor of this Nation may be maintained and upheld.

Mr. Speaker and gentlemen of the House, I said to you on this floor on the 29th of January, 1916, that "In my humble judgment, our position is not that of a neutral Nation. It is inconsistent with neutrality. We are participating in that great war. We are assisting to make it one of the most destructive wars in the world's history, and we are being paid billions and billions of dollars for our participation and assistance therein, and we call this 'prosperity in America.' If any true, loyal American citizen can get comfort out of this blood-soaked and tear-stained prosperity, he is welcome to it. But, as for myself, I announce here and now that I am once and forever opposed to this iniquitous policy.

In my judgment, there should be an embargo placed upon the shipment of war munitions and arms of all kinds by this Nation. No excuse that we may give can justify our position, and if we continue, I am quite clear in my own mind that we may very well anticipate an attempted invasion of this country

in the future, for we are not without blame.

"The action of this Government in permitting the manufacture and sale of war munitions to belligerent nations across the sea is sure, finally, to bring the curse of war upon our

I know that some men undertake to justify our position, as a Nation, on the theory that if we do not supply the belligerents with munitions of war and arms that by our refusal to do so we would give one belligerent nation an advantage over another. And that very claim on the part of any man is an admission that this Nation is directly interested in that great and indescribable conflict.

We should not deceive ourselves, or draw to our bosoms any delusion as to the prosperity coming to us from profits arising from helping to slaughter men, and to make widows and orphan

The rattle of the bloody coin coming into this country can not drown the sound of the groans and cries of the misery arising from the battlefields of Europe.

International law may permit it, but moral law and all humanitarian laws refute and condemn it. Instead of this Nation being an arsenal from which the belligerent nations across the sea may withdraw their war munitions and arms, it should be the peaceful abode of a neutral and impartial citizenship.

The United States demanded in all earnestness during the Civil War that England refrain from purchasing "insurgent cotton," because the Confederates obtained through this commerce new money and new war supplies. This request on the part of the United States is conclusive evidence of the fact that it was the candid opinion of this Nation at that time that neutral nations should not assist belligerent nations, or those nations involved in war.

If it was right then that neutrals should not supply warring nations with munitions of war and war materials, why is it nations with indultions of war and war indectals, only not right now? The position of the United States then was directly the opposite of its position now. In short, the United States understood clearly then that every trade of neutrals with a belligerent country serves to strengthen its means for the continuation of war.

Peace is the normal state, war is the exception; peace is an enduring status, war is a passing state. Only the direct belligerents have an interest in war, the civilized humanity have not. It is not proper that the economic life of all should

be interfered with by war between nations,

It has always been held as a violation of international law for a belligerent to obtain its supply of arms exclusively from one neutral nation. I am aware that some very able citizens in this country undertake to justify the exportation of munitions of war and arms on the ground of precedent under international law. An examination of these precedents and the literary authorities on the subject will disclose that they are entirely unsatisfactory, some holding against the shipment of munitions and war materials, and others holding in favor of it, and I further understand that such justification is placed upon the theory by some that the shipper takes the risk, and that his cargo is contraband of war. Let these theories be as they may, they are not in line with reason and justice and equity between the people of a neutral nation and the people of a belligerent nation or nations.

Some insist that to lay an embargo upon arms and war munitions now would be a breach of neutrality. They say that foreign nations have built their foreign policies and other relations to us upon the theory of our passed practice, and that to now undertake to stop it as a mere commercial question at home would not meet the question in its ultimate boundaries. But they overlook the fact that the most recent action of this Government has been to lay an embargo upon arms and muni-tions of war with reference to other nations involved in war.

If I may express an opinion, our attitude in neutrality is a travesty on the term when we look at it from a moral and ethical viewpoint. We are not only inflicting pain but killing our professed friends and making widows of their wives and orphans of their children, when, on the other hand, we could shorten the war and hasten peace as we did by placing an embargo on arms and munitions to Mexico. There arises in the minds of real neutrals the suspicion that the administration is not neutral toward all belligerents, since England has virtually dictated to the United States for over a year an arbitrary policy regarding our foreign trade, and with impunity hauled pilfered our mails and prevented their delivery. The people feel convinced that if their products of the factory and field had some privileges of a free sea, as in times past and as real neutrals we should have, the United States would be enjoying a prosperity for the laboring and middle classes instead of a death-dealing rich man's prosperity, which is calamitous in both

I believe that had it not been for the fact that we were dealing in this most unrighteous and unscrupulous trade the Americans on the Lusitania would not have lost their lives. We have, in fact, made our country a party to the war across the ocean.

We can not justify that tragical calamity that cost so many

American citizens their lives by citing the laws of neutrality. The law of neutrality does not warrant it and strict neutrality condemns it.

The great tendency of the American people is to worship the dollar—the mighty dollar—instead of the God of the uni-

Too many Americans place the value of the dollar above the value of human beings or human souls. I can not, in good conscience, subscribe to this practice. I feel it my duty to condemn it, and I do so unhesitatingly and fearlessly.

I do not want to be understood in this address, however, as expressing my views on the question of preparedness. I shall give that question my most serious and careful attention later

on and during this session of Congress

War is to be deplored and abhorred, and we should not condone and encourage it. Let us wash our hands, then, of the stain of war, and forever hereafter maintain clean hands, and remain neutral in truth and in fact.

Analysis of "Evidence" Presented by Robert E. Peary to Committee on Naval Affairs, 1910-11.

EXTENSION OF REMARKS

HON. HENRY T. HELGESEN,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, January 25, 1916.

Mr. HELGESEN. Mr. Speaker, since my speech of January 13 was delivered I have had many inquiries as to where the printed testimony given at the Peary hearing before the Committee on Naval Affairs can be obtained. As this hearing was never distributed, but, on the contrary, was carefully guarded from general distribution, I have decided to make public a critical analysis of the evidence offered, which embraces every statement made at this hearing pertinent to Mr. Peary's claim for recognition as "discoverer of the North Pole."

I am also adding the original Peary hearing before the Committee on Naval Affairs in full, in order that there may be no question as to whether my analysis covers every material point. A careful study of that evidence and of my analysis of the same presented herewith will convince any unbiased, fair-minded person that Robert E. Peary neither discovered nor reached the

North Pole.

This statement is based, not on hearsay evidence or newspaper reports, or the claims of any rival or rivals of Mr. Peary. The official statements of Mr. Peary, made in his testimony before the congressional Committee on Naval Affairs, prove that his claim to the discovery or attainment of the North Pole is wholly unwarranted and without foundation.

The testimony of officials, experts, and Mr. Peary, given at Government hearings before the Committee on Naval Affairs, in 1910 and 1911, was the evidence on which Peary was retired from the Navy with the rank of rear admiral and the highest retired pay of that grade, namely, \$6,000 per year, which amount is annually paid to Mr. Peary, involuntarily, by the taxpayers of

the United States.

The Government officials who testified were O. H. Tittmann, then Superintendent of the Coast and Geodetic Survey; and Mr. Henry Gannett, of the Geological Survey. Hugh C. Mitchell, who also testified for Mr. Peary, is an expert computer who was employed by Peary to examine his data; and Peary took the

stand in his own behalf.
The first of the "Peary hearings" was held Friday, March 4. 1910, when the committee was called to order at 10.30 o'clock a. m., Hon. Thomas S. Butler (chairman) presiding. The following-named Congressmen were present: Messrs.
Roberts, Bates, Dawson, Englebright Greeg, and Macon. BUTLER.

All quotations from the testimony are made verbatim from the printed hearings, published by the Government in pamphlet form. The first hearing is dated March 4, 1910.

Mr. Tittmann was the first witness called, and testified in part

as follows:

The CHAIRMAN. Tell us, so we may have it in the record, your em-

ployment.

Mr. TITTMANN. I am Superintendent of the Coast and Geodetic Survey.

The CHAIRMAN. In the service of the Government?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. How long have you been at the head of this depart-

The CHAIRMAN. How long have you been at the head of this department?

Mr. TITTMANN. About 10 years.

The CHAIRMAN What relation, if any, did you have to the report that Peary may have made as to his having reached the North Pole?

Mr. TITTMANN. You mean the official relation?

The CHAIRMAN. Yes, sir; any official relation?

Mr. TITTMANN. Mr. Peary was ordered to report to me, as Superintendent of the Coast Survey, for the purpose of making tidal observations, under instructions from the President; I have his letter here and will read it to you if you care to have it.

Mr. GREGG. A copy of his instructions?

Mr. TITTMANN. No; not a copy of the instructions to Peary, but a copy of the letter of the President to the Secretary of Commerce and Labor, directing that I give him instructions. This is a photographic copy which I brought over:

THE WHITE HOUSE, WASHINGTON.

Oyster Bay, N. Y., July 3, 1908.

SIR: Civil Engineer R. E. Peary, United States Navy, has been directed by the Navy Department to report by letter to the Superintendent of the United States Coast and Geodetic Survey, and you are requested to direct this official to order him to make tidal observations along the Grant Land and Greenland shore of the Polar Sea during his projected cruise in the Rooscvelt. It is believed that such observations will throw light upon the Coast Survey theory of the existence of a considerable land mass in the unknown area of the Arctic Ocean.

Respectfully.

Respectfully

THEODORE ROOSEVELT.

Hon. OSCAR S. STRAUS, Secretary of Commerce and Labor,

Hon. Oscar S. Straus.

Secretary of Commerce and Labor.

The Chairman. The purpose of sending for you, as you will appreciate, is to learn what method you employed—

Mr. Roberts. We want to have a complete chain of the official records of the transaction.

Mr. Tittmann. I then gave him instructions to make the observations in a particular way.

(These instructions are given on page 54 of the printed hearings, and pertain only to tidal observations, making no reference whatever to the North Pole.)

The Chairman. Are you satisfied Peary reached the North Pole?

Mr. Tittmann. Surely.

The Chairman. Give us your reasons for it; take as long as you please and do it in any way you please.

Mr. Tittmann. Perhaps you will first allow me, then, to speak of the official records that I have in regard to the matter. When Mr. Peary returned from the Arctic he sent us the volumes of the tidal observations that he had made, and that was complying with his orders and instructions; but as the principal interest in the tidal observations was largely the knowledge of the hydrography of the Arctic, Mr. Peary also forwarded to us a line of soundings, which he had made, extending from Cape Columbia, where tidal observations were made, to within about 5 miles of the pole. So he forwarded those to me officially, and that is the official record we have of his having been at the North Pole.

Thus the "official record" of Peary's discovery of the North Pole consists, according to the statement of the Superintendent

of the Coast and Geodetic Survey, of the following:

Mr. Peary fastened a piece of iron-prepared weight, ax head, sledge shoe, or whatever—to a length of "specially prepared wire"; when he came to a convenient hole in the ice he dropped the chunk of iron in the water and noted the length of wire that ran out before the iron touched bottom (when it did touch bottom) or the amount of wire he happened to have attached to the weight when, as often occurred, he failed to reach bottom. In Mr. Peary's incomplete sounding which he claimed to have made at the pole "the wire broke." The samples of the soundings taken by Marvin were, unfortunately, lost with Marvin. Therefore Mr. Peary presented to the Coast and Geodetic Survey as "proof" that he had been at the pole a set of figures showing two claimed soundings by Eartlett, one by Peary himself, one by Macmillan, and five by Marvin, the samples of which were lost with Martin, as I later prove. As Mr. Peary also stated in his testimony that "some of the wire was lost by Mar-vin when reeling it in," it would seem that the samples on that occasion must also have been lost with the wire; however, a small inconsistency of this nature would trouble neither Mr. Peary nor Mr. Tittmann. The only samples of soundings furnished by Mr. Peary were taken a short distance from shore, in localities where soundings had already been made by other ex-plorers. (See Arctic Tides, 1911, by Rollin A. Harris, of the Coast and Geodetic Survey.) The only proof (?) of other soundings alleged to have been taken by the Peary expedition is a row of figures which could as easily have been made at Eagle Island, Me., as at Cape Columbia or the North Pole.

Mr. Tittmann also stated that, in addition to the record of soundings, Mr. Peary furnished as proof that he had been to the North Pole a set of tidal observations, taken mostly by Borno, Macmillan, and Marvin-before the expedition left Cape Sheridan.

Granted that these tidal observations were as accurate as the most delicate instruments and human exactness can make them, how is it possible for them to prove or disprove Mr. Peary's discovery of the North Pole? As none of the tidal observations were taken away from land, they prove nothing except that some members of the Peary party read their tide gauges at stated periods; but they have no connection whatever with the reaching of the pole.

However, Mr. Tittmann, superintendent of the Coast and Geodetic Survey, had more to say, i. e., he talked more.

The hearing continued:

Mr. Dawson. What official evidence is there of the fact you have just stated—that this party, consisting of Peary, Bartlett, and the others, reached that point—that is, within striking distance of the pole? Is there any official record?

Mr. Tittmann. I have no official evidence of that except, as I said, the line of soundings under Peary's signature, his official report that he made; that is strictly official.

Mr. Greego. Did you see the book of original entry in which he made the record of these soundings?

Mr. Tittmann. No; I did not.

Mr. Gregg. You know what I mean, I suppose; the book in which they were entered from time to time as he moved along—a sort of daybook?

Mr. Tittmann. I didn't see that.

Mr. Gregg. Mr. Tittmann, you saw something which he finished and sent in to your office?

Mr. Tittmann. Yes, sir; sent in to our office under his signature.

Mr. Gregg. Have you ever, in any capacity, seen the books of original entries that I have described?

Mr. Tittmann. No, sir; I have not.

In this connection I shall quote a letter written by Mr. Peary to the Coast and Geodetic Survey, which is of special interest. The photostat copy of this letter is in my possession:

EAGLE ISLAND, SOUTH HARPSWELL, ME., October 28, 1909.

Mr. F. W. PERKINS, Washington, D. C.

Mr. F. W. Perkins, Washington, D. C.

Dear Sir: Replying to your favor of October 21, I desire to express my sincere appreciation of your kind offer to furnish me the results of the discussion of the expedition's tidal records.

I shall be very glad to receive the same when ready.

In regard to the profile of soundings delivered to you by Mr. Nichols, and which you inform me the Hydrographic Office of the Navy Department desires, will say that these soundings were made on the meridian of Cape Columbia, and plotting on that meridian at the latitudes which I think are noted in the table on the profile sheet will give their position.

position.

There are quite a number of other soundings made on this expedition and the previous one along the north coast of Grant Land as far west as the eighty-second meridian (Cape Fanshawe Martin); also in Kennedy & Robeson Channels and Kane Basin; also off Cape Alexander and from Cape Morris Jesup, the northern extremity of Greenland, to

and from Cape Morris Jesup, the northern extremity of Greenland, to 84.15.

If the Hydrographic Office contemplates adding these soundings to chart No 2142, or thinks of issuing a new edition of that chart, it would seem desirable to have all of these soundings, as well as the work of the previous expedition, defining the shore line from Aldrich's farthest to Cape Thomas Hubbard, and the reconnaissance of the present expedition of Clements Markham Inlet, just west of Cape Hecla, added to the chart.

May I respectfully request that you take this matter up with the Hydrographic Office and, if the work indicated above seems desirable, see if some arrangement can be made for the compensation and expenses of Prof. Donald B. Macmillan, who is familiar with much of this work, so that he may come to Washington with the notes of the soundings and assist in plotting the work?

Prof. Macmillan is now engaged in getting the sounding samples in shape to send a set to your office for such examination as you may desire.

desire.

Unfortunately, the samples of soundings on the northern journey beyond the sounding of 110 fathoms were lost with Prof. Marvin. The others may yield interesting results under the microscope.

Very sincerely,

R. E. Peary, U. S. N.

A few points in this letter should be carefully noted before considering the "report of soundings and tidal observations" to which Mr. Peary refers, always remembering that this "report" is the only official proof ever furnished the Coast and Geodetic Survey by Mr. Peary that he had been to the North

Peary states that these soundings "were made on the meridian of Cape Columbia." This is wholly supposition, as Peary had no means of knowing on what meridian he traveled after he left Cape Columbia. He stated to the investigating committee that he traveled by dead reckoning and by compass; yet he took no observations for longitude nor for compass variations; neither did he have with him a chart showing the magnetic variations. Therefore, although he carried a compass, he did not know in what direction the needle of that compass pointed; hence, he could not know whether his route lay along the Columbia meridian or varied from it many miles. Therefore Peary's instructions to the Coast and Geodetic Survey to plot his soundings on the Columbia meridian at the latitudes given were valueless, and the position of the various soundings could not be obtained by such plotting and would furnish no evidence of his having traveled from Cape Columbia toward the pole.

Peary also states:

Unfortunately, the samples of soundings on the northern journey beyond the sounding of 110 fathoms were lost with Prof. Marvin. The others may yield interesting results under the microscope.

The sounding of 110 fathoms was taken at the edge of the continental shelf, 367 miles from the pole. Therefore, the only samples of deep-sea soundings obtained by the expedition were lost with Marvin. Hence, Mr. Peary brought back no evidence whatever, other than his unsupported word, that soundings were taken at any point nearer the pole than 367 miles.

As stated above, Mr. Tittmann testified to the congressional

committee that:

I have no official evidence except, as I said, the line of soundings under Peary's signature; his official report that he made; that is strictly official.

On June 12, 1915, Dr. E. Lester Jones, Mr. Tittmann's successor as Superintendent of the Coast and Geodetic Survey, wrote me a letter, which I quote: JUNE 12, 1915.

Hon. H. T. Helgesen, House of Representatives, Washington, D. C.

Peary to this bureau on his return from the north in 1909, and * * * that a photostat copy be made of Admiral Peary's only official report to us, I have complied with your request and am sending it herewith.

Respectfully, yours,

In this letter Superintendent Jones corroborates Mr. Tittmann's statement, made five years previously, that Peary's only official report to the Coast and Geodetic Survey, consists of his letter transmitting a "profile," or set of soundings, purporting to have been made at various points between Cape Columbia and the North Pole, but of which no evidence exists other than Peary's word and Peary's "notes" on those soundings, telling how they were made, and so forth.

Wonderful proof this; convincing beyond the shadow of a doubt. All Peary found necessary in order to prove that he had been to the North Pole was a copy of a few measurements of wire. The original entries of these measurements were never shown to anyone. Samples of the complete soundings were easily explained away; they were "lost with Marvin." Copies of his wire measurements were quite sufficient to satisfy the

demands of the investigating committee.

Neither did Peary have any evidence or proof to submit to the Navy Department, as witness a letter written by Secretary of the Navy Daniels to the Hon. LEMUEL PADGETT, chairman of the House Committee on Naval Affairs, under date of July 30,

MY DEAR MR. CHAIRMAN: In reference to your letter of recent date inclosing a copy of H. J. Res. 282, "Providing for action by Congress to determine the priority of discovery of the North Pole."

This department has never conducted any investigation or made any findings in regard to the discovery of the North Pole, and is therefore, should the joint resolution 282 be approved by the Congress, unable to submit a report of finding in reference to the matter under consideration.

Faithfully yours

Faithfully, yours,

JOSEPHUS DANIELS, Secretary of the Navy.

The only report furnished to the Navy Department is embodied in a letter written to Representative Ernest W. Roberts by G. v. L. Meyer, then Secretary of the Navy, under date of

THE SECRETARY OF THE NAVY,
Washington, February 21, 1910.

My Dear Congressman: In response to your request of February
23 for copies of any and all reports made by Civil Engineer Robert E.
Peary, United States Navy, I have the honor to inform you that the
only report in our files of this nature from Mr. Peary is the following
telegram from Battle Harbor, received September 11, 1909:

"Respectfully report my return. Hoisted Navy ensign on North
Pole April 6."

Faithfully, yours,
Peary had no proof

Peary had no proof or evidence of his claimed achievement to submit to the Coast and Geodetic Survey, under whose instructions he acted on his last Arctic expedition; he had no proof or evidence to submit to the Navy Department to which he was attached and which had granted him another of a long series of "leaves of absence with full pay"; what, then, did he have?

Let us return to the congressional hearing and Mr. Tittmann.

Referring to Mr. Tittmann's statement that-

When Mr. Peary returned from the Arctic he sent us the volumes of the tidal observations that he had made, and that was complying with his orders and instructions.

Mr. Roberts asked:

Mr. ROBERTS. Where are those tidal observation?
Mr. TITTMANN. They are in our office; there are 21 volumes of them.
Mr. ROBERTS. In what form are they?
Mr. TITTMANN. It is an octave volume.
Mr. ROBERTS Who did that actual work?
Mr. TITTMANN. It was done by Marvin and Macmillan, I think.

As Mr. Tittmann was a member of the subcommittee of the National Geographic Society which "examined" Mr. Peary's data and "reports," it is strange as well as significant that he did not "know" instead of "think" that these tidal observations were taken, without exception, by men who never claimed to have been within hundreds of miles of the pole, and therefore had nothing whatever to do with Peary's attainment of the pole or its nonattainment. In fact, Macmillan's letter, accompanying his report of the tidal observations, is dated. January 9, 1909, almost two months before Peary left the ship for the pole. A photostat copy of Macmillan's letter and of the covers to the 21 "volumes" of tidal observations are now in my possession.

Mr. Gregg. Who forwarded them (the tidal observations) to you, Peary or Macmillan?

Mr. Tittmann. Peary; we communicated with Peary, I think.

Mr. Tittmann's ideas, as an expert witness, were decidedly hazy; he did not know who actually made the report which, as he claimed, proved Peary's discovery of the pole, but "thought"

that they communicated with Peary. Mr. ROBERTS. These are the only soundings that you have been advised of?
Mr. TITTMANN, Yes; they are the only ones that he took.

These soundings—with the exception of one that Peary claimed to have made—were all taken by Marvin, Macmillan, My Dear Mr. Congressman: Further referring to your letter of June | claimed to have made—were all taken by Marvin, Macmillan, 11, in which you requested the original official report made by Robert E. and Bartlett, not one of whom was nearer. or claimed to have been nearer, the pole than 133 miles. The samples of the deep-sea soundings were all "lost" with Marvin; and yet these soundings "prove" that Peary reached the pole.

At this stage of the hearing, as has been shown, Tittmann plainly stated that Peary had submitted only tidal observations and soundings; later, however, Tittmann attempted to show that nautical observations were officially examined.

The CHAIRMAN. Professor [Tittmann], for myself I could not comprehend how anybody would be so untruthful as to say that he reached the North Pole if he did not, but at the same time I wish you would state in some way the observations that were made by Peary. You see I do not know how they were made; I know nothing at all of astronomy, but I would like it to appear in the record the sort of observation he made, the instruments with which he made it, and what it showed, so that any scientific man may know by looking at that observation how you reached your conclusion and how it enabled you to reach your conclusion.

When Mr. Tittmann was asked to make a definite statement, one which would be satisfactory to a really scientific man, he was immediately seized with a spasm of mad haste to get away and leave the responsibility of proving Mr. Peary's case in other

hands. Note his reply to the above question:

Mr. TITTMANN. I think Mr. Gannett could give you all of that, as you have him here. I am really due before the Appropriations Committee.

Mr. Gannett was the next one of Mr. Peary's friends to be interrogated. Let us analyze his statements:

STATEMENT OF MR. HENRY GANNETT.

The CHAIRMAN. Are you in the service of the Government? Mr. GANNETT. I am connected with the Geological Survey. The CHAIRMAN. Give us your official position. Mr. GANNETT. Well, I am called geographer.

The testimony of Mr. Gannett on that point is worthy of note. Fortunately, in the interests of veracity, he stated that he was "called" geographer. The following extract from a letter dated June 20, 1914, written by Director Smith, of the Geological Survey, to Congressman Lafferty, shows more definitely than Mr. Gannett's own statement his true official connection with the Government:

DEPARTMENT OF THE INTERIOR, UNITED STATES GEOLOGICAL SURVEY, Washington, June 20, 1914.

Hon. A. W. LAFFERTY, House of Representatives.

My Dear Mr. Laffery: I hasten to reply to your letter of June 19.
Although one of the older members of the survey, Mr. Gannett is not chief geographer, nor does he hold any administrative position in the survey. He was chief topographer between July 1, 1889, and July 1, 1896. Since that time his title, while employed in this office, has been geographer, but such employment has not been continuous.

Yours, very truly,

GEO. O. SMITH.

The above letter, taken in conjunction with Mr. Gannett's testimony, shows to what lengths of deception Peary's friends were willing to go in order to convince the investigating committee that the examination of Mr. Peary's records was made officially. As a matter of fact, not one of the men who at that time "examined" (?) Peary's data did so in his official position.

officially. As a matter of fact, not one of the men who at that time "examined" (?) Peary's data did so in his official position. The Chairman. Were you a member of the committee [of the National Geographic Society] that was selected to make an examination of the report of Commander Peary?

Mr. Gannett. I was chairman of that committee.
The Chairman. May I ask you who selected this committee?
Mr. Gannett. The board of management of the society called on—
The Chairman. Of what society?
Mr. Gannett. The National Geographic Society.
The Chairman. Are you a member of that society?
Mr. Gannett. Yes, sir; I am president of it now. The board of management practically made the selection of this committee.
The Chairman. Will you be kind enough to detail to us the methods which were employed by this committee in making an examination of the reports of Commander Peary of his expedition?
Mr. Gannett. You mean what actually took place at the actual meetings with him?
Mr. Roberts. Yes.
The Chairman. Tell us in the plainest language what you saw and learned of the discovery, the reports you saw, the conclusions you reached, and the reasons for your conclusions.
Mr. Gannett. Mr. Peary came from his home near Portland, Me., and brought his records in a gripsack and his instruments in a trunk. First he met the committee at the office of the Geographic Society, and we appointed a meeting at the house of Admiral Chester, who was a member of this committee. We simply sat down with him and read his journal from his original records; he had an original record made in a little book, a notebook, you know, at that time, and it had all the earmarks of being the original. He read the journal over two or three days before Bartlett left him; we all read it together; we included in the reading two or three days which Bartlett was with him, and from that time on to the pole and all of the way back to Cape Columbia. We also had his astronomical observations, and Admiral Chester recomputed them; I do not know whether Mr. Tittmann did or not, I

On page 5 of the hearing Mr. Tittmann says Peary's records which he had seen were "on loose slips of paper." exact words are:

He showed me the actual papers on which he did this-

They were on loose slips of paper.

At the same hearing, on the same day, Mr. Gannett said:

We simply sat down with him and read his journal from his original cords. He had an original record made in a little book, a notebook, records. I

So Mr. Tittmann, then Superintendent of the Coast and Geodetic Survey, and Henry Gannett, then president of the National Geographic Society, told different stories of the same occurrence at the same hearing on the same day to the same committee, one saying that Mr. Peary's records were on loose sheets, the other that these same records were in a book, and repeated his statement, saying, "a notebook, you know."

These are the same records which a little later Mr. Peary re-

fused to show to the congressional committee, waiting almost a year before he finally consented to allow the committee to see them, and when shown, these "original records" were on different paper than either Mr. Tittmann or Mr. Gannett had stated.

Mr. Englebright. You call attention to his latitude observations, but you do not mention how he kept his longitude.

Mr. Gannett. I saw no longitude observations, and my understanding is that he didn't make any. I do not see why he should. He kept his directions by the compass and the direction of the sun at noontime, and his purpose was to go north.

This is one of the most ridiculous statements ever made by a professed "scientist," and proves Mr. Gannett absolutely incompetent to discuss or examine nautical observations, with a view to verifying an explorer's route in the Arctic or over any "virgin" section of the earth's surface, for an Arctic traveler can not know the direction in which he is traveling unless he knows the direction in which his compass needle points, and to know this he must take repeated observations for compass variation. It is impossible, when the sun is above the horizon throughout the 24 hours, for him to know the correct time, no matter how many absolutely accurate chronometers he carries, unless he knows on which longitudinal meridian he travels, and this he can not know without frequent observations for longitude and for compass variation. Therefore if he does not know when it is noon he can not tell with any degree of correctness the direction in which his shadow falls at noon. Mr. Gannett himself said that-

A slight error in the time determination makes a large error in the longitude

Conversely, if traveling by compass only, a slight error in (estimated) longitude would make a large error in time, and the traveler's calculations would be absolutely unreliable.

Also Mr. Peary told the committee and stated in his book that he traveled on the Columbia meridian and carried Columbia (seventieth) meridian time, but, in "verifying" the observations made by Marvin and Bartlett, Peary's "expert computers" state that they "assumed" that Marvin and Bartlett carried correct sixticth meridian time. They also "assumed" that Peary's observations at his polar camp were made on sixtieth meridian time, and from these observations they calculated that Peary's polar camp was at longitude 137° west!

Therefore, according to the testimony of Mr. Peary and his expert computers, Peary traveled on the seventieth (Columbia) meridian and carried seventieth meridian time (see pp. 21-25 of the hearing), although Marvin and Bartlett, who traveled with him, carried sixtieth meridian time, and made their observations on that basis (see p. 136 of hearing); and while reary claimed to have traveled on the seventieth meridian and carried seventieth meridian time, his "expert computers" found that his polar camp, "Camp Jesup," was at longitude 137° west. We need no "experts" to prove that "there is something rotten in Denmark"—and in Mr. Peary's story. And yet Mr. Gannett did "not see why Peary needed to make any longitude observations,"

Discussing Peary's instruments, the committee continued:

Mr. Roberts. How were they (the observations) taken?
Mr. Gannett. Taken with a sextant and an artificial horizon.
Mr. Roberts. The instrument was a sextant similar to that used on shipboard?

Mr. GANNETT. Yes, sir; precisely.

PEARY RECORDS REFUSED.

Mr. Butler. The committee asked Prof. Gannett to state the results of his examination of the records made by Peary and to give his reasons for his belief in the accuracy of the reports made by Commander Peary.

Mr. Gannett. Well, as I understand the question, you wish to have the journal and the observations made by Mr. Peary brought forth in this committee?

The Chairman. No.

Mr. Macon. I want that brought in. This Congress belongs to the country, and whatever we do as its representatives ought to be done in the open and not in secret. If we are doing anything to be kept dark, I propose to make it public myself. So far as I am concerned, we are not going to deal with secrets in anything. We are charged here as representatives of the people.

Mr. Bates. Do you care to state why that record should be kept from the public?

Mr. Gannett. I do not know that I should like to. I would rather Peary would state his reasons himself.

Mr. Roberts. Now, let me ask a question. Do I understand the papers or records in issue now are copies of Mr. Peary's original journal?

Mr. Gannett. Yes, sir.

Mr. Roberts. Do I understand that Mr. Peary objects to his observations as to latitude and the position of the sun, objects to that being made public, or is it simply the journal of his trip that he objects to, or both?

Mr. Gannett. Both.

Mr. Roberts. Did Peary have his artificial horizon when he exhibited it to your committee?

Mr. Roberts. Did Peary have his artificial horizon when he exhibited to your committee?
Mr. Gannett. Yes, sir.
Mr. Roberts. And it seemed to be a proper one?
Mr. Gannett. Oh, yes,
Mr. Roberts. And adequate for the purpose?
Mr. Roberts. And adequate for the purpose?
Mr. Gannett. There was a slight modification made in it.
(But Mr. Gannett did not state what that "slight modification"

Was.)
Mr. Roberts, Was anyone other than Mr. Nichols and Mr. Peary before your committee giving information on this?
Mr. Gannett. No.
Mr. Roberts. In other words, your committee did not call any of the other members of the party to verify any of the statements made by

Peary? Mr. GANNETT. No.

Thus Mr. Gannett showed that the "proof" all rested on Peary's unsupported word.

To further show the farcical nature of the National Geographic Society's "investigations," see page 17 of the hearing:

graphic Society's "investigations," see page 17 of the hearing:

Mr. Roberts. Have you any familiarity with soundings and the
methods used in making soundings?

Mr. Gannett. Well, not particularly with deep-sea soundings. Peary
described his method of making soundings on this journey.

Mr. Roberts. That is what I wanted to ask you about. He says
when the sounding at 85° 33' was made, 700 fathoms only were left
of the sounding wire of the main party. In hauling up the wire from
this sounding it parted again, and some 200 fathoms, together with
two pickax heads and a steel sledge shoe, which had been used to
carry it down, were lost. What I am getting at is this: If it took
two pickax heads and a steel sledge shoe to get down 700 fathoms,
how much weight did it take to get down 1.500 fathoms, and where
did he get that extra weight to carry it down 1.500 fathoms, when he
made the sounding himself within 5 miles of the pole?

Mr. Gannett. No effort was made by your committee to interrogate
Henson to verify in any way any of the statements made by Peary?

Mr. Gannett. No.

Mr. Roberts. Or the time it took him to make his different journeys,
the number of miles per day?

Mr. Gannett. No.

The foregoing is a plain, straightforward admission that the

The foregoing is a plain, straightforward admission that the "investigating committee" of the National Geographic Society made not the slightest attempt to verify Peary's story in any manner, but accepted whatever he told them as "evidence."

Mr. ROBERTS. Did he tell your committee what his equipment was

Mr. Roberts. Did he tell your committee what his equipment was on that dash?

Mr. Gannett. Well, he had two sledges. (On page 82 of the hearings Peary said he had five sledges.)

Mr. Roberts. How many dogs?

Mr. Gannett. I think 36 dogs; it seems to me 36 or 32. (On page 48 of the hearings Peary said 38 dogs.)

Mr. Roberts. How many Esquimaux?

Mr. Gannett. Two Esquimaux. (On page 24 of the hearings Peary said four Esquimaux.)

The Chairman. The verdict of this committee, of which you were a member, has been accepted by the scientific societies in many different places in the world?

Mr. Gannett. Yes, sir

The Chairman. The records of Peary were not submitted to any of these societies? They simply accepted the judgment of the National Geographic Society?

Mr. Gannett. That is the case.

Mr. Roberts. I want to put into the record a communication I have received from the Secretary of Commerce and Labor in answer to a request for copies of Mr. Peary's reports to the Coast and Geodetic Survey. They relate to the soundings.

Department of Commerce and Labor,

DEPARTMENT OF COMMERCE AND LABOR,
OFFICE OF THE SECRETARY,
Washington, March 1, 1910.

Hon. ERNEST W. ROBERTS, M. C., House of Representatives.

Sir: In reply to your letter of February 25, requesting the report by Civil Engineer R. E. Peary, United States Navy, I beg leave to transmit herewith copies of, first, a letter transmitting tidal records; second, a letter transmitting the profile of soundings, referred to in the letter transmitting the tidal records, the explanatory statement transmitted with the soundings, and a photographic copy of the profile and of the table of geographic positions, all of which are duly attested.

Respectfully,

Charles Nagel, Secretary.

EAGLE ISLAND, SOUTH HARPSWELL, ME., October 18, 1909.

Acting Superintendent F. W. PERKINS, United States Coast and Geodetic Survey, Washington, D. C.

United States Coast and Geodetic Survey, Washington, D. C.

Sin: Referring to my telegram, I am sending you by express the tidal records of the Peary Arctic Club's recent north polar expedition. Owing to the unfortunate death of Prof. Ross G. Marvin, some of the chronometer comparisons, particularly of the Cape Bryant observations, are missing.

These comparisons are undoubtedly among Prof. Marvin's private papers; and if so, will be obtained from his relatives later.

Prof. Donald B. Macmillan took many of the observations and is familiar with them all, and can come to Washington to see you any time you may consider it advisable.

I am writing him now to communicate with you at once and to keep you posted as to his address.

I am also sending you profile of soundings from Cape Columbia to within 5 miles of the pole.

If such request is permissible, I will respectfully request that this profile and complete set of soundings be not published at present.

With best regards, I am, very respectfully.

R. E. Pearr, U. S. N.

The above letter is an exact copy of a photostat reproduction furnished me by the Coast and Geodetic Survey.

In this letter-second paragraph-Peary states that-

Owing to the unfortunate death of Prof. Ross G. Marvin, some of the chronometer comparisons are missing,

But he fails to state here that not only the chronometer comparisons but the chronometers themselves were lost with Marvin. For this we have Peary's own word, embodied in a letter written to the Waltham Watch Co., under date of November 20, 1909, and published in Hampton's Magazine for January, 1910:

NEW YORK, November 20, 1909.

WALTHAM WATCH Co.,

Waltham, Mass.

GENTLEMEN: Waltham watches were used during my expedition in connection with the simultaneous tide observations at Cape Sheridan, Cape Columbia, and Cape Bryant, where accurate time was the essential feature. They were also taken on sledge expeditions north over the

thal feature. They were also taken of the constraint of the comparisons by the parties up to the point where Marvin returned in command of the third supporting party.

As further tide observations were contemplated between Cape Sherdan and Cape Morris Jesup, Marvin took with him the five Waltham watches (chronometers) in the party for this purpose, the object being that comparison of the five different watches (chronometers) might give us absolute certainty of correctness of our time.

Very truly, yours,

R. E. Pearx.

Peary states, on page 321 of his book, The North Pole, that everything Marvin had with him on his return trip except "a few of his notes" was lost with him. Therefore it necessarily follows that these chronometers were also lost. What did Peary use for the purpose of time comparisons after Marvin left him?

Furthermore, as a matter of "proof" that Peary reached the pole neither Marvin's nor Bartlett's nor McMillan's records have any bearing whatever, as all of these men turnel back long before the pole was in sight; even Bartlett, who was sup-posed to attain the highest northing of any of the supporting parties, only claimed to reach 87° 47′. Therefore none of them could have any personal knowledge of Peary's movements after they left him.

At this point in the proceedings the hearing adjourned until Monday, March 7, 1910, when, owing to Peary's request that his data be not made public, no further hearings were held until 10 months later. The proceedings of Monday, March 7, 1910, were as follows:

were as follows:

The subcommittee was called to order at 4 p. m., Hon. Thomas S. Butler (chairman) presiding.

The members present were: Messis. Butler, Roberts, Bates, Dawson, Englebright, Macon.

Congressman De Alva Alexander, of New York, presented the following statement to the committee:

"Commander Peary and his friends say that contracts signed months ago with his publishers render it impossible to make his records and scientific data public now. It would not only subject Peary to heavy damages—a loss which he can not meet, having just extricated himself from debt incurred in connection with his various expeditions—but it would be breaking faith with his publishers, which he is unwilling to do under any circumstances."

Noturelly from Mr. Peary's point of view his contract with

Naturally, from Mr. Peary's point of view, his contract with his publishers, and his private pocketbook, were of far greater importance than the United States Government, whose servant he was; therefore the business of the Government could await his pleasure and that of his publishers. In the meantime there was a gambling chance that the first excitement of the affair would die out and the "investigation" become even more desultory and perfunctory than if it was allowed to continue at this

Also, Peary had already drawn \$50,000 from the Government; his regular salary was continuing without intermission; if he was granted "retired pay" that retired pay would begin from the time he claimed to have reached the pole; therefore all the regular salary he could manage to draw before his retired pay was granted was in the nature of a bonus. After a year's postponement of the case it would be easier to persuade Congress to allow it to slip through and would also give Peary a year in which to prepare some "original" records. Otherwise why were only copies of "original records" offered in the first

PEARY'S OWN TESTIMONY.

On Saturday, January 7, 1911, almost a year after the discontinuance of the hearings because of Penry's reluctance to make his records public, Subcommittee No. 8 of the House Committee on Naval Affairs met to continue the hearings and listen to Peary's own testimony.

Hon. THOMAS S. BUTLER (chairman) presided at the hearing.

Mr. Butler. Capt. Peary, there are two or three bills awaiting the action of the committee on which congressional action is necessary. You know what the bills are. Yesterday the subcommittee suggested that you should be invited to come here at 10 o'clock this morning and tell us anything you see fit bearing upon your trip to the North Pole. If agreeable to you, begin your narrative where Bartlett left you, and tell us what you can which will help us to understand that you actually did reach the pole.

Capt. Peary. I can say in a general way, Mr. Chairman, that at the point where Bartlett left us his observation indicated it was 87° 47′ north latitude.

Capt. Peart. I can say in a general way, art. chairman, that are point where Bartlett left us his observation indicated it was 87° 47′ north latitude.

Mr. Butler. Who made the observation at that point, Bartlett? Capt. Peart. Yes, sir.

Mr. Butler. And Bartlett made the report?

Capt. Peart. He made the observation at that point. Bartlett started back immediately after noon of the 1st of April, after taking his observation and giving me a copy and retaining a copy.

I started at 4 or 5 o'clock the next morning. I made five marches, the estimated distance of the first one being 25 miles, of the second one 20 miles, of the next two 25 miles each, and of the last 30 miles.

In Peart's book. "The North Pole," he says he started "a

In Peary's book, "The North Pole," he says he started "a little after midnight on the morning of April 2," after Bartlett left him; but he told the committee "about 4 or 5 o'clock."

Also, Peary's original report, as published in the New York Times, gave his distances for the five marches as: First, 25 miles; second, 20 miles; third, 20 miles; fourth, 25 miles; fifth, 40 miles.

Mr. Roberts. You are speaking of geographical miles?
Capt. Peary. I am speaking of geographical miles. All miles that I speak of now will be geographical.
Mr. Butler. The last march reached what point?
Capt. Peary. My estimate put me within 3 or 4 miles of the pole. I reached there, as I had hoped to do, before noon of a given day, so that I could take a preliminary observation immediately after my arrival that would indicate my position near enough so that I could decide what to do the next day, whether I would go on with my party or whether I would take a light sledge and one or two men and make a spurt for it, as Shackleton did, and as is customary in such work.
The observation which I made at that time (noon of April 6) was not an entirely satisfactory one, as clouds were drifting over the sky; but it indicated our position as 89° 57', which is about 3 miles from the pole.

Marvelous accuracy! Peary took no observations of any kind—except what he calls a "latitude sight"—from the time Bartlett is supposed to have left him, 133 miles from the pole, until he reached his "polar camp," at which point he says:
"My estimate put me within 3 or 4 miles of the pole," and his

observation taken at that point showed him to be at 89° 57', which is about 3 miles from the pole! Can you beat it?

which is about 3 miles from the pole! Can you beat it?

Capt. Peary. My intention was, when I had reached the point that I indged to be at or near the pole, to take observations at six-hour intervals. I had intended to take an observation at my Columbia 6 p. m. time, approximately, but it was cloudy at that time. I was unable to take any observation within six hours from my previous observation. Starting with two of my Eskimos and the light sledge and my instrument I went what I judged to be 10 miles farther on in the same direction, and took another series of observations at midnight of the time I was carrying, which I call Columbia meridian time. Those observations indicated that I was on the other side of the pole.

Mr. Enclerright. Please indicate the point on the map where the magnetic North Pole is.

Capt. Peary. Way down here [indicating on map] in King William.

Mr. Buyler. The needle tends to point toward the magnetic pole?

Capt. Peary. It does point near it.

Mr. Buyler. Was there anything in the action of your needle that would assist in determining whether or not you had been to the pole?

Capt. Peary. It does point near it.

Mr. Buyler. Was there anything in the action of the needle?

Capt. Peary. It does for as you used a compass.

Mr. Buyler. I understand; but in the pointing of the needle?

Capt. Peary. It would assist you with the magnetic pole. That is the distinction. One is a geographical pole, a mathematical point, and the other is a magnetic pole, which is the point where the magnetic attraction is.

Peary's testimony at this point was damaging to his case.

Peary's testimony at this point was damaging to his case, for he claimed that the compass needle tends to point toward the magnetic pole instead of toward the North Pole. As a mat-

ter of fact, it does not point directly toward either one; yet Mr. Peary traveled by compass and "estimate" only.

But what follows is more damaging still:

But what follows is more damaging still:

Mr. Englebright, In using a compass in the northern regions you use it with a calculated variation?

Capt. Peary. You use it, checking it by observations wherever you can. To give you an idea of what the variations are, here at Roosevelt indicating) the variation is approximately 95° west. In other words, the north end of the needle points a little south of true west, and as you go west that increases.

Mr. Englebright is not that all charted by the Coast Survey and by the maritime nations of the world?

Capt. Peary. They have the lines of certain variations, but, of course, the greater the number of observations, the more accurate the data.

Mr. Englebright Did you have such a chart with you?

Capt. Peary. No, sir; I did not have such a chart.

Mr. Dawson. Did you make any observations which would tend to throw any additional light on the variation of the needle?

Capt. Peary. I did not on this last expedition. I should say that on this trip that I had what I called a double team of dogs, 12, and a light sledge.

Observe that Peary stated that the compass is used "check-

Observe that Peary stated that the compass is used "checking it by observations wherever possible"—but he took no observations for compass variation; that, although the charts of the various nations show the lines of certain variations, "the greater the number of observations, the more accurate the

data"-yet he neither made those observations which would increase the accuracy of his data, nor did he have such a chart with him. It may also be noted that Peary suddenly found it very convenient to change the subject abruptly from compass variations to the number of dogs in his team.

The instructions to navigators, published by the United States Navy Department, by direction of the Secretary of the Navy

(see Bowditch's Practical Navigator, p. 36), read:

The variation (of the compass) not only changes as one travels from place to place on the earth, being different in different localities, but in every locality besides the minor periodic movements of the needle known as the diurnal, monthly, and annual variations, there is a progressive change which amounts to large alterations in the pointing of the compass. In taking account of the effect produced by the variation of the compass, the navigator must therefore be sure that the variation used is correct not only for the place but also for the time under consideration.

Sir Douglas Mawson, who recently conducted one of the most remarkable Antarctic expeditions ever made, says in writing of his experiences:

Proximity to the magnetic pole made the compass useless.

I am in receipt of a letter from a member of the Point Barrow international polar expedition, dated January 27, 1916, from which I shall quote:

which I shall quote:

During my two years in the Arctic regions, at Point Barrow and vicinity, I met and conversed with many Arctic whaling captains, all of whom said that in navigating the Arctic seas the compass can not be relied upon, unless checked daily for variations. At Point Barrow the magnetic needle points about 23° east of the geographic North Pole, or true north, which, however, varies hour by hour and day by day. The variations at times were very considerable. One day in particular the needle swung from 23° east of true north to 23° west of true north, a variation in 24 hours of 46°. No Arctic whaling captain, if he wished to reach a point due north 400 miles distant from land, would be so foolish as to steam by compass only, unless he knew the daily variation of his compass; for if he ever would reach the desired goal, he would zigzag so much that the distance his log would record would be perhaps two or three times 400 miles. He surely would be wise enough to take frequent observations for latitude, longitude, and compass variations.

Middleton Smith,

Member of the Point Barrow International Polar Expedition.

In addition to statements from other practical men to the same effect as the one I have just quoted, I am also in receipt of a letter from the Superintendent of the United States Naval Observatory, which I shall read:

WASHINGTON, D. C., January 19, 1916.

Hon, H. T. HELGESEN.

Hon. H. T. Helgesen.

Dear Sir: Replying to your letter of the 14th instant, inquiring about magnetic variations, variation changes with change of position of the observer in either latitude or longitude.

Neither the north nor the south magnetic poles are coincident with the geometric poles of the earth. (There are presumably two magnetic South Poles.)

Observations in numerous parts of the world have established the values of the variation, and these have been plotted in curves. They appear, with other data, on the Pilot Chart issued by the Hydrographic Office, Navy Department, which office has been requested to mail you a copy, and two old ones are inclosed herewith.

The curves of variation on the Pilot Chart are not extended into extreme polar regions, for the reason that there have been no observations sufficient to permit a definite charting of the lines.

In the specific case mentioned by you, sailing north from Cape Columbia, Grant Land, it is not possible to give the figures, there being no data available. Your question can be answered only by the general statement that the traveler from Cape Columbia to the North Pole might expect to find large changes in variation.

Very respectfully,

J. S. Hoogewarf,

Very respectfully,

J. S. Hoogewerf, Captain, United States Navy, Superintendent.

Competent mariners, explorers, and scientists agree that in traveling over an unknown region, with no visible landmarks, it is a physical impossibility to travel over 400 miles, as Mr. Peary claims to have done, from the last point of land to the North Pole by compass without, as he stated to the committee, taking any observations whatever for compass variation.

This statement of Peary's alone proves indisputably that he never reached the North Pole.

Peary continued (p. 26 of hearing):

Returning then to my camp I made an observation at 6 o'clock the next morning, which would of necessity be at right angles to the observation I had made at midnight, and that indicated that the pole was between me and the sun. I then took another team of 12 dogs and went in that direction an estimated distance of about 8 miles. I then returned to my same camp and at noon of the 7th took a series of observations, taking them for the Columbia meridian.

It would be interesting if Mr. Peary had told the committee how he knew which was the Columbia meridian, as he took no observations for compass variation, traveled by compass only for "estimated" distances, and—after Marvin's return—had no way even to check his chronometer.

Capt. Pears. At about 4 o'clock of that afternoon I decided to start back. On the way back we stopped about 5 miles south of the pole, to make a sounding at a place where there had been a movement of the heavy ice and where the new ice which had frozen over was thin enough. We reached our last upward igloo and slept there.

Mr. Dawson. You could follow the line coming back?

Capt. Peary. We had a trail and the igloos to occupy when we got to camp at night.

Mr. Butler. What surprised me was this, that there were not frequent snows that would cover the trail.

Capt. Peary. There was very little snow on this trip.

Mr. Butler. You could not have found the igloos if it had not been for the trail on the return?

Capt. Peary. No.

Mr. Butler. You came back on the same trail?

Capt. Peary. Yes, sir; practically all the way, within 45 miles of Cape Columbia, and then I had Bartlett's trail.

Mr. Roberts. Before you leave this matter of the trail, how could you distinguish it coming back?

Capt. Peary. By the passage of the sledges and the dogs over it.

Mr. Roberts. The tootprints of the dogs are left on the packed ice?

Capt. Peary. The footprints will show on the snow, and the cutting of the steel sledge shoes will show in the snow. We also made a point, both on my previous expedition and this last one, of taking the pemmican cans which had been emptied along on a sledge and dropping the cans at certain intervals on the trail. For this purpose those for the dogs were painted red and those for the men blue. The marks of the sledge shoes, the marks of the dogs' feet, in places the discoloration of the ice and snow, the droppings of the dogs, and our pemmican tins made a trail that could be followed.

Mr. Butler. Did not the cans blow?

Capt. Peary. Yes, sir; some of them.

Mr. Butler. From Columbia to the North Pole you traveled 413 miles?

Capt. Peary. Yes, sir.

Mr. Bates. The other returning parties found no trouble in coming

miles?

Capt. Pearr. Yes, sir.

Mr. Bates. The other returning parties found no trouble in coming back by this trail?

Capt. Pearr. It took them some time in one or two places, where there had been movements of the ice, to pick up the trail on the other side. Battlett, when he got back within 45 miles of land, lost the main trail and went into the land on his own hook, and I followed his trail when I came back.

Mr. Bates. Within 45 miles of land?

Capt. Pearr. Yes, sir.

Whis statement of Poenwis is one to consider genefully. He

This statement of Peary's is one to consider carefully. He says that they traveled back to land from the pole over the trail made on their upward march, which trail was kept open by the returning supporting parties. But Mr. Peary forgets to mention a fact which has been authoritatively established, that is, that a constant, albeit slow, drift is continually moving the ice pack which forms the surface of the polar sea. The general "set" of the waters through the Arctic Archipelago has been determined to be easterly. Peary himself claims to have noted the easterly drift north of Grant Land and Greenland. This drift takes place irrespective of the direction of the wind, though it has been found that the direction toward which the wind blows is often—not always—in general accord with that taken by the drifting ice. Taking into account heavy winds, which may temporarily affect the easterly drift, this movement of the ice in the polar regions north of Grant Land and Greenland is conservatively estimated at from 3 to 4 miles per day. Peary's expedition left land on March 1. He states in his book that the first supporting party reached the ship March 21. As the ship was about five easy marches distant from Cape Columbia (their first point of land), 16 days is a fair estimate to allow for the absence of this first supporting party from land. In that time their trail made on the upward journey would have "faulted" to the east about 50 miles.

Bartlett reached Cape Columbia on April 18, 49 days from the time he left land. In that time his original trail would have "faulted" 147 miles at the starting point. It is not to be won-dered that Capt. Bartlett "went into land on his own hook"! A period of 9 days elapsed from the time Bartlett turned back until Peary reached "Camp Bartlett" on his return trip. In that time the igloo at "Camp Bartlett" would have been anywhere from 27 to 36 miles east of the geographical position it occupied when first built. Suppose, for the sake of argument, that it was possible for the whole body of ice to have drifted at exactly the same rate, so that the upward trail remained unbroken, and that Peary followed this unbroken trail on his return journey, he would have then found himself at least 160 miles to the east of Cape Columbia. But, we may argue, the land masses along the coast would prevent the ice from drifting at this rate. Very well, consider only, then, the period from the time Peary left the "Big Lead," 45 miles north of Cape Columbia. Peary left this point on the upward journey March 11 and reached it on the return trip April 20, a period of 40 days. In that time, at the lowest estimate, the drift would have amounted to 120 miles, and Peary would therefore have found himself 120 miles to the east of the point where his crossing was made and at least 165 miles (instead of 45 miles) from Cape Columbia.

This is another reason why I know Peary did not go to the North Pole.

An effort was made by the committee to ascertain if any members of the party other than Peary kept a record of the

Mr. Dawson. Have you brought with you your original notes which you took during your movements in proximity to the pole?

Capt. Pearx. I have them; yes, sir.

Mr. Dawson. Have you any chart that you made at that time showing these movements about the point where the pole is supposed to be? Capt. Peary. I made no chart; no, sir.

Mr. Robers. I would like to ask if the supporting parties kept records of their return trips?

Capt. Peary. They kept records; yes, sir.

Mr. Robers. And turned them over to you?

Capt. Peary. I have Bartlett's report. I think I have Macmillan's and Borup's reports, but I will not be sure. I can give you the time of each supporting party, if you care for it, on the return without going into details.

Mr. Robers. How did you get that information?

Capt. Peary. After my return I had Bartlett make me a report of his own trip, and I recall that I have a brief report from Borup and one from Macmillan.

Mr. Robers. What I was inquiring about particularly was whether each supporting party had kept a diary or record or journal?

Capt. Peary. I have a report from Bartlett, and I think I have Macmillan's report.

When first asked about the reports Peary stated that he had

When first asked about the reports Peary stated that he had Bartlett's report, but was "not sure" about Borup's and Macmillan's. The next moment he "recalled" that he had a brief report from both Borup and Macmillan, and immediately afterwards only "thought" that he had Macmillan's. On this as on other subjects, Peary's ideas were decidedly hazy.

Mr. Roberts. But those reports were made up after they returned to the ship?

Capt. Peary. They were given to me then. They probably had rough notes.

Mr. Roberts. Do you know whether or not they were made from day to day as they moved along the backward journey?

Capt. Peary. I assume that they made entries in the journal and that they gave me a transcript of their journal or report. I feel quite sure they did that.

Mr. Englebright. Have you the report here from Mr. Bartlett?

Capt. Peary. I have not the report. I have Bartlett's memorandum given to me.

Mr. Roberts. Is this the original?

Capt. Peary. Here [exhibiting] is a certificate given me by Bartlett at that time:

Arctic Ocean, April 1, 1909.

ARCTIC OCEAN, April 1, 1909.

Have to-day personally determined our latitude to be by sextant observation 87° 46' 49" north. I return from here in command of the fourth supporting party. I leave Commander Peary with 5 men, 5 sledges, with full loads, and 40 picked dogs. Men and dogs are in good condition. The going fair. The weather good. At the same average as our last eight marches, Commander Peary should reach the pole in eight days.

ROBERT A. BARTLETT, Master Steamer "Roosevelt."

Capt. "Bob" Bartlett is an able seaman, a descendant of a long line of "they who go down to the sea in ships," courageous, strong, and faithful; but these fine qualities do not necessarily presuppose that he is a so-called "navigator." Harper's Magazine for October, 1915, contains the first installment of Donald B. Macmillan's own story, "In Search of a New Land" (Crocker Land), in which Prof. Macmillan says:

The captain of our vessel absolutely refused to enter ice that Bob Bartlett would have thoroughly enjoyed bucking. It is a strange anomaly that insurance companies will refuse to accept a man trained in arctic work and experienced in ice navigation on the ground that he has no "ticket," but will accept a warm-water man who happens to know something about practical astronomy.

This statement of Prof. Macmillan accounts for the fact that Bartlett's determination of the latitude was "by sextant ob-servation" only, with no supplementary observations for longitude and for compass variation. Peary had been north so many times in a period covering twenty-odd years that the route from New York to Lincoln Bay was as familiar to him as the street from the new Union Station to the Army and Navy Club in Washington. Capt. Bartlett was mate of Peary's ship, the Windward, in 1898-99, and took the Roosevelt north in 1905-6 and again in 1908-9 on this last expedition of Peary's. Familiar with Arctic waters, he could successfully negotiate the ship through the ice-but-in a matter of observations to determine a correct position on the wastes of the polar sea some-thing more than "able seamanship" is required. As well might a chauffeur, perfectly competent to run a high-powered automobile through the streets of New York at the hour of busiest traffic, assert that he could locate his position to a certainty If placed amid the shifting sands of the Mojave Desert. Bartlett's "determination" of latitude was valueless to show the actual position of the party.

But his "certificate" is open to criticism on other phases:

Mr. Roberts (after examining paper). Are these figures in your handwriting?
Capt. PEARY. In Bartlett's handwriting.
Mr. Butler. This was written away up at the point where Bartlett

left you?

Note Peary's evasive reply:

Capt. Pearr. That is just as he wrote it in one of his notelooks, and he tore it out and gave it to me. He kept a copy.

Mr. BUTLER. He gave it to you at that time?

Capt. Pearr. Yes, sir.

Mr. BUTLER. He left you within 133 miles of the pole?

Capt. Pearr. Yes, sir.

Mr. MACON. If he had reached 87° 47'?

Capt. Peary. These are the figures just as Bartlett put them down on a page of the notebook.

Mr. Roberts. When were those figures [indicating] inserted?
Capt. Peary. Immediately after the observation.

Mr. Roberts. Why did he (Bartlett) use two pencils on that record?
Capt. Peary. That I can not say.

Mr. Roberts. I should judge that evidently that was a different pencil [indicating]; that looks like an indelible pencil, and this looks lindicating] like an ordinary lead pencil. Do you know whether or not Bartlett signed that [indicating] after making his observation, after putting down the figures?
Capt. Peary. Yes, sir; 1 think he did.

Mr. Roberts. It looks like a different pencil entirely.
Capt. Peary. Yes, sir; 1 that was signed at the time, and, of course, it was done after the observation was made.

Mr. Roberts. It seems rather strange that he had such an assortment of pencils there—three pencils. Those entries were all contemporaneous—made the same day?
Capt. Peary. Yes, sir.

A few interesting questions which the committee might have asked Peary in regard to Bartlett's certificate, and which up to the present time have never been satisfactorily answered, are the following:

First. If Bartlett's certificate was all written at the same time, why did he leave such a wide space between the fourth and sixth lines, much wider than between any other two lines of the

Second. Why is the fifth line-written in this wide space on a slant altogether different from the rest of the certificate?

Third. Why does the word "eight" on the first line of the second page of the certificate (see The North Pole, pp. 360-361) appear to have been written after the balance of the certificate, the space occupied by it being unnecessarily wide and the word on a different slant from the other words on that

Fourth. Why does this word appear to be in a different hand-writing from the balance of the certificate? The word "eight" in the fourth line of this page is written in a different style than the word "eight" in the first line. Why?

Fifth. The foregoing remarks refer only to the "certificate" which Bartlett is supposed to have given Peary when he turned south from his "farthest north." A more serious feature of Bartlett's observation is found on page 359 of Peary's book The North Pole, where a photographic reproduction of Bartlett's figures is given. It is necessary to refer to these figures to appreciate the force of the following criticism:

Count down the page to the ninth row of figures. Note that the divisor 2 is used to divide the numerals 13, 24, 34. This division of this row of figures by 2 is proof positive that no able navigator, no master mariner, no person competent to work out nautical observations ever computed the "observation" on page 359. The divisor 2 should have been used to divide the third row of figures from the top of the page; that is, 13, 13, 00. How does either Peary or Bartlett explain this error?

Apparently the insurance companies know a master mariner when they see one. Or did Capt. Bartlett sign a paper prepared for him by another person? For surely the signature on page 359 was not written at the same time that the balance of the writing on this page was done. This is shown by the fact that it did not develop the same "color" in the photographic repro-

Thus Peary's only "scientific" corroborative evidence that he reached 87° 46' 49" north latitude, such evidence furnished by the only white member of his party who accompanied him beyond 86° 38' north latitude, is absolutely valueless, because it is positively in error.

Peary's own observations were also the subject of interest and

inquiry:

Mr. Dawson. Have you any objection to allowing the committee to see the original notes you made during this last journey and during the observations in the immediate vicinity of the pole?

Capt. Peary. I have not.

Mr. Gregg. Did you keep them in a book or on slips of paper?

Capt. Peary. In a book.

It will be remembered that almost a year prior to this time Mr. Tittmann told the committee that-

Capt. Peary showed me the actual observations—the astronomical observations that he made when he was at the pole. He showed me the actual papers on which he did this; made at the time, on losse slips of

A few hours after Mr. Tittmann made the above statement, Mr. Gannett told the committee:

We simply sat down with him (Peary) and read his journal from his original records: he had an original record made in a little book, a matebook, you know, at that time, and it had all the earmarks of being the original.

Now, comes Peary with the story that he kept his records in a book, but that-

My own observations, made in separate books, were taken out on my return to the ship, and I did them up in a little waterproof package.

WHAT DID PEARY SHOW TO TITTMANN AND GANNETT? Mr. Tittmann saw "original" loose sheets of paper; Mr. Gannett read an "original" notebook; Peary says he made the entries in a notebook, and took them out on his return to the ship—which might account for Tittmann's "original loose slips"—but how about Gannett's "original notebook"? The Peary witnesses should have compared notes with Peary and with each other before they attempted to testify.

with each other before they attempted to testify.

Capt. Pranx. My own observations, made in separate books, were taken out when I compacted all of my papers on my return to the ship, and I did them up in a little waterproof package which I had sewed to my undershirt.

Mr. BUTLER. I will ask you this question: Was it absolutely necessary for you to have been at the North Pole in order to make these observations?

Capt. Prank. That is a question on which there has been some discussion. I can answer it by saying that observations have never been made yet that were not made at the place.

Mr. BUTLER. You must have been at the place to have made certain observations, and if you were there, you were there, but could you have made the figures without having been at the pole, and if you had made the figures without having been there, is there anyway to detect your effort?

the figures without having been there, is there anyway to detect your effort?

Capt. Peary. There is a difference of opinion in regard to that. You will find that some experts will say that observations can be arranged, and others will say that they can not.

Mr. Roberts. Mr. Gannett and Mr. Tittmann told us that it is possible for a person who has sufficient knowledge to sit down in a department here in Washington and make figures and claim to have been at a point where the so-called observation was made. In other words, that the figures themselves would not carry any proof on their face.

Capt. Peary. That is the opinion of an expert.

Mr. Dawson. I have a curiosity to see the journal that you kept from day to day during your presence in the vicinity of the pole. Did you make entries in this journal every day?

Capt. Peary. Not every day. Sometimes we were so busy that I did not make entries. I did not make an entry on the day that Bartlett was adrift on the ice floe on the outward journey.

Mr. Roberts. When did you begin the journal of your last trip?

Capt. Peary. That book was started on the 22d of February.

Mr. Roberts. Did you keep any personal journal up to that point?

Capt. Peary. I kept a personal journal in a book like that [indicating], and I think members of the party did.

Mr. Roberts. And that particular book commeuced when?

Capt. Peary. The day we left the Roosevelt, and I have some similar books both before and after that.

Mr. Roberts. That contains all the entries made on your way to the pole and back?

Capt. Peary. Yes, sir.

Mr. ROBERTS. That contains at the pole and back?

Capt. PEARY. Yes, str.

Mr. ROBERTS. Does that contain a daily record of the movements of the different parties and of the equipment which you had on each day?

Capt. PEARY. It contains a record of the supporting parties as they left. It does not contain a daily record of the equipment that I had on each day.

Mr. ROBERTS. How dld you get at the equipment, then, as stated in

the book?

Capt. Pearry. Each time a supporting party left me I noted who went back or what the returning party was and what it had left me with. That is noted there. I say it is; I assume it is.

Peary was never sure of anything, even of his own data, that he was supposed to have written himself.

Mr. Roberts. There are no memoranda in your book on the 1st day of April as to the outfit you had to go forward. You did not put down memoranda of the number of men and sledges you had. My recollection is you told what Bartlett went back with.

Capt. Peary. That is not down in my notes, but I had eight dogs to

a sledge.

Mr. ROBERTS. Right on that point let me ask: If I understand, this identical memorandum book was submitted to the committee of the National Geographic Society, was it not?

Capt. PRANK. It was.

Mr. ROBERTS. And the members of that committee read all of it

Capt Pears. It was.

Mr. Roberts. And the members of that committee read all of it carefully?

Capt. Pears. No; I will not say they read all of it carefully. It was passed around. I can not say how much they read.

Mr. Roberts. It was stated in their report that they went over it very carefully.

Capt. Pears. I would not be at all surprised if that book was pretty well read through by the different members of the committee. I do not know whether any one man read right straight through or not.

Mr. Roberts. What I was leading up to by these questions was to ascertain if you can account for the discrepancy in statements made by Mr. Gannett, one of that committee, and the statements that appear in your dairy or in your book with regard to the outfit you had on the final dash. You know what Mr. Gannett's statement was?

Capt. Pears. No.

Mr. Roberts. No.

Mr. Roberts. He stated to the committee that you had 4 men, 2 sledges, and, I think, 32 or 33 dogs, which was a different party entirely, as you will realize, from 6 men, 5 sledges, and 40 dogs. If he, as a committee who looked these matters over, stating that he had examined the data very carefully, gives us that outfit for the final dash, how do you account for the discrepancy?

Capt. Pears. I should say he simply did not recall the figures.

Mr. Roberts. I wondered why there was so much of a discrepancy.

Capt. Pears. I do not see what Mr. Gannett said has to do with this.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

Mr. Roberts. It goes very vitally to the foundation of it.

The question naturally arises, in view of Mr. Gannett's statement that the committee of the National Geographic Society examined Peary's data "very carefully" and found such widely dissimilar conditions as those found by the congressional sub-

committee, whether the book which Gannett saw and the book shown to the congressional committee was really one and the same, or whether Peary unwittingly submitted another of his various "books" to the congressional subcommittee? Of course, the two books should agree, but-

Mr. Roberts. Capt. Peary, will you kindly read us your memoranda there of the evening of March 19?

Capt. Peary (reading): Brilliant, clear day of yellow sunlight. Temperature in the -50's, as shown by frozen brandy and nearly invisible dogs. Bubble in all three thermometers and unable to register. Bartlett's estimate of our position here is 85.30; mine, 85.20.

Mr. Roberts. How did you get the temperature of that day; where did you find that?

Capt. Peary. It was an estimate. As I state here, the bubbles were in the thermometers and they were unable to register precisely, and I know that brandy up there will freeze somewhere in the -50's, probably at about -55.

"Estimating" was Peary's favorite habit. He "estimated" his distances, "estimated" his temperatures, "estimated" the longitude, and finally "estimated" the location of the North

Peary then read extensive quotations from his diary, which he stated to the committee was written while on his actual trip and while "at the pole." These extracts covered the entire time from the day Bartlett left him until he started on his return journey. But Peary seems badly mixed in his dates as to the time he reached the pole and his movements while there. Not only that, but his dates (days of the month) do not correspond with his days of the week, and the number of days away from the ship (which he claimed to have entered in his diary daily) do not correspond with the days of the month. These statements are not based on newspaper reports, but on Peary's own story and on what he claimed was his "original diary," written on the trip, and "very carefully examined" by the committee of the National Geographic Society, and which Mr. Peary later submitted to the congressional subcommittee.

Note a few of the discrepancies:

Peary states that this diary was commenced on Monday, February 22, 1909, the day he left the Roosevelt. He reads an entry, which begins, "Sunday, March 14 (twenty-first day)." A little later he reads another entry, which he begins, "Tuesday, April 1." One need only refer to a calendar for 1909 to see

day, April 1." One need only refer to a calendar for 1909 to see that April 1, 1909, fell on Thursday, and not on Tuesday.

Later on Peary evidently discovered that something did not match up correctly, for he jumps from "Tuesday, April 1." to "Friday, April 2." But in the meantime he gets his number of days on the trip mixed. He is correct with all of his figures on "Sunday, March 14 (twenty-first day)," but on April 2 he has in his diary: "23d March. 39 days. Friday, April 2d."

Since March 14 was Peary's "twenty-first day" away from the ship (as he correctly states), then April 2 must have been

the ship (as he correctly states), then April 2 must have been his fortieth day, instead of his thirty-ninth.

At the hearing on January 11 Peary was asked by Congressman Roberts:

Capt. Peary. No objection, except that I would like to call your attention to the personal notes.

Mr. ROBERTS. I notice a heading here. What does that mean [indicating]?

Capt. Peary. That means the ninth march and the twenty-third day. That is the ninth march from Columbia and the twenty-third day from the ship.

Congressman Roberts then read several extracts from the diary until he came to the following:

Thursday, March 25, thirty-first day out, seventeenth march.

In this entry Peary has the day of the week and the number of his marches noted correctly, but he is wrong on the number of days away from the ship. March 25 was his thirty-second day away from the ship instead of the thirty-first. The items read by Congressman Roberts showed that this same error continued until the following:

Forty-eighth day, April 11, fifth return march.

The above shows a continuance of the error, but note the following item:

Sixth return march, fiftieth day, Tuesday, April 12.

Peary jumps from "April 11, the forty-eighth day," to "April 12, the fiftieth day." But in doing this he forgot to calculate for the day of the week, and that is again wrong, April 12, 1909, falling on Monday instead of Tuesday.

Mr. ROBERTS. Apparently the last entry made is: "Tuesday and Wednesday, April 21 and 22, sixtieth day."

In the above item Peary has the number of days away from the ship correctly entered, April 22 being his sixtieth day; but again he is mixed on the days of the week, April 21 and 22, 1909, falling on Wednesday and Thursday, instead of on Tuesday and Wednesday.

Mr. Roberts. I notice on "Thursday, April 1, thirty-eighth day," there is no mention at the top of the number of the march. The record for that day covers three pages. The last page is continued in the margin. I would like the records to show that there is a margin of one-half an inch or more on the left-hand side of each page. The entry runs through the margin of all three pages and across the top of that day's record.

Congressman Roberts continued reading, to show that the pages for other dates in the diary were not written over into the margins. A good point, as on April 1, the day when the margins were so written over, was the day Bartlett left him; and he had to economize on pages, since a large amount of writing must be done if the diary was to show a North Pole trip:

Mr. Roberts. The entry for April 8 was all written that day, or, at least, the whole entry of that day was written at one time?

Capt. Peary. Probably. I might perhaps have filled in something in connection with it at the next camp, but within those limits; yes.

Mr. Roberts. You never filled in anything later than the next camp? Capt. Peary. No, sir; I do not think so.

Mr. Roberts. Are you certain?

Capt. Peary. I feel quite surc.

Mr. Roberts. Everything written was written the day it purports to have been written here or the following day?

Capt. Peary. Very soon after. As I say, I left some days open to fill in if I had the time afterwards.

Congressman Roberts apparently endeavored to emphasize the fact that the "diary" had the appearance of having been written somewhere other than where it purported to have been written, or, at the best, to have been liberally "doctored"; otherwise Peary would have been able to give strong, definite answers to the above questions.

Mr. RORERTS. Would you leave this book to be examined by the com-

mittee?

Capt. Peary. I do not care to leave it with the committee or anyone. I do not care to let it out of my possession; it never has been.

Mr. Roberts. If the members of the committee care to, I would like to have the book examined, particularly with reference to its condition and state. It shows no finger marks or rough usage; a very cleanly kept book.

Doubtless Peary is careful of his books; refined people usually are; but it is a well-known fact that, on a long Arctic journey, ablutions, even of the face and hands, are too luxurious for the travelers. Pemmican is the staple article of food. Its great value lies in its greasy qualities. One's hands necessarily come in contact with this greasy food frequently. How was it possible for Peary to handle this greasy food, and, without washing his hands, write in his diary daily; and at the end of two months have that same diary show "no finger marks or rough usage; a very cleanly kept book"? Small wonder that Peary did not "care to leave it with the committee or anyone"!

Another notable discrepancy is seen in Peary's entries for April 6 and 7. In his testimony he read a long entry beginning, "Tuesday, April 6," and then stated verbally to the committee:

On the next day, the 6th, I have this entry, after we had built our igloos and entered them:
"The pole at last! The prize of 3 centuries; my dream and ambition for 23 years."

Therefore Peary made a long entry in his diary on "April 6," and then (as he says) on the "next day," which he also calls "April 6," he made another long entry. But this is not all, for immediately following the entry for his second "April 6," has in his diary this record:

April 7. Spend day with light sledge, double team, going east and west. Noon observation and looking for a crack where a sounding would be possible. Leave 4 p. m., 30 hours. Minimum temperature, -32°; maximum, -11°; at starting -25°. Impossible to find place to sound; 5 miles south from camp 1,500 fathoms, no bottom, lose lead and wire.

The above is a detailed statement of Peary's movements on his last day at the alleged pole, and he has dated it in his diary "April 7," which corresponds with the story he told most frequently relative to the time spent in that locality. But, three days after he read the above quotation from his diary to the congressional subcommittee he told that same subcommittee:

I made no entry in my diary for two days, for the 7th and 8th of

The above is found on page 43 of the hearing, and the quotation from his diary dated *April* 7 is on page 40 of the same hearing. It may be pertinent to inquire: On what date did Peary reach the place he called the North Pole? If on the 6th of April, as he says he did, then his "next day" must have been April 7. If, on the other hand, his "next day" was really the 6th it follows that he must have reached the allowed roles. the 6th, it follows that he must have reached the alleged pole on April 5,

How long did he remain there?

If, as Peary stated to the committee, he made no entry in his diary on April 7 and 8, where was he when he wrote the above quotation, dated April 7? Was it written at Eagle Island or New York or Washington?

WHY DID NEITHER THE INVESTIGATING COMMITTEE OF THE NATIONAL CEOGRAPHIC SOCIETY NOR THE CONCRESSIONAL SUBCOMMITTEE NOTICE THESE GRAVE AND STARTLING DISCREPANCIES IN PEARY'S STORY?

Peary continued his testimony, saying:

My next entry (in the diary) is Priday, April 9. I started back on the afternoon of the 7th. For the 8th I made no entry at all. Here is an entry made at the end of the march of the 9th, at the close of my second return march.

But Peary says he started back on the 7th, making one single march on the 7th; he made another (double) march totaling 50 miles on the 8th, and another (double) march totaling 45 miles on April 9; therefore his entry made, as he said, at "the end of the march of the 9th, at the close of my second return march," was really made (if the balance, or any, of Peary's story can be believed) at the end of his third return march instead of the second.

Peary also made an interesting statement in his entry of "April 9," to which reference will be made later. He said:

April 9, to which reference will be made later. He said:

"Ice going south with us. There has been no lateral movement yet."
Mr. Roberts. I want to ask the captain: Have you ever seen that [handing pamphlet entitled "How Peary Reached the North Pole"]?
Capt. Peary. I have.
Mr. Roberts. Did you authorize its publication or its being printed?
Capt. Peary. I did have it printed.

Mr. Roberts. Can you fix the date when you did?
Capt. Peary. No, I can not.
Mr. Roberts. It was prior to last March, was it not?
Capt. Peary. That I could not say without looking the matter up.

The subsequently appears there adjourned until Thesday January.

The subcommittee then adjourned until Tuesday, January 10, 1911.

On Tuesday, January 10, 1911, the subcommittee of the House Committee on Naval Affairs met to continue the Peary hearing, Hon. THOMAS S. BUTLER (chairman) presiding:

Hon. Thomas S. Butler (chairman) presiding:

Mr. Bates. In the last few weeks, Capt. Peary, you have undergone some physical tests of riding and walking?

Capt. Peary. I made tests in compliance with the orders of the Navy Department.

Mr. Bates. What did you do?

Capt. Peary. Perhaps I can cover that whole ground fully in just two or three words. I received orders from the Navy Department in November, stating that the records of the department did not show that I had taken any physical test for 1909, and directing that I take one physical test which would be credited to me for the year 1909, and that I should take another for the year ending 1910, which would be credited to me for that year. I took those two tests during the month of December. For the year 1909 I selected the walking test.

Mr. Macon. I would like to have the gentleman tell exactly what was done, the dates and hours engaged in each test, the circumstances and conditions under which made, and the kind of road that he traveled over when he was making the tests.

Capt. Peary. This is a copy of my report to the Navy Department:

"I selected for the year ending December 31, 1909, the walking test of the department's general order No. 50, dated December 21, 1909.

rest of the department's general order No. 50, dated December 21, 1909.

"On the 18th of December I walked 25 miles in 6 hours and 45 minutes; on the 19th of December, 25 miles in 7 hours and 26 minutes; and on the 20th of December, 5 miles in 1 hour and 28 minutes; a total of 55 miles in 15 hours and 39 minutes. This is submitted as my physical test for the year 1909.

"For the year ending December 31, 1910, I selected the riding test of the department's general order No. 50

"On the 28th of December 1 rode 50 miles in 4 hours and 58 minutes; on the 29th of December, 50 miles in 4 hours and 45 minutes; and on the 30th of December, 10 miles in 38 minutes, a total of 110 miles in 10 hours and 16 minutes. This is submitted as my physical test for the year 1910."

In regard to the places where the tests were taken, my walking test was in the road to Chevy Chase, Chevy Chase Lake, and beyond; and the riding test was taken on what is called the speedway, down in Potomac Park.

Mr. ENGLERIGHT. What was your best day's travel in your Arctic trip, either going or coming?

Capt. Pearx. The best day's travel was on the second march on the return from the pole.

Mr. ENGLEBRIGHT. How far did you go?

Capt. Pearx. The best day's travel was on the conditions of the ice and weather and the conditions that day—the conditions of the ice and weather and the conditions of the men and dogs?

Capt. Pearx. The weether was not bad. It was clear weather, good traveling weather. The character of the ice was as we had experienced it going up. We had our trail to follow. The men were in good condition. They had had double rations at the pole twice. We had dightened our load in every possible way. It was not great. We had the trail to follow and the igloos.

Mr. Buyller, How many hours were required to cover that march of

igloss.

Mr. Butler. How many hours were required to cover that march of 50 miles?

Capt. Pears. I can not tell you. I made no entry in my diary for two days, for the 7th and 8th of April, and I do not know what the times were.

Arctic furs, with a rest of only a few minutes between each 25 miles, and some of the time helping to push a loaded sledge over the ice hummocks and pressure ridges which exist everywhere on the Polar ice, though, as Peary says: "We encountered no difficult pressurage in our later marches to the Pole that I recall now."

Is it consistent or reasonable to believe that Peary made as good time under these conditions as over Washington's smooth, level roads, with a night's rest between each 25 miles?

good time under these conditions as over Washington's smooth, level roads, with a night's rest between each 25 miles?

Mr. Butler. What was the condition of the ice as to smoothness?

Capt. Pearn. The character of the going there (on the march of 50 miles) was in the shape of large floes, as we call them, of the ice of the previous year or years, and against the edges there is this pressurage [indicating]. They come together during the movement of the ice in the previous summer or summers, when the ice up there breaks into great fields, and will move, perhaps, a field in compact, at times coming together, and the edges will crush and fill up, and the older the ridges are the more rounded they become by the snow drifting into them and filling in the space between the ice floes, so that in time a pressurage is formed this way [indicating] by the crumbling up of the edges. Assuming that this ice field remains cemented together in the course of some years (I do not know how many) by the drifting of the snow into the spaces between the ice and by the melting of summer trickling down into them and freezing again, that ridge will take the form of a rounded line of hummocks.

Mr. Butler. And usually how high did you encounter them?

Cept. Pearx. The height varied, maybe, from a few feet up to, I would say, 25 feet, which is perhaps a common elevation. The pinnacle of some of the ridges would be higher than that.

Mr. Butler. In your advance to the Pole, had you cleared your way through the ridges?

Capt. Pearx. We had no difficulty in following the trail back.

Mr. Butler. In your advance to the Pole, had you cleared your way through the ridges?

Capt. Pearx. We did not have to do any pronounced clearing. We selected a course, for instance, in crossing a field like that [indicating] with a pressurage at this edge of it [indicating]. Of course across that field it would be one of these pressurages. Now, in approaching that pressurage [indicating] you could see whether a short distance here or there, there was a chance t

Mr. Butler. Have you anything to submit to the committee?
Capt. Phart. I have one or two points in connection with the last meeting which I was not able to answer fully. I have here [exhibiting] Bartlett's report on his return trip. It is apparently simply a transcript of Bartlett's log.

The "log" mentioned consists of a more or less intermittent account of Bartlett's return from the point where he left Peary until he reached the Roosevelt at Cape Sheridan. It contains nothing of special interest, being more or less a statement of: "Leaving igloo; reached next igloo." The first item is as fol-

April 1, 1909, 3 p. m.: Left commander with 19 dogs, 1 sledge, 2 huskies, and just enough for 40 days. Midnight: Reached the 21st igloo, where we slept. Fine and clear, fresh north-northwest wind. One of our dogs clipped its harness, going back to commander's party.

The "log" shows entries for April 1, 2, 3, 4, 5, 6, 8, 10, 11, 13, 15, 16, 17, 18, 20; skipping April 7, 9, 12, 14, 21, 22, 23, and 24. The last entry reads:

April 20: Left Columbia, reaching the ship on the 24th.

And is signed, "R. A. Bartlett."

And is signed, "R. A. Bartiett."

Mr. Roberts, Did you find that report awalting you when you got back to the ship?
Capt. Peary. It was not. It was written during May by Bartlett, at my request. We got back the latter part of April, and Bartlett was on board the ship. Borup and Macmillan wrote me similar reports of their return, probably in June, because they were away when I came back. Mr. Grego. You said that Bartlett wrote it; did he write it in his log book, or is this a transcript?
Capt. Peary. I do not know. I would say from the appearance of this that it is a copy from Bartlett's log book, as written during the journey.

ourney.

Mr. Grego. You do not know whether he made the log-book entries daily?

Capt. Peary. I would say that he made the entries exactly as they are here.

Mr. ROBERTS. Do you know if Bartlett kept a diary or daily memorandum while going north and returning?

Capt. Peary. I have no doubt he did. I can not swear to it.

Thus Bartlett's report of his return trip, which was presented to the committee as corroborative evidence of Peary's claims, On Peary's official "physical test" he covered 50 miles (Dec. 18 and 19, 1910) in 14 hours and 11 minutes, with a night's rest between each 25 miles. This test was made over the proverbially good roads of Washington, D. C., with no load. On his return from the alleged Pole, he made 50 miles in a "day's march" (number of hours not given) bundled in his was written, as Peary states, at Peary's request, a month after the trip was made. Peary's replies to questions relative to Bartlett's report were so vague and contradictory as to arouse a suspicion that the report was dictated to fit Peary's own story.

Peary first said: "It was written during May, by Bartlett,

lett's log book, or was merely a "transcript," he did not know, but "would say" that it was a copy from Bartlett's log book. It is remarkable that if the report was "written during May at Peary's request," he should not be able to state definitely whether Bartlett wrote it in his log book or merely wrote it on a slip of paper and gave it to him (Peary). Neither did Peary know whether or not Bartlett kept a daily memorandum on his trip north and return, but "had no doubt he did." His ideas about the log of the Roosevelt were also vague and indefinite.

Mr. Roberts. Do you know where the log of the Roosevelt is?

Capt. Pearr. I can not say offhand; perhaps I have it and perhaps

Bartlett has it.

Mr. Roberts. Who kept it?

Capt. Pearr. The first mate, as is usual on these trips.

Mr. Roberts. I gathered from what you said that that might be a copy of the log of the Roosevelt.

Capt. Pearr. No; it could not be a copy of the log of the Roosevelt.

This is a copy of Bartlett's notebook that he had on the journey.

Peary at last made up his mind just what Bartlett gave him. It required much time and study, but he finally decided, as shown above, that "it was a copy of Bartlett's notebook"!

shown above, that "it was a copy of Bartlett's notebook "!

Mr. Roberts. What he calls his log?

Capt. Peary. His personal log. The log of the Roosevelt, as far as I know, never left the ship. It was a book of that size [Indicating]. I think it was the ordinary printed form for ships and was kept on board the Roosevelt, and was kept, I should say, entirely by Mr. Gushue, the first officer.

Mr. Roberts. That related wholly to the navigation of the ship and what transpired on the ship?

Capt. Peary. When we were navigating there was not so much that transpired. If the officer kept the log with sufficient care, the log will show when the various parties left the Roosevelt, when they returned, and what the occurrences were on board the Roosevelt.

Mr. Roberts. You did not take the log with you when you left the ship?

Capt. Peary. No, sir.

Mr. Roberts. It is not in your possession now?

Capt. Peary. I can not say; it may be. If the committee wants it, I will look it up. I have a number of miscellaneous papers, some on Eagle Island and some here, and I do not now recall whether it has been turned over to me, or whether it is in Bartlett's possession.

Mr. Roberts. The ship has been disposed of. That would not go with the ship?

Capt. Peary. No, sir.

We are told that nothing is impossible. Therefore, it may be

We are told that nothing is impossible. Therefore, it may be possible that Peary was sincere when he "could not say" in whose possession the log of the Roosevelt was at the time of whose possession the log of the Roosevell was at the time of the hearing. It may be true that he did not know where this book, so closely connected with what he claimed as the culminating achievement of his life, was located a year later; but it is natural to assume that he did know where the book was, and preferred that no one else should see it. If honestly kept, that "log" would doubtless tell a different tale of the movements of the members of the expedition than was revealed by Peary's own story. Hence his vague and noncommittal replies as to its whereabouts.

Mr. ENGLEBRIGHT. I have here copies of letters to and from the Coast and Geodetic Survey, and I will ask to have them inserted in the record.

The letters referred to by Congressman Englebright were relative to Peary's instructions on his last northern trip. A telegram from Peary to the Coast and Geodetic Survey, dated July 3, 1908, is as follows:

NEW YORK, July 3, 1968.

To Assistant Superintendent Perkins,

United States Coast and Geodetic Survey, Washington, D. C.:

I have information that you may be authorized to give the instruction concerning tidal observations north coast Grant Land and Greenland. Will two or three days' personal instructions at your office be desirable for my assistants? Kindly wire. R. E. PEARY.

A letter from the Department of Commerce and Labor to the President, dated July 7, 1908, reads as follows:

A letter from the Department.

President, dated July 7, 1908, reads as follows:

Department of Commerce and Labor,
Office of the Secretary,
Washington, July 7, 1908.

Sin: I have the honor to state that in response to the directions issued to the Navy Department, Civil Engineer R. E. Peary, United States Navy, called in person at the office of the Coast and Geodetic Survey and informed himself fully of the views and requirements of that office in regard to tidal observations along the Grant Land and Greenland shore of the Polar Sea and expressed his intention to make every effort to collect the desired information.

I have the honor to be, sir, your obedient servant,
(Signed) Oscar S. Straus,
Secretary.

The PRESIDENT, Oyster Bay, N. Y.

Note.—Commander Pearry called at the Coast Survey Office on June 18 and on July 8. Mr. Macmillan reported and spent that day and the morning of July 9 under the instruction of Dr. Harris.

Since Peary did not receive orders to report to the Coast and Geodetic Survey for instructions until July 2, 1908, his "call" at that office on June 18 seems to have been in the nature of a "preliminary reconnoissance," to suggest a plan by which he could nominally work under the instructions of the Coast and

Geodetic Survey, but in reality materialize his own plans for another Arctic vacation.

A number of letters were presented and printed in the hearing relative to Peary's instructions. Finally, one was produced by Congressman Bates, signed by Charles H. Darling, Acting Secretary, which contained these words:

The attainment of the pole should be your main object. Nothing short will suffice.

Mr. Bates. Is this a copy of a letter from the Acting Secretary of the Navy when you were granted a leave of absence?

Capt. Peart (after examining letter). That is a copy of a letter from the Acting Secretary of the Navy, Judge Darling, to me, granting me a leave of absence.

Mr. Bates. In which he states, "The attainment of the pole should be your main object. Nothing short will suffice."

This letter, signed by Judge Darling, Acting Secretary of the Navy, was produced by Peary's friends on the committee to show that he was acting under instructions from the Navy Department when he instituted his final search for the pole. But neither Congressman Bates nor Mr. Peary nor any of the members of the committee mentioned the fact that this letter was dated September 5, 1903, and referred only to Peary's trip of 1905-6 and not at all to what he claims as his "successful" trip of 1908-9. Therefore, the letter was irrelevant and had nothing to do with Peary's instructions from the Navy Department or the Coast and Geodetic Survey for his 1908-9 expedition. Congressman Roberts attempted to emphasize this fact, although he did not specifically refer to the letter in question:

he did not specifically refer to the letter in question:

Mr. Roberts. I would like to ask you in regard to your detail from the Navy Department when you went on this last trip. As I understand, and as I think is mentioned in the papers submitted by Mr. Englebright, the detail was simply to the Department of Commerce and Labor, and the Coast and Geodetic Survey gave you instructions to make certain tidal observations?

Capt. Peary. "For the purpose of making tidal observations." I think that was the wording.

Mr. Roberts. You were not detailed for the purpose of making any effort to reach the North Pole?

Capt. Peary. I think I can say positively that that was not included in the precept of the order.

Mr. Dawson. Was there anything in the nature of your detail from the Navy Department which would make it proper or necessary for you to file with the Navy Department any report upon your return?

Capt. Peary. There was nothing in my orders calling for a report, I feel quite sure. I feel quite sure there was nothing of the kind. I did report my return to this country by wire to the Navy Department, and I reported specifically by wire to the Coast Survey. That report contained the condensed results of my work, and later I sent them the original observations. I did not send them any detailed report in regard to the tidal meteorological and other observations because they have experts in their own department who could report on the original information.

Apparently Peary did not carefully study his instructions

Apparently Peary did not carefully study his instructions from either the Navy Department or the Coast and Geodetic Survey since he was unable to state postitively their contents. He could only say that "he felt quite sure," and then repeat, "I feel quite sure." Yet he poses as a naval officer!

"I feel quite sure." Yet he poses as a naval officer!

Capt. Peary. Here is a pamphlet in regard to which I was asked questions at the last hearing. Here are the actual facts. According to Judd & Detweller, the printers, they received the order on the IIth day of March, 1910, and the pamphlet was sent out about 10 days later—that is, sent to me—and I presume it reached Members of Congress about 10 days after that.

This pamphlet was the result of a suggestion to me that some of the salient points in connection with the matter which was under discussion be made known to Members of Congress. The title of the pamphlet is: "How Peary reached the North Pole. An Expedition Over the Ice That Went to Its Mark With the Precision of a Military Campaign and Reached the Goal Sought for Centuries." This pamphlet consists of a reprint of my original cablegram to the New York Times, which appeared in the Times somewhere about the middle of September; I do not remember the exact date.

It also contained "What Peary has discovered—The Polar problems of vast import solved by his story—His perfect exploration machine," by Cyrus C. Adams. That is also a reprint from a letter or communication to the New York Times about that time; I should say September, 1909.

It contains other miscellaneous matter. Those two things, the first and second articles, are reprints and are doubtless full of typographical errors. The second I know is heavened. Headed.

It contains other miscellaneous matter. Those two things, the first and second articles, are reprints and are doubtless full of typographical errors. The second I know is, because I looked at it recently with the idea that it contained some of the salient points for the information of this committee, and I found it full of typographical errors, being simply newspapers reports with typographical errors and errors of transmission.

Peary says that he "looked at this pamphlet recently with the idea that it contained some salient points for the information of the committee"; he also knew that it was "full of typographical errors"; yet three days previous to this time (see p. 41). of the hearing) Peary did not know when he had the pamphlet printed; could not even approximate to the month of its publication. He must, indeed, have looked at it very "recently," with the "idea" above mentioned.

Mr. Gregg. Have you given the Government or the public any way by which your trail can be retraced and somebody else could find the pole along the line you pursued?

Capt. Pears. Of course there is no trace to follow.

Mr. Gregg. I mean have you any data by which some one else could go to the Pole along that route?

Capt. Pears. Nothing that would help them.

Mr. Gregg. Then the North Pole is just as much lost as ever?

Capt. PEARY. Yes, sir. Of course the term "discovery" of the North Pole is a misnomer. It should be the "attainment" of the pole.
Mr. Macon, It is a fiction.
Mr. Bates. You have a record of the latitude and longitude of the

Mr. Bates. You have a record of the latitude and longitude of the course you took?

Capt. Prart. There is nothing more than what appears in these observations—the latitude at different points. Our longitude was not far removed from the meridian of Columbia.

This statement is assumption on Peary's part, for he repeatedly states that no longitudinal observations were taken.

Mr. Roberts. What official report, Mr. Peary, did you make under the instructions which were given you by the Navy Department and by the Department of Commerce and Labor on your return? Under the detail from the Navy Department, I presume the instructions were from the Coast Survey?

Coast Survey?

Capt. Peart. After my return I sent my telegram from the Labrador coast to the Navy Department reporting my return to the country. That telegram is, of course, on file. I then sent a telegram to the Coast and Geodetic Survey, stating so many days' tidal observations at such a place and at such a place and at such a place—the line of soundings and something of that kind, a telegraphic summary of the work. I believe that telegram was never received by the Coast and Geodetic Survey, but it was filed at Battle Harbor. I will not be absolutely sure whether the telegram was sent from Battle Harbor or Indian Harbor. Then I sent the original observations to the Coast and Geodetic Survey with a letter of transmittal. I do not remember what was said in the letter of transmittal, but that can be obtained. I made no report as to what were the results from the tidal observations.

Mr. Roberts. Those were all the reports you made?

Capt. Peary. Yes, sir.

On the above, as on other points, Peary's memory was poor. He could not recall from what point his telegraphic summary of his polar trip was sent, whether from Battle Harbor or Indian Harbor. He could not recall what was said in his letter of transmittal. On many other points which the average person would consider of great personal interest-to Peary-his memory was equally defective.

Peary's statement, however, agrees with Mr. Tittmann's;

that is, that his only proof was his tidal observations.

Congressman Macon, who was in deadly earnest in the investigation of Peary's claimed discovery, was continually blocked in his line of questioning. For instance:

Mr. Macon. In respect to what Mr. ALEXANDER has said about latitude and longitude observations, I will say that the distinguished members of the committee that passed upon the case of Capt. Peary told this committee that the records showed that Capt. Peary had not taken a single longitude observation on his trip out.

The gentleman from Pennsylvania [Mr. Butler] quickly and kindly came to Peary's assistance and relief with the suggestion:

kindly came to Peary's assistance and relief with the suggestion:

Mr. Butler. Let us go on now and permit Mr. Roberts to finish his examination.

Mr. Englebright. Is there any difficulty when you arrive at the North Pole about taking proper astronomical observation that will satisfy you that you are at the North Pole?

Capt. Peary. I do not know why the North Pole can not be determined approximately the same as the position of the Equator or any point of latitude or longitude on the face of the earth; but there is one pronounced fact that makes some difference in northern work, and that is the matter of the comparatively low altitude of the sun. In summer work the sun is the only thing you can use, because there are no stars. Here is a point that you gentlemen all know—but, perhaps, it should be brought right home to you here—and that is that from the 26th of March, from that time up to the pole, back to Columbia, back to the Roosevelt, after we started on the Roosevelt, and for some nights down the Kennedy-Robeson Channel there was never a time when you could see a star, not only constant daylight, but fine, clear weather.

But in Peary's book. The North Pole, which the committee

But in Peary's book, The North Pole, which the committee had at the hearing and to which they frequently referred, Peary says in his chronicle of March 31, pages 265-266:

The going was fairly good, but the weather was thick. Had it been clear we should undoubtedly have covered 25 miles in this march; but it is difficult to break a trail in thick weather as rapidly as in clear, and this day netted us only 25 miles.

Again, on page 284, April 6, the day of his claimed arrival at the pole:

The weather was overcast. The sky was a colorless pall, deepening to almost black at the horizon, and the ice was a ghastly and chalky white. How different it seemed from the glittering fields, canopled with blue and lit by the sun and full moon, over which we had been traveling for the last four days.

And on pages 288-289:

Everything was in readiness for an observation at 6 p. m., Columbia meridian time, in case the sky should be clear; but at that hour it was, unfortunately, still overcast.

Of his return trip, on page 306 (Apr. 10), he says:

During the night the gale moderated and gradually died away, leaving the air very thick. It was almost impossible for us to see the trail.

Again, on page 308:

The day (Apr. 13) was a bitterly disagreeable one. On this march e had in our faces a fresh southwest wind that ever and again spat now that stung like needles and searched every opening in our

After the return to the ship, on page 328, he again says:

On Sunday, May 16, the sun was hot, but the next day we had a lift southwest gale, with considerable wet snow.

On page 330 he says:

On the summer solstice, June 22, midnoon of the Arctic summer and the longest day of the year, it snowed all night.

Evidently Peary was suffering from one of his temporary aberrations of memory when he wrote his book or when he stated to the committee that:

* * from the 26th of March up to the pole, back to Columbia, back to the Rooscvelt, after we started on the Rooscvelt, and for some nights down the Kennedy-Robeson Channel, there was not only constant daylight but fine, clear weather.

Which statement was correct?

Mr. ROBERTS. Is the information contained in your telegram all the information you ever gave to the Navy Department of your trip to the

pole?
Capt. Peary. To the Navy Department direct. I was on duty, but I was not on duty under the Navy Department.
Mr. Roberts. And later you transmitted to the Coast and Geodetic Survey the results of the tidal observations?
Capt. Peary. Tidal and meteorological observations and the sound-

Capt. Peary. Tidal and meteorological observations and ings.

Mr. Roberts. What report did you make to the Navy Department when you were finally relieved from duty with the Coast and Geodetic Survey?

Capt. Peary. I do not recall that I made any report. I was placed on waiting orders.

Mr. Roberts. Is it not customary for naval officers to make some report to the department when discharged from a duty?

Capt. Peary. I am not aware that such is the case. I was placed on waiting orders, and soon after—only two or three days, I think—I was granted leave. My impression is that the report was made to the Navy Department by the Superintendent of the Coast and Geodetic Survey.

Navy Department by the Superintendent of the Coast and Geodetic Survey.

Mr. Roberts. In the documents transmitted to the Coast and Geodetic Survey containing the results of the soundings and the tidal observations was there any injunction of secrecy on the part of the bureau or the department?

Capt. Peary. No; not in my telegraphic report.

Mr. Roberts. I am speaking of the regular report.

Capt. Peary. On page 20 of Mr. Moore's speech you will find my letter to the Acting Superintendent of the Coast and Geodetic Survey, and, after inclosing the profile of soundings, this paragraph occurs:

"If such request is permissible, I will respectfully request that this profile and complete set of soundings be not published at present."

The speech of Congressman J. Hampton Moore to which

The speech of Congressman J. Hampton Moore to which Peary referred was printed in the Congressional Record, and afterwards reprinted in pamphlet form, as is customary when a wider circulation is desired for any particular speech than is feasible through the pages of the Congressional Record alone. This speech of Congressman Moore, however, was later shown to be Peary's main source of information as to what he did on his last polar expedition. Unless he first referred to the speech, he was unable to answer the most simple questions relative to his movements.

relative to his movements.

Mr. Roberts. About the soundings, Mr. Peary, as I understood you the other day, you personally made one sounding?

Capt. Peary. Yes, sir.

Mr. Roberts. And only one?

Capt. Peary. Yes, sir.

Mr. Roberts. Did you observe the other soundings made? Were you right there and could you see all the conditions?

Capt. Peary. Some of them I did; not all of them.

Mr. Roberts. You did not note the first four soundings made, and you can not tell what the tidal conditions were, but you did make the last sounding within a few miles of the pole. As your wire ran out, did you note whether it was a tidal current that carried it away?

Capt. Peary. There was no strong tidal current, as indicated by the wire, to sweep it one way or the other.

Mr. Roberts. It was not trailed off on the ice by a strong current?

Capt. Peary. I did not observe it.

Mr. Roberts. You do not know whether that was the condition at the other soundings?

Capt. Peary. I doubt if there is any strong current in the main Arctic Ocean, because the tidal movement at Columbia is very slight.

It would be interesting to know the method of reasoning by

It would be interesting to know the method of reasoning by which Peary reached this conclusion, as the next day (see p. 92 of the hearing) Congressman Macon also questioned him rela-

tive to Arctic currents, and elicited the following replies: Mr. Macon. I believe you stated that there was no current? Capt. Pearv. I noticed no indications of current. I had no current meter with me.

Where, then, is the value of his observations of the Arctic currents? One must remember that the President of the United States personally ordered Peary to be attached to the Coast and Geodetic Survey for this expedition, and the superintendent of that department tells the committee that Peary had received proper instructions, yet he had no current meter with him. As Peary's tidal and sounding reports were the only "official" re-Peary's tidal and sounding reports were the only "official" reports given the Government, for what services rendered do the taxpayers of the United States pay Mr. Peary \$6,000 annually? Mr. Macon. Can you explain about the facts set out in your book which indicate that there was a great crushing of ice coming together and sweeping along? The ice itself would not move without something under it?

Capt. Peary. In the Arctic Ocean the movement of the ice is more dependent on the wind than it is on the current.

Mr. Macon. How thick is the ice?

Capt. Peary. Anywhere from a few inches—newly-formed ice—to 20 or 25 feet thick.

Mr. Macon. You do not mean to tell the committee that the wind could move that ice?

Capt. PEARY. The pressure of the wind would move that ice if there was any space for it to move in.

Note that the wind was sufficiently strong to move a sea-level body of ice from 20 to 25 feet thick but was not strong enough to move an empty tin can away from its position on a hummock of ice where it had been placed to "mark" the trail. How thoroughly inconsistent and Pearyesque!

thoroughly inconsistent and Pearyesque!

Mr. Macon. This ice being 25 feet thick when it would pack, what would cause it to produce the leads you speak of so often in your book?

Capt. Peart. The wind would be a most important factor in producing pronounced and rapid changes in the ice. Also, what has been determined by my last two expeditions, and which, as far as I know, was not recognized before, is the fact—I say it is a fact; it is my pronounced impression, susceptible, perhaps, of modification by the work of the experts—that the strong tides of every month, the tidal waves crossing the Polar basin, result in a movement of that ice and will form leads, and the tidal wave passing under the ice will buckle the ice and cause the lead to form, and then, with the ebb tide, that lead will slowly open without any pronounced, and, perhaps, any perceptible current of the water.

Mr. Macon. The great force you speak of would not disturb the waters under the ice to the extent that it would create any current?

Capt. Pearx. Not to a considerable amount.

Mr. Macon. Did you ever make investigations to the extent that you knew that there was not a current sweeping forward all the time down in the ocean?

in the ocean?
Capt. Pearv. No; I had no current meter with which to do so.

Peary had no current meter, therefore he did not know whether or not there was a current sweeping down all the time in the ocean. Apparently he was unfamiliar with the drift of wreckage from De Long's ship, the Jeannette, from the New Siberian Islands to the southeast coast of Greenland, or possibly he thought the wind blew that wreckage there, although it left his empty tin cans undisturbed as guideposts! Also, it was inexpedient for Peary to admit the existence of a current, because doubtless Congressman Macon would have made it difficult for him to explain how his almost invisible wire and 14-pound sounding lead dropped down like a plummet instead of being deflected by the current and carried out under the ice. As will be shown later, Congressman Macon argued this point somewhat at length.

Mr. Roberts. There is another question that I would like to ask. It was mentioned here a short time ago: What could have been done by you to remove any doubt that might exist in any person's mind as to attaining the pole, and whether anything more could have been done than what you did? I have heard this question asked a good many times by people, and I am going to take the liberty of asking you why, when you went to the pole on your final dash, you did not take with you some of the members of your party in order that there might be credible corroborative evidence if the question was ever raised as to attaining the pole? I do not know whether you care to answer that question.

Capt. Pears. I have not the slightest objection to answering that question, Mr. Roberts. The reason for that has been stated in the book, that the man I took with me was more effective for the combined demands of extended work than any white man I have ever had with me, but, perhaps, what you want in a way is this:

The pole was something to which I had devoted my life; it was a thing on which I had concentrated everything, on which I had expended some of myself, for which I had gone through such hell and suffering as I hope no man in this room may ever experience, and in which I had put money, time, and everything else, and I did not feel that under those circumstances I was called upon to divide with a man who, no matter how able and deserving he might be, was a young man and had only put a few years in that kind of work, and who had, frankly, as I believed, not the right that I had to it. I think that conveys my idea.

As noted above, Peary stated to the committee that the man

As noted above, Peary stated to the committee that the man he took with him to the pole (Henson) was "more effective for the combined demands of extended work than any white man he had ever with him." In Penry's book, to which he refers, he explains his reasons more at length, on pages 272-273:

At this time it may be appropriate to say a word regarding my reasons for selecting Henson as my fellow traveler to the pole itself. He has always been with me at my point farthest north. Henson was the best man I had with me for this kind of work, with the exception of the Eskimos. Had I taken another member of the expedition also, he would have been a passenger. It would have amounted to an additional load on the sledges, while the taking of Henson was in the interest of economy of weight.

tional load on the sledges, while the taking of Henson was in the interest of economy of weight.

The second reason was that while Henson was more useful to me than any other member of my expedition when it came to traveling with my last party over the polar ice, he would not have been so competent as the white members of the expedition in getting himself and his party back to land. If Henson had been sent back with one of the supporting parties from a distance far out on the ice, and if he had encountered conditions similar to those which we had to face on the return journey in 1906, he and his party would never have reached the land. I owed it to him not to subject him to dangers and responsibilities which he was temperamentally unfit to face.

Peary seemed to hold the inconsistent idea that Henson, although unfit to travel back over the trail (which Peary claims all of his supporting parties did), he was perfectly capable to go forward and "pioneer" a trail for the rest of the expedition. He could not follow an open trail back to land, but he could break a new trail over the bewildering, trackless waste of the Polar Sea (supposedly), holding to the direction of true north with the certain and unerring instinct of a homing pigeon! See pages 234-235 of "The North Pole":

Henson at once received instructions to get away early the next morning with his division of Eskimos and sledges to pioneer the road for the next five marches. The doctor was informed definitely that he

was to return to land the next morning with two men. The rest of the party would remain here until Marvin and Borup came in.

Was Peary correct in his statement that "Henson would not have been so competent as the white members of the expedition in getting himself and his party back to land." or was he acting in good faith when he sent Henson ahead to pioneer the trail for the expedition?

Mr. Roberts. In selecting the men to go with you on this expedition, was there any injunction of silence placed on them as to what they might observe or see on the trip, or were they free to come back to civilization and tell anything or write or lecture—do anything they pleased—with regard to their experiences on the trip?

Capt. Prant. The members of the party were not free to write or lecture after the return without permission.

Mr. Butler. They were paid for their services?

Capt. Prant. Yes, sir.

Mr. Butler. Were you paid for your services?

Capt. Prant. I was not.

Mr. Macon. Was not the Government paying Capt. Peary's salary?

Mr. Butler. Yes, sir; of course.

Peary was on duty under instructions from the Coast and Geodetic Survey, drawing his regular salary; yet in reply to the question, "Were you paid for your services?" he had the superb "nerve" to reply, "I was not." (See p. 75 of hearing.)

Mr. Roberts. There was a suggestion made that it would be very much to the enlightenment of the committee if you could come before it (in 1910), and some person, I am not just certain who, purporting to represent you, said that you felt that you could not come then because you were under contracts to publishers or under contracts that forbade your disclosing any of the results of your recent trip. I want to ask if you authorized anybody to make such a representation to us?

Note Peary's evasive reply:

Note Peary's evasive reply:

Capt. Peary. My position at the time was that I was willing to come before the committee and show all my papers and my journal and answer all questions, but I was not ready to have the results of my work published. That, I think, states the position absolutely.

Mr. Roberts. The reason you did not wish them published was because you were under certain contracts?

Capt. Peary. Yes, sir.

Mr. Roberts. Those contracts have now expired?

Capt. Peary. Yes, sir.

Mr. Roberts. When did they expire?

Capt. Peary. I presume with the publication of the narrative.

Mr. Roberts. Which narrative do you speak of—the book or the magazine?

Capt. Peary. The book was published last, and I should say it was upon the publication of the book.

Mr. Roberts. When was that published?

Capt. Peary. In September. I think, or October.

Mr. Roberts. You were bound by the contract with your publishers not to make known or disclose without their permission any of the results of your trip?

Capt. Peary. Yes, sir; in a general way, I should say so.

The contract with his publishers was Peary's own, entered

The contract with his publishers was Peary's own, enteredinto by him; yet he knew absolutely nothing about it; he was able only to "presume" or "think" or, at the most, "should say so." No mention was made at this time, however, of Peary's contract with the New York Times, entered into before he left on his polar expedition. This contract was published in full in the New York Times of September 11, 1909, and read as follows: JULY 6, 1908.

New York Times, New York City.

New York Times,

New York City.

Gentlemen: I herewith acknowledge the receipt of the sum of \$4,000 from the New York Times on behalf of itself and associates. It is understood that in making this advance the Times does not assume any responsibility for or any connection with the expedition on which I am about to embark and which has for its purpose the finding of the North Pole. The money is advanced to me as a loan, to be repaid to the New York Times and its associates out of the proceeds of the news and literary rights resulting from this expedition, it being understood that if for any reason the expedition is abandoned before the fall of 1908 the money will be refunded to the Times. If the expedition is successful and the pole is discovered. I promise to use every means in my power to reach civilization and wire to the Times the full story of the discovery over my own signature. The Times is to have the sole rights to the news of the discovery and is to have the exclusive right of its publication in all parts of the world. My understanding is that the Times on its part, agrees to syndicate the news, both in Europe and America, and to give me the entire amount it receives, after deducting costs of cables, tolis, etc. The Times and its associates will pay me what they consider a reasonable amount for the use of the material in their own publications. From the sum thus raised the \$4,000 is to be repaid, and I am free to sell the magazine and book rights to my best advantage.

It is understood, however, that should the news reports by any possibility not realize the sum of \$4,000 any deficit will be reimbursed to the Times from the magazine and book rights.

Should the expedition not be successful in finding the pole, but should simply result in explorations in the Far North, the Times is to be repaid \$4,000 out of the news, magazine, and book rights of the expedition, so far as they may go toward the liquidation of that claim.

Yours, very truly,

R. E. Pearx.

The above contract shows that Peary was interested to the amount of \$4,000 in finding the North Pole. Failure to discover the pole entailed a personal loss of \$4,000. Therefore his at-

tainment of the pole—on paper—was inevitable.

The committee then adjourned until Wednesday, January 11, 1911, when they met, with Hon. THOMAS S. BUTLER, chairman,

The gentleman from Massachusetts [Mr. Roberts] continued his examination of Peary:

Mr. Roberts. Capt. Peary, when you returned from your dash, the first people you saw were those of the ship?
Capt. Peary. Yes, sir.
Mr. Roberts. You, of course, told them of the trip?
Capt. Peary. No; I did not. I did not go into any details in regard to the trip.
Mr. Roberts. Did you tell them you had reached the pole?
Capt. Peary. I told Bartlett; no one clsc.

If we can believe Peary's book, his statement that he told no one of his party except Bartlett that he had been to the pole must be taken cum grano salis, for on pages 325-326 of The North Pole he says:

Borup, with the aid of the Eskimos, built at Cape Columbia a permanent monument, consisting of a pile of stones, formed around the base of a guide post made of sledge planks, with four arms, pointing true north, south, east, and west. On each arm is a copper plate with an inscription punched in it. On the northern arm, "North Pole, April 6, 1909."

Therefore Borup must have known of Peary's claimed attainment of the pole. And if Borup, why not the other members of the party? This query, of course, is made on the supposition that a monument with such inscription was really erected.

Mr. Roberts. I recall reading in the papers that on the way from where the ship wintered, somewhere on the return journey, you met some sportsman. Was it Whitney?

Capt. Pears. I met Whitney at Etah, down in the Whale Sound region.

Mr. Roberts. Did you say anything to him—did you have any talk with him about your trip?

Capt. Pears. No, sir.

Mr. Roberts. You did not say anything to him about reaching the pole?

Capt. Pears. No. sir.

Capt. Peary. No, sir.
Mr. Roberts. Did he make any inquiry of you?
Capt. Peary. I do not think he did; I do not recall.

Again Peary's memory proved weak; he could not "recall" whether or not the first civilized man, aside from his own party, whom he had met for over a year asked him anything about his trin.

Mr. Roberts. You were telling us the average equipment you carried on your sledges. Just what did you carry to make up the load?

Capt. Pearr. There would be on each sledge a pair of snowshoes, a very light pickax, and some of the spare clothing, not much. I do not think of anything else now, though doubtless some minor items were in each division of four sledges. That would be in addition to the camp cooker.

each division of four sledges. That would be in addition to the camp cooker.

Mr. Roberts. What is the weight of the sledge itself?
Capt. Peart. Of my last sledges, my impression is that it was eighty-odd pounds. Each sledge would vary some.

Mr. Roberts. Your special sledge?
Capt. Peart. My standard sledges.
Mr. Roberts. How did they compare in weight with the Eskimo sledges?
Capt. Peart. My sledges were about the same, I should say. The reason why I can not tell you the weight of the sledges that you referred to is that I have had so many different kinds of sledges, so many different lengths, etc., both of the Eskimo type and this type, on different expeditions, that I have not the figures clear, but I will say that my sledges on my various expeditions have weighed from the lowest—I think, 65 pounds—up to 95 pounds. On the inland-ice work one sledge weighed 12½ pounds and carried 400 pounds.

This sledge which weighed only 12½ pounds mentioned by

This sledge, which weighed only 121 pounds, mentioned by Peary, was personally constructed by Eivind Astrup, the young Norwegian, who accompanied Peary on his first trip across the inland ice of Greenland. It was the only sledge out of the four which started that made the entire round trip from MacCormick Bay over the inland ice to Academy Bay and return.

Mr. Roberts. What weight did you carry on these sledges on this

Mr. Roberts. What weight did you carry on these sledges on this trip?

Capt. Pearx. Of course, none were weighed—we had no facilities—but from Cape Columbia in no instance did the weight on a single sledge exceed about 500 pounds. The standard load, I mean the load one would try to hew to as much as possible as the unit for heavy work of a man and a team of eight dogs, would be a sledge weighing less than 100 pounds and a total gross load on the sledge not to exceed 500 pounds at the start.

Mr. Roberts. Five hundred and eighty pounds in weight, all told?

Capt. Pearx. Yes, sir; at the start.

Mr. Roberts. When you started in the final dash after leaving Bartlett, you had five sledges. Were they loaded to capacity?

Capt. Fearx. Practically; nearly so. They were not loaded over capacity; a little under, if anything.

After a little further inquiry by the gentleman from Massachusetts [Mr. Roberts], Congressman Macon commenced his investigation and examination of Peary.

PEARY'S MEMORY.

Mr. Macon. Mr. Chairman, the committee having under consideration a bill for the purpose of promoting Capt. Peary to rear admirat for the discovery of the North Pole, which, in a sense, would be to place in his hands on the part of the American people a passport into every phase of human society as an American hero, and remembering that this country and every other country has been infested with bogus heroes as well as real ones, I consider that we ought to go into this matter upon the merits of the case.

Capt. Peary, this being the consideration of a bill to confer high honors upon you, I want to find out whether or not you are entitled to them, whether your services to the Government have been of such moment as to make you worthy of them. If they have been, I want to have you have it. Therefore I will ask you, to start with, how long

have you been in the service of the Government in connection with your duties as a naval officer?

Capt. Pearx. The 26th of October, 1881, I think, was the date.

Mr. Macon. How much of that time have you devoted to real service in the Navy Department?

Capt. Pearx. That I can not answer offhand. I think this is stated in a letter from the Secretary of the Navy to this committee; it was written last winter.

Mr. Macon. You can approximate it in years; we do not ask for months or days.

months or days.

Capt. Peary That information, I think, will be found in detail on page 23 of Mr. Moore's speech.

Peary could remember the number of the page of Congressman Moore's speech on which that information was given, but could not remember the information itself, although it concerned him personally and was a matter of personal history.

Mr. Macon. Mr. Moore's speech? You can not approximate it, then? Capt. Peary. Not unless it is given there.

It appears that Congressman J. Hampton Moore must have been the author of Peary's North Pole story, otherwise Peary would not have been afraid to reply to questions before he had looked up the version of the gentleman from Pennsylvania.

Mr. Macon. Then I will ask you if you can approximate how many years you have devoted to polar or Arctic explorations? I will not say polar explorations, because I do not believe you have been in search of the pole all the time you have been out.

Capt. PEARY. My first expedition was in 1886. The answer to that question is also given in detail on page 6 of Mr. Moore's speech.

Peary could tell offhand on just what page to find the answer to any given question, but he could not or did not dare give the answer without first reading to make sure that it was indeed in accord with what he might say if he spoke from his actual knowledge and experience.

Mr. Dawson. I suggest that both statements go into the record.
Mr. Macon. I am trying to find out from him. He is supposed to
know as much about it as Mr. Moore. I am after the facts. I am
not after second-handed facts. I want them first-handed.
Capt. Peary. These are official documents.
Mr. Macon. He is supposed to know about the official records. I
know as much about the time I have given to my duties as Congressman since I have been a Member of Congress as my official record could
disclose

man since I have been a Member of Congress as my official record could disclose.

Mr. BUTLER. I suggest that we put the official letter from the department, which Mr. ROBERTS has, in the record.

Mr. Macon. I am asking him of his own knowledge. Can you tell us how many years you have been making your northern or Arctic explorations, of your own knowledge?

Capt. Pears. I can not answer offnand, because I have not the dates here. I would have to look them up. I should probably get the same information as is presented in this official communication from the department. department.

Peary evidently wished to avoid stating the exact amount of time he had spent in the Arctic. It is unbelievable that he really did not know.

really did not know.

Mr. Macon. I have seen it stated that you have spent a great deal of your time for 23 years in making explorations in the north.

Capt. Pearx. My first expedition—on page 6 of Mr. Moore's speech my first expedition is described.

Mr. Macon. It is a matter of so little interest that you can not remember when you did go?

Capt. Pearx. I went north the first time in 1886 for about six months.

Mr. Macon. Has most of your time since then been given to Arctic explorations or to service in the Navy Department?

Capt. Pearx. It seems to me, Mr. Chairman, that that question is answered here. I can not answer that question without looking up the statistics. statistics.

The answer to that question was also given in Congressman MOORE's speech, but it was a matter Mr. Peary did not wish to bring to the attention of the committee; therefore he tried to persuade the chairman to overlook the question.

Mr. Macon. If you can not answer the question, I do not want an

Mr. Macon. If you can not answer the question.

Mr. Dawson. These facts are matters of record in the Navy, and the Secretary of the Navy has submitted them to this committee.

Mr. Macon. If the gentleman will excuse me, yesterday the captain stated to the committee that this matter had been his life work; that his soul practically was wrapped in it to the extent that he was not willing to share any part of the glory of it with anybody on the face of the earth. Now, if he has made a life work of it, if he has been so wrapped in what he was doing, then he ought to have felt enough interest to be able to give us the information of his own knowledge.

Capt. Peary. I am unable to answer that question in detail without information or the written record.

Mr. Roberts. There [handing paper to Capt. Peary] is the whole record from the Navy Department, if you care to look it over in order to answer the question.

Capt. Peary (after examining letter). I will say that the letter here states that I performed active duty for 12 years and 9 days. That would be up to the date of this letter, February 11, 1910. I have been unemployed for 16 years 1 month and 16 days. Of this unemployed duty approximately 13 years and 5 months have been spent on leave while unattached, and the balance on waiting orders or leave on duty.

Mr. Macon. Were you receiving your salary all the time?

Capt. Peary. Not all the time; no sir. It is stated here: "For the ix months from May 5, 1896, to November 4, 1896 (with the exception of two days of duty, October 25 and October 26)," according to this report, I was on "leave without pay."

Mr. Macon. For six months during 16 years you did not receive pay?

Capt. Peary. That is the statement. That would be essentially in

pay?
Capt. PEARY. That is the statement. That would be essentially in accordance with my recollection.

Mr. Macon. Can you state how much you received at the hands of the Government in compensation for your services?

Capt. Pearr, I can not offhand. I do not know that I could state it myself, anyway.

Why, then, did he not again refer to Congressman Moore's speech? The information may be found on page 23 of that speech, but apparently Peary did not wish to state to the committee that he had been paid \$38,148.36 by the Government while on leave of absence.

while on leave of absence.

Mr. Macon. Tell us what a sounding is?
Capt. Pearx. A sounding is a measurement of the depth of water, I would say. I would give that as my definition.
Mr. Macon. I will ask you, then, to tell us how many and the character of the soundings that were made on your trip?
Capt. Peary. The soundings as made on the trip were one of 98 fathoms at the edge of the glacial fringe north of Cape Columbia; one of 96 fathoms, made by D. B. McMillan at 83° 25′; one of 110 fathoms, made by Bartlett at 83° 53′, the camp where we were held up by the lead; one of 825 fathoms, made by Marvin at 84° 39′; one of 380 fathoms, made by Marvin at 84° 39′; one of 580 fathoms, made by Marvin at 85° 23′. All of those soundings reached bottom. One of 700 fathoms, made by Marvin at 85° 33′, no bottom; one of 1,260 fathoms, made by Bartlett at 87° 15′, no bottom; and one of 1,500 fathoms, 89° 55′, made by myself, no bottom.

If it is permissible, this (referring to a profile of soundings) can be entered on the record in connection with my statement.

Mr. Butler. Yes, sir.

. The profile of soundings is printed on page 89 of the hearing; also on page 338 of Peary's book, "The North Pole."

Also on page 338 of Peary's book, "The North Pole."

Mr. Macon. Tell us how much wire you started with?
Capt. Peary. I had two reels of wire of 1,000 fathoms each.
Mr. Macon. What was the size of the wire?
Capt. Peary. I can not answer precisely. I can obtain the information absolutely. My impression is that the diameter was .028 inch.
Mr. Macon. Twenty-eight one-thousandths of an inch?
Capt. Peary. That is my impression.
Mr. Macon. That would be pretty diminutive.
Capt. Peary. It is not large wire. I can submit a sample of the wire to the committee if it is desired. I find that my first answer, .028 inch, was correct.
Mr. Macon. Is it possible that a wire hardly visible to the human eye across a 10-foot space could stand going down in the water 9,000 feet where it had to come in contact with ice and currents?
Capt. Peary. The wire did not necessarily come in contact with ice, and there is no certainty that there is any pronounced current there, I will state the fact that the strength of the wire is and was sufficient to take the lead down, or, rather, to hold the lead to the bottom, and that the strength of the wire was no kink in it, to bring the lead in.
Mr Macon. Is there any floating ice in the Arctic Ocean?
Capt. Peary. There is not apt to be very much floating ice at the time we were there.
Mr. Macon. Do you know whether there was any at the time you were there?
Capt. Peary. There was no ice floating against the sounding wire,
Mr. Macon. What was the weight at the end of the wire—how heavy was it?
Capt. Peary. The sounding lead made for the expedition, on a sug-

Mr. Macon. What was the weight at the end of the wire—how heavy was it?

Capt. Peary. The sounding lead made for the expedition, on a suggestion to me by Sir John Murray, was, I think, 20 pounds. That I can ascertain absolutely from Barilett. I feel quite sure those are the figures. Those leads, in the interests of lightness on the journey, were cut down by chiseling off the metal on each side to 14 pounds, according to Bartlett's statement. I did not weigh them.

Mr. Macon. What was the weight of the wire per 1,000 feet?

Capt. Peary. Twelve pounds.

Mr. Macon. The weight of the lead was about 14 pounds?

Capt. Peary. Yes, sir.

Mr. Macon. That was the weight that you had at the end of the wire when you were within 5 miles of the Pole?

Capt. Peary. Yes, ir, that is right.

Mr. Macon. I believe you stated that there was no current?

Capt. Peary. I noticed no indications of current, I had no current meter with me.

Mr. Macon. Can you explain about the facts set out in your book which indicate that there was a great crushing of ice coming together and sweeping along? The ice itself would not move without something under it.

Capt. Peary. In the Arctic Ocean the movement of the ice is more dependent on the wind than it is on the current.

nader it.

Capt. Pears. In the Arctic Ocean the movement of the ice is more dependent on the wind than it is on the current.

Mr. Macon. Is it not natural for a layman to conclude, in the absence of your having made the investigation, or anyone else I have ever heard of, that when this ice 25 feet thick was broken that it must have had something underneath it to press it up or push it in some way? That would be just as logical a conclusion, if not more so, than yours of the wind.

Capt. Pears. I can say that every man could of course have his own

Capt. PEARY. I can say that every man could, of course, have his own opinion. In regard to the facts of the case, my personal impression, as the result of my work north, is that the wind is a very powerful factor in the movement of the ice.

As stated in The North Pole, George Borup was in charge of one of Penry's supporting parties. Leaving Cape Columbia on February 28, he accompanied Bartlett for three marches, camping about 25 miles from land. There he left his loads, and, following Peary's orders, returned to Cape Columbia for further supplies, with which he was to make forced marches to overtake the main division. He reached Cape Columbia late on March 3, and the next day was joined by Marvin, whom Peary had sent back for fresh supplies of oil and alcohol. On pages

had sent back for fresh supplies of oil and alcohol. On pages 160-161 of A Tenderfoot with Peary, Borup says:

March 5 we set out. The sea ice had begun drifting east, Marvin landing on the glacial fringe 4 or 5 miles east of where I had, so we followed his trail to the end of the land ice. There stretched a lead, 400 yards wide, in either direction, as far as the eye could see. The ice on the far side of the lead was drifting steadily eastward, although there was no wind.

Compare the statements of the two men:

In the Arctic Ocean the movement of the ice is more dependent lead was drifting steadily east-on the wind than it is on the ward, although there was no wind.

Comment is unnecessary.

Mr. Macon. If there was current underneath, could it be possible that a small wire such as you indicate, with only about 14 pounds of weight at the end of it, would go down in a perpendicular manner 1,500 fatherms. Mr. Macon. If there was current underneath, could it be possible that a small wire such as you indicate, with only about 14 pounds of weight at the end of it, would go down in a perpendicular manner 1,500 fathoms?

Capt. Pearx. My impression would be that a wire of that dimension would be deflected but slightly by any moderate current.

Mr. Macon. You do not know that it would be almost as horizontal as it would be perpendicular?

Capt. Pearx. I should be pretty sure that under those conditions the wire would not be anywhere horizontal, nowhere near 45 degrees.

Mr. Macon. You said something about the loss of part of your wire in a sounding you made 5 miles from the pole. Did you lose all of it? Capt. Pearx. Practically all of it.

Mr. Macon. Where did it break off?
Capt. Pearx. Not far from the reel.

Mr. Macon. What depth?
Capt. Pearx. I can not say precisely; perhaps 100 or 150 feet. I do not recall, except I remember my men running out a short distance on the ice.

Mr. Macon. Might it not have been 25 or 30 feet long?
Capt. Pearx. I should say it was more than 25 feet. My impression is that the piece of wire was 100 or 150 feet in length.

Mr. Macon. Is it not possible that your wire had been carried underneath this ice 25 or 30 feet, so when you began to reel it up the edge of the ice had something to do with the breaking of the wire? That the sweeping by a current might have broken it?

Capt. Pearx. I do not think so. I doubt it. I noticed nothing of the kind.

Mr. Macon. Did you notice anything to the contrary?

Capt. Pearx. No, sir. If there had been any pronounced deflection of the wire the man taking the sounding would undoubtedly have noticed it.

Mr. Macon. You said that Mr. Marvin lost all his records of soundings and observations? They were all lost with the poor man?

Capt. Peary. Yes, sir.

Solar Observations.

Mr. Macon. How many observations.

SOLAR OBSERVATIONS.

Mr. Macon. How many observations were taken upon your journey, and what was the character of them?

Capt. Pearr. The observations taken were those by Marvin on the 22d of March, by Marvin on the 25th of March, by Bartlett on the 1st of April, and by myself on the 6th and 7th of April. The observations were solar observations. They were taken with a sextant and an artificial mercurial horizon

Mr. Macon. All latitude and no longitude observations?

Capt. Pearr. No longitude observations were attempted.

The gentleman from Massachusetts [Mr. Roberts] then requested to have placed in the record a number of letters, among them one from the Secretary of the Navy, giving the only report ever made to the Navy Department by Peary in relation to his north polar trip:

THE SECRETARY OF THE NAVY,

Washington, February 21, 1910.

MY DEAR CONGRESSMAN: In response to your request of February 23 for copies of any and all reports made by Civil Engineer Robert E. Peary, United States Navy, I have the honor to inform you that the only report in our files of this nature from Mr. Peary is the following telegram, from Battle Harbor, received September 11, 1909:

"Respectfully report my return; hoisted Navy ensign on North Pole April 6."

A report made Appret 11, 1909.

April 6."

A report made August 11, 1908, and received October 8, 1908, of Mr.
Peary's voyage from Sydney to Etah, from July 17 to August 7, 1908,
was sent to the White House from the Navy Department shortly after
it was received here.
Faithfully, yours,

G. v. L. MEYER.

To Hon. ERNEST W. ROBERTS, House of Representatives.

The following letter is of interest as showing Peary's gratitude and liberality toward the Government which had paid

SMITHSONIAN INSTITUTION,
Washington, D. C., February 25, 1910.

Dear Sir: Replying to your inquiries of February 23, addressed to the Smithsonian Institution and the National Museum, I beg to inclose a list of specimens presented to the Museum by Commander R. E. Peary in 1887, the only ones which have been received from him. I also inclose a pamphlet account of North Polar Exploration, by Commander Peary, which was published in the Smithsonian report for 1903. Commander Peary has made no direct communication to the institution regarding his Arctic explorations.

With reference to your telephone inquiry, I am informed that the Cape York meteorites brought down by Commander Peary have been purchased by a private individual and presented to the American Museum of Natural History, in New York, where they have been on exhibition for some years.

Very respectfully, yours,
(Signed)

Charles D. Walcorr Samulater House, United States Hours.

Hon. Ernest W. Roberts, United States House of Representatives, Washington, D. C. LIST OF SPECIMENS RECEIVED AS A "GIFT" FROM LIEUT. ROBERT E. PEARY, UNITED STATES NAVY, IN 1887.

One small kyak.

One small kyak.

Alcoholic specimens of shells and fishes from Greenland.

Specimens of steatite, volcanic rock, mineral dust, etc.; 2 specimens of graphite and 2 specimens of lignite from Greenland.

One specimen of rose quartz, 1 specimen of pyrite, 2 specimens of terrestrial native iron, 1 specimen of muscovite, and 1 specimen of tourmaline in quartz.

The above list, with a set of soundings and tidal observations, in all but one instance made by some one other than Peary, is the sum total which a grateful Government has to show for Peary's many years in the Arctic regions on leave of absence at full pay.

The investigation continued:

Mr. Macon. You said, I believe, that you took no longitude observa-tions at all?

Capt. Pearr. I took no observations for longitude at any time on the

Mr. Macon. Then, you do not hold to the teachings of other scientists, which is to the effect that unless you take the longitude observations you can not know exactly the direction in which you are travely

ong?

Capt. Pearx. I do not think I care to go into a discussion of general principles. I will state the facts, and also my determination of those facts, to the committee or to any experts.

When Peary was cornered, or at a loss for a reply, he invariably adopted the very "dignified" stand that he did not wish to discuss the matter.

Mr. Macon. You are an explorer, so reputed, and we want to find out whether or not you knew what you were doing. When you send a man out into the field to plow he must know something about the work or he will not do much intelligent work.

Capt. Pearx. I do not care to go into a discussion of general principles. I am willing to give the facts in regard to the work.

Naturally, he did not wish to "discuss" general principles. when practically every course followed by him on his northern trip was contrary to both "general" and "practical" princi-ples. The real "facts in regard to the work" are that Peary started out over the polar ice, traveled a certain number of days, regardless of where he was going, and then turned back, not knowing whether he had been traveling toward the North Pole or in a circle. This is doubtless one of the reasons why every member of his various expeditions was invariably sworn to secrecy about all matters connected with the expedition before Peary would allow them to start with him.

Mr. Macon. How many observations were taken by you after you left Mr. Bartlett at 87° 47′, between that and the North Pole, a distance of 123 miles—observations of any kind?

Capt. Phart. I would like to say that I took in all 13 single or 6½ double observations of the sun at two different stations, in three different directions, at four different times.

Mr. Macon. Where were they taken?

Capt. Phart. Three sets of those observations were taken at Camp Jesup, and one set was taken at a point an estimated distance of 10 miles beyond that camp.

Mr. Macon. Camp Jesup was right at the pole?

Capt. Phart. It was the pole camp.

We are still in doubt as to the exact location of this "pole camp," or "Camp Jesup." At one time Peary says, "It was about 5 miles from the pole"; at another time, "about 3 miles

from the pole"; and here he says, "It was the pole camp."

Mr. Macon. Then you took no observations, longitude or otherwise, for a distance of 133 miles after you left Bartlett at 87° 47'?

Capt. Peary. No., sir.

Notwithstanding Peary's point-blank statement that he took no observations of any kind—see page 100 of hearings—from the time Bartlett left him until he reached his polar camp, Peary's diary, on page 40 of the hearing, records:

Took a latitude sight 89° 25'.

And on page 284 of The North Pole Peary says:

I took a latitude sight, and this indicated our position to be 89° 25', or 35 miles from the pole.

Peary does not explain his definition of a "latitude sight"; apparently he considers it not at all in the nature of an observation, for he repeatedly states that he made no "observations" between 87° 47' and his polar camp.

Mr. Macon. And you managed to make a straight course to the pole without anything except conjecture or estimate to guide you? Is that it?

Capt. Peary. I leave the observations to answer that question. I am satisfied that I made that distance, was in fairly close limits, as I have done on other journeys on previous expeditions.

By Peary's permission, his negro servant, Matthew Henson, published a book entitled "A Negro Explorer at the North Pole, with Foreword Written by Robert E. Peary." Thus Peary vouched for the authenticity of the book. On pages 127-129 of this book Henson says:

The captain (Bartlett) had gone; Commander Peary and I were alone (save for the four Esquimos), the same as we had been so often in the past years. We made excellent distance without any trouble. With my proven ability in gauging distances, Commander Peary was ready to take the reckoning as I made it, and he did not resort to solar observations until we were within a hand's grasp of the pole.

Thus, at a point which Peary claims was about 133 miles distant from the pole, he sent back Capt. Bartlett, his only remaining white companion, and took with him for the remainder of the journey his colored servant, Henson, who as Peary states in his book, see page 273 of "The North Pole," was not sufficiently competent to be trusted alone on the ice, but whose imaginary "reckoning" Peary complacently accepted in lieu of

solar observations for a distance of 133 miles, when a problem of such world-wide importance and magnitude as the attainment of the North Pole was at stake. As well might the United States Weather Bureau forego all scientific observations and use only the predictions of a "goosebone prophet."

Mr. Macon. How did you come to the conclusion that you were 4 or 5 miles from the pole toward Behring Sea when you had not taken any longitude observations?

Capt. Pears. I did not know that until I had taken my observations, Mr. Macon. But you took no longitude observations?

Capt. Pears. I took no observations for longitude.

Mr. Macon. What character of observations led you to conclude you were west of the pole 4 or 5 miles?

Capt. Pears. The observations taken by me at those two places of which I speak. After I had taken the series of observations which I had noted, I felt I knew approximately my position, as indicated in the book.

had noted, I felt I knew approximately my position, as indicated in the book.

Mr. Macon. Explorers and a certain class of scientists tell us that conditions are such in the Arctic Zone that an object will have a very much larger appearance to the naked eye than here. In that latitude, I have been told, an ordinary hare would be the size of a good-sized animal and that an object that might appear small here would be about the size of a mountain, and though a great distance off, would appear close to you. What do you know about that?

Capt. Pearx. I have read such accounts. As to the so-called small animals being taken for large animals, I think I have read similar accounts, but I have had no personal experience. As regards the land-scape, as a rule, a man will underestimate elevations of the land. The other objects which you have mentioned, animals and the like. I personally have not had that experience. I do not recall any member of my party having had that experience. I do not recall any member of my party having had that experience.

Mr. Macon. A member of your party a few years ago told me personally that he observed the very condition that I have stated in the latitude in which you were traveling before you went as far up as you did.

Mr. Englebrioht. Was that Mr. Baldwin?

Mr. Macon. Yes, sir.

George Borup was the youngest member of Pearv's last ex-

George Borup was the youngest member of Peary's last expedition, an enthusiastic sportsman, and the leader of one of the "pioneer parties," turning back at 85° 23', according to Peary. After his return to civilization, with Peary's permission, he wrote a book entitled "A Tenderfoot with Peary." page 74 of this book Mr. Borup says:

The next day Marvin had a laughable experience which showed how stiff a job it was to estimate distances or the size of objects up there at that season. He and his huskies sighted what they thought was a deer half way up the mountain. He took his rifle and started after the animal, but when he got about halfway the "deer" flew away. It was a ptarmigan.

As an Arctic ptarmigan is a small bird, weighing about 1 pound, on account of its white winter plumage sometimes called the "white partridge of the Arctic," one can readily understand that the atmosphere of the Polar regions possesses great magnifying powers, notwithstanding the fact that Peary said he " had no personal experience."

Borup's narrative continues:

Three years before, Marvin said, while hunting during one of the winter moons, they came on what they thought was a herd of musk oxen. After quite a chase, they tumbled to the fact that their oxen

Borup also says—page 122—that an Arctic hare weighs 10 pounds. Mr. Peary, in Northward Over the Great Ice, tells us of shooting a musk ox which weighed 1,200 pounds. The difference between an animal weighing 10 pounds and one weighing 1,200 pounds is surely great enough to be noticeable under ordinary atmospheric conditions.

Again, on page 37, in a description of Arctic duck hunting. Borup says:

At first none of us could hit the ducks at all. They'd look to be within 30 yards, and we'd let drive and never disturb a feather, After having burnt up a whole lot of ammunition, we finally realized that while thinking the ducks were maybe 40 yards off, as a matter of fact they were twice as far away; so that at last we waited and wouldn't shoot until the ducks seemed to be almost sitting on the ends of our guns, then let her rip, and there'd be a dead one about 40 yards off.

Therefore, although Peary told the committee that he "had personally not had that experience" and did not recall any member of his party having had that experience, three members of his expeditions—Baldwin, Marvin, and Borup—had found conditions as Congressman Macon described them at the hearing.

Peary's lack of memory was again in evidence when he stated to the committee that he "personally had not had that experi-ence," for in Volume I of Northward Over the Great Ice, page 201, he says:

The light about us was of such a character that it was impossible to form any judgment of the size or distance of objects. A single snow block could be taken for a snow house, and our igloo itself at a little distance loomed up like an iceberg.

Congressman Macon continued:

Mr. Macon. Did you submit any observations of temperature for air, ater, barometer readings, wind velocity, and the direction of the

Capt. Pearly. Meteorological reports were submitted to the United States Coast and Geodetic Survey. I took no water temperatures on the sledge journey. I think some were taken on the upward voyage and the return voyage.

Peary was "commander" of the expedition, yet he was only able to "think" as to the character of the observations that were made on the upward and return voyages. He was able to state positively, however, that he took no water temperatures on the sledge journey.

I have now in my possession photographic copies of the "reports" that were submitted to the Coast and Geodetic Survey by Peary. These "reports" comprise 21 "volumes" of tidal observations which were taken at the times and places which I shall name:

Duplicate I	Cape Sheridan Cape M. Jesup	Nov. 12-Nov. 28, 1908 May 13-May 23, 1909	Barnes. Not given. Borup and Mac-	
1	Cape Bryant	Jan. 16-Jan. 29, 1909 Jan. 30-Feb. 13, 1909	millan. Not given. Do.	

It will be noted that all of the above observations were taken either before Peary left the ship on his polar trip, or after the men who made the observations had returned to the ship, with the exception of those taken by Barnes and Weisman, who made no observations away from the ship (except two by Barnes in company with Macmillan at Cape Columbia). Neither Barnes nor Weisman accompanied Peary or any of the supporting parties on the polar trip. It may also be noted from the places of observation that all of the observations were made on land, none being taken away from the coast. Therefore it is plain that these tidal observations prove nothing relative to Peary's attainment of the North Pole.

It is worthy of special note that of these tidal observations (on which Peary lays great stress as forming one of the important "scientific results" of his expedition), those taken at Cape Morris Jesup covered a period of 10 days and those taken at Fort Conger covered a period of 15 days only. In order to be of scientific value tidal observations should cover at least one lunar month. In a book called "Arctic Tides," written by Dr. Rollin A. Harris and published by the Coast and Geodetic Suryey, page 9, Dr. Harris says:

Observations at Cape Morris Jesup were commenced on May 13 and continued to May 23, 1909. The record consisted of hourly staff readings, generally supplemented by more frequent readings. The total loss of hourly readings amounts to five hours.

Out of these observations, therefore, which covered only onethird of the period necessary for a satisfactory scientific record, we must deduct another period of five hours for hourly readings skipped by the observers. As Borup says on page 242 of his

I had managed to oversleep a couple in the middle of things.

The observations at Fort Conger covered only one-half the period necessary for a scientific record.

Relative to the observation of water temperatures, Peary

I think some were taken on the upward voyage (from New York to Cape Sheridan) and the return voyage—

but if he "thought" correctly—which is doubtful—the results of these observations of water temperatures were not submitted to the Coast and Geodetic Survey.

Mr. Macon. What distance is the magnetic pole estimated to be from the real pole?

Capt. Prank. That I can not say offhand, but I will say approximately 1,500 or 1,600 miles.

Mr. Dawson. It is just 20° on that map [indicating].

Capt. Prank. Specifically or precisely the magnetic pole is located somewhere here [indicating on map], near king Williams Land, just a little north of the mainland of the American Continent. There is a gentleman here who can probably give you the precise point.

Mr. Macon. We are examining you here now and not examining the other gentleman.

Strange that an Arctic explorer who said he had been to the North Pole could not tell how many miles distant the magnetic pole is from the geographic North Pole!

Capt. Pearx. I was simply referring to a gentleman whose memory might be better than mine; 20°, that would be 1,200 geographical miles or 1,400 statute miles, approximately, as taken from that map.

Mr. Macon. At an angle of about how many degrees would that be from the North Pole? Say from a given point, like you had up there at Bartlett's camp.

Capt. Pearx. I do not know that I understand the question.

Mr. Macon. At what angle, how many degrees—we speak of a thing being at an angle of about 45°, such as a leaning tree, or something of that kind leaning at an angle of about 45°. Now, what angle would the magnetic pole be from the North Pole from the point that Bartlett turned back?

Capt. Pearx. That I could not say without measuring it from the map.

Here another interruption occurred, and much time was consumed in an endeavor to distract Congressman Macon from the point he desired to make—that is, that after Bartlett left him Peary traveled more in the direction of the magnetic pole than in the direction of the North Pole.

Mr. Englebright. The map speaks for itself. I submit there is a map that shows the magnetic pole and shows the course Capt. Peary took.

Mr. Macon. I submit, Mr. Chairman, that I am examining Capt.

took.

Mr. Macon. I submit, Mr. Chairman, that I am examining Capt.
Peary.

Mr. Englebright. Then examine him on the map.

Mr. Macon. He is at liberty to use any map that he sees fit, but when he is using the gentleman from California he is not using a map.

Mr. Bates. I do not know that any one gentleman has a day to examine him. I do not know that any one gentleman of the committee has a mortgage on a whole day of this committee's time to examine this gentleman.

Mr. Macon. Let us have an understanding. I want the gentleman from Pennsylvania to understand that he can not influence me.

Mr. Bates. The gentleman does not try to influence the gentleman from Arkansas.

Mr. Macon. I want to say right here, Mr. Chairman, that we had it distinctly understood when this proceeding opened that each member of the committee should have an opportunity of making such examination of Capt. Peary as he saw fit.

Mr. Bates. But not the exclusive right.

Mr. Macon. I have waited until the last and allowed every other member of this committee to examine before me.

Mr. Bates. Oh, no; there are several other questions to be asked.

Mr. Macon. I say I have waited until every other member of the committee has examined him; my name was last on the subcommittee, and I waited until the last before proceeding with my examination.

Mr. Bates. We may not be through when the gentleman from Arkansas is through.

Mr. Macon, Then you have the right to take up the examination and go on.

Mr. Bates. I am very glad you accord me that right.

go on.

Mr. Bates. I am very glad you accord me that right,
Mr. Macon. I will not question it.

The above is a sample of the manner in which one of the members of the subcommittee, who really endeavored to conduct an honest investigation of Peary's claims, was blocked in his efforts, not once but many times.

his efforts, not once but many times.

Mr. Macon. When Messrs. Gannett and Tittmann were before that committee last spring they stated that they could not have relied upon the report of the observations taken by you for ascertaining where you were or about discovering the pole. Do you know whether or not their calculations about that are correct?

Capt. Pears. I know nothing about it. I do not know what their statement was—what they may have said.

Mr. Macon. They stated they examined your instruments at the station; presumably the station here in Washington. A cursory examination of your instruments here would not be evidence of their being used at all, would it?

Capt. Pears. That I could not say, sir.

Mr. Macon. Would recomputing the records of your observations be satisfactory evidence of where you were when they were taken—recomputed here in Washington?

Capt. Pears (sparring for time). I do not know that I understand that question.

Capt. Prant (sparring for time). I do not know that a understand that question.

Mr. Macon. I ask you if a recomputing of your records—the records of your observations—would be a satisfactory evidence?

Capt. Prant. I should say that it would be generally so considered. Mr. Macon. Then, when they could not rely upon them, you appear to differ from them—Messrs. Gannett and Tittmann—who passed upon your record. Your narrative could have been written here in Washington or at Bartlett's camp. That could not be considered competent or satisfactory evidence by geographers or scientists, could it?

Here the investigation was again interrupted, as always

Here the investigation was again interrupted, as always when a critical point for Mr. Peary was reached.

when a critical point for Mr. Peary was reached.

Mr. Bates. This witness is not here to be lectured,
Mr. Macon. I am not lecturing him.
Mr. Bates. You were giving an opinion.
Mr. Macon. If I am offensive to the gentleman from Pennsylvania—
Mr. Bates. No; you are not; but you are taking up valuable time.
Mr. Macon. My time is as valuable to me as it is to you, and I insist I am taking up time trying to ascertain the truth, not what penmican is made of. You did not complain when they were asking about immaterial things this morning.

Mr. Bates. I objected because the gentleman's remarks were, in a sense, a severe stricture on the witness, who came before us at our request.

request.

Mr. Macon. I am asking him questions. He can decline to answer any one of them if he wants to.

Mr. Butler. Ask a question, Mr. Macon. We invited Capt. Peary to come, and I am sure he will answer anything he feels he can answer.

answer.

Mr. Macon. Mr. Roberts asked you something yesterday about a pamphlet you had published which is sort of a cursory history of your

route. Did that contain the report that you filed with all the facts contained in the report that you filed with the Geodetic or Geographic Society when you came back?

Capt. PEARY. It did not contain the tidal or meteorological observations or all of the soundings.

Mr. MACON. Does not your book contain all of those?

Capt. PEARY. It does not. It contains simply a summary of them.

Mr. MacON. I believe Mr. Roerers asked you if, in submitting report to the Government, you made the request that, if it was permissible, that they would not make public your profile and set of soundings? soundings

Capt. PEARY. That is covered, I think, in the hearings of yesterday formally and completely.

Mr. Macon. You said, I believe, that you would file with the committee your reasons for asking secrecy on that occasion. Have you done so? done so?
Capt. PEARY. I have that part of the report yet to insert.

Then, why did he say that "that is covered in the hearings of yesterday, formally and completely "?

Mr. Macox. The reasons given the committee by the gentleman who appeared before it in explanation of your refusal to submit your proofs a year ago were that you were under contract with some magazines, and that it would interfere with the financial end of your discovery if you were to disclose your findings of facts to the committee. Did you afterwards have to change that contract with the magazines; the monetary part of it?

Another interruption occurred:

Mr. Bates, I object to that question. I think the committee will

Mr. Macon. The gentleman can refuse to answer if he wants to.

Mr. Macon. The gentleman can refuse to answer if he wants to.

Mr. Bates. The personal and financial arrangements of Capt. Peary have nothing to do with finding the pole.

Mr. Macon. The gentleman can refuse to answer if he wants to. I am not going to fall out with him for refusing to answer any question.

Congressman Macon was apparently trying to emphasize the fact that Peary had asked the Government to keep secret a re-port made by him of "work" done while he was absent from duty on Government pay. At the time this request for secrecy was made, Peary and his friends were endeavoring to persuade the Government to grant him retirement with retired pay of \$6,000 per year, several years before such retirement—according to age limit—was due. Was Peary afraid that if his "report" was made public before this retirement was granted, the people of the United States would rebel at a request to pay this amount annually for such meager results as were shown in that report? But, as usual, Congressman Macon was interrupted:

Mr. Macon, Did you find any decided atmospheric changes (at the pole)?

Capt. Pearr, I did not.

Mr. Macon. Did the needle answer to the primary or the secondary magnetic pole?

Capt. Pearr. The direction of the compass was fairly constant there.

This evasive reply shows Peary's ignorance of conditions at the pole. First, it was not an answer to Congressman Macon's question-merely an evasion. Second, Peary could not know whether or not the direction of his needle was "fairly constant," because he states repeatedly that he took no observations for longitude or for compass variation; therefore he could not know how much or in what directions his needle varied from true north. Third, he had already stated that the needle points near the magnetic pole, when in reality, in some places, it points at right angles to the magnetic pole, and varies to practically all points of the compass.

Again the investigation was interrupted:

Mr. Butler. Will you tell me, please, what that means? Mr. Macon. I asked him whether the needle answered to the primary

Mr. Macon. I asked him whether the needle answered to the primary or secondary magnetic pole.

Mr. Butler. What are they?

Mr. Macon. Oh, they are known in science.

Mr. Bayes. Where did you find that question?

Mr. Macon. They are known in science.

Mr. Bayes. But I am not a science.

Mr. Dawson. I would be glad if the gentleman from Arkansas would explain.

Mr. Dawson. I would be glad if the gentleman from Arkansas would explain.

Mr. Macon. The gentleman from Arkansas is going to ask questions. and he is not going to ask any foolish ones, either.

Mr. Englebright. Is he trying to test the captain's knowledge on science by asking such questions—ridiculous questions?

Mr. Macon. I have asked no ridiculous questions.

Mr. Englebright. Did you ever hear of a primary or secondary magnetic pole?

Mr. Macon. Yes; I have.

Mr. Englebright. Where—in Arkansas?

Mr. Macon. Where I have heard of everything eise? No; in Washington. And I want to say to the gentleman from California, if he intends it as a slur in regard to Arkansas, that it is unworthy of him.

Mr. Englebright. I withdraw the remark.

Mr. Macon. I want it understood that Arkansas is the equal of California in everything in the world, except a little gold in the earth and a few hungry fellows for an exposition.

Mr. Butler. I will ask the members of the subcommittee not to further interrupt you.

ther interrupt you.

Again and again, as in the instance above cited, when Peary was asked a question to which he could not or did not wish to reply, interruptions were made, and Peary was able to avoid an answer. Congressman Macon asked no questions that were not pertinent to the subject under discussion.

Mr. Macon. Each day's travel was estimated, not measured?

Mr. Macon. Each day's travel was estimated, not measured?
Capt. Pearr. It was.
Mr. Macon. So you would just figure the matter out along the line
of your judgment. Now, you made the 133 miles in five marches?
Capt. Pearr. We made the distance from the camp where Bartlett
left me to Camp Jesup in five marches.
Mr. Macon. That was 133 miles; it would be 26% miles per day.
Can you call to mind the travels of any explorer that discloses such a
record as that—five days' marching with an average of 26% miles, over
an unknown sea of ice?
Capt. Pearr. I can not give the figures right here. If it is material
in that connection, it can be inserted in the record of the committee,
if it desires it. Beginning on page 29 and ending on page 30 of
Mr. Moore's speech of last winter, comparative distances are to be
found which I think have not as yet gone into the record.

Dearre continually refers to Congressman Moore's speech, but

Peary continually refers to Congressman Moore's speech, but he is afraid to quote from that speech, lest he contradict something he himself had said.

Mr. Bates. What date was that speech, so it can be identified as being part of the Congressional Record?
Capt. Peart. March 22, 1910.
Mr. Bates. Who furnished him with the data, do you know?
Capt. Peart. It is stated that Mr. Gilbert H. Grosvenor, director and editor of the National Geographical Society, furnished it.

Remarkable, indeed, that the editor of the National Geographic Society, and a Member of Congress, should know more about a trip that Peary made than Peary himself knew, and were able to produce data which Peary himself could not furnish. Is not this fact conclusive proof that Peary's story was a manufactured fiction and not a bona fide record of actual events?

Mr. BUTLER. What is the average dog travel? Does Mr. MOORE say

Congressman Moore was never north of the Arctic Circle, yet he is regarded as an authority on the speed of Eskimo dogs.

Capt. Peary. There was no average given.

Here followed two pages of interruptions and discussions as to the speed of dogs in Alaska and farther north, and Peary was again saved from the necessity of a direct answer.

Mr. Macon. I would like to have that in the record, Capt. Peary, so as to make the record complete—what your average travel was while you had your supporting parties with you, while your dogs were fresher than they were when you left Bartlett, 87° 40'.

Capt. Peary. I think that question was answered, what the average speed was per march. The stenographer, I think, figured that out.

Evidently Peary disliked to state that his speed was much greater after his supporting parties left him, even though he had his own trail to "pioneer," than the speed made while he had the various supporting parties to break the trail with fresher

Mr. Macon. How long was it after Capt. Bartlett reached his camp the return trip that you arrived there? Capt. Pragr. I found him on the ship. Mr. Macon. How long had he arrived there before you did?

Capt. PEARY. Four days.

When Peary returned to the ship Macmillan and Borup were at Cape Morris K. Jesup, on the north Greenland coast, where they made tidal observations. Peary immediately sent an Eskimo to Cape Jesup with a note of instructions for Macmillan and Borup. In "A Tenderfoot with Peary," pages 231-232, Borup gives a copy of this note, signed by Peary, which begins:

STEAMSHIP " ROOSEVELT, April 28, 1909.

MY DEAR MACMILLAN: Arrived on board yesterday. Northern trip entirely satisfactory.

The letter was a long one, but the above quotation shows the date of Peary's arrival at the ship to have been on April 27. Page 51 of the hearing shows extract from Bartlett's diary, as follows:

April 20: Left Columbia, reaching the ship on the 24th.

Therefore, instead of arriving at the ship four days ahead of Peary, Capt. Bartlett was only three days ahead of him, Peary also omitted to mention that, as he himself arrived at Cape Columbia on April 23 and Bartlett did not reach the ship until April 24, if Peary had not spent 30 hours at the place he called the pole and two days at Cape Columbia, he would actually have reached the ship before Bartlett arrived there.

have reached the ship before Bartlett arrived there.

Mr. Macon. On the 7th of April, while you were making this trip, you made a sounding of 1,500 fathoms?

Capt. Peary. Yes.

Mr. Macon. About how long did it take you to make that sounding? Capt. Peary. It did not take us very long. In making a sounding the wire runs out very rapidly.

Mr. Macon. You did not estimate the time?

Capt. Peary. I did not estimate the time?

Mr. Macon. How long before that had the wire been used in making the soundings—the last sounding preceding that—how long a time had intervened.

Capt. Peary. Bartlett made a sounding on the 25th or 26th of March; or possibly the 27th; somewhere along there.

As a matter of fact, according to Peary's book, the last previous sounding was made by Bartlett on March 29. Another instance of Peary's poor memory.

Mr Macon. What was the condition of the weather while you were at the pole?
Capt. Psany. As stated in my book.
Mr. Macon. I believe you stated in the book that during the 30 hours you stayed at the pole it was clear and calm, cloudless and flawless. Let me have that book, please.

Here ensued more interruptions; but in this instance the gentleman from Arkansas, Mr. Macon, refused to be sidetracked.

gentleman from Arkansas, Mr. Macon, refused to be sidetracked.

Mr. Macon, In response to that—"clear and calm, cloudless and
flawless"—I desire to submit a few pictures here in your book, Captain. The flags taken up there, to be found on pages 284 and 290,
appear to be waving in a gale. These two appear to be waving in a
gale, blowing like that [indicating]. You would not call that breezeless,
would you?

Capt. Prark, Does it not state that there was sufficient breeze from
the west, or from the left, at times to straighten out the flag?

Mr. Macon. These two appear to be in a gale. The wind is so strong
that it stretches them right out. That would not be in an ordinary
breeze, and I was simply submitting these photographs in connection
with your statement in the book about its being clear and calm that day.
Now, Captain, at the risk of incurring the displeasure of some of the
members of the committee, I want to ask you again why it was that
when you concluded to find the pole that you rid yourself of every white
man who had any knowledge, any astronomical knowledge and experience in the northern regions, and sent them back and took only one
negro and four Eskimos with you to testify to your work. I think you
answered that yesterday.

Capt. Prary. I think I answered that.

Mr. Butlem. Do you wish to answer that further?
Capt. Prary. No, sir; the answer is as I have given it—that it would
have been inevitable under the circumstances.

Mr. Excleration. I submit that is a question for the public to pass
upon.

upon.

The public never saw this published hearing. It was practically suppressed. The Senate library has not a copy of it; the members of the congressional committee have none; Senators and Congressmen have tried in vain to procure copies. was this hearing suppressed?

Mr. Macon (p. 120 of hearing). Now, the gentlemen who were before us last spring said that they were of a subcommittee that examined your proofs, and they admitted that they had made up their minds about your having discovered the pole before they saw any of them at all. Therefore, they could not have been an impartial jury to sit upon your case. Captain, have your proofs been submitted to any geographical or scientific society to be passed upon except this National Geographic Society?

graphical or scientific society to be passed upon except this National Geographic Society?

Capt. PBARY. Yes.

Mr. Macon. What society? Have you any evidence of what society has passed upon them?

Capt. PEARY. This is a copy of the letter received by me from Maj. Leonard Darwin, president of the Royal Geographical Society of London findicating]. This is a copy of a letter received by me from Mr. Douglas W. Freshfield, member of the council of the Royal Geographical Society.

Mr. Macon. Did this geographical society have a full copy of the records that you have furnished to this committee?

Capt. PEARY. They did not have all the material that is here to-day.

Mr. Macon. What did they have?

Capt. PEARY. They had copies of all of my observations, and they had copies of a considerable portion of my journal.

Peary himself states that only copies were submitted to the

Peary himself states that only copies were submitted to the Royal Geographical Society. Furthermore, the society as a society never declared that Peary discovered the pole; it was only the presentation speaker who took it upon himself to make that assertion. The medal presented to Peary by the Royal Geographical Society bears the inscription: "For Arctic Exploration, 1886-1909," and says never a word about the North Pole or its discovery. The medal was given as a "sop to Cerberus," because Peary agreed to withdraw from the South Polar race and leave the field clear to Capt. Scott, so far as American competition was concerned. The meeting at which the medal of the Royal Geographical Society was voted to Peary was a secret meeting, and the printed matter on the subject is not for general distribution. Note the following letter signed by Sir Martin Conway, an explorer of note, who was knighted in recognition of his geographic feats:

ALLINGTON CASTLE,

Maidstone, February 25, 1914.

DEAR SIR: I wish I could send you anything you need, but the report you ask for (report of action of Royal Geographical Society on Peary's claims) is confidential, and I have not even seen it. I was off the council (of the Royal Geographical Society) when the matter arose and shall not be on again till next year at earliest. I am writing to the secretary to send you the presentation speech.

Yours, very truly,

Mr. Macon, But a scientification.

MRTIN CONWAY.

Mr. Macon. But a scientific society right here, of which you are a member, I understand, said that your observations were not any good without your narrative?

Mr. Bates. I object to that.

Nevertheless the statement remained in print. It may be relevant to state that on page 121 of the hearing is a copy of the letter referred to by Peary, written by Douglas W. Freshfield, member of the Royal Geographical Society's council, in which he says that the scientific instructor of the society (whose verdict was not accepted by the majority) says also that he "took the same view as that taken by the committee of the United States Geographic Society," This letter shows, by the use of the words

"United States Geographical Society," that the National Geographic Society is looked upon in England as really "national." This erroneous idea is shared by many persons in this country. In this connection the following letter from our Department of State is of interest:

Department of State,
Washington, December 5, 1913.

Sir: In response to your letter of December 2 I am directed by the Secretary of State to advise you that the National Geographic Society of this city is not a bureau of this Government.

I am, sir, your obedient servant,
J. A. Tonner, Chief of Bureau.

The above letter should prove to the most enthusiastic member—that is, subscriber to the National Geographic Magazine-that this society is "national" in name only.

In this connection I will also quote from a resolution (H. Res. 709) introduced in the House of Representatives on January 21,

1915, by Hon. F. O. Smith of Maryland:

Whereas the National Geographic Society is not national (in the sense that it is not a bureau of nor connected with the National Government in any capacity whatsoever), is not geographic, is not scientific, and is not a society, but is simply and solely a private publishing house, no special privileges should be granted to it.

Yet this is the "society" that posed before the world as a geographic, scientific, national arbiter of Peary's claim to the discovery of the North Pole!

Mr. Macon (page 122). I believe you said, Captain, that the Eskimos that you selected to go with you to the pole would walk through hell with you if you said so. (Page 44 of "The North Pole"). I believe that language is in your book, and that they and Henson, the colored man you took with you for witnesses, were as pliant to your will as the fingers of your right hand. (Pages 270-271 of "The North Pole"). You made that statement, did you not?

Capt. Pearx. If that is in my book I will stand by it.

Peary was really doubtful as to whether or not he had actually made those statements in his book.

Mr. Macox. Do you really think those men would walk through hell for you, or was that just a figure of speech?

Mr. Bates. What has that to do with whether Peary reached the

Mr. Bates. What has that to do with it when you take into account all of the circumstances in connection with this question.

Capt. Peary. I think those men would go with me out on the ice just as far as I went, even if they felt pretty well satisfied in their own minds that their ever coming back to land was a doubtful question. That is my opinion.

Mr. Butler. Of course, the statement presupposes that there is a hell.

Mr. Butlen. Of course, and hell.

Mr. Macon. And it presupposes that they would say whatever the captain told them to say and abide by it.

Mr. Bates. I think that last remark better be struck out.

Mr. Macon. I do not think the committee has anything to do with it.

Mr. Bates. He interjected a remark.

Upon direction of the chairman the stenographer read as fol-

Mr. Macon. And it presupposes that they would say whatever the captain told them to say and abide by it.

Capt. Phart. I will ask, Mr. Chairman, that that be struck out of the record, if permissible.

Mr. Macon. No; I do not want to withdraw it.

Mr. Englebright (p. 125). You stated you made no observations for longitude?

Capt. Phart. I did not make any observation for longitude.

Mr. Englebright. When you left New York you had your chromometers compared?

Capt. Phart. They were compared, yes; the ship's chromometers.

Mr. Englebright. They were not compared again until after your return?

Capt. Phart. No; not so far as I know.

return?
Capt. Pearx. No; not so far as I know.
Mr. Englebright. Did you have a record of those comparisons of chronometers after you came back?
Capt. Pearx. I did not.
Mr. Englebright. As to any astronomical observations made up north, to be complete the chronometer comparisons would be a part of the essential thing in making careful calculations?
Capt. Pearx. They would be a part of the final discussion and reduction of those observations.
Mr. Englebright. Have you got the chronometer comparisons new?
Capt. Pearx. I have not.
Mr. Englebright. Will state that they are in the record of the coast-survey memorandum.

The gentleman from Massachusetts [Mr. Roberts] then instithe gentleman from Massachusetts [Mr. Roberts] then mistruted a comparison between Peary's book, The North Pole—which Peary had placed in evidence—and the "pamphlet" entitled, "How Peary Reached the North Pole," by Peary, showing that various discrepancies occurred:

ing that various discrepancies occurred:

Mr. Roberts (p. 127). There is just one other point that has come up that I would like to ask you a question or so about. In reading your book giving details of the trip from Camp Bartlett, which, as I understand, is the place where Bartlett left and you started north, you mentioned in the book the distances traveled. I find the first distance mentioned is 30 or 25 miles, and a statement that the Eskimos estimated that you had traveled 35 miles that first march.

Capt. Pearr. They thought the march was equivalent to a distance near the ship, which was in reality about 35 miles. I do not mean to say that the Eskimos said to me: "We think we have traveled 35 miles," but they said: "We think our march to-day has been equivalent to the march from the Roosevelt to Porter Bay."

Mr. Roberts. But you said that you think that you traveled 30 miles; but in order to be conservative, you call it 25 miles. I am not giving the exact language of the book, but that was the summary. The next mention in the narrative of the distance traveled is 20 miles. Then,

the next, as I find, is a distance of 25 miles from the pole. You stopped at some camp 35 miles from the pole. Then the final distance mentioned is 30 miles. So in the narrative you give the distances traveled on three marches, and two marches you do not give any distance. Capt. Peart. It is not stated there?

Mr. Roberts. No.
Capt. Peart. I do not recall.
Mr. Roberts. Now, in this pamphlet. I find that on pages 18 and 19 that you estimate your first march 10 hours, 25 miles; the second, 20 miles in 10 hours, 25 miles in 10 hours, 25 miles; the fourth, without mentioning the hours, 25 miles or more; and the last 12 hours that you made 30 miles. I understood you also to say that Camp Bartlett was a distance of 133 geographic miles from the pole.
Capt. Peart. From the pole; yes.
Mr. Roberts. Now, let me ask you, how could you give the distances traveled for each of those five days in this pamphlet and in the book published later you did not give it?
Capt. Peart. I should say it was simply a matter of inadvertent omission. I think the figures appear in my journal.
Mr. Roberts. Then, in adding up the distances traveled as mentioned in the pamphlet, as distinguished from the book, I find that these five marches—two of them 20 miles each, two 25 miles, and one 30—total 120 miles.
Capt. Peart. One of those 20 miles is a typographical error in that

120 miles.

Capt. Pearly. One of those 20 miles is a typographical error in that pamphlet. The third is given 20 in the pamphlet, and that is a typographical error or an error of transmission.

Mr. ROBERTS. And that should be what?
Capt. Pearly. Twenty-five miles.

Mr. ROBERTS. Then, calling that 25 miles, that puts 125 miles from Camp Bartlett, or 8 miles south of the pole, if I may use that term, "south," 8 miles away from the pole.

Capt. Pearly. Yes.

Mr. ROBERTS. And yet Camp Jesup, where you stopped at the end of those marches, places you within about 3½ miles of the pole. So there was an error somewhere of 5 miles or more.

To this statement Peary made no reply whatever.

PEARY'S LACK OF MEMORY REGARDING HIS PHOTOGRAPHS AT THE POLE.

PEARY'S LACK OF MEMORY REGARDING HIS PHOTOGRAPHS AT THE POLE.

Mr. ROBERTS (p. 126). Captain, can you tell us about what time the photographs were made at or in the vicinity of the pole with relation to your arrival there?

Capt. Peary. Not precisely, no; the photographs were made at different times as I had opportunity.

Mr. ROBERTS, You arrived about noontime on the 6th of April?

Capt. Peary. About 10 o'clock.

Mr. ROBERTS. Were any of them made that day?

Capt. Peary. I should say that they were.

Mr. ROBERTS. You recall now that I am speaking of the four that were pointed out in the book; those are the particular ones I am talking about. I wanted to identify those particular ones. Can you give us any idea whether they were made before you had made your astronomical observations or afterwards?

Capt. Peary. I should say that some of those photographs were made in the evening. I can not say exactly when they were taken, but they were taken after 8 o'clock of the 6th; I can say that. I do not know that I can recall the precise time other than to say that they were taken after 8 o'clock, because they were taken in sunlight.

Mr. ROBERTS. They were taken after 8 o'clock of the 6th?

Capt. Peary. They were taken after 8 o'clock of the 6th?

Capt. Peary. They were taken some time between 8 p. m. of the 6th and 4 p. m. of the 7th.

Peary's lack of memory as to his movements at the alleged

Peary's lack of memory as to his movements at the alleged pole is remarkable. The nearest he could approach to an estimate of the time of taking the photographs to which Congressman Roberts referred was that "they were taken some time between 8 p. m. of the 6th and 4 p. m. of the 7th." But in his book he says (p. 289) that he was on his way to a point 10 miles beyond the pole when the sky cleared. Therefore, these four photographs purporting to have been taken at the pole (or at Camp Jesup) could not have been taken until his return to Camp Jesup at 6 a. m. of April 7. Mr. Peary distinctly says that he took all of these photographs himself; therefore Henson could not have taken them in Peary's absence. This would place the time at which they were taken between 6 a. m. and 4 p. m. of April 7

But after taking his observations at 6 a. m. on April 7, Peary says on page 290 of "The North Pole":

With a double team of dogs and a light sledge I traveled directly toward the sun, an estimated distance of 8 miles. Again I returned to the camp in time for a final and completely satisfactory series of observations on April 7 at noon.

It would therefore appear that Peary did not have any time to take photographs on the forenoon of April 7, especially as he says in his diary (p. 40 of the hearings) :

Spent day with light sledge, double team, going east and west.

Again, on page 300 of "The North Pole," he says:

In the afternoon of the 7th, after flying our flags and taking our photographs, etc.

Also, in Hampton's Magazine for August, 1910, page 177, he says (in writing of April 7):

During those last few hours I busied myself with taking photographs the locality, of the flags on their hummock of ice, and of my five companions.

The above is the only place in the Hampton story where Peary mentions taking photographs at the pole.

And still, after proving conclusively that all of his photographs in the neighborhood of the alleged pole were taken on

April 7, on page 2 of Hampton's Magazine for January, 1910, is a full-page photograph, entitled:

"First photograph at the North Pole. Stars and Stripes at the earth's apex. Photograph taken by Peary on the day of discovery, April 6, 1909."

Also, opposite page 291 of "The North Pole," is another, entitled:

"Peary's igloo at Camp Morris K. Jesup, April 6, 1909."

Any attempt to make Peary's statements of dates and occurrences coincide is certain to result in inextricable confusion. Small wonder that Peary did not trust himself to "remember" any of these occurrences at the hearing, when his statements were used as "evidence" of his attainment of the North Pole!

PEARY'S MEMORY OF THE INVESTIGATION OF THE NATIONAL GEOGRAPHIC SOCIETY.

Mr. Roberts (p. 128). I would like to go into the examination of your records made by the Geographic Society committee, if you have no objection. I would like to have from you just what was said and done,

* * You were invited by the Geographic Society to present your

records?
Capt. Pearx. I was.
Mr. Roberts. I understand you first sent them through a Mr. Nichols, a statement of some sort, sent it from Portland, or somewhere in Maine. Is that the fact?
Capt. Pearx. I sent them papers; yes.
Mr. Roberts. Do you object to telling us what those papers were?
Capt. Pearx. Well, I will suggest as to that that the members of that subcommittee who had those papers—and it is probably on the records—could give that information with absolute accuracy. I don't know that I have a memorandum of what those papers were.

As previously shown, Peary could remember just what copies of material were sent to the Royal Geographical Society of London, but in the case of the material sent to the National Geographic Society, a committee of which was to pass upon his claim, he "did not know that he had a memorandum of what those papers were."

Mr. Roberts. I would say in reply to that, that we sought those papers from that committee last spring, and they declined to give them to us on the ground that they were under a certain injunction as to secrecy and could not give them out. That is why I asked you about them.

about them.

Capt. Peary. I would prefer that that question would be taken up with the subcommittee

Mr. Roberts. I am not asking you as to the subcommittee, but whether you sent them.

Capt. Peary (continuing). As to their record, the record of what was sent to them, and what their examination was.

Mr. Roberts. Have you any record of what you sent by Mr. Nichols? Capt. PEARY. I can not say whether I have or not; I will look

Capt. Frank: I can also and see.

Mr. ROBERTS. In reply to that request of the Geographic Society, you sent them something by Mr. Nichols?

Capt. PEARY. Yes.

Mr. ROBERTS. And you do not wish to tell us now, what it was?

Capt. PEARY. I could not tell you, that I know of, now.

Mr. ROBERTS. And you did not keep any copy of it?

December 1 could not keep any copy of it?

Congressman Roberts's last question was not answered. Note how Peary evaded a reply:

Capt. Pearr. And I would prefer, as I said, that the question as to what was said to the committee and what action they took, would be put to the committee.

Mr. ROBERTS. As long as you have not copies of it, and, as I understand it, you do not want to trust your memory to tell us just what you sent, we will go on a step. Did the Geographic Society's committee act upon that information you sent by Mr. Nichols at that time?

Capt. Peary. How far they acted I can not tell you offhand.
Mr. Roberts. What did you next hear from that committee, after sending them those documents, or that information, or whatever it was that you did send?
Capt. Peary. I can not say that I heard from the committee, except a request to come on to that committee.
Mr. Roberts. How did you get that request?
Capt. Peary. I can hardly say whether by wire or letter, and I do not recall from whom the request came.

Apparently Peary feared Congressman Roberts would ask him which member of the society sent him the request to

appear.

Mr. Roberts. In response to that, you came down?

Capt. Pearr. I did.

Mr. Roberts. And what did you bring with you?

Capt. Pearr. I brought with me my instruments and the material that I have here to-day.

Mr. Roberts. Did you bring any more than you have shown the committee thus far?

Capt. Pearr. I brought all of my photographs or nearly all of them, and, I think, my negatives. I am not sure of that.

Mr. Roberts. What time did you reach the city, Mr. Peary?

Capt. Pearr. I could not say.

Mr. Roberts. What did you do when you arrived in the city? Where did you go?

Mr. Roberts. What the year and the year and the year and the year.

Capt. Peary. I do not recall what my movements were.

Mr. Roberts. Perhaps I will ask some leading questions, as the lawyers say, and suggest in my question the answer. You went to the Geographical Society's rooms some time in the forenoon?

Capt. Peary. I do not remember when I went there. The members of the board can tell.

By what deduction did Peary reason that the members of the board or committee would have a clearer recollection of the time

that Peary met them than he himself had, when the meeting was of much greater importance to him than it could possibly have been to any of the committee?

Mr. Roberts. It was that same day you got in?

Mr. Roberts. It was that same day you got in:
Capt. Pearx. Yes.
Mr. Roberts. You went to the Geographical Society's rooms?
Capt. Pearx. No; I think not. The Geographic Society's rooms?
Mr. Roberts. Yes; on Sixteenth Street.
Capt. Pearx. That I can not say.
Mr. Roberts. Well, let me ask this question: Where did you meet
the committee that had been appointed to investigate?
Capt. Pearx. The meeting of the committee was at Admiral Chester's

Capt. Pears. The meeting of the committee was at Admiral Caester's house,
Mr. Roberts. No. Where did you meet them? I am not asking the place of the meeting of the committee, but where did you meet the committee or any of its members.
Capt. Pears. There, as I recall it. The members of the committee can tell you.

Again, why should the members of the committee remember the place of meeting better than Peary? Washington is a familiar city to him, so that he had not the excuse of unknown streets and buildings.

Mr Roberts. I would like to have the best recollection you have about when you first saw any of the members of the committee, and here? Capt. Prany. I do not recall about that—about my meeting any mem-

Capt. Pearry. I do not recall about that—about my meeting any members of the committee.

Mr. Roberts. You would not want to say that you did not meet two of the members of the committee at the room of the Geographical Society, would you?

Capt. Pearr. I would not want to say I did or did not.

Mr. Roberts. Well, we will go a step farther. You did finally go to the house of Admiral Chester?

Capt. Pearr. I went to the house of Admiral Chester.

Mr. Roberts. And three members of that subcommittee were there with you?

Capt. Pearry They were: yes.

Mr. Roberts. And three members of that subcommittee were there with you?

Capt. Peary: They were; yes.
Mr. Roberts. You are not certain just how you all got there?

Capt. Peary. No.
Mr. Roberts. Can you give us anything definite as to the time of day you got there?

Capt. Peary. No; I could not.
Mr. Roberts. Before lunch or after?

Capt. Peary. No.
Mr. Roberts. Can you recall how long you were there?

Capt. Peary. Until some time in the evening.
Mr. Roberts. What did you do while there with the committee? I want to find out how this examination of the proofs was made. That is what I am trying to get at, Mr. Peary.

Capt. Peary. There, again, as the members of the committee are accessible, I would prefer to have them take that up.
Mr. Roberts. No; I want to have your recollection, if you can give it.

Capt. Peary. I recall that I was there at Admiral Chester's house

Mr. ROBERTS. No., I shall be seen at Admiral Chester's house with the members of the committee, and some others, I think, came in in addition to the members of the subcommittee; and I remember, too, that I was there until some time in the evening; I could not say how

that I was there during the late.

Mr. Roberts. Have you exhibited to the subcommittee that original memoranda that you have shown us? Did they read it?

Capt. Pears. How much the different members of the committee read.

Capt. Pears. How much the different members of the committee read I can not say.

Mr. Roberts. And you submitted the data of your astronomical observations?

Capt. Pears. That is my impression. I had it there with me, and I presume they saw portions of it, perhaps all of it.

Mr. Roberts. Did they verify any of the computations in your presence; that is, figure over again the necessary computations?

Capt. Pears. The only thing I can say is that I think Prof. Gannett was making some figures. Whether he carried out the full computation or not I can not say.

Mr. Roberts. Do you recall Admiral Chester going over the astronomical computations?

Capt. Pears. I remember, Admiral Chester having a chart showing the projection of the sun.

Mr. Roberts. How many hours would you say, as the best estimate you can give, you were there with the committee?

Capt. Pears. Well, I should say that I was there the greater portion of the day.

A brief time before this Peary could not remember whether

A brief time before this Peary could not remember whether he met the committee in the morning before lunch or in the afternoon, or approximate the time of day in any manner; now he "should say" he was with them the greater portion of the day!

Mr. Roberts. Do you recall when it was that you were there? Do you recall the month or the day?
Capt. Pears. It was some time in October, I should say.
Mr. Roberts. Did you bring with you to Admiral Chester's house your instruments?

your instruments?
Capt. Peart. No.
Mr. Roberts. Where were they?
Capt. Peart. They were at the station.
Mr. Roberts. Did the committee see those instruments?
Capt. Peart. They did.
Mr. Roberts. Where did they see them?
Capt. Peart. At the station.
Mr. Roberts. Did you go with them?
Capt. Peart. Did.
Mr. Roberts. Do you recall what time you got to the station?
Capt. Peart. I did.
Mr. Roberts. Do you recall what time you got to the station?
Capt. Peart. No. sir; I do not, except it was pretty well along in the evening.
Mr. Roberts. It was after dark?
Capt. Peart. It was after dark?
Capt. Peart. When you got to the station what did you or the committee do with regard to the instruments? How did the instruments come down?
Capt. Peart. They came in a trunk.
Mr. Roberts. After you reached the station and found the trunk.
Mr. Roberts. After you reached the station and found the trunk.

Capt. Pearly. They came in a trunk.
Mr. Roberts. After you reached the station and found the trunk,
what did you and the committee do with regard to the instruments?

Capt. Peary. I should say that we opened the trunk there in the station.

Mr. Roberts. That is, in the baggage room of the station?

Capt. Peary. Yes,

Mr. Roberts. Were the instruments all taken out?

Capt. Peary. That I could not say. Members of the committee will probably remember that better than I.

Mr. Roberts. Well, you do not have any recollection of whether they took them out and examined them?

Capt. Peary. Some were taken out, I should say; whether all were taken out I could not say.

Mr. Roberts. Was any test of those instruments made by any member of the committee to ascertain whether or not the instruments were accurate? accurate?

capt. Pearl. That I could not say. I should imagine that it would not be possible to make tests there.

Mr. Roberts. Were those instruments ever in the possession of the committee other than the inspection at the station?

Capt. Pearl. Not to my knowledge.

Mr. Roberts. Has this original memorandum you read from ever been left in the hands of the committee?

Capt. Pearl. No.

Mr. Roberts. Have they ever had copies of it?

Capt. Pearl. No.;

Mr. Roberts. When did they get copies?

Capt. Pearl. That I can not say.

Mr. Roberts. Before or after they had made a report to the society?

Capt. Pearl. That I can not say.

Mr. Roberts. Before or after they had made a report to the society?

Capt. Pearl. That I can not say.

Mr. Dawson (p. 134). In the course of your trip, when you were in this condition of perpetual day, for how many periods of 24 hours—that is, how many calendar days—were you in this perpetual daylight?

Was it all the way from Camp Columbia up and back?

Capt. Pearl. Not from Camp Columbia up and back?

Capt. Pearl. Not from Camp Columbia in no. From about the 28th of March where we were there was constant daylight from there to the pole and back.

In "The North Pole" page 245. Pearly says, on March 20:

In "The North Pole," page 245, Peary says, on March 20: "The now continuous daylight," and so forth.

On page 258 he says, on March 27:

We were now across the eighty-seventh parallel and into the region of perpetual daylight, as the sun had not set during our last march.

Thus he has two different dates, a week apart, for the season of perpetual daylight.

Mr. Roberts. Just one question or two I forgot. You spoke of submitting copies to the Royal Geographic Society of London. Did they request you to do so?

Capt. Pears. I was asked if I would bring my records with me. Mr. Roberts. On what occasion?

Capt. Pears. When I went over there; I stated that I would bring them and submit them to the society.

Mr. Roberts. Did you take the originals?

Capt. Pears. I did.

Mr. Roberts. But you submitted copies?

Capt. Pears. I submitted copies.

Mr. Roberts. That was after the award of the medal?

Capt. Pears. That was after the award of the medal?

Thus Peary states that the medal presented to him by the Royal Geographical Society, which he claims was a recognition of his discovery of the North Pole, was presented before the Royal Geographical Society had examined any of his data; that when he did allow that society to inspect any of his data he did not give them original papers, but merely copies of such of his records as he saw fit to submit to them; and the action of the Royal Geographical Society was therefore not based on the merit of Peary's records-which the society had not seenbut merely on the previous action of the National Geographic Society, which, as was plainly brought out and emphasized at the hearing, had made only the most cursory and inefficient examination of Peary's records and proofs.

Mr. Roberts: Has any other geographic or scientific body requested you to submit proofs?

Capt. Pearv. No; not that I recall.

Mr. Roberts. Have you volunteered to submit them to any other body?

Capt. Pearv. I do not recall that I have.

This ended the formal examination of Peary by the subcommittee of the Naval Committee of Congress.

Mr. Hugh C. Mitchell was called as an "expert" witness to testify in regard to Peary's astronomical observations.

TESTIMONY OF MR. HUGH C. MITCHELL.

Mr. Englebright. Have you had the data of Mr. Peary's observations near the pole?

Mr. Mitchell. Yes, sir.

Mr. Englebright. L. it an essential proposition to have the rating of the chronometers used in connection with any astronomical observations to determine position on the earth?

Mr. Mitchell. Yes.

Mr. Englebright. Then, to have made final calculations on the position attained by Mr. Peary you finally got all the necessary data?

Mr. MITCHELL I believe I had all the necessary data.

Mr. Englebright. I have a document here in writing, some remarks made by you, giving the calculations and figures, with your name and report. Did you make that [indicating]?

Mr. MITCHELL Yes.

Mr. Englebright. I offer this as part of the record.

I now quote a few extracts from Mr. Mitchell's report:

I now quote a few extracts from Mr. Mitchell's report:

I. Marvin's observations of March 22 give a latitude of 85° 48' 57" ader the assumption that his watch carried correct sixtleth meridian

Why did Mr. Mitchell "assume" that Marvin carried correct sixtieth meridian time, when Peary claims to have traveled on the meridian of Cape Columbia—the seventieth meridian—and

Marvin traveled with Peary? In Peary's letter of October 28, 1909, to the Coast and Geodetic Survey, he says:

In regard to the profile of soundings, will say that these soundings were made on the meridian of Cape Columbia.

Why, then, assume that Marvin had sixtieth meridian time instead of seventieth meridian, especially as Peary says of his own observation alleged to have been made at the pole?

Everything was in readiness for an observation at 6 p. m., Columbia meridian time. (See "The North Pole," pp. 288-289.)

Mr. Mitchell also stated in reply to a question asked by Congressman Englebright that: "It is an essential proposition to have the rating of the chronometers used in connection with any astronomical observations to determine position on the earth."

In Peary's letter to the Waltham Watch Co., dated November 20, 1909, he said:

Watches were distributed to different supporting parties, and were used for time comparisons by the parties up to the point where Marvin returned.

As further simultaneous tide observations were contemplated, Marvin took with him the five Waltham watches in the party for this purpose. (Hampton's Magazine for January, 1910.)

On pages 319 to 321 of "The North Pole," Peary says that Marvin's Eskimos "threw from the sledge everything they could find belonging to Marvin," overlooking only "a little canvas packet containing a few of his notes."

Therefore, since all of Marvin's instruments (including the five watches) and observations were lost with him, how did Mr. Mitchell obtain the chronometer rating which Marvin used in connection with his observations of March 22 and March 25, and which Mr. Mitchell stated was essential to have?

The first line of Mr. Mitchell's report says:

Marvin's observations of March 22 give a latitude of 85° 48' 57".

But on page 352 of "The North Pole" Peary gives what purports to be a facsimile reproduction of Marvin's observation of March 22, which reads:

Lat. at noon, March 22, 85-48-03.

Where, then, did Mr. Mitchell obtain what he calls "Marvin's observations of March 22 of 85° 48′ 57"?

Again, Mr. Mitchell's report reads:

II. Marvin's observations of March 25 give a latitude of 86° 37' 45", subject to the same assumption mentioned for 1.

But on page 355 of "The North Pole" is a facsimile of Marvin's observation of March 25, which shows the following figures:

86° 37' 49" (86° 38') lat. at noon, March 25, 1909.

Where did Mr. Mitchell obtain what he calls "Marvin's observations of March 25 of 86° 37′ 45′′ "?

One may say that the difference between Marvin's observa-tions as quoted by Mr. Mitchell and those shown in Peary's facsimile reproductions, is too slight to make any appreciable difference in the computations—but even so, why any differerence? What reasonable explanation can be given why the two should not be the same if they were taken from the same data? Did Mr. Peary make his facsimile reproductions from one set of papers and give Mr. Mitchell another set of "Marvin's observations" from which to make his computations? Since, as Mr. Peary stated to the committee, "all of Marvin's observations and records were lost with him"; how did Peary obtain possession of any of them?

Again, Mr. Mitchell's report continues:

III. Bartlett's observations of April 1 give a latitude of 87° 44' 49", subject to the same assumption mentioned in 1.

But on page 359 of "The North Pole" Peary gives a facsimile of Bartlett's observation of April 1, which shows the following: Lat. at noon, April 1/09, 87° 46' 49".

Why should not Bartlett's observation, as shown in facsimile by Peary and as quoted by Mr. Mitchell, agree, if taken from the same papers?

The gentleman from Massachusetts, Mr. Roberts, made a brave attempt to obtain from Mr. Mitchell a lucid explanation as to how the "estimated error" of Peary's chronometer was obtained by the computers, but was obliged to abandon the effort, which he did with the question?

Mr. Roberts. When you come right down to it, that "average rate" was a matter of guesswork, was it not?
Mr. Mitchell. Guesswork within limits.
Mr. Roberts. Well, we all guess within limits, do we not?

Superintendent of the Coast and Geodetic Survey, from which

DEPARTMENT OF COMMERCE,
UNITED STATES COAST AND GEODETIC SURVEY,
Washington, March 4, 1914.
Sir: The computations of Peary's work were made by Messrs. Hugh
C. Mitchell and Charles R. Duvall, who were employed for the purpose
by Mr. Peary. These computations were, therefore, not made officially
by the Coast and Geodetic Survey.
Respectfully,

O. H. TITTMANN, Superintendent.

Mr. Englebright. Mr. Peary filed a lot of tidal records, and so on, with the Coast Survey. The Coast Survey got the rating of those chronometers for the purpose of using them in working up those detail

But contrary to Congressman Englebright's implied opinion, Peary never submitted his nautical or astronomical observations—if he made any—to the Coast and Geodetic Survey. This is proved by a letter dated June 12, 1915, from Superintendent Jones, of the Coast and Geodetic Survey, addressed to me:

DEPARTMENT OF COMMERCE,
UNITED STATES COAST AND GEODETIC SURVEY,
Washington, June 12, 1915.

Hon. H. T. HELGESEN.

My Dear Mr. Congressman: Further referring to your letter of June 11, in which you requested the original official report made by Robert E. Peary to this bureau on his return from the north in 1909, and a photostat copy of Admiral Peary's only official report to us, I have complied with your request and am sending it (Notes on Soundings and Profile of Soundings from Cape Columbia to the Pole) herewith.

Respectfully, yours,

E. Lester Jones.

E. LESTER JONES, Superintendent.

This letter from Superintendent Jones, of the Coast and Geodetic Survey, and the photostat copy referred to, which accompanied the letter, confirms the statement made by former Superintendent Tittmann to the congressional committee that Peary's only official record consisted of a line of soundings and did not refer to astronomical observations of any kind.

The hearings closed with Mr. Mitchell's testimony. There remained, then, the "report" of the committee, or, in common

parlance, the "verdict of the jury."

When Peary's case was first brought before Congress a number of bills looking to a "reward" for his Arctic achievements were introduced in the Senate and the House, among which were the following:

House bill 19971, introduced in the House by Congressman ALLEN read:

A bill providing for the appointment of Commander Robert E. Peary a rear admiral in the Navy, as an additional number in grade, and placing him upon the retired list.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, authorized to appoint Commander Robert E. Peary, of the United States Navy, a rear admiral in the Navy, to be carried as an additional number in said grade, and to place him upon the retired list of the Navy.

House bill 20984 introduced in the House by Congressman Butler, chairman of the Naval Committee, read as follows:

Butler, chairman of the Naval Committee, read as follows:

A bill providing for the vote of thanks to be presented to Civil Engineer Robert E. Peary, United States Navy, and the men who accompanied him on his expedition whereby he discovered the North Pole, and providing for a suitable gold medal to be presented to him.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the thanks of Congress be, and the same are hereby, presented to Civil Engineer Robert E. Peary, United States Navy, and through him to the men who accompanied him on his last expedition in the Arctic regions, for the discovery of the North Pole and placing thereat the flag of the United States of America.

SEC. 2. That the President of the United States be requested to cause a gold medal to be struck emblematical of this distinguished and memorable service and be presented to Civil Enginer Robert E. Peary, United States Navy, in such manner as may be most honorable to him. SEC. 3. That any moncy in the Treasury not otherwise appropriated is hereby appropriated to carry out the provisions of this act and shall be immediately available.

House bill 21431, introduced in the House by Congressment.

House bill 21431, introduced in the House by Congressman Loup, was identical with House bill 20984, except that it introduced a clause reading:

That Civil Engineer Robert E. Peary shall be eligible to retirement from active duty in the United States Navy immediately upon the passage of this act, and in lieu of the retired pay of his grade he shall receive an annuity of \$5,000, payable out of the appropriation, "Pay of the Navy."

Senate bill 6104, introduced in the Senate by Senator Hale, on February 3, 1910, read:

A bill providing for the appointment of Commander Robert E. Peary a rear admiral in the Navy, as an additional number in grade, and placing him upon the retired list.

No reply was vouchsafed to this query.

The erroneous supposition prevails that the computations of Peary's data by Messrs. Mitchell and Duvall were made officially by the Coast and Geodetic Survey. The fallacy of this supposition is proved by a letter signed by O. H. Tittmann, then

Bills H. R. 21495, introduced in the House by Congressman Bates; H. R. 29511, introduced by Congressman Alexander; and House joint resolution 144, introduced by Congressman J. HAMPTON MOORE, were of the same purport as the bills above

The amended bill, which finally passed both houses of Con-

gress, read as follows:

An act (S. 6104) providing for the promotion of Civil Engineer Robert E. Peary, United States Navy, and tendering to him the thanks of Congress.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, authorized to place Civil Engineer Robert E. Peary, United States Navy, on the retired list of the Corps of Civil Engineers with the rank of rear admiral, to date from April 6, 1909, with the highest retired pay of that grade under existing law.

law.

That the thanks of Congress be, and the same are hereby, tendered to Robert E. Peary, United States Navy, for his Arctic explorations, resulting in reaching the North Pole.

Note the vital differences in the bills as they were introduced in the Senate and the House of Representatives, and the amended bill, which finally passed both houses and was signed

by President Taft on March 4, 1911.

The various bills, as introduced, called for the "promotion" of "Commander" Robert E. Peary to the rank of rear admiral. The bill which finally passed provides that "Civil Engineer" not "Commander"—Peary be placed on the retired list of the Corps of Civil Engineers with the rank of rear admiral. This change in the bill as introduced and as finally passed was largely due to a letter written by (then) Secretary of the Navy von L. Meyer to the chairman of the Committee on Naval Affairs, in which he said:

NAVY DEPARTMENT, Washington, February 10, 1910.

My Dear Congressman: The receipt is acknowledged of your letter of the 5th instant, inclosing a bill (H. R. 19971).

It would appear that the bill in question is framed for the purpose of rewarding Civil Engineer Peary for having reached the North Pole, and while having successfully accomplished this self-imposed task is most commendable and reflects great credit not only upon him but also upon the entire Nation, his various exploring expeditions can not be regarded as having been conducted for a strictly military or naval purpose, and for this reason it seems inappropriate to confer upon him a title for which his previous education, training, and service have not fitted him.

It is therefore recommended that in the title of the bill and in the

It is therefore recommended that in the title of the bill and in the fourth line thereof the word "Commander" be changed to "Civil Engineer," the latter being Mr. Peary's correct official designation, and, further, that instead of appointing him a rear admiral and placing him upon the retired list as such, that he be retired as a civil engineer with the rank of rear admiral, and with the highest retired pay of that grade under existing law.

Faithfully, yours,

G. VON L. MEYER.

To the CHAIRMAN COMMITTEE ON NAVAL AFFAIRS, House of Representatives.

In accordance with the letter just quoted the bill that passed Congress and was signed by the President, placed Peary on the retired list of the Corps of Civil Engineers, with the rank of rear admiral. Thus Peary was not promoted or made a rear admiral. In truth, he never was an officer of the line in the Navy, as is shown by Secretary Meyer's letter.

At this time (1916) the Official United States Register rends:

"Peary, R. E., civil engineer."

The section in some of the bills introduced providing for the presentation of a gold medal to Peary by Congress was not included in the bill as finally passed and signed. No medal was ever given to Peary by act of Congress.

Note also that the words "discovery" and "discovered" were stricken from the amended bill, and that section of the

bill was made to read:

That the thanks of Congress be, and the same are hereby, tendered to Robert E. Peary, United States Navy, for his Arctic explorations resulting in reaching the North Pole.

Thus Robert E. Peary was never officially recognized by Congress as the "discoverer" of the North Pole.

Congressman Bates, from the Committee on Naval Affairs. submitted the following report to accompany amended Senate

After reading the bill as just quoted, Congressman Bates

Robert E. Peary reached the North Pole on April 6, 1909. From a camp which he established at a point estimated by observation at 89° 56' north latitude on said date, slightly 4 miles from the exact pole, he made two excursions on that and the following day, which carried him close to and beyond the pole.

Peary's "polar camp" has moved again! In the hearing it was "estimated" at different times to be 3, 5 and 8 miles, respectively, from the role. (See p. 40 of hearing questions)

respectively, from the pole. (See p. 40 of hearing, quotation from diary, 89° 57', or 3 miles; p. 128 of hearing, 8 miles; p. 31 of hearing, "3 or 5 miles" from the pole.) And now Congress-

man Bates places the camp at a point which he says was "estimated by observation at $89\,^\circ$ 56', slightly over 4 miles from the exact pole."

Congressman Bates's report continues:

Your committee have come to the above conclusion after a careful examination and hearing by the subcommittee extending over several days, at which Capt. Peary appeared in person and gave important testimony, submitting all his papers, original data, daily journal kept by him during the journey, and notes of astronomical observations and soundings etc. soundings, etc.

On page 84 of the hearing, Peary refused to leave his original memorandum book, or "journal," with the committee, saying it never had been out of his possession. The only examination the committee was able to give it, therefore, was a most cursory one, as it was passed around from hand to hand.

One, as it was passed around from hand to hand.

Your committee also heard the report of the National Geographic Society of Washington, the report from the president and one of the board of governors of the Royal Geographical Society of London, which society, through its official computer, had made an independent examination of the data and proofs; and also a report from Hugh C. Mitchell and C. R. Duvall, expert computers of astronomical observations from the Coast and Geodetic Survey of the United States. These men independently of any other person, working on the original data of the observations taken by Peary, stated before your committee that on the abovenamed dates Peary passed within a little over a mile of the exact pole, and stated, in conclusion, that the march of April 7, 1909, may have carried Peary even within a stone's throw of that point.

As is shown in the analysis of the hooring the festimony of

As is shown in the analysis of the hearing, the testimony of the two representatives of the National Geographic Society, Messrs. Gannett and Tittmann, was most unconvincing and unsatisfactory. Tittman, on page 2 of the hearing, said:

When Mr. Peary returned from the Arctic he forwarded to us a line of soundings from Cape Columbia to within about 5 miles from the Pole, and that is the official record we have of his having been at the North Pole. North Pole.

And again, on page 3 of the hearing, Tittmann said:

I have no official evidence (that Peary reached the pole) except, as I said, the line of soundings under Peary's signature.

When Congressman Butler, chairman of the committee (p. 6 of the hearing), said to Mr. Tittmann:

I would like it to appear in the record the sort of an observation he (Peary) made, the instruments with which he made it, how he made it, and what it showed, so that any scientific man may know, by looking at that observation, how you reached your conclusion and how it enabled you to reach your conclusion.

Mr. Tittmann suddenly remembered that he was due at a meeting of the Appropriations Committee, and remarking that Mr. Gannett could give the Naval Committee "all of that," hurriedly left the committee room.

Mr. Gannett in his testimony gave the report of the subcommittee of the National Geographic Society, which stated that:

Commander Peary has submitted to this subcommittee his original journal and records of observations, together with all his instruments and apparatus and certain of the most important of the scientific results of his expedition. These have been carefully examined by your

It must be remembered, however, that this "careful examination" of Peary's instruments and apparatus was made at the railroad station, in the baggage room, after dark; that the instruments were in a trunk, and Peary himself, although he "exhibited" the instruments to the committee, was unable to say whether or not they were all taken from the trunk. The "scientific results" mentioned by Mr. Gannett were the soundings which Mr. Tittmann stated comprised the only official evidence that they had of Peary's having been to the pole.

Mr. Gannett also made many statements in his testimony inconsistent with a "careful examination of Peary's records." stated that Peary took with him to the pole 2 sledges, 32 or 36 dogs, 2 Eskimos, and Henson, while Peary says he had 5 sledges, 40 dogs, 4 Eskimos, and Henson. Other statements made by Mr. Gannett prove conclusively that his "examination" of Peary's records was anything but "careful."

So far as the Royal Geographical Society is concerned, Mr. Peary admitted, on page 121 of the hearing, under examination by Congressman Macon, that the Royal Geographical Society "did not have all the material that is here to-day." Congressman Macon asked: "What did they have?" and Peary replied:

They had copies of all of my observations, and they had copies of a considerable portion of my journal.

It is also a notable fact, easily proven by the medals on exhibition in the National Museum at Washington, that the Royal Geographical Society, as a whole, never recognized Peary as the discoverer of the North Pole. The medal presented to Peary by that society plainly reads: "For Arctic Explorations," and says never a word about "discovery" or "North Pole."

Congressman Bates in his report also conveys the idea that Hugh C. Mitchell and C. R. Duvall were acting for the Coast and Geodetic Survey in making their recomputations of Peary's observations. That such was not the case is shown by Mr.

Tittmann's letter of March 4, 1914, already quoted, in which Mr. Tittmann says:

The computations of Peary's work were made by Messrs. Hugh C. Mitchell and Charles R. Duvall, who were employed for the purpose by Mr. Peary. These computations were, therefore, not made officially by the Ooast and Geodetic Survey.

The report continues:

Peary was an officer of the United States Navy and charged with the specific duty in which he was engaged. President Roosevelt, July 3, 1908, detailed Peary to report to the Superintendent of the United States Coast and Geodetic Survey, and instructed that Peary be ordered to make tidal observations along the Grant Land and Greenland shore of the Polar Sea.

These instructions were given, but Peary was not instructed to search for the North Pole. It was known that he was to do so, however, and his instructions to make tidal observations were given merely to silence the many adverse criticisms made relative to Peary's many and prolonged absences from his legitimate duties connected with the Navy Department, while he was drawing full pay for services not rendered. These instructions to make tidal observations furnished a plausible and official excuse for another "Polar expedition."

Congressman Bates next makes the misleading statement and quotation:

Mr. Peary entered the Navy in 1881 and has served almost thirty years. When leaving for his Polar trip the Acting Secretary of the Navy wrote him that he was granted this leave of absence for Arctic explorations because he is believed to be better equipped than any other person to undertake such work. "You have," said the letter from the Navy Department, "the requisite courage, fortitude, and physique. The attainment of the Pole should be your main object. Nothing short will suffice."

Congressman Bates, however, neglects to state to which Polar trip the Acting Secretary of the Navy referred when he wrote the above words to Peary. As a matter of fact, the letter is dated September 5, 1903, almost five years prior to the Polar trip under discussion.

Referring to Peary's observations, Congressman Bates says:

Mitchell states that from his professional experience it would have been impossible for the data of these observations to have been ob-tained other than under the circumstances claimed.

In refutation of this statement is the testimony before the Committee on Naval Affairs, of Mr. Gannett, then the president of the National Geographic Society, a (theoretical) geographer, and the author of "Manual Topographic Surveying," "Dictionary of Altitudes," "Magnetic Declination in the United States," "Stanford's Compendium of Geography," and other technical works. I repeat the questions asked Mr. Gannett at the hearing on this subject, and his answers:

Mr. Roberts. Could he (Peary) have gone out of sight behind an iceberg or promontory and faked this thing?

Mr. Gannett, I do not know whether Peary knows enough about astronomy to do it or not.

Mr. Garnett, I think I could.

The Cannett, I think I could.

The Chairman (Mr. Butler). Could you lely upon his report of the observations taken without any other fact and not knowing the man?

Mr. Gannett, No.; I don't think I could.

Although Mr. Gannett did his best to bolster up Peary's reports, he was forced to admit that he himself could have worked backward from a theoretical point and produced so-called "observations" which could be as readily computed as were Peary's. To a thoughtful person this statement of Mr. Gannett was sufficient to nullify all of his friendly but blundering efforts to help Peary "prove" his claimed achievement.

Congressman Bates closes his report with this eloquent paragraph:

Your committee believe that in view of his long distinguished service in the arctic regions in ascertaining the northern boundaries of Greenland, his soundings and tidal observations, his ascertainment of facts concerning the northern Arctic Ocean, the general information he had obtained by living over 12 years within the Arctic Curcle, and, finally, having successfully followed a carefully laid plan resulting in his reaching on April 6, 1909, and bringing back to civilization the conditions existing at the North Pole, that Robert Edwin Peary has performed a most remarkable and wonderful service; that he has attracted the favorable attention of the civilized world; and that, therefore, the American people, through its Congress, shall render him thanks and bestow upon him the highest rank of the service which he adorns.

In this peroration Congressman Bates labored under a misapprehension of facts, for in all of the achievements named by Congressman Bates, Peary had one or more predecessors and merely followed in the footsteps and confirmed the reports of those men who went before him. For example, a detailed delineation of the northern coast of Greenland is given in Maj. Gen. A. W. Greely's report, "Three Years of Arctic Service" also the official report of Greely's expedition issued by the Government under the title "International Polar Expedition, Report on the Proceedings of the United States Expedition to Lady Franklin Bay, Grinnell Land. Greely. Volumes I and II." Peary's claim to the first delineation of the North Greenland coast and the establishment of the insularity of Greenland was

based on the fictitious Peary Channel, which is now proven to exist only in Peary's fertile imagination.

An accurate and complete set of tidal observations and soundings was faithfully made by the Greely expedition, and later published by the Government, these observations extending over a period of three years.

Many other explorers have spent long years in the arctic regions and have given to the world the results of their zoological, meteorological, topographical, and ethnological studies Among these are Capt. Charles F. Hall, of and observations. the Polaris expedition, Dr. Hayes, Dr. Kane, Dr. Fridtjof Nansen, Capt. Otto Sverdrup, and others, who were the pathfinders for Peary and later explorers.

Finally, Peary has utterly failed to prove that he reached the North Pole on April 6, 1909; therefore no reliance can be placed on his reports of the conditions existing at the pole.

Congressman Bates's report embodied the opinion of a majority of the subcommittee, but printed as a part of the same pamphlet are the "Views of the Minority," as expressed by the gentleman from Massachusetts, Hon. Ernest W. Roberts, a part of which I

In view of the criticism upon Congress because of its so-called tardiness in taking some action looking toward a reward for Capt. Peary for his attempt for the North Pole, it seems proper that a statement of the circumstances leading up to the final action of the Naval Committee should be incorporated into the majority report of that committee accompanying the bili reported by it conferring certain honors upon Capt. Peary.

The National Geographic Society of Washington constituted itself a tribunal and invited Capt. Peary to lay before it proofs of the truth of his claims.

Capt. Peary.

The National Geographic Society of Washington constituted itself a tribunal and invited Capt. Peary to lay before it proofs of the truth of his claims.

Capt. Peary, upon this request, did submit through a Mr. Nichols to the Geographic Society certain papers or documents.

At this time it was of the utmost importance to the world, to the Geographic Society, and to Capt. Peary that the most thorough and exhaustive examination be made of all proofs then or thereafter to be submitted to the Geographic Society. A great responsibility was undertaken by the Geographic Society and its committee of examination, and the people of this country had a right to believe the investigation into Capt. Peary's proofs would be conducted in a manner commensurate with the importance of the subject.

The Geographic Society, through a committee of three, made some examination of the proofs submitted by Capt. Peary and reported its conclusions were that Capt. Peary reached the North Pole on April 6, 1909.

No statements as to the contents of Capt. Peary's journal and the nature of his observations nor of the kind or character of his instruments or apparatus or any of the scientific results of his expedition were given to the public; and it was said that the subcommittee of the Geographic Society was made up of friends and partisans of Capt. Peary, and that his case had been heard "in the house of his friends," with the result that the report of the committee in no way tended to satisfy the popular mind.

With matters in this shape, a bill was introduced into both branches of Congress proposing to reward Capt. Peary for his having reached the pole by placing him on the retired list of the Navy with the rank of a rear admiral of the line. One of these bills was referred to the House Committee on Naval Affairs.

For the reason that favorable action by the Naval Committee, if approved by the House, and its recommendation enacted into law conferring such signal honor upon Capt. Peary would be taken in this country as an offic

proofs, stated:

"These have been carefully examined by your subcommittee."

The following quotations from the testimony of Mr. Tittmann show with what care, or rather lack of care, this committee examined Capt.

"The CHAIRMAN. Are you satisfied Peary reached the North Pole?
"Mr. T:TTMANN. Surely.
"Mr. Dawson. What official evidence is there of the fact that Peary reached within striking distance of the pole? Is there any official

reached within striking distance of the pole? Is there any official record?

Mr. Tittmann. I have no official evidence of that except the line of soundings under Peary's signature.

"Mr. Grego. Did you see the book of original entry in which he made the record of these soundings?

"Mr. Tittmann. No: I did not.

"Mr. Grego. You know what I mean, I suppose, the book in which they were entered from time to time as he moved along; a sort of day-book?

they were entered from time to time as ne more book?

"Mr. TITTMANN. I didn't see that.

"Mr. Grego. Have you ever, in any capacity, seen the books of original entries I have described?

"Mr. TITTMANN. No, sir; I have not.

"Mr. Grego. Those (observations) that he showed you, then, were they the original entries made at the time?

"Mr. TITMANN. Yes; made at the time on loose slips of paper.

"Mr. Grego. Did you examine the paper to see whether it was new paper or old paper? Did it show evidence of having been used, or was it likely made up on a piece of new, fresh paper?

"Mr. TITTMANN. Why, I did not go into that; I could not go into that."

"because he was very much occupied with other matters." When asked for certain information by the chairman, Mr. Tittmann refers him to Mr. Gannett, the next member of the committee examined, told the members of the Naval Committee, in the following language, what examination was made of Capt. Peary's records and instruments:

"Mr. Gannett Mr. Peary came from his home near Portland, Me., and brought his records in a gripsack and his instruments in a trunk. First he met the committee at the office of the Geographic Society, and we appointed a meeting at the house of Admiral Chester, who was a member of this committee. We simply sat down with him and read his journal from the original records; he had an original record made in a little book, a notebook, you know, at that time, and it had all the carmarks of being the original. He read the journal over two or three days before Bartlett left him. We all read it together. We included in the reading two or three days which Bartlett was with him, and from that time on to the pole and all of the way back to Cape Columbia. We also had his astronomical observations recomputed, examined them, not recomputed, for he had already computed them on these sheets. We had one sheet for a set of observations, and Admiral Chester recomputed them. I do not know whether Mr. Tittmann did or not. I do not remember. We had his line of soundings. The tidal observations I never saw.

"As to the matter of the instruments, they started with Peary in a trunk, which was checked, but they did not come here as fast as Peary did. He got here in the morning and his trunk did not get here until evening. And we examined the contents of it, examined the instruments down at the station that evening without moving the trunk.

"Mr. Roberts. How many days from the time he (Peary) left Bartlett and went to the pole before he rejoined the party at the base of supplies?

"Mr. Gannett. I do not recall it now; I have figured on that a good deal; I do not remember how many days from the time he (Peary) left Ba

deal; I do not remember how many days.

"Mr. ROBERTS. How many days going to the pole.

"Mr. ROBERTS. How many days going to the pole.

"Mr. GROSENSOR. I think 16 days. He was 52 going and 16 days going back."

Note.—It is difficult to understand just what Mr. Grosvenor had in mind when he said Peary was "52 days going and 16 days coming back."

He did not refer to Peary's absence from the ship, because Peary was away from the ship 64 days. He seems to have attempted to convey the information that Peary's upward trip (either from the ship or from Cape Columbia) occupied 52 days, which is wrong in either instance.

"Mr. ROBERTS. Did he tell your committee what his equipment was on "Mr. ROBERTS. How many dogs?"

"Mr. GANNETT. Well, he had two sledges.

"Mr. ROBERTS. How many dogs?

"Mr. GANNETT. I think 36 dogs; it seems to me 36 or 32.

"Mr. ROBERTS. And Henson?

"Mr. GANNETT. And Henson."

"Mr. GANNETT. And Henson."

"Mr. ROBERTS. And himself?

"Mr. GANNETT. Yes, sir."

From these extracts from the testimony it will be seen that Mr. Gannett, after his "careful" examination of Capt. Peary's proofs and records, did not know how many days it took Capt. Bartlett from the time he left Bartlett to reach the pole and return to the Roosecelf, that information being supplied by a Mr. Grosvenor. It will be observed that Mr. Gannett, as a result of his "careful" steady of Capt. Peary's proofs and records, gives capedges, 36 or 32 dogs, 2 Eskimos, and Henson. It will be seen later, from Capt. Peary's testimony, that he had on that final dash 40 dogs, 5 sledges, and a total of 6 men in his party. This discrepancy on so vital a point must seem quite conclusive that the examination of the Geographic Society's committee was anything but careful.

At a certain stage of the examination it appeared that Mr. Gannett had with him the copies of the records and observations of Capt. Peary but deciled to submit them to the committee on a end.

Hearings were then suspended, while an effort was made to procure the presence of Capt. Pear

This pamphlet is entitled "Private Calendar No. 733, Sixtyfirst Congress, third session, House of Representatives, Report No. 1961, and comprises 23 pages, of which the report of Congressman Bates occupies 6 pages, and the minority report, signed by Congressman Ernest W. Roberts, fills 17 pages.

What, then, did Peary present to Congress as his "proofs" that he had reached the pole, and what has he given to the world as scientific results sufficient to justify the American people in paying him \$6,000 per year as a retired salary?

Peary presented to the congressional committee a chart compiled from recomputed observations, which observations one of his "expert witnesses" said could have been made away from the pole or at any point other than where they were pur-ported to have been made. These observations were recomputed by two men employed by Peary for that purpose. As previously noted, Congressman Roberts truly said of these re-computations, "They were a matter of guesswork."

In addition to these observations, which prove absolutely nothing, Peary presented various sets of tidal observations, none of which were made either at or en route to the pole.

But the data on which Peary himself laid the greatest stress, and which he guarded so jealously that when he presented them to the Coast and Geodetic Survey he made the request that they should not be made public, were a set of soundings which he claimed extended from Cape Columbia to the pole. This line of soundings comprised nine attempted soundings, only six of which were made beyond the edge of the continental shelf, and of these six three were incomplete or failed to touch bottom. Only one of the entire line was made by Peary himself, and this is the one which is of the greatest interest, as Peary claims to have made it at 89° 55′ north latitude, or 5 miles distant from the pole. (See profile of soundings on page 338 of The North Pole; page 89 of the hearing; and line of soundings shown on Hydrographic Office Chart No. 2560.)

Again, in so important a matter as this "polar sounding" we see evidence of Peary's inaccuracy and unreliability. He claims that his observations located his polar camp (Camp Jesup) at 89° 57', or 3 miles from the pole. Here the igloos were built, the flags were raised, and photographs taken. On page 300 of The North Pole, Peary says:

In the afternoon of the 7th, after flying our flags and taking our photographs, we went into our igloos and tried to sleep a little before starting south again.

This places Peary at his Camp Jesup at 89° 57', 3 miles south of the pole, immediately before he started on his return journey. On page 304 of The North Pole he says:

We crowded on all speed for the first 5 miles of our return journey. Then we came to a narrow crack, which furnished a chance to try for a sounding. Our sounding apparatus gave us 1,500 fathoms of water, with no bottom.

Also, in Peary's diary (see p. 40 of the hearings) we find, under his date of April 7, the following:

Five miles south from camp, 1,500 fathoms; no bottom.

Peary makes it plain, therefore, that his "polar sounding" was made 5 miles south of his polar camp, which, as stated above, was alleged to be at 89° 57′. Five miles south of this point would give a latitude of 89° 52′, or 8 miles from the pole. But in Peary's "Profile of soundings," which is considered by him his most important scientific result of the expedition, he shows this sounding at 89° 55′ instead of 89° 52′, where, in order to make his story consistent it must have been taken make his story consistent, it must have been taken.

The above statement is based on the alleged result of Mr. Peary's observation, which, he says, placed his polar camp at 89° 57′. But at various times Peary places his polar camp at 5 miles, 4 miles, and 8 miles, respectively, from the pole. pp. 31, 40, and 128 of hearing and p. 1 of Rept. No. 1961.) cepting any one of these positions as the correct one gives us the location of his "polar sounding" at either 89° 50′, 89° 51′, or 89° 47', according to the camp location selected as the correct one; but in no instance can we locate the sounding where Peary places it at \$9° 55'. In other words, Peary's sounding (according to his various statements) was made at a possible \$, 9, 10, or 13 miles from the pole instead of 5 miles from the pole, as shown on his "Profile of soundings" and as stated in his

"Notes on soundings." (See pp. 21–22 of hearing.)
Representative Hughes, of New Jersey, introduced a resolution (H. Res. 495) to have Peary's "official" report of tidal observations and investigations printed, with illustrations. This resolution was referred to the Committee on Interstate and Foreign Commerce, and in discussing it Congressman J. Hamp-TON MOORE said :

I wish to say that the records of Mr. Peary were submitted by him to three expert scientists of this country, officers of the Government, sworn to perform their duties. (See p. 3565 of Congressional Record, vol. 45, pt. 4, 61st Cong., 2d sess.)

Congressman Moore of Pennsylvania also said, in the speech to which Peary so often referred:

Mr. Peary transmitted to the superintendent of the Coast Survey 21 volumes of tidal observations and also a profile of soundings from Cape Columbia to within 5 miles of the pole.

Have we the time or the disposition to examine this portion of Mr. Peary's work, these 21 volumes of tidal observations? Pray, Mr. Speaker, who in this House feels that his judgment in matters of this kind would be superior to that of these three men—Gannett, Tittmann, and Chester—accredited officers of this Government, who have already reported thoroughly upon this question? Why not, Mr. Speaker, pro-

ceed to the Hydrographic Office and take note of the progress there made by the Navy Department in building new maps of the world, which thanks to the explorations of Peary, enable us to carry American soundings to the pole?

The gentleman from Pennsylvania [Mr. Moore] failed to state that these "three officers of the Government, sworn to perform their duties," were not acting in their official capacity as officers of the Government when they made their farcical examination of Peary's data, but were serving as private citizens and friends of Peary on the committee of a private publishing con-cern known as the National Geographic Society, and their report, so far from being thorough, showed a deplorable and disconcerting lack of thoroughness.

It is quite possible, too, that when Congressman Moore made the speech from which I have quoted he had never seen Peary's tidal observations. If the gentleman from Pennsylvania [Mr. MOORE] had seen them, he would have known that not one of the tidal observations in those 21 volumes which he mentioned was made on Peary's alleged trip from Cape Columbia to the pole, nor on his return journey to Cape Columbia, nor at the

place Peary called the North Pole.

The gentleman from Illinois, Hon. James R. Mann, a member of the Committee on Interstate and Foreign Commerce, submitted an adverse report on the resolution to print Peary's tidal observations. In this adverse report Congressman MANN said:

It is believed by your committee unnecessary to require the original 21 volumes, and sheets accompanying them, or complete copies of the same to be at this time transmitted to the House.

Needless to say, when Congressman Mann made this report he did so because he had been misinformed and did not know that the observations contained in the 21 volumes, and the sheets accompanying them, were all made at coastwise points, and had

no bearing whatever on Peary's claimed polar discovery.

However, this adverse report of the gentleman from Illinois was accepted. Therefore up to the present time this material

of Peary's has never been given to the public.

This analysis would be incomplete without a reference to Peary's day-by-day marches. Much has been said and written by various authorities relative to Peary's speed on his alleged Polar journey. It inturally requires a certain amount of credulity to believe that he could make a far greater degree of speed after all of his supporting parties returned, and he had his own trail to pioneer, than he was able to make while fol-lowing an already broken trail; but that is not the point to which I now direct attention.

Cape Columbia is rightly stated by Peary to be distant from the North Pole 413 miles in an air line. As Camp Jesup was supposedly 3 miles south of the pole, the distance from Cape

Columbia to Camp Jesup is 410 miles.

Peary's book, The North Pole, does not give the mileage traveled for every day of his journey, neither does his diary, portions of which were inspected by the congressional committee; but a combination of the book and the diary gives us the daily mileage for Peary's entire journey from Cape Columbia to the point he named "Camp Jesup," or his polar camp. This mileage as shown by Peary in his book and in his diary shows the total distance traveled by him from Cape Columbia to Camp Jesup to be 414 miles.

We are therefore asked to believe the preposterous and wholly unbelievable statement that Peary made a journey between two points distant from each other 410 miles in an air line, and in that journey of 410 miles as the crow flies his entire allowance for detours, rough going, and so forth, amounted to

only 4 miles!

On page 194 of The North Pole Peary says:

There is no land between Cape Columbia and the North Pole, and no smooth and very little level toc.

On page 170 of Hampton's Magazine for August, 1910, is a photograph entitled:

Only stretch of level going on northward march; A lake of young ice north of 87°, 6 miles wide.

On pages 241 to 243, 247, 250, 256, 257, 276, 279, 284, and others of The North Pole, Peary mentions exceptionally rough ice over which they had to find their way. Also on page 275 he says:

The pressure ridges were stupendous, some of them 50 feet high.

On pages 223, 234, 238, 240, 256, 261, 277, and others, Peary mentions detours necessary to avoid open water and rough going. On page 268 Peary says:

We had traveled fully 12 miles more than his (Bartlett's) observation showed in the last five marches, but had lost them by the crushing up of the young ice in our rear and the closing of the leads.

But Peary's total allowance of extra mileage for the entire distance from Cape Columbia to Camp Jesup (27 "marches")

is only 4 miles. Yet he states that they lost 12 miles in five marches. When did they make up the missing 8 miles, to say nothing of the other distances that must have been lost by detours and rough ice fields?

Again, Peary's mileage was all "estimated." For a distance of 410 miles he "estimated" the daily mileage, and (according to his statement) made a total error of only 4 miles. But note

carefully the following.

On pages 287 to 289 of The North Pole Peary says:

I made the first observation at our polar camp (on Apr. 6). It indicated our position at 89° 57′. ° ° Two of the Eskimos and myself made ready a light sledge, and, drawn by a double team of dogs, we pushed on an estimated distance of 10 miles. Observations indicated that our position was then beyond the pole.

In Peary's diary (p. 40 of hearing) he says:

(Apr. 6): Caught sun through clouds at 12.45, 89° 57'. Drov 10 miles with empty sledge and double team dogs, two Eskimos. servation at 1 a. m., 89° 50', on other side.

Page 137 of the hearing states:

After taking the observations at noon of the 6th at Camp Jesup the expedition marched straight ahead 10 geographic miles and took a set of observations of the sun.

Although, as stated elsewhere, the location of "Camp Jesup" was given at several different places, for the sake of argument I shall use only the location given by Peary on page 287 of his book, The North Pole-89° 57'.

Therefore, we have these figures: Camp Jesup, at an alleged 89° 57′ north latitude; a position "straight ahead 10 geographic miles," "89° 50′ on other side."

But if his polar camp was at 89° 57′ (3 miles south of the pole) and he traveled "straight ahead 10 geographic miles" due north (see p. 289 of The North Pole), his observations at the end of that "estimated" 10 miles should have placed him at 89° 53′, instead of 89° 50′ "on other side."

On page 284 of his book, The North Pole, in describing the

condition of the ice in the region of the place he called the pole,

Peary says:

The going was even better than before. There was hardly any snow on the hard granular surface of the old floes and the sapphire blue lakes (of level ice) were larger than ever.

Peary's error of 3 miles in an estimated 10-mile sledge journey was therefore made in a region where the traveling was exceptionally good. Yet we are asked to believe that in his journey of an alleged journey of 410 miles, abounding in "stupendous" pressure ridges, open leads, and other obstacles, Peary's "estimate" of the distance varied only 4 miles from the actual air-line distance from Cape Columbia to the North Pole.

Let us hear the conclusion of the whole matter: Peary claims to have traveled 27 days by compass alone, without making any observations whatever for compass varia-tion. The Superintendent of the United States Naval Observatory (than whom there is surely no higher official authority in this country) states that no data is available to show the variation of the compass from Cape Columbia to the North Pole. Superintendent Hoogewerff adds:

The traveler from Cape Columbia to the North Pole might expect to find large changes in variation.

Peary made no observations for longitude throughout his trip, although he claims to have traveled on the seventieth meridian from Cape Columbia to the North Pole,

Peary made all of his latitude observations at a time when the sun was at an altitude of less than 7°, while the American Practical Navigator, issued by the Navy Department, states that observations when the sun is at an altitude of less than 10° should be avoided as unreliable.

Peary's latitude observations at the point he called the North Pole are astronomically and mathematically incorrect; therefore

must be rejected.

Peary's only alleged proof or result of his claimed polar trip, which he has officially presented, is a profile of soundings, which soundings, as I explained in detail in my speech of January 13, 1916, were not made (if made at all) at the points where Peary claimed to have made them.

Peary was the only member of the expedition who testified at the congressional hearing; none of the men who accompanied him on his sledge expedition was called to testify either for or against him; but in view of the facts which I have presented and after careful and judicious consideration of the testimony given by Peary and his friends before the congressional subcommittee, I again make the unqualified statement that Robert E. Peary never reached, discovered, nor was approximately near to that mathematical point of the earth's surface known as the North Pole.

THE FOLLOWING APPENDED MATERIAL IS A VERBATIM COPY OF THE ENTIRE PEARY HEARINGS BEFORE THE COMMITTEE ON NAVAL AFFATRS

> COMMITTEE ON NAVAL AFFAIRS, SUBCOMMITTEE ON PRIVATE BILLS, Friday, March 4, 1910.

The committee was called to order at 10.30 o'clock a. m., Hon. Thomas S. Butler (chairman) presiding.

Present: Messrs. Butler, Roberts, Bates, Dawson, Englebright, Gregg, and Macon.

STATEMENT OF MR. O. H. TITTMANN, SUPERINTENDENT OF THE COAST AND GEODETIC SURVEY.

The CHAIRMAN. Tell us, so we may have it in the record, your em-

ployment.

Mr. TITTMANN. I am Superintendent of the Coast and Geodetic Sur-

Vey.

The CHAIRMAN. In the service of the Government?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. How long have you been at the head of this depart-

Mr. Tittmann. Yes, sir.
The Chairman. How long have you been at the head of this department?
Mr. Tittmann. About 10 years.
The Chairman. And prior to that time—
Mr. Tittmann. I was appointed to the survey in 1867.
The Chairman. So you have been connected with the survey—
Mr. Tittmann. Since 1867.
The Chairman. What relation, if any, did you have to the report that Peary may have made as to his having reached the North Pole?
Mr. Tittmann. You mean the official relation?
The Chairman. Yes, sir; any official relation?
Mr. Tittmann. Mr. Peary was ordered to report to me, as Superintendent of the Coast Survey, for the purpose of making tidal observations, under instructions from the President; I have his letter here and will read it to you if you care to have it.
Mr. Gregg, A copy of his instructions?
Mr. Tittmann. No; not a copy of the instructions to Peary, but a copy of the letter of the President to the Secretary of Commerce and Labor directing that I give him instructions.
The Chairman. What is the date of the letter?
Mr. Tittmann. July 3, 1908.
The Chairman. Then read it, please.
Mr. Tittmann. This is a photographic copy which I brought over:
The White House, Washington.

THE WHITE HOUSE, WASHINGTON.

OYSTER BAY, N. Y., July 3, 1908.

OYSTER BAY, N. Y., July 3, 1908.

Sir: Civil Engineer R. E. Peary, United States Navy, has been directed by the Navy Department to report by letter to the Superintendent of the United States Coast and Geodetic Survey, and you are requested to direct this official to order him to make tidal observations along the Grant Land and Greenland shore of the Polar Sea during his projected cruise in the Roosevelt. It is believed that such observations will throw light upon the coast-survey theory of the existence of a considerable land mass in the unknown area of the Arctic Ocean, Respectfully,

THEODORE ROOSEVELT.

Hon. Oscar S. Straus,

Secretary of Commerce and Labor.

The Chairman. The purpose of sending for you, as you will appreciate, is to learn what method you employed.

Mr. Roberts, May I interrupt right there? Did you give instructions to Mr. Peary in writing or verbally?

Mr. Tittmann. Well, Mr. Peary came to the office in order to consult our tidal expert as to certain details, and those were really incorporated in a letter of instructions which I haven't with me.

Mr. Roberts, Furnish us with a copy of that and put it in the hearings.

sult our tidal expert as to certain details, and those were really incorporated in a letter of instructions which I haven't with me.

Mr. Roberts, Furnish us with a copy of that and put it in the hearings.

Mr. Tittmann, Yes, sir; I will do that.

Mr. Roberts, We want to have a complete chain of the official records of the transaction.

Mr. Tittmann, I then gave him instructions to make the observations in a particular way.

The Chairman, Are you satisfied Peary reached the North Pole?

Mr. Tittmann, Give us your reasons for it; take as long as you please and do it in any way you please.

Mr. Tittmann, Perhaps you will first allow me, then, to speak of the official records that I have in regard to the matter. When Mr. Peary returned from the Arctic he sent us the volumes of the tidal observations that he had made, and that was complying with his orders and instructions; but as the principal interest in the tidal observations was largely the knowledge of the hydrography of the Arctic, Mr. Peary also forwarded to us a line of soundings which he had made extending from Cape Columbia, where tidal observations were made, to within about 5 miles of the pose. So he forwarded those to me officially and that is the official record we have of his having been at the North Pole. Now, I understand, Mr. Chairman, that you want me to speak of my views, my personal views?

The Chairman, I think I have already stated that the line of soundings which Mr. Peary furnished us showed us that he had been within 5 miles of the pole; but besides that, I, of course, had knowledge, which was afterwards verified, that Mr. Peary's expedition differed from all previous expeditions in this, that when he got within striking distance of the pole—that is, within about 140 miles of the pole—the had with him a large party of men and Capt. Bartlett; that up to that time he had kept himself in absolute reserve, allowing the hard work—the pioneer work—to be done by a younger man and a stronger man, and when he reached, as I say, a point which I cons

Mr. Dawson. What official evidence is there of the fact you have just stated—that this party, consisting of Peary, Bartlett, and the others, reached that point—that is, within striking distance of the pole? Is there any official record?

Mr. TITMANN. I have no official evidence of that except, as I said, the line of soundings under Peary's signature, his official report that he made; that is strictly official.

Mr. Englemeight. This expedition had the sanction of the Government, and that Mr. Peary was to make certain reports. Now, in any ordinary report of that nature that is made to the Government or that is made to your office, for instance, all that you get, as a rule, is the finished report under the signature of the party making it?

Mr. Tittmann. Yes, sir.

Mr. Englebeight. It is not customary for him to file with his report the notes made unless it is regular detailed work of your department, where the notes and finished work come in together, but you act on the finished report?

Mr. Tittmann. Well, not always; but in this case it was one in which he supplied us with all the detailed notes, all those things with which we had specially charged him.

Mr. Gregg. You know what I mean, I suppose—the book in which they were entered from time to time as he moved along, a sort of daybook?

Mr. Tittmann. I didn't see that.

Mr. Gregg. Mr. Tittmann. you saw something which he finished and

they were entered from time to time as he moved along, a sort of daybook?

Mr. Tittmann. I didn't see that.

Mr. Greeg. Mr. Tittmann, you saw something which he finished and sent in to your office?

Mr. Tittmann. Yes, sir; sent in to our office under his signature.

Mr. Greeg. Have you ever, in any capacity, seen the books of original entries that I have described?

Mr. Tittmann. No. sir; I have not.

The Chairman. But you accepted the report, as you usually do, after such soundings or such professional work has been done?

Mr. Tittmann. We accepted such reports, of course.

Mr. Roberts. Under date of October 18, 1909, Mr. Peary evidently sent a letter to the acting superintendent, F. W. Perkins, United States Coast and Geodetic Survey, Washington, D. C., a copy of which communication I have, and I will read the first sentence for the purpose of my query. It is dated at South Harpswell, Me.:

"Referring to my telegram, I am sending you by express the tidal records of the Peary Arctic Club's recent North Polar expedition."

He refers there to a telegram. Was that telegram the first official notice the Coast and Geodetic Survey had of Mr. Peary's expedition on his return?

Mr. Tittmann. I am unable to answer that, because I haven't those papers with me. If you will allow me, I will answer that in the record, because I can answer it.

Mr. Roberts. I want to get a complete chain of his reports, everything that he sent to the Coast and Geodetic Survey or to the Department of Commerce and Labor to be transmitted to your department on his return. I want to get from the very first down to the last any official documents, letters, telegrams, or however he might have sent the information.

Mr. Tittmann. I can make a brief of all the telegrams.

Mr. Roberts. Yes; just put them in.

information.

Mr. Tittmann. I can make a brief of all the telegrams.

Mr. Roberts. Yes; just put them in.

Mr. Tittmann. I will do that.

Mr. Greeg. Have you the date at which he filed this report with you?

Mr. Tittmann. Oh, yes; it is right here; I think I sent a copy with that [indicating papers in Mr. Roberts's hands].

Mr. Roberts. You spoke a moment ago of the report that he made on tidal observations. That was, I take it, distinct from these [indicating papers]?

Mr. Tittmann. That was distinct from those.

Mr. Roberts. Because there is nothing in these papers referring to tidal observations. These relate to the soundings.

Mr. Tittmann. No; I think you will find it there—if you will allow me, I will look them over.

Mr. Roberts. My recollection is that they all relate to the soundings. I was after the complete scientific report given by Mr. Peary.

Mr. Tittmann. Here is a letter in regard to that, dated—

"Eagle Island, South Harpswell, Me.,"

"Eagle Island, South Harpswell, Me., "October 18, 1999.

"Referring to my telegram, I am sending you by express the tidal records of the Peary Arctic Club's recent North Polar expedition. Owing to the unfortunate death of Prof. Ross G. Marvin, some of the chronometer comparisons, particularly of the Cape Bryant observations, are missing—

You may recall that Mr. Marvin was drowned-

"These comparisons are undoubtedly among Prof. Marvin's private papers, and if so will be obtained from his relatives later. Prof. Donald B. Macmillan took many of the observations and is familiar with them all, and can come to Washington to see you any time you consider it advisable."

Mr. Roberts. Where are those tidal observations?
Mr. Tittmann. They are in our office; there are 21 volumes of them.
Mr. Roberts. In what form are they?
Mr. Tittmann. It is an octave volume.
Mr. Roberts. In print, you mean?
Mr. Tittmann. No; just the actual observations made at the time.
Mr. Englebright. On Government blanks?
Mr. Tittmann. Yes; I think they are; we furnished the records, I tean the blank books for that purpose.
Mr. Roberts. Who did that actual work?
Mr. Tittmann. It was done by Marvin and Macmillan, I think.
Mr. Greeg. Who forwarded them to you, Peary or Macmillan?
Mr. Tittmann. Peary; we communicated with Peary, I think.
Mr. Roberts. These are the only soundings that you have been adised of?

Mr. Roberts. These are the only soundings that you have been auvised of?

Mr. Tittmann. Yes; they are the only ones that he took.

Mr. Roberts. Nine in number?

Mr. Tittmann. Yes.

Mr. Roberts. If you are through with your statement, I want to ask you some questions.

Mr. Tittmann. I thought that was all I need say. It seemed to me conclusive.

The Chairman. The Professor has stated that he concludes that from the report he made.

Mr. Tittmann. I have something to add.

Mr. Roberts. You say he reached a certain point before he separated himself from his crew. Now, I intended to ask you to take up the narrative from that point.

The CHAIRMAN. Tell us all of the facts which, in your judgment, warranted the committee that examined him in reaching the conclusion it did reach.

Mr. TITTMANN. Well, now, as to the committee—when all this happened I was in Europe; when I came back I found I had been appointed an election of the committee that all this happened I was in Europe; when I came back I found I had been appointed an election of the committee, and at that meeting Capt. Yeary showed me the actual observations—the astronomical observations of the sun was made within about 3 miles of the pole. He then continued in the same direction—my figures now are not very well—reary showed me the actual observations—the astronomical observations of the sun was made within about 3 miles of the pole. He then continued in the same direction—my figures now are not very well—reary showed in the same direction—my figures now are not very well—reary showed in the same direction—my figures now are not very well—reary and the pole, and he was getting to the eastward—if you had a map before you you would see what I mean—he went to the eastward and there made some more astronomical observations. He showed me the actual papers on which he astronomical observations, saw the faction of the sun interest who had an opportunity to go over the details that I did not have, because I was very much occupied with other matters.

Mr. Grand Tables and a poportunity to go over the details that I did not have, because I was very much occupied with other matters.

Mr. Grand Tables and the state of the sun.

Mr. Grand Tables and the state of the sun.

Mr. Grand Tables and the state of the sun.

Mr. Grand Tables and the state of the sun.

Mr. Grand Tables and the state of the sun and the state of

right here in Washington and make up observations of latitude and longitude for that immediate vicinity that could not possibly be disproved.

Mr. Tittmann. That might be so in so short a journey; that is a matter of opinion.

The Chairman. Professor, for myself I could not comprehend how anybody would be so untruthful as to say that he reached the North Pole if he did not; but at the same time I wish you would state in some way the observations that were made by Peary. You see, I do not know how they were made; I know nothing at all of astronomy; but I would like it to appear in the record the sort of an observation he made, the instruments with which he made it, how he made it, and what it showed, so that any scientific man may know, by looking at that observation, how you reached your conclusion and how it enabled you to reach your conclusion.

Mr. Tittmann. I think Mr. Gannett could give you all of that, as you have him here. I am really due before the Appropriations Committee.

STATEMENT OF MR. HENRY GANNETT.

The Chairman. Are you in the service of the Government?

Mr. Gannett. I am connected with the Geological Survey.

The Chairman. Give us your official position.

Mr. Gannett. Well, I am called geographer.

The Chairman. How long have you been connected with the Geological Survey?

Mr. Gannett. I joined the Geological Survey in 1882 and have been with it, with the exception of two leaves of absence of approximately a year each, continuously.

The Chairman. Are you an engineer?

Mr. Gannett. I was educated as an engineer at Harvard.

The Chairman. This was before 1882?

Mr. Gannett. When I graduated from the scientific school at Harvard I was in the observatory a couple of years, the Harvard observatory; then I joined the Hayden Survey, as it was called, exploring the different Territories; I was with that organization until it closed out in 1878; then I went into the Tenth Census and was the geographer of that, and I have assisted subsequent censuses since that time.

The Chairman. Were you a member of the committee that was selected to make an examination of the report of Commander Peary?

Mr. Gannett. I was chairman of that committee.

The Chairman. May I ask you who selected this committee?

Mr. Gannett. The board of management of the society called on—
The Chairman. Of what society?
Mr. Gannett. The National Geographic Society.
The Chairman. Are you a member of that society?
Mr. Gannett. Yes, sir; I am president of it now. The board of management practically made the selection of this committee. There is within the society what is called a research committee, which is made up of men representing different branches of geography, men that are well up in the several branches, and the selection of that committee was made from this research committee.

The Chairman. Will you be kind enough to detail to us the methods which were employed by this committee in making an examination of the reports of Commander Peary of his expedition?

Mr. Gannett. You mean what actually took place at the actual meetings with him?

Mr. Roberts. Yes.
The Chairman. Tell us, in the plainest language, what you saw and learned of the discovery, the reports you saw, the conclusions you reached, and the reasons for your conclusions.

Mr. Gannett, Mr. Peary came from his home near Portland, Me., and brought his records in a grilpsack and his instruments in a trunk. First he met the committee at the office of the Geographic Society and we appointed a meeting at the house of Admiral Chester, who was a member of this committee, We simply sat down with him and read his journal from his original records; he had an original record made in a little book, a notebook, you know, at that time, and it had all the earmarks of being the original. He read the journal over two or three days before Bartlett left him, we all read it together; we included in the reading two or three days which Bartlett was with him, and from that time on to the pole and all of the way back to Cape Columbia. We also had his astronomical observations, and Admiral Chester recomputed them; I do not know whether Mr. Tittmann did or not, I do not remember; we had his like of soundings; the tidal observations I never saw.

the had one sheet for a set of observations, and Admiral Chester recomputed them; I do not know whether Mr. Tittmann did or not, I do not remember; we had his line of soundings; the tidal observations, I never saw.

Mr. ROBERTS. They were not concerned with the pole discovery; they were taken down on the coast.

Mr. GANNETT. They were not concerned with the pole discovery; they were taken down on the coast.

Mr. GANNETT, I saw no longitude observations, and my understanding is he didn't make any; I do not see why he should. He kept his direction by the compass and the direction of the sun at noontime, and his purpose was to go north.

Mr. FNGLERIGHT. Will had pongitude observations in the far North?

Mr. FNGLERIGHT. Will had pongitude observations in the far North?

Mr. GANNETT. Why, the difficulty arises simply out of the fact that the meridians are very short there, so that a slight error in the time determination makes a large error in the longitude. I do not know whether I could go into the details of the thing. Of course, the best time for taking observations, that is for longitude, is when the sun is the far the meridians are very short there, so that a slight error in the tongent of the sun is the far that the meridians are very short there, so that a slight error in the tongent of the more sun is the far that the meridians are very short there, so that a slight error in the tongent of the more sun is the fact that it is for longitude, is when the sun is the fact that it is for longitude, is when the sun is the fact that is for longitude, is when the sun is the fact that is for longitude, is when the sun is the fact that is for longitude, is when the sun is the fact that is for longitude, is when the sun is the fact that the sun is so near the pole, the rate of rising is very, very slow, and any slight error in measuring that altitude is increased many times over as compared with a smaller error in latitude. I do not know whether I have made myself at all clear about it.

Mr. Gannett, South and the far t

would not be able to appoint said commission unless authorized by his council, which meets late in November, and unless also requested to do so by both Commander Peary and Dr. Cook.

"Commander Peary was willing to able by such a commission, but Dr. Cook stated that his observations would go first to the University of Copenhagen. In view of the fact that Commander Peary had been sulting since his return, in September, to submit his records and the sulting since his return, in September, to submit his records and the sulting since his return, in September, to submit his records and the sulting since his return, in September, to submit his records and the sulting since his return, in September, to submit his records and been sulting since his return, in September, to submit his records and been sulting since his return, in September, to submit his records and been sulting super submit for the University of Copenhagen and the society would not have an opportunity of seeing them for probably some months, if did not seen his to defer action on Commander Peary's observations until Dr. Cooks gapers were relected on managers of the National Geographic Society, Wednesday morning, October 20, the records and observations and proof of Commander Robert E. Peary that he reached the pole April 6, 1909, were submitted to the society.

"The records and observations were immediately referred to the committee on research, with the direction that the chairman appoint a subcommittee of experts, of which he shall be a member, to examine said records and report on them to the board. Mr. Henry Gannett, chairman of the committee on research, with the direction that the chairman appoint a subcommittee of experts, of which he shall be a member, to examine said records and report on them to the board. Mr. Henry Gannett, chairman of the committee on research, with the direction that the chairman appoint a subcommittee on research, with the direction that the chairman of the committee on the board. Mr. Henry Gannett, Chairman of the commit

"The foregoing report was unanimously approved by members present, who were as follows: Dr. Willis L. Moore, Dr. Alexander Graham Bell, Mr. Charles J. Bell, Col. Henry F. Blount, Admiral Cotby M. Chester, Mr. F. V. Coville, Mr. John Joy Edson, Mr. David Fairchild, Mr. Henry Gannett, Mr. Gilbert H. Grosvenor, Prof. J. Howard Gore, Mr. Rudolph Kauffmann, Dr. T. L. Macdonald, Gen. John M. Wilson, and Mr. O. P. Austin.

"Immediately after this action the following resolutions were unanimously adopted:

mously adopted:

"'Whereas Commander Robert E. Peary has reached the North Pole, the goal sought for centuries;

"'Whereas this is the greatest geographical achievement that this society can have opportunity to honor: Therefore

"'Resolved, That a special medal be awarded to Commander Peary.

"Resolved, That the question of whether or not anyone reached the North Pole prior to 1909 be referred to the committee on research, with instructions to recommend to the board of managers a subcommittee of experts, who shall have authority to send for papers or make such journeys as may be necessary to inspect original records, and that this action of the society be communicated at once to those who may have evidence of importance."

"At a meeting of the board of managers, November 8, the committee on research of the society recommended that the personnel of the committee to consider whether the pole was discovered before 1909 should be entirely different from that of the committee which passed on the Peary records. Upon their recommendation the board appointed the following committee:

"J. Howard Gore, formerly professor of mathematics, George Washington University, and author of several works on surveying and geodesy.

"Rear Admiral John E. Pillsbury, United States Navy, who was for

ington University, and author of several works on surveying and geodesy.

"Rear Admiral John E. Pillsbury, United States Navy, who was for 10 years in charge of the hydrographic office of the United States Navy, did important work investigating the gulf stream currents, was for several years assistant chief of the Bureau of Navigation of the Navy Department, and later Chief of Staff of the North Atlantic Squadron.

"Dr. C. Willard Hayes, chief geologist of the United States Geological Survey, one of the pioneer explorers of Alaska and of many sections of the Rocky Mountains.

"At the meeting of the board of managers February 1, Prof. Gore, chairman of the above committee, read the following report, which was unaulmously adopted by the members present.

"Present: President Gannett, Vice President Tittmann, Dr. Alexander Graham Bell, Mr. Charles Bell, Mr. Blount, Mr. Coville, Mr. Edson,

Prof. Gere, Mr. Grosvenor, Mr. Kauffmann, Prof. Merriam, Prof. Moore, Admiral Pillsbury, Mr. Smith, Gen. Wilson, and Mr. Austin, secretary.

" BOARD OF MANAGERS NATIONAL GEOGRAPHIC SOCIETY:

"'Board of Managers National Geographic Society:

"'The committee appointed November 3, 1909, to consider the question whether or not anyone reached the North Pole prior to 1909, begs leave to submit the following report:

"The only probable claimant to the distinction of an earlier attainment of the North Pole was Dr. Frederick A. Cook. Immediately after his arrival in Copenhagen in September last, he declared that proof of his claim would be submitted to the University of Copenhagen. Later when asked by the board of managers of the National Geographic Society to submit his data to a board of experts in this country, he reiterated his earlier promise made in Copenhagen. This committee was therefore unable to obtain access to any of Dr. Cook's records and had at its disposal only the published narratives which, although copyrighted by the publisher, were unsigned and hence inadmissible as evidence.

"The committee has collected a large mass of correlative information in regard to Dr. Cook's expeditions and has made an exhaustive study of the narratives referred to above, but not having had an opportunity to study authenticated documents or data, we do not feel justified at this time in making public the opinion derived therefrom.

"The University of Copenhagen most courteously kept your committee informed of its operations and promptly favored us with a copy of its report upon their investigations. As this was the tribunal selected by Dr. Cook, and as he presumably placed at its disposal all of the data he possessed, we deem it wise to indorse the opinions expressed by the University of Copenhagen to the effect that there is no evidence to show that Dr. Frederick A. Cook reached the North Pole.

"The committee furthermore invites the attention of the board of managers of the National Geographic Society to the conscientious and fearless position taken by the University of Copenhagen in giving wide publicity to a decision which, in the minds of so many, seem Incompatible with its earlier attitude. By this act the

"'JAMES H. GORE.

"JAMES H. Gore.
"'J. E. PILLSBURY.'

"The report was accepted and the committee discharged from further consideration of the subject.
"It was moved that the inscription to be placed upon the special medal recently awarded to Commander Peary shall indicate that it is awarded to him as the discoverer of the North Pole. This motion was unanimously agreed to."

Mr. Butler. The committee asked Prof. Gannet to state to the committee the results of his examination of the records made by Peary, and at the same time to give his reasons for his belief in the accuracy of the reports made by Commander Peary.

Mr. Gannett. Well, as I understood the question, you wish to have the journal and the observations made by Mr. Peary brought forth in this committee?

The Chairman, No.

Mr. Macon. I want that brought in; this Congress belongs to the country, and whatever we do as its Representatives ought to be done in the open and not in secret. If we are doing anything to be kept back, I propose to make it public myself. So far as I am concerned, we are not going to deal with secrets in anything. We are charged here as the Representatives of the people.

Mr. Bates. I understand there is a very good reason for that. Do you care to state why that record should be kept from the public?

The Chairman, Do you care to state what the reason is?

Mr. Gannett. I do not know that I should like to. I would rather Peary would state his reasons himself.

Mr. Roberts. Now, let me ask a question: Do I understand the papers or records in issue now are copies of Mr. Peary's original journal?

Mr. Roberts. And what other.

Mr. Roberts. And what other.

Journal?

Mr. GANNETT. Yes, sir.

Mr. ROBERTS. And what other—
Mr. GANNETT. Copies of his observations.

Mr. ROBERTS. Just what is included in the term "observations," in a general way?

Mr. GANNETT. The altitude of the sun and latitude.

Mr. ROBERTS. Do I understand that Mr. Peary objects to his observations as to latitude, and the position of the sun—objects to that being made public, or is it simply the journal of his trip that he objects to, or both?

Mr. GANNETT. Both.

Mr. ROBERTS. In view of the statement we have just listened to, I would like to ask Prof. Gannett when Mr. Peary placed the injunction of secrecy on those papers?

Mr. GANNETT. When he gave them to me two or three days ago.

The CHAIRMAN. On what papers did he place the injunction of secrecy?

Mr. Gannett. When he gave them to me two or three days ago. The Chairman. On what papers did he place the injunction of secrecy?

Mr. Roberts. His journal and astronomical observations. If I may, I would like to ask Prof. Gannett a question or two. Is the committee to understand that the interview had between the geographic committee and Mr. Peary at Admiral Chester's house was the first opportunity and the first information that your committee acquired in their examination of the Peary records?

Mr. Gannett. No; the story is very nearly as it has already been stated by Mr. Alexander. Peary originally sent down a Mr. Nichols with certain papers which brought the record up to the time that Bartlett left him; further, he had a statement in the handwriting of the various men—McMillan, Marvin, and Bartlett—giving the results of their latitude observations, and carried it up, and also his soundings.

Mr. Roberts. How did Mr. Nichols happen to come before your committee? Had you asked Mr. Peary to submit his data and proofs?

Mr. Gannett. Yes.

Mr. Roberts. You had formally done that as a committee?

Mr. Gannett, Yes; it was done by the society, not our committee; it was a formal invitation to submit his proofs; in reply he sent Mr. Nichols with the papers.

Mr. Roberts. And the information you sought?

Mr. Roberts. And the information you sought?

Mr. Gannett, Yes; it was intimated to him we would require further information. He, indeed, expected to furnish it, but he was not able to leave his home at that time in order to attend the committee.

Mr. Roberts. Did the committee do anything at all on the information they had, or did they hold the matter in abeyance?

Mr. Gannett. They looked over the matter and sent it back.
The Chairman. What additional information did you ask for?
Mr. Gannett. Asked for just what we got; we wanted his own journal and his own observations.
Mr. Gregg. The journal and observations he made after he had left

Mr. Greege. The journal and observations he made after he had letter the party?

Mr. Greege. The journal and observations he made after he had letter the party?

Mr. Greege. The journal and observations he made after he had letter the party?

Mr. Greege. The journal and left him; that was particularly what we wanted; but we had the whole thing. As to the matter of the instruments, they started with Peary in a trunk, which was checked, but they did not come here as fast as Peary did; he got here in the morning and his trunk did not get here until evening, and we examined the contents of it, examined the instruments down at the station that evening without moving the trunk.

Mr. Dawson. At what point did Commander Peary leave the balance of his party?

Mr. Gannett, At a point a little short of 88° latitude.

Mr. Dawson. How far was that from the pole in miles?

Mr. Gannett. One hundred and thirty-three miles, I think, sir.

Mr. Dawson. How long was he absent from the party until he rejoined it?

Mr. Gannett. After Bartlett left there was no rejoining; Mr. Bartlett went back to Cape Columbia; they separated on the 1st of April, I think it was, and on the 6th he arrived at the pole; that would be six days.

Mr. Dawson. You said there was submitted to your committee ob-

think it was, and on the out he arrived to the days.

Mr. Dawson. You said there was submitted to your committee observations taken up to the point when Bartlett turned back. How many days did the observations cover while Peary was alone, beyond that point?

Mr. Gannett. How many days?

Mr. Dawson. Yes, sir; how many days' observations were there, do you recall?

Mr. Gannett. How many days:

Mr. Dawson. Yes, sir; how many days' observations were there, do you recall?

Mr. Gannett. No. Peary took only one set of observations after Bartlett left him until he reached the pole, then at the pole he took a number of sets.

Mr. Dawson. What I want to get at is how many days after he left Bartlett before he returned to his party, from the point where he covered the observations himself?

The Chairman. Where he met other people?

Mr. Roberts. Where he met his party again?

Mr. Roberts. He went back to the base of supplies by himself?

Mr. Gannett. He did not meet his party at all; one after another turned back to Cape Columbia.

Mr. Roberts. He went back to the base of supplies by himself?

Mr. Gannett. Yes.

Mr. Roberts. Now, how many days from the time he left Bartlett and went to the pole before he rejoined the party at the base of suplies? That is what we are getting at.

Mr. Gannett. I do not recall it now; I have figured on that a good deal; I do not remember how many days.

Mr. Grosvenor. He was six days going to the pole.

Mr. Roberts. How many days going back from the pole to Cape Columbia?

Mr. Roberts. How many days going to the pole.

Mr. Roberts. How many days going back from the pole to Cape Columbia?

Mr. Grosvenor. I think 16 days; he was 52 going and 16 days going back.

The Chairman. What distance did he cover in that time?

Mr. Grosvenor. About 400 miles.

Mr. Roberts. In the 16 days?

Mr. Grosvenor. I think so. I could give it to you; I have that information in my office; if you want it I can send it to you; I think 16; I worked it out.

Mr. Roberts. I should judge, from what you say, that Mr. Peary left Bartlett, left his party, at just about the point where the last sounding was made by Bartlett, 87-15. According to the report, Bartlett made his last sounding at 87-15, and got 1,260 fathoms of water.

Mr. Gannett. Bartlett continued a little beyond that point, but no other sounding was made.

Mr. Roberts. There was one other sounding; Peary made a sounding right close to the pole, 89-55. Now, did Peary have his artificial horizon when he exhibited it to your committee?

Mr. Ronerts. And it seemed to be a proper one?

Mr. Roberts. And adequate for the purpose?

Mr. Roberts. And adequate for the purpose?

Mr. Roberts. There was a slight modification made in it; it was not possible to get the sun at very low angles.

Mr. Roberts. There was no question in your mind as to its being a proper artificial horizon for use in the Arctic regions and giving the best of results?

Mr. Roberts. Was anyone, other than Mr. Nichols and Mr. Peary, before your committee giving information on this?

Mr. Roberts. No.

Mr. Roberts. When your report was submitted to the Geographic Society in what way was it presented; to whom in the society?

Mr. Gannett. No.

Mr. Roberts. When your report was submitted to the Geographic Society in what way was it presented; to whom in the society?

Mr. Gannett. They accepted it.

Mr. Roberts. When your seport was submitted to the Geographic Society in what way was it presented; to whom in the society?

Mr. Gannett. When, took some action on it?

Mr. Roberts. They then, took s

opinion.

Mr. Roberts. The reason I asked the question is that you know, of course, that there is an impression over the country that Mr. Peary appeared in the house of his friends, so to speak; that the committee appointed to examine this data were prejudiced in his favor, and the statement has been made to our committee that certain members of that committee were—well, I won't say hostile to Mr. Peary, but rather skeptical, and were convinced by his statements against their state of unbelief, and that is the reason I asked you the question, whether you had expressed an opinion.

Mr. Gannett. The purpose of that committee as regards Commander Peary was, according to my understanding, like this: I think it is fair to say that I was a friend of his, but I do not think I had met him a dozen times in my life; I knew him, had an acquaintance-ship with him, and that was all; I think that was the case with Tittmann.

Mr. Roberts. That does not just meet the point. You know it is a matter of common knowledge that people take sides one way or another. What I wanted to get at, if you care to express it, was your own state of mind. Did you believe before you saw that proof that Peary reached the pole or was your mind completely blank on it?

Mr. Gannett, Every one who knows Peary by reputation knows he would not lie; I know him by reputation.

Mr. Roberts. A fair inference would be that you believed his statement when it first appeared in the press and before you saw the proofs?

Mr. Roberts. Now, in view of what you say about the possibility of faking observations in the vicinity of the pole which could not be disproved, upon which any man could have claimed to have been at that spot, did not the personal equation enter very largely into the findings of your committee of the Geographic Society; that is, your belief in the personal honesty of Mr. Peary?

Mr. Gannett. I do not think that if Peary's evidence were found to be insufficient or faulty the committee would have had the slightest hesitation in turning him down.

Mr. Roberts That is very true, but that is hardly an answer to my question. I assume that the observations which he presented, the astronomical observations, were mathematically correct, and then it all depends upon whether he ever took those observations at the spot he says he took them, doesn't it, because he might sit down in Washington and make those observations and claim to have made them at the pole or in the vicinity of the pole; so it is the personal equation after all? In other words, the believing of what Mr. Peary related after he left Bartlett until the time he returned to Cape Columbia depended entirely upon the personal equation, so far as your committee was concerned?

Mr. Gannett. As Mr. Tittmann has so admirably set forth, it is hardly believable that a man would sit down within 130 miles of the North Pole and do that after he had undertaken the uncertainties, the dangers, and the risks to life

Mr. Grego. Could he have done it at 130 miles from the pole—made entries and observations?

Mr. Roberts. In other words, could he have gone out of sight behind an iceberg or promontory and faked this thing?

Mr. Gannett. I do not know whether Peary knows enough about astronomy to do it or not.

Mr. Butler. If he had information enough about astronomy could he have done it?

Mr. Grego. Could you have made one, Professor?

Mr. Gannett. I think I could.

The Chairman. Could it have been detected by a scientific man like yourself?

Mr. Gannett. Well. It would do not not be a scientific man like yourself?

Mr. Gannett. I think I could.

The CHairman. Could it have been detected by a scientific man like yoursel?

Mr. Gannett. Well, it would depend entirely upon a whole lot of things. Now, any scientific man reading Cook's narrative sets him down as a faker, because his narrative don't tie together; he gets the indinght sun rising on the wrong day; his notes about it show he is traveling south instead of north; and he gets the longitudes to the minute when he couldn't get them within 10°, and all that sort of thing, you know. Now, whether, of course, a man who knew more, if he attempted to fake, could avoid some of those things; but could he avoid them all?

The Chairman. Could you rely upon his report of the observations taken without any other fact and not knowing the man?

Mr. Gannett. Just simply the observations, without any knowledge of the man and without any narrative?

The Chairman. Yes.

Mr. Gannett. No; I don't think I could.

Mr. Gregg. The personal equation and confidence in the man would cut a considerable figure in siding you to come to a conclusion?

Mr. Gannett. Yes; and the other attendant circumstances, as Mr. Tittmann set them out so well when he said he had everything to carry him forward, and the idea of a man attempting to fake when within 130 miles of the pole. In the dealings of this committee of the Geographic Society with Mr. Peary, Mr. Peary made the condition that none of his records should get into print, and it is for the very obvious reason that Cook was at that time supposed to be fixing up his records to submit to Copenhagen, and if Peary submitted these observations he would use them.

The Chairman. Well. the reason why the records should not be made public may now have disappeared.

Mr. Bates. Are there any evidence before your committee as to whether he did or did not mention to any of his party, after he rejoined them, that he had found the pole?

Mr. Gannett. I do not remember any direct evidence.

Mr. Gregg. Did he claim he told Bartlett when he rejoined the party?

Mr. Gregg

Mr. Gerog. Did he claim he told Bartlett when he rejoined the party?

Mr. Gannett. I do not remember whether that question was ever asked or answered.

Mr. Gerog. I have heard it contended that he did not tell anybody until it was claimed Cook had gotten there.

Mr. Roberts. Have you any familiarity with soundings and the methods used in taking soundings?

Mr. Gannett. Well, not particularly with deep-sea soundings. Peary described his method of making soundings on this journey.

Mr. Roberts. That is what I wanted to ask you about. He says he started on that expedition with two reels of specially made piano wire of 1,000 fathoms each, and three approximately 20-pound leads, with clamshell devices for grasping samples of the bottom. These reels were arranged to be fitted quickly to the upstanders of a sled when making a sounding, and had handles for reeling in the wire and lead. One of these reels and leads were carried by Bartlett with his advance party, and the other reel and two leads by the main party. Portions of the wire and the two leads were lost at various times in hauling up, owing probably to kinks in the wire. When the sounding at \$5° 33' was made, 700 fathoms only were left of the sounding wire of the main party, and Bartlett, with the other thousand fathoms, was in advance and inaccessible. In hauling up the wire from this sounding it parted again, and some 200 fathoms, together with two pickax heads and a steel sledge shoe, which had been used to carry it down, were lost.

When Marvin turned back, the captain's 1,000 fathoms and the remaining 500 fathoms of the other reel were combined. When Bartlett made the sounding at 85° 15′, I gave him explicit instructions to use the utmost caution in regard to the wire, in order not to lose any more of it, as I wanted it all for a sounding at the pole should I succeed in getting there. Acting upon these instructions, Bartlett ran out 1,260 fathoms and then stopped on account of a small kink in the wire, which he feared would part when the wire was hauled up. When I made my sounding about 5 miles from the pole, the wire parted, as had been feared, and the last lead and nearly all of the wire was lost. What I am getting at is this: If it took two pickax heads and a steel sledge shoe to get down 700 fathoms, how much weight did it take to get down 1,500 fathoms, and where did he get that extra weight to carry it down 1,500 fathoms when he made the sounding himself within 5 miles of the pole?

Mr. GANNETT. That I can not answer.

Mr. ROBERTS. No effort was made by your committee to interrogate Henson to verify in any way any of the statements made by Peary?

Mr. GANNETT. No.

Mr. ROBERTS. Or the time it took him to make his different journeys, the number of miles per day?

Mr. GANNETT. No.

Mr. ROBERTS. Did Mr. Peary before your committee, give you any

the number of miles per day?

Mr. GANNETT. No.

Mr. ROBERTS. Did Mr. Peary, before your committee, give you any account of the conditions of ice or open water that he found on that dash from the main party to the pole?

Mr. GANNETT. Yes; that he found some thin ice; I do not remember that he found any open leads in that six days' travel.

Mr. ROBERTS. Well, how did he explain to you that with that ice and no open water he got through the ice to make his soundings?

Mr. GANNETT. He found some thin places.

Mr. ROBERTS. He found some thin ice and chopped through? Did he make that sounding going up or returning?

Mr. GANNETT. Returning.

Mr. ROBERTS. Did he tell your committee what his equipment was on that dash?

Mr. Gannett. Returning.
Mr. Roberts. Did he tell your committee what his equipment was on that dash?
Mr. Gannett. Well, he had two sledges.
Mr. Roberts. How many dogs?
Mr. Gannett. I think 36 dogs; it seems to me 36 or 32.
Mr. Roberts. How many Esquimaux?
Mr. Roberts. How many Esquimaux?
Mr. Roberts. And Henson?
Mr. Roberts. And Henson.
Mr. Roberts. And himself?
Mr. Gannett. Yes, sir.
Mr. Roberts. And on his two sleds he carried all his apparatus, food for 4 people and 32 or 36 dogs, for 22 days?
Mr. Gannett. I do not remember how many days; it must have been more than that, because they did not expect to get back so soon.
Mr. Roberts. What weight will a big sled like that transport—what is the average load?
Mr. Gannett. The average load, including the sled, is about 500 pounds.
Mr. Roberts. Do you know what his instruments weighed?

Mr. Gannett. The average load, including the sled, is about 500 pounds.

Mr. Roberts. Do you know what his instruments weighed?

Mr. Gannett. They were very light; the sextant was the heaviest instrument that he had; he had besides that a lot of light mountain transits, which he did not use.

Mr. Roberts. He must have had 40 to 50 pounds in his sounding apparatus.

Mr. Gannett. Yes.

Mr. Roberts. Because the wire itself weighed something over 20 pounds, the lead 20, and the reel that carried the wire must have made the weight something like 40 or 50 pounds. He carried a camera also, didn't he?

Mr. Gannett. I think he must have; yes.

Mr. Roberts. Did he show you the picture that Hampton is giving away of the Navy ensign holsted on the North Pole, projecting so distinctly?

Mr. Gannett. No.

Mr. Roberts. Do you know anything about that photograph?

Mr. Gannett. No; I do not.

Mr. Roberts. Let me ask just this question: What were the conditions as to sunlight at the time he is said to have been at the pole? Was it the period when the sun is highest or what they call the midninght sun?

Mr. Gannett. No; it was just after the spring equinox; that comes—

Mr. Gannett. No; it was just after the spring equinox; that comes—
the sun gets up as far as the Equator on the 21st of March; now, he was
at the North Pole some 15 or 16 days later.

Mr. ROBERTS. Then he was there at the time of the year when the
sun is ordinarily the highest at the pole?

Mr. Gannett. No; the sun would be the highest at the pole the 21st
of June

Mr. Gannett. No; the sun would be the highest at the pole the 21st of June.

The Chairman. On November 4, 1909, the subcommittee, of which you were a member, made its report to the National Geographic Society?

Mr. Gannett. Yes.

The Chairman. In that report you said that Commander Peary had submitted to the subcommittee his original journals and records of observations.

Mr. Gannett. Yes.

The Chairman. Have you copies of the records and observations with you?

Mr. Gannett. Yes.

The Chairman. Have you copies of the records and observations with you?

Mr. Gannett. Yes.

The Chairman. In view of the statement made by Representative Alexander, of New York, to this subcommittee this morning, having before it the bill to promote and retire Commander Peary as a rear admiral, that Commander Peary was ready and entirely willing to submit to the committee all of his original notes, observations, instruments, and journals, and other data furnished to the committee of the National Geographic Society, on which it made its report, have you any objection now to submitting these copies to the committee?

Mr. Gannett. No; in view of Mr. Alexander's statement I have not. Mr. Alexander. I do not take the responsibility of saying that what is shown to this committee shall be published to the world; whether he would be willing to have it published to the world or not I do not know. My simple suggestion was that he was perfectly willing to submit to the gentlemen of this committee any and all data, original and otherwise, which he may have, that they might say "We have seen the original data which was submitted to the National Geographic Society," and upon it this committee could make their findings. But whether he would want them, even at this time, published to the world that is a question I did not speak to him about, nor was there any suggestion in our conversation upon which I could base an opinion as to his willingness.

The CHAIRMAN. I do not see how it can be kept from the public if it goes down here. That you will appreciate.

Mr. Alexander. Then I wouldn't want anything submitted here upon my statement this morning. There is time enough; Mr. Peary can make his own statement upon that.

The CHAIRMAN. I think it would be well enough for us to suspend the examination at this point until we can meet again in two or three days, and will ask Prof. Gannett to come back before us again.

Mr. Alexander. My statement was simply to show to the committete his willingness to show to the committee everything that he had. Now, I would suggest that inasmuch as he is entirely willing to come here himself that it might not be a bad plan to have him accompany Prof. Gannett, and then you can ask him all and every question; how many days he was going up after he left Bartlett, how many days he was coming back, anything and everything that this committee wants to ask I assure you it will get a full and frank answer.

Mr. Dawson. He ought to understand that what is taken here will be a matter for public record.

Mr. Englebright. I make the motion that we invite Mr. Peary to be present, with Mr. Gannett and Mr. Tittmann.

(This motion was seconded by Mr. Gregg, and after some discussion Mr. Gregg withdrew his second, and Mr. Englebright withdrew his motion.)

(This motion was seconded by Mr. Gregg, and after some discussion Mr. Gregg withdrew his second, and Mr. Englebright withdrew his motion.)

The Chairman. The verdict of the National Geographic Society affirming Commander Peary's records and data relative to his attaining the North Pole has been accepted by the geographical societies of London. Paris, Berlin, Vienna, Rome, Brussels, Antwerp, Geneva, Dresden, and St. Petersburg, has it not?

Mr. Gannett. Yes, sir.

The Chairman. The verdict of this committee, of which you were a member, has been accepted by the scientific societies in many different places in the world?

Mr. Gannett. Yes, sir.

The Chairman. The records of Peary were not submitted to any of these societies? They simply accepted the judgment of the National Geographic Society?

Mr. Gannett. That is the case.

Mr. Roberts. Do you know of any instance where a national geographic society has made a finding of any scientific fact and that finding has not been accepted by others? In other words, it is a professional courtesy among geographic societies to accept the results of each other's work without question?

Mr. Gannett. We had a case only two or three months ago where Cook was accepted by the University of Copenhagen, but nearly all the geographical societies refused to accept it.

Mr. Roberts. That was not a geographical society.

Mr. Roberts. That was not a geographical society.

Mr. Roberts. Do you know where the finding of any society has been repudiated by another except in the Cook instance?

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr. Roberts. I do not recall any except in the Cook instance.

Mr.

DEPARTMENT OF COMMERCE AND LABOR, OFFICE OF THE SECRETARY, Washington, March 1, 1910.

Hon. ERNEST W. ROBERTS, M. C., House of Representatives.

Sin: In reply to your letter of February 25, requesting the report by Civil Engineer R. E. Peary, United States Navy, I beg leave to transmit herewith copies of, first, a letter transmitting tidal records; second, a letter transmitting the profile of soundings referred to in the letter transmitting the tidal records, the explanatory statement transmitted with the soundings, and a photographic copy of the profile and of the table of geographic positions, all of which are duly attested.

Respectfully,

CHARLES NAGEL, Secretary.

MARCH 3, 1910.

I certify that this is a true copy of the original. [SEAL.] Andrew Braid,
Assistant in Charge of Office, Coast and Geodetic Survey.

EAGLE ISLAND, SOUTH HARPSWELL, ME., October 18, 1909.

Sin: Referring to my telegram, I am sending you by express the tidal records of the Peary Arctic Club's recent north polar expedition. Owing to the unfortunate death of Prof. Ross G. Marvin, some of the chronometer comparisons, particularly of the Cape Bryant observations, are missing.

These comparisons are undoubtedly among Prof. Marvin's private papers; and if so, will be obtained from his relatives later.

Prof. Donald B. Macmillan took many of the observations a.) I is familiar with them all, and can come to Washington to see you any time you may consider it advisable.

I am writing him now to communicate with you at once, and to keep you posted as to his address.

I am also sending you profile of soundings from Cape Columbia to within 5 miles of the pole.

If such request is permissible, I will respectfully request that this profile and complete set of soundings be not published at present.

With best regards, I am,

Very respectfully,

R. E. Peary, U. S. N.

Acting Superintendent F. W. Perkins,

United States Coast and Geodetic Survey,

Washington, D. C.

March 3, 1910.

MARCH 3, 1910. I certify that this is a true copy of the original.

[SEAL.]

Andrew Braid,

Assistant in Charge of Office, Coast and Geodetic Survey.

EAGLE ISLAND, SOUTH HARPSWELL, ME., October 28, 1909.

Mr. F. W. PERKINS, Washington, D. C. DEAR SIR: Replying to your favor of October 21, I desire to express my sincere appreciation of your kind offer to furnish me the results of the discussion of the expedition's tidal records.

I shall be very glad to receive the same when ready.

In regard to the profile of soundings delivered to you by Mr. Nichols and which you inform me the Hydrographic Office of the Navy Department desires, will say that these soundings were made on the meridian of Cape Columbia, and plotting on that meridian at the latitudes, which I think are noted in the table on the profile sheet, will give their position.

There are quite a number of other soundings made on this expedition and the previous one along the north coast of Grant Land as far west as the eighty-second meridian (Cape Fanshawe Martin); also in Kennedy and Robeson Channels and Kane Basin; also off Cape Alexander, and from Cape Morris Jesup, the northern extremity of Greenland, to 84° 15′.

and from tage morris sessy, the normen extensity of Green and From 184° 15'.

If the Hydrographic Office contemplates adding these soundings to Chart No. 2142. or thinks of issuing a new edition of that chart, it would seem desirable to have all of these soundings, as well as the work of the previous expedition, defining the shore line from Aldrich's farthest to Cape Thomas Hubbard, and the reconnaissance of the present expedition of Clements Markham Inlet just west of Cape Hecla added to the chart.

May I respectfully suggest that you take this matter up with the Hydrographic Office and, if the work indicated above seems desirable, see if some arrangement can be made for the compensation and expenses of Prof. Donald B. Macmillan, who is familiar with much of this work, so that he may come to Washington with the notes of the soundings and assist in plotting the work.

Prof. Macmillan is now engaged in getting the sounding samples in shape to send a set to your office for such examination as you may desire.

shape to send a set to your office for such desire.

Unfortunately, the samples of soundings on the northern journey beyond the sounding of 110 fathoms were lost with Prof. Marvin. The others may yield interesting results under the microscope.

Very sincerely,

R. E. Peary, U. S. N. March 3, 1910.

I certify that this is a true copy of the original. ANDREW BRAID,
Assistant in Charge of Office, Coast and Geodetic Survey.

NOTES OF SOUNDINGS.

NOTES OF SOUNDINGS.

The sounding equipment of the expedition consisted of two reels of specially made piano wire of 1,000 fathoms each and three approximately 20-pound leads, with clamshell device for grasping samples of the bottom. These reets were arranged to be fitted quickly to the upstanders of a sledge when making a sounding and had handles for reeling in the wire and lead.

One of these reels and leads was carried by Bartlett with his advance party and the other reel and two leads by the main party.

Portions of the wire and the two leads were lost at various times in hauling up, owing, probably, to kinks in the wire.

When the sounding of 85° 33' was made, 700 fathoms only were left of the sounding wire of the main party, and Bartlett, with the other 1,000 fathoms, was in advance and inaccessible.

In hauling up the wire from this sounding it parted again, and some 200 fathoms, together with two pickax heads and a steel sledge shoe, which had been used to carry it down, were lost.

When Marvin turned back, the captain's 1,000 fathoms and the remaining 500 fathoms of the other reel were combined.

When Bartlett made the sounding at 85° 15′, I gave him explicit instructions to use 'the utmost caution in regard to the wire, in order not to lose any more of it, as I wanted it all for a sounding at the pole, should I succeed in getting there.

Acting upon these instructions, Bartlett ran out 1,260 fathoms and then stopped on account of a small kink in the wire, which he feared would part when the wire was hauled up.

When I made my sounding about 5 miles from the pole, the wire parted, as had been feared, and the last lead and nearly all of the wire were lost.

The above facts are noted to explain the irregularity of these soundings, which did not get bottom.

The sounding of 310 fathoms at 85° 23′ naturally impressed me at

The above facts are noted to explain the irregularity of these soundings, which did not get bottom.

The sounding of 310 fathoms at 85° 23' naturally impressed me at once as surprising, and when Marvin reported the result to me, immediately after taking the sounding, I at once asked him if he was sure that he had the bottom, and he replied that he was, as the fact of this pronounced shoaling from 825 fathoms at 310 impressed him at once, and he made sure that his depth was correct.

Again, when the sounding of 700 fathoms and no bottom was made about 10 miles farther north, we both spoke of the peculiar fact of this outlying ridge with deeper channel intervening between it and the continental shelf, and Marvin again said that he was sure of his 310 fathoms reading.

tinental shelf, and Marvin again said that the fathoms reading.

Had it not been for the loss of the last lead and practically all of the wire, while making the sounding at the pole, I should, on the return, have interpolated other soundings.

The profile indicates that a line of 5-mile interval soundings from Cape Columbia to the eighty-sixth parallel might develop a particularly interesting profile of the bottom of the Arctic Ocean.

R. E. Pearr,

United States Navy.

OCTOBER 18, 1909.

MARCH 3, 1910.

I certify that this is a true copy of the original.

hat this is a true copy of the original.

Andrew Braid.

Assistant in Charge of Office, Coast and Geodetic Survey.

NAVY DEPARTMENT, Washington, March 7, 1910.

My Dear Congressman: Referring to your call at the Hydrographic Office of this department on the 3d instant, when you requested to be furnished with a chart showing the explorations of Civil Engineer R. E. Peary, United States Navy, and the soundings taken by him, I beg to hand you herewith a black print of the base of the North Polar Chart in course of construction at the time of your visit at the Hydrographic Office. The soundings shown on this chart as having been taken by Civil Engineer Peary on his last voyage of exploration to the Arctic were received from the United States Coast and Geodetic Survey.

Faithfully, yours,

BEEKMAN WINTHROP, Acting Secretary of the Navy.

Hon. WILLIAM F. ENGLEBRIGHT, M. C., House of Representatives, Washington, D. C.

COMMITTEE ON NAVAL AFFAIRS, SUBCOMMITTEE ON PRIVATE BILLS, Monday, March 7, 1919.

The subcommittee was called to order at 4 p. m., Hon. THOMAS S. BUTLER (chairman) presiding.

Present: Messrs. Butler, Roberts, Bates, Dawson, Englebright,

Macon.

Representative De Alva Alexander presented the following statement to the subcommittee:

"Commander Peary and his friends say that contracts signed months ago with his publishers render it impossible to make his records and scientific data public now. It would not only subject Peary to heavy damages—a loss which he can not meet, having just extricated himself from debt incurred in connection with his various expeditions—but it would be breaking faith with his publishers, which he is unwilling to do under any circumstances."

Representatives R. P. Hobson and W. Hampton Moore addressed the committee in executive session.

(Adjourned to meet at 11 o'clock Wednesday morning, March 9, 1910.)

SUBCOMMITTEE No. 8 OF THE COMMITTEE ON NAVAL AFFAIRS, Saturday, January 7, 1911.

The subcommittee this day met, Hon. Thomas S. Butler (chairman)

presiding.

STATEMENT OF CAPT. ROBERT E. PEARY, UNITED STATES NAVY.

STATEMENT OF CAPT. ROBERT E. PEARY, UNITED STATES NAVY.

Mr. Butler. Capt. Peary, there are two or three bills awaiting the action of the committee, on which congressional action is necessary. You know what the bills are. Yesterday the subcommittee suggested that you should be invited to come here at 10 o'clock this morning and fell us anything you may see fit bearing upon your trip to the North Pole.

Capt. Peary. The subject, if gone into in detail, is rather an extensive one, and I should hardly know where to commence to make a connected and formal statement in regard to the matter. I had not thought of anything of that kind, but if you or any member of the committee wishes to ask questions in regard to points that seem to be the more prominent ones, I shall be very glad to answer them to the best of my ability, if that has your approval.

Mr. Butler When we adjourned last spring some members of the committee desired you to submit some proofs that you had been to the North Pole, had succeeded, before congressional action should be taken on any of the bills, and while I have no disposition whatever to examine you or to cross-examine you, if you have any data or any material to submit to us, which will enable us in our own way to establish the fact, we would be glad to have it.

Mr. Englerricht. For the purpose of the record, I would suggest that Capt. Peary give us his present connection with the Navy Department.

Mr. Englerrichte.

partment.

Mr. Butler. Perhaps I should have asked the captain to give us his connection with the Navy, although I had assumed that we all knew it, because it is a matter of record.

When did you enter the Navy?
Capt. Pbart. I entered the Navy on the 26th of October, I think it was, 1881, 29 years ago
Mr. Butler. As a civil engineer?
Capt. Peart Yes, sir. As the result of a competitive examination which lasted two weeks at the Washington Navy Yard.
Mr. Butler. And since that time you have been a member of the department?
Capt. Peart. I have been in the Civil Engineer Corps of the service since that time.
Mr. Englebright. What is your present rank?
Capt. Peart. My present rank is that of captain, since the 20th of October.

of October.

of October.

Mr. BUTLER. That is the highest grade you can reach in your corps?

Capt. Peary. Yes, sir; except by being made chief of bureau.

Mr. BUTLER. I understand that by reason of the recent act of Congress your rank will continue after you retire from the bureau?

Capt. Peary. I think that is the law, that a chief of bureau continues

his rank.

Mr. Bates. It is true that Mr. Bartlett was within 130 miles of the pole?

pole?
Capt. Peary, One hundred and thirty-three miles.
Mr. Butler. If agreeable to you, begin your narrative where Bartlett left you, and tell us what you can which will help us to understand that you actually did reach the pole.
Capt. Peary. How fully do you wish me to go into that?
Mr. Butler. Take your own way and drift along, and, for one member of the committee, I shall be greatly pleased to sit here and

member of the committee, I shall be greatly pleased to sit here and listen.

Capt. Peary. I can say, in a general way, Mr. Chairman, that at the point where Bartlett left us his observation indicated it was \$7'\$
47' north latitude. At that point I overhauled my sledges completely. At that time I had seven sledges. I intended to go on from there with a party of six men.

Mr. Butler. Who made the observation at that point—Bartlett?

Mr. Peary. Yes, sir.

Mr. Butler. And Bartlett made the report?

Capt. Peary. He made the observation at that point. At that point I had 7 sledges and, I think, 60 dogs. I do not remember the number precisely. I proposed to go on from there with 5 men besides myself and with 5 sledges, leaving 3 men to return. One of the sledges was completely broken up to furnish material for repairing others. We broke a great many sledges. One was assigned to Bartlett and the poorest dogs were selected to go, back with Bartlett. That left me with Henson and 4 Eskimos, Oo-tah, E-ging-wah, See-gloo, and Oo-que-ah, and 40 dogs, which were the pick of my original pack of 133 with which we left Camp Columbia, the selections having been made at every point where a supporting party turned back. We had a rest of at least 24 hours at this point, reached by Bartlett. That rest was intentional for the purpose of double rationing the dogs, selecting the poor ones, repairing the sledges, and starting Eartlett back. Bartlett started back immediately after noon of the 1st of April, after taking his observation, and giving me a copy and retaining a copy.

Mr. Butler. How soon did you start after that?

Capt. Peary. I went on with the work of repairing the sledges and reloading them, and started 'at 4 or 5 o'clock the next morning, after having a good sleep. In those next four days and part of the fifth day we made five marches. You will understand that in the time of continuous daylight a march is not synonymous with a day here. We made three marches in four days. You can sleep when you please and

travel when you please, except for the weather; night or day does not affect that. I made five marches, the estimated distance of the first one being 25 miles, of the second one 20 miles, of the next two, 25 miles each, and of the last, 30 miles.

Mr. ROBERTS. You are speaking of geographical miles?
Capt. PEARY. I am speaking of geographical miles. All miles that I speak of now will be geographical.

Mr. BUTLER. The last march reached what point?
Capt. PEARY. The last point, I judged, brought me near enough of the pole so I could reach it from that point.

Mr. BUTLER. Estimated at how many miles? I remember from your book very distinctly that it was about 5 miles.
Capt. PEARY. My estimate put me within 3 or 4 miles of the pole. I reached there, as I had hoped to do, before noon of a given day, so that I could take a preliminary observation immediately after my arrival that would indicate my position near enough so that I could ecide what to do the next day, whether I would go on with my party or whether I would take a light sledge and one or two men and make a spurt for it as Shackleton did, and as is customary in such work.

The observation which I made at that time was not an entirely sat-

party or whether I would take a light sledge and one or two men and make a spurt for it as Shackleton did, and as is customary in such work.

The observation which I made at that time was not an entirely satisfactory one, as clouds were drifting over the sky, but it indicated our position, as figured in the field at that time, as 89° 57°, which is about 3 miles from the pole. After making our camp there, we turned in for a few hours of sleep. My intention was, when I had reached the point that I judged to be at or near the pole, to take observations at six-hour intervals. I had intended to take an observation at my Columbia 6 p. m. time, approximately, but it was cloudy at that time and looked as if it might clear away. I was unable to take any observation within six hours from my previous observation.

Starting with two of my Eskimos and the light sledge—because when you start off on the ice you never know what may happen—and my instrument, I went what I judged to be 10 miles farther on in the same direction and took another series of observations at midnight of the time I was carrying, which I call Columbia meridian time. Those observations indicated that I was on the other side of the pole.

Mr. Dawson. Were the conditions fairly favorable for the observations which you made beyond the pole?

Capt. Peary. The conditions after 8 o'clock in the evening were entirely satisfactory—they cleared away about 8 o'clock. The sky was entirely clear for the rest of the time that we were in the neighborhood of the pole.

Mr. Englebright. And practically wherever you are on the earth the needle is pointing toward the magnetic pole?

Capt. Peary. It tends to do so.

Mr. Butler. The North Pole is not north?

Capt. Peary. The North Pole is not north?

Mr. Butler. The needle tends to point toward the magnetic pole?

Capt. Peary. It does point near it, until

Capt. Peary. It does point near it, until you get so near to it that the—

Mr. Butler. Was there anything in the action of your needle that would assist in determining whether or not you had been to the pole? Capt. Peary. No, sir; except so far as you used a compass.

Mr. Butler. I understand; but in the pointing of the needle? Capt. Peary. It would assist you with the magnetic pole. That is the distinction. One is a geographical pole, a mathematical point, and the other is a magnetic pole, which is the point where the magnetic attraction is.

Mr. Excleright. In using a compass in the northern regions you use it with a calculated variation?

Capt. Peary. You use it, checking it by observations wherever you can. Along this coast [indicating on map] there are observations made by the British expedition, from this point [indicating] out to about here [indicating]. There are other observations made by me out to here lindicating] in the summer of 1900. To give you an idea of what those variations are, here at Roosevelt [indicating] the variation is approximately 95° west. In other words, the north end of the needle points a little south of true west, and as you go west that increases.

Mr. Engleright. Is not that all charted by the Coast Survey and by the marltime nations of the world?

Capt. Peary. They have the lines of certain variations, but of course the greater the number of observations the more accurate the data.

Mr. Engleright. Did you have such a chart with you?

data.

Mr. Engleright. Did you have such a chart with you?

Capt. Peary. No, sir; I did not have such a chart.

Mr. Dawson. Did you make any observations in the locality which would tend to throw any additional light on the variation of the needle?

Capt. Peary. I did not on this last expedition; I did on the previous ones; when I went along this coast [indicating]. I should say that on this trip that I had what I called a double team of dogs—12—and a light sledge. The usual team was 8 dogs, although we started from Columbia with 7.

Returning then to my camp, I made an observation at 6 o'clock the

and a light sledge. The usual team was 8 dogs, although we started from Columbia with 7.

Returning then to my camp, I made an observation at 6 o'clock the next morning, which would of necessity be at right angles to the observation I had made at midnight, and that indicated that the pole was between me and the sun. You can not say east or west, or anything else; everything is south. I then took another team of 12 dogs, fresh ones, and went in that direction an estimated distance of about 8 miles; I then returned to my same camp and, at noom of the 7th, took a series of observations, the conditions then being satisfactory for such observations, taking them from the Columbia meridian. Then we started in to have some sleep before returning, but after having been in camp a little while, everyone seemed to be more desirous of starting back and taking advantage of the fine weather. They were comfortable, but all more or less keyed up, and at about 4 o'clock of that afternoon I decided to start back. My men were all agreeable, and we did start back at 4 or 4.30, something like that, in the afternoon of the 7th, with the idea of sleeping at the last igloo in the upward journey.

On the way back we stopped about 5 miles south of the pole to make a sounding at a place where there had been a movement of the heavy ice and where the new ice which had frozen over was thin enough. That is shown in an illustration in the book. We reached our last upward igloo and slept there.

Mr. Butler. You did not make the sounding because your line parted?

Capt. Pearx. I did make the sounding, but did not recover the apparatus. I ran out my lead and all the wire without touching

bottom.

Mr. Englebricht. How deep?

Capt. Pears. Fifteen hundred fathoms—9,000 feet. When I started to reel the lead in the wire parted and I lost the apparatus. Otherwise I should have made soundings on the return like on the outward

wise I should have made soundings on the return like on the outward journey.

After sleeping at this igloo, we started back, and we covered our two outward marches in one. We should not have done that but for the fact that we knew that we did not have to build an igloo, and when we got there we could go in at once, and stopping there and putting in the time building an igloo would have taken about the same time. On the second march we did the same thing. We covered the two outward marches, but we could not have done a thing if we had been going the other way. During this march we had a northerly gale at our backs and in the latter part of it we had the ice raftering under us in places, but the wind rather helped us, and we did make our igloo at the end of that march. There, with the continuance of the storm, we got a fairly decent sleep and started on from there back. On the next march we did not cover two. I found I had come pretty near using up my dogs in the three marches, and I found that I had to look out for them if I was going to carry them back to land. From Bartlett's camp back to Cape Columbia we averaged five outward marches in three return marches.

Mr. Dawson. You could follow the line coming back?

Capt. Peary. We had a trail and the igloos to occupy when we got to camp at night.

Mr. Bates. That saved time?

Capt. Peary. Yes, sir; and it was a matter of moral encouragement to the men.

Mr. Butter, I am familiar with the details given in the book, as I

Mr. Barss. That said and the was a matter of moral encouragement to the men.

Mr. Butler. I am familiar with the details given in the book, as I read it with very great care, but what surprised me was this, that there were not frequent snows that would cover the trail. The illustrations, however, show how perfectly they had been retained.

Capt. Peary. There was very little snow on this trip. Three years ago we had a blizzard at 84° or 85° that continued for six days and quite a bit of snow fell, but the snowfalls in the Arctic regions are not excessive. They can not be. There is very little water exposed for a very short time to furnish evaporation into the air to later come down in snow. If you get snow it is usually accompanied with wind. That means that you have not only the falling snow, but any loose snow that may be picked up is carried on. It is nothing but a quiet downfall of snow that can obliterate a trail. If there is any wind, you will find places entirely covered with hard snow, and perhaps 100 feet or 100 yards beyond that you will see the trail just as distinct as ever.

feet or 100 yards beyond that you will see the trail just as distinct as ever.

Mr. Butler. You could not have found the igloos if it had not been for the trail on the return?

Capt. Pearx. No.

Mr. Butler. You came back on the same trail?

Capt. Pearx. Yes, sir; practically all the way, within 45 miles of Cape Columbia, and then I had Bartlett's trail.

Mr. Roberts. Before you leave this matter of the trail—you speak of the trail over the ice—how could you distinguish it coming back?

Capt. Pearx. By the passage of the sledges and the dogs over it.

Mr. Roberts. Did the dogs' feet leave any tracks on the ice?

Capt. Pearx. Not on the ice. Perhaps that might be a popular misconception. There is practically no ice, as such, on such a journey as this, except the new-frozen ice, ice covered with frozen crystals. Farther north, as I note in my book, on the surface of the great floes, in their depressions, there was crystalline ice where the pools of fresh water of the previous summer had frozen; but in general the ice of the Arctic regions is snow. It is hard, granular snow, or in places soft snow.

fresh water of the previous summer had frozen; but in general the ice of the Arctic regions is snow. It is hard, granular snow, or in places soft snow.

Mr. Roberts. Packed?

Capt. Peary. As a rule. If there has been any wind to speak of during the previous few weeks or months, it will be packed hard.

Mr. Roberts. The footprints of the dogs are left on the packed ice that you speak of?

Capt. Peary. The footprints will show on the snow, and the cutting of the steel sledge shoes will show in the snow. There is another thing—sometimes it is a nuisance, but on a trip like this it is a God's blessing: An Eskimo dog never passes a little hump of ice but what he puts his mark on it, and you can see the discoloration sometimes 300 or 400 yards, when you can not see the trail right at your feet. We also made a point, both on my previous expedition and this last one, of taking the pemmican cans which had been emptied along on a sledge and dropping the cans at certain intervals on the trail, sometimes on a pinnacle of ice. For this purpose those for the dogs were painted red and those for the men blue. The marks of the sledge shoes, the marks of the dogs feet, in places the discoloration of the ice and snow, the droppings of the dogs, and our pemmican tins made a trail that could be followed.

Mr. BUTLEE. Did not the cans blow?
Capt. Peary. Yes, sir; some of them.

Mr. BUTLEE. Did not the cans blow?
Capt. Peary. Yes, sir; some of them.

Mr. BUTLEE. On page 208 of your book I find the illustration "Looking back." You will remember that picture?
Capt. Peary. Yes, sir.

Mr. BUTLEE. On page 208 of your book I find the illustration made.

Mr. BUTLEE. On page 208 of your book I find the illustration had.

Capt. Peary. Yes, sir.

Mr. BUTLEE. On page 208 of your book I find the illustration been made.

Mr. BUTLEE. On page 208 of your book I find the illustration been made.

Mr. BUTLEE. On page 208 of your book I find the illustration been made.

Mr. BUTLEE. On page 208 of your book I find the illustration been made.

Mr. BUTLEE

Mr. Butler. On your return how did the trait appear, how much obliterated?

Capt. Peary. On a trail like that, in places there would be drifts across it that would absolutely obliterate it for a short distance. In other places you would find that these furrows had filled in with snow that had drifted across. On a trail like that a soft snowfall would have to be—I can not say precisely—several inches thick not to show some of the more pronounced furrows.

Mr. Butler. From Columbia to the North Pole you traveled 413 miles?

Capt. Peary. Yes, sir.

Mr. Butler. Of that distance, 413 miles, what sort of a trail did you have, as compared with this shown in the picture; largely similar?

Capt. Peary. We never had as distinct a trail as that, because that picture was taken from a trail that had just been made by a passage.

Mr. Bates. The other returning parties found the trail, and that helped to keep the trail open?

Capt. Peary. Yes, sir; that was one of the most important duties of each supporting party—to connect all possible breaks in the out-

ward trail due to any movement of the ice that would give the main party a continuous trail.

Mr. Dawson. I suppose your compass was of some assistance in following the trail?

Capt. Pears. Most assuredly.

Mr. Bates. The other returning parties found no trouble in coming back by this trail?

Capt. Pears. It took them some time in one or two places where there had been movements of the ice to pick up the trail on the other side, but their doing that saved me that time and trouble. Battlett, when he got back within 45 miles of land, lost the main trail and went into the land on his own hook; he could see it, of course, then, and I followed his trail when I came back.

Mr. Bates. Within 45 miles of land?

Capt. Pears. Yes, sir.

Mr. Dawson. Have you brought with you your original notes which you took during your movements in proximity to the pole?

Capt. Pears, I have them; yes, sir.

Mr. Dawson. Have you any chart that you made at that time showing these movements about the point where the pole is supposed to be?

Capt. Pears. I made no chart; no, sir.

Mr. Rousers. I mould like to ask if the supporting parties kept

Capt. Pears. I made no chart; no, sir.

Mr. Roberts. I would like to ask if the supporting parties kept
records of their return trips?
Capt. Pears. They kept records; yes, sir.

Mr. Roberts. And turned them over to you?
Capt. Pears. I have Bartlett's report. I think I have Macmillan's
and Borup's reports, but I will not be sure. I can give you the time of
each supporting party, if you care for it, on the return, without going
into details.

Mr. Roberts. How did you get that information?
Capt. Pears. What information?
Mr. Roberts. As to their time and so on and the incidents of their
return.

return.

Capt. Pharx. After my return I had Bartlett make me a report of his own trip, and I recall that I have a brief report from Borup and one from Macmillan. Borup, on his return to Columbia, had instructions to go west along this const [indicating on map] just in the same way that Marvin, when he came back, was to come up this coast [indicating on map], so that I should be protected along the entire extent of the north coast in event of meeting conditions such as I met in the previous expedition when I was driven off here [indicating on map]. return

on map).

Mr. Roberts. What I was inquiring about particularly was whether each supporting party had kept a diary or record or journal.

Capt. Peary. I have a report from Bartlett, and I think I have

Capt. Prary. I have a report from Dates.

Macmillan's report.

Mr. Roberts. But those reports were made up after they returned to the ship?

Capt. Prary. They were given to me then. They probably had

Capt. Pears. They were given to me then. They probably had rough notes.

Mr. Roberts. Do you know whether or not they were made from day to day as they moved along the backward journey?

Capt. Pears. I assume that they made entries in the journal, and then they gave me a transcript of their journal or report. I feel quite sure they did that.

Mr. Roberts. Have you any objection to allowing us to look at them?

them?
Capt. Peary. Not the slightest.
Mr. Engleright. Have you the report here from Mr. Bartlett?
Capt. Peary. I have not the report. I have Bartlett's memorandum given to me.
Mr. Barts. Have you his memorandum?
Capt. Peary. Yes, sir.
Mr. Roberts. Is this the original?
Capt. Peary. Here [exhibiting] is a certificate given me by Bartlett at that time:

ARCTIC OCEAN, April 1, 1909.

Have to-day personally determined our latitude to be by sextant observation 87° 46′ 49″ north. I return from here in command of the fourth supporting party. I leave Commander Peary with 5 men, 5 sledges, with full loads, and 40 picked dogs. Men and dogs are in good condition. The going fair. The weather good. At the same average as our last eight marches Commander Peary should reach the pole in eight days.

ROBERT A. BARTLETT, Master Steamer "Roosevelt."

Mr. Roberts (after examining paper). Are these figures in your handwriting?

Capt. Peary. In Bartlett's handwriting.

Mr. Butler. This was written away up at the point where Bartlett left you.

Mr. BUTLER. This was written away up at the point where Bartlett left you?

Capt. Peary. That is just as he wrote it in one of his notebooks, and he tore it out and gave it to me. He kept a copy.

Mr. BUTLER. He gave it to you at that time?

Capt. Peary. Yes, sir.

Mr. BUTLER. He left you within 133 miles of the pole?

Capt. Peary. Yes, sir.

Mr. Macon. If he had reached 87° 47'?

Mr. BUTLER. Yes, sir.

Capt. Peary. These are the figures just as Bartlett put them down on a page of the notebook.

Mr. BUTLER. Four observations, all of them, are printed in this book which you have published?

Capt. Peary. Not all of them.

Mr. BUTLER. I remember the facsimiles of the observations, and I assumed that they were all of the observations.

Capt. Peary. They are not facsimiles of all.

Mr. BUTLER. Have you a facsimile of the observations you made at the pole?

Mr. Butler. Have you a facsimile of the pole?

Capt. Peary. Two of them.

Mr. Butler. Not here?

Capt. Peary. Yes, sir.

Mr. Butler. I find a facsimile of an observation made on April 6, 1909, and then April 1, 1909. That was an observation made by Bartlett?

Capt. Peary. I have just shown you that.

Mr. Butler. The observation made on April 6 is the only one in here made while at the North Pole. I find in the same book, on page 292, three observations made at Camp Morris Jesup April 7, 1909. That was the camp that you made just before you made your final drive for the pole?

the pole?
Capt. Pear, That was practically my North Pole camp.

Mr. Butler. Within 3 or 5 miles of the geographical pole?
Capt. Peart. Yes, sir.
That indicates [indicating] Camp Morris Jesup. The first observation was taken here [indicating] on the 6th of April. The next one was taken here [indicating] in this direction. The next one was taken here [indicating] in this direction, after which I traveled an estimated distance of 8 miles this way, and the last observation was taken from this camp [indicating] in this direction.

Mr. Dawson. And that [indicating] is the pole?
Capt. Peart. The results of these observations seemed to indicate that the pole was approximately in that direction [indicating] from my camp.

Capt. Peary. The results of these observations seemed to indicate that the pole was approximately in that direction [indicating] from my camp.

Mr. Dawson. Have you any objection to allowing the committee to see the original notes you made during this last journey and during the observations in the immediate vicinity of the pole?

Capt. Peary. I have not.

Mr. Greeg. Did you keep them in a book or on slips of paper?

Capt. Peary. In a book.

Mr. Dawson. And since then you have taken them out of the book?

Capt. Peary. Yes, sir.

Mr Greeg. Are these the original entries or transcripts?

Capt. Peary. The originals.

Mr. Enolement. Were they taken out of the book to be photographed and used for illustration purposes?

Capt. Peary. These made by Marvin and Bartlett were taken out of their notebooks and given to me. My own observations, made in separate books, were taken out when I compacted all of my papers on which I had sewed on to my undershirt. My photographs I had done up in hermetically sealed tins.

Mr. Robents. When were those figures [indicating] inserted?

Capt. Peary. Immediately after the observation. The only thing that held Bartlett from starting on his return was the making of the observation, and the moment he had taken the observation and made the record he started back.

Mr. Robents. Why did he use two pencils on that record?

Capt. Peary. That I can not say.

Mr. Robents. I should judge that evidently that was a different pencil [indicating]; that looks like an indelible pencil.

Capt. Peary. Yes, sir.

Mr. Borgars. And this looks [indicating] like an ordinary lead pencil.

Capt. Peary. Have you also the journal or log of your party?

Capt. Peary. Bartlett can answer that question better than I can.
Mr. Dawson. Have you also the journal or log of your party?
Capt. Peary. I have.
Mr. Roberts. Do you know whether or not Bartlett signed that [indicating] after making his observation, after putting down the

Indicating after making his observation, after putting down the figures?

Capt. Peart. Yes, sir; I think he did.

Mr. Roberts. It looks like a different pencil entirely.

Capt. Peart. Yes, sir. That was signed at the time, and of course it was done after the observation was made.

Mr. Roberts. It seems rather strange that he had such an assortment of pencils there—three pencils. Those entries were all contemporaneous; made the same day?

Capt. Peart. Yes, sir.

Mr. Butler. We have your word for it, and we have these observations to show that you were at the North Pole. That is the plain way of putting it—your word and your preofs. To me, as a member of this committee, I accept your word; but your proofs, I know nothing at all about.

Mr. Butler. And you have Bartlett's statement as far as he went?

Mr. Butler. Yes, sir. As to the observations made, I am not a mathematician and therefore would not understand whether or not they were correct.

were correct.

mathematician and therefore would not understand whether or not they were correct.

I will ask you this question: Was it absolutely necessary for you to have been at the North Pole in order to make these observations? Maybe I should not, but I do. I am perfectly satisfied with your statement, but was it necessary to have been absolutely at the pole in order to have made the observations which you did make?

Capt. Pearx. That is a question on which there has been some discussion. I can answer it by saying that observations have never been made yet that were not made at the place.

Mr. Butler. You must have been at the place to have made certain observations, and if you were there you were there, but could you have made the figures without having been at the pole, and if you have made the figures without having been there, is there any way to detect your effort?

Capt. Pearx. That is a thing I can only answer in this way. There is a difference of opinion in regard to that. You will find that some experts will say that observations can be arranged and others will say that they can not.

Mr. Butler. Observations, in other words, can be written down as having been made by a person who reports to have been at a certain place?

Capt. Peary. That has been stated.

Mr. Robers, Mr. Gannett and Mr. Tittmann told us that it is possible for a person who has sufficient knowledge to sit down in a department here in Washington and make figures and claim to have been at a point where the so-called observation was made. In other words, that the figures themselves would not carry any proof on their face.

Capt. Peary. That is the opinion of an expert.

words, that the algures themselves would not carry any proof on their face.

Capt. Peary. That is the opinion of an expert.

Mr. Roberts. I have had navigators tell me the same thing, that if a man knows nothing about navigation that it is a possible thing to do.

Mr. Dawson. I have a curiosity to see the journal that you kept from day to day during your presence in the vicinity of the pole. Did you make entries in this journal every day?

Capt. Peary. Not every day. Sometimes we were so busy that I did not make entries. I did not make an entry on the day that Bartlett was adrift on the ice floe on the outward journey.

Mr. Butler. There was no time to write that day?

Capt. Peary. I only made memorandum entries on the sixth and seventh. On the seventh, and on the first return march I made an entry and, I think, on one or two other occasions. I left them for later, but I did not get around to it.

Mr. Dawson. Were you writing under considerable difficulties up there?

Capt. Peary. In what way?

Mr. Dawson. The proposed difficulties.

lere?
Capt. Peary. In what way?
Mr. Dawson. Physical difficulties.
Mr. Buyler. You did not carry a writing desk with you or a typeriting machine?

Capt. Peary. No. sir; a pencil and notebook. Mr. Dawson. Was it warm enough to handle a pencil or light enough see?

Capt. Peary. No, sir; a pencil and notebook.

Mr. Dawson. Was it warm enough to handle a pencil or light enough to see?

Capt. Peary. There was plenty of light.

Mr. Dawson You made the entries in the igloos?

Capt. Peary. Yes, sir.

Mr. Dawson. It was too cold to do so outside?

Capt. Peary. The journals are generally written up in the igloo after the tea is made and before turning in.

Mr. Dawson. The construction of the igloo is such that there is plenty of light?

Capt. Peary. Yes, sir.

Mr. Butler. And the lamps burn all the time?

Capt. Peary. No, sir. After the sun gets above the horizon continuously there is no trouble, and we have not any special arrangement for the light, but before the sun gets above the horizon continuously we often took a piece of ice, perhaps the size of that book [indicating], and chipped it to about the thickness of that book [indicating] and set that in the wall of the igloo, over the entrance, and that gives sufficient light.

Mr. Dawson. I want to get some idea as to the temperature in the igloo; how cold was it inside of this habitation?

Capt. Peary. The temperature in the igloos where our heads were at the time we were making our tea in the evening and for a few minutes after would be above the melting point, particularly over the alcohol heater, and if the bed platforms were anywhere near zero or above, we would be comfortable. Down in the standing room, where our feet were, the temperature was practically the same as outside.

Mr. Dawson. Did you make the entries in this diary when the temperature was approximating zero or less?

Capt. Peary. I doubt if our hands were much below zere when any of the entries were made.

Mr. Englebricht. And you did not make any more entries than were absolutely necessary?

Capt. Peary. Not as a rule. Sometimes after having my tea and pemmican I would write a page or two in my book.

Mr. Roberts. When did you begin the journal of your last trip?

Capt. Peary. That book was started on the ship on the 22d of February.

Mr. Roberts. When you

Mr. Roberts. When did you begin the journal of your last.

Capt. Peary. That book was started on the ship on the 22d of February.

Mr. Roberts. When you left the ship?

Capt. Peary. Yes, sir.

Mr. Roberts. Did you keep any personal journal up to that point?

Capt. Peary I kept a personal journal in a book like that [indicating], and I think members of the party did.

Mr. Roberts. And that particular book commenced when?

Capt. Peary. The day we left the Roosevelt, and I have some similar books, both before and after that.

Mr. Roberts. That contains all the entries made on your way to the pole and back?

Capt. Peary. Yes. sir. If you wish any specific information about the Eartlett certificate, his address is the City Club, Boston, in case you should care to write him. The notes on the upper page [indicating] are entirely personal.

Mr. Butler, I understand that [indicating] is your diary and you wrote in there some personal entries?

Capt. Peary. Half personal and half the record of the ship.

Mr. Roberts, Does that contain a daily record of the movements of the different parties and of the equipment which you had on each day?

Capt. Peary. It contains a record of the supporting parties as they left. It does not contain a daily record of the equipment that I had on each day.

Mr. Roberts, How did you get at the equipment, then, as stated in the book?

Capt. Peary. At what point?

Mr. Roberts, My recollection is that half a dozen times you give the

the book?
Capt. Peary. At what point?
Mr. Roberts. My recollection is that half a dozen times you give the equipment when you started out
Capt. Peary. Each time a supporting party left me I noted who went back or what the returning party was, and what it left me with. That is noted there. I say it is; I assume it is.
Mr. Englebright. Have you a memorandum there of when Bartlett left you?

left you? Capt. PRARY. Here is the entry of Sunday, March 14, at the seventh

camp:

"SUNDAY, MARCH 14-(Twenty-first day).

"A fine day but bitter cold (in the —50's), and impossible see the land, owing to mist from the leads behind us.

"Hensen and his division, Ootah, Ahwatingwah, Koolootunah, 3 sledges, got away early to the north.

"Later the doctor started on his return, with Weshakupsi, Arco, 1 sledge, and 12 dogs.

"I take Inughite into my igloo in place of Arco. Everyone overhauling sledges.

"I take Inughite into my igiod in place of Arco. Everyone overnauling sledges.

"Late in afternoon Marvin comes swinging in, smoking like a battle-ship squadron, followed by Borup, Kyntah, Kudloektoe, Keshungwah, and Karko, 5 sledges in all. The general estimate of our position here is 84.30."

Mr. Robents. That was March 14?

Capt. Prany. Yes, sir. Here is the entry of the next day—Monday, March 15:

"Marvin brought ample supply alcohol and oil, some pemmican, biscuit, and milk, enabling me to leave this camp with 12 fully londed sledges.

cuit, and milk, enabling me to leave this camp with 12 fully loaded sledges.

"Macmillan shows me his frosted heel and I send him back at once, with Kyntah, Tauchingwah, 2 sledges, and 14 dogs. Two sledges left here; 2 or 3 broken up to repair others.

"Cold march with light but bitter easterly air. Heavy ice, fair going. Late in day movement of ice very perceptible. An active lead compels detour to west, and an hour or two later a just-formed one halts us and compels us build igloos, though I know Hensen's igloo must be close by. "Temperature as we camp. —50°."

I see that I do not note in the memorandum at least just what my party was on leaving that camp.

Mr. Rossers. On that day, March 14, your equipment comprised 16 men and 160 dogs. That is the statement in the book?

Capt. Praarx. I know what Eskimos and what men I had with me, and I can give you the figures.

Mr. Rossers. And then it is stated that your main party had seven new sledges and five old sledges. I want to find out how you secured those details?

Capt. Peary. Those particular things that you note there are not here in my journal. I did not put down everything.

Mr. Butler. Those are from your memory?

Mr. Roberts. Again, Capt. Peary, will you kindly read us your memoranda there of the evening of March 19?

Capt Peary (reading):

"Brilliant, clear day of yellow sunlight. Temperature in the —50's, as shown by frozen brandy and nearly invisible dogs. Bubble in all three thermometers and unable to register. Left supplies and equipment of Borup's party in camp, thus lightening sledge loads over 200 pounds."

Borup was to turn back at the end of the next march, and the things he was to take back with him were left there so that there would not be that unnecessary transportation of one march and another march back.

Mr. Dawson. Were those bubbles in the thermometer caused by the

that unnecessary transportation of one march and another march back.

Mr. Dawson. Were those bubbles in the thermometer caused by the cold?

Capt. Peary. By jarrings, mostly. I carried them on my sledges and on my person, and stumbling and the movement of the sledges caused them [reading]:

"A fair march (12 miles), Marvin in the lead. This march puts us between 85.7 and 85.30, or about the latitute of Storm Camp of last trip. Bartlett's estimate of our position here is \$5.30; mine, 85.20."

Mr. Roberts. That is all?

Capt. Peary. That is all of this entry.

Mr. Roberts. How did you get the temperature of that day; where did you find that?

Capt. Peary. It was an estimate. As I state here, the bubbles were in the thermometers, and they were unable to register precisely; and know that brandy up there will freeze somewhere in the fifties, probably at about 55.

Mr. Dawson. Below zero?

Capt. Peary. Below zero?

Capt. Peary. Below zero.

Mr. Roberts. Then you have not any memoranda in your diary as to what your main party consisted of?

Capt. Peary. No.

Mr. Roberts. But you do give in your book the composition of your main party that day?

Capt. Peary. Yes.

Mr. Engleberght. When you say "bubble in the thermometer," that is misleading, is it not? It is merely the separation of the contents of the tube?

Capt. Peary. Peersely. It looks like a bubble.

Capt. PEARY. Precisely. It looks like a bubble.

Mr. BUTLER. Captain, will you not read us the memoranda in your book made the day Bartlett left you?

Capt. PEARY (reading):

"TUESDAY, APRIL 1.

"Tuesday, April 1.

"After about four hours' sleep turned everyone out at 5 a. m., announced which two Eskimos (Kushungwah and Karko) are to go back from here with the captain, culled the best dogs from their teams to replace poorer ones in the other teams, repaired sledges thoroughly with the material from one broken up, and rearranged loads, compacting everything. Captain went north some 5 miles in forencon, returning took latitude observation (87 46 49). (This latitude is the direct result of the north wind of the last two days. We have traveled a good 12 miles more than this in the last five marches, but have lost them by the crushing up of young ice in our rear.) Then left with his 2 men, 1 sledge, and 18 dogs.

"We are ready now for the final lap of the journey, sledges thoroughly overhauled and strengthened, dogs the pick of 133, and dogs and men in training. It is the time for which I have reserved all my energies, and I feel to-night as if I was in trim and equal to the demands upon me of the next few days.

"Assuming the captain's figures to be correct, we are 133 miles from the pole.

"Eight marches same average as our last 8, or 8 equal to the 3 from 85 48, or 6 like yesterday's will do the trick.

"Weather clear, north wind continuous, temperature in —30's.

"Eskimos cating dog all day as they worked on their sledges. I hope this will be our last delay or lay-over day until we are back here.

"To-day the sky, the light drifting snow, the bazy horizon, the biting character of the wind at not excessive low temperatures, everything except the surface of the lee, are the replica of ice-cap weather.

"I do not regret the wind, though it has stolen some of our miles, for it will close up everything behind us for the captain and any others still out on the ice.

"Three years ago to-day we crossed the 'Big Lead.'"

"Up to now I have intentionally kept in the extreme rear to

out on the Ice.

"Three years ago to-day we crossed the 'Big Lead.'"

"Up to now I have intentionally kept in the extreme rear to straighten out any little hitch or encourage a man with a broken sledge and see that everything is drawing. From here on I shall take my proper place in the lead.

"Bartlett has done good work and been a great help to me. I have given him this post of honor because he was fit for it, because of his handling of the Rossevelt, because of his saving me hundreds of petty annoyances, and because I felt it appropriate, in view of England's magnificent Arctic work covering —— years, that it should be a British subject who could boast that next to an American he had been nearest to the pole."

Mr. BUTLER. Those memoranda were made that day?

Capt. Prark. The 1st of April.

Mr. BUTLER. Have you any memoranda made on the 2d that you can read us?

Mr. ROSERTS. I would like to ask a question or two as he goes along.

can read us?

Mr. Roberts. I would like to ask a question or two as he goes along. As I recall the reading of that, you spoke of the number of dogs you had in the beginning. That is minuted in that memorandum, is it?

Capt. Prart. I left Columbia with 133. I left the point, seventh march here, with 100, or maybe 99, and after that my sledges had almost uniformly 8 dogs to a sledge. In one or two cases, I think, when Marvin turned back, I had 2 sledges with 9 dogs for a short time. But from the end of the seventh march out our standard team was 8 dogs; starting from Columbia it was 7.

Mr. Roberts. There are no memoranda in your book on the 1st day of April as to the outfit you had to go forward. You did not put down memoranda of the number of men and sledges you had? My recollection is, you told what Bartlett went back with.

Mr. Dawson, With an Eskimo eating a dog every few minutes I should think it would be difficult to keep track of the exact number of them.

Mr. Roberts. Track was kept, and I am curious to know just how it was done.
Capt. Peary. That is not down here in my notes, but I had eight dogs Mr. ROBERTS. Right on that point, let me ask: If I understand, this identical memorandum book was submitted to the committee of the

identical memorandum book was submitted to the committee of the Geographic Society, was it not?
Capt. Pears. It was.
Mr. Roberts. About when?
Capt. Pears. October, 1909.
Mr. Roberts. Over a year ago?
Capt. Pears. Yes.
Mr. Roberts. And the members of that committee read all of it carefully?
Capt. Pears. No: I will not say they read all of it carefully. It was passed around. I can not say how much they read.
Mr. Roberts. It was stated in their report that they went over it very carefully.

Mr. Roberts. He was stated in their report that they went over it very carefully.

Capt. Peart. I would not be at all surprised if that book was pretty well read through by the different members of the committee. I do not know whether any one man read right straight through or not.

Mr. Roberts. What I was leading up to by these questions was to ascertain if you can account for the discrepancy in statements made by Mr. Gannett, one of that committee, and the statements that appear in your diary, or in your book, with regard to the outfit you had on the final dash. You know what Mr. Gannett's statement was?

Capt. Peart. No.

Mr. Roberts. He stated to the committee that you had 4 men, 2 sledges, and, I think, 32 or 33 dogs, which was a different party entirely, as you will realize, from 6 men, 5 sledges, and 40 dogs. If he as a committee, who looked these matters over, stating that he had examined the data very carefully, gives us that outfit for the final dash, how do you account for the discrepancy?

Capt. Peart. I should say he simply did not recall the figures.

Mr. Butler. He did not have any memoranda at all. I think he just answered offhand.

Mr. Roberts. I wondered why there was so much of a discrepancy. Capt. Peart. I do not account for his not remembering. I have never seen a report of the testimony of the members of the Geographic Society.

Mr. Bates. I do not see what Mr. Gannett said has to do with this.

never seen a report of the testimony of the members of the Geographic Society.

Mr. Bates. I do not see what Mr. Gannett said has to do with this. Mr. Roberts. It goes very vitally to the foundation of it. Mr. Butler. I recollect the gentleman's statement. I have no recollection that he had any memoranda. He was just asked the question. Mr. Macon. We are supposed to be investigating this matter from the ground up, and here we have a finding made by an independent scientific geographic society, who say they examined the reports made by Capt. Pearly carefully, and that they found certain things therefrom. Are their statements worth nothing? If co, I would like for the committee to know.

Mr. Butler. That will be for the committee to determine. He could not arswer that. May we go ahead, or shall we question the captain here?

Mr. Butler. That will be for the committee to determine. He could not arswer that. May we go ahead, or shall we question the captain here?

Mr. Gregg. Let him read it right through.
Mr. Butler. All right, then; just go ahead, Captain.
Capr. Prary (reading):

"23d March. 39 days. Friday, April 2nd. Eight hours' sound, warm, refreshing sleep. Left camp 5 a. m., leaving others to break camp and follow. A fine morning; clear; temperature —25. Wind of last day subsided. Going the best and most equable of any day yet."
Mr. Gregg. Is this the day succeeding that you read a while ago?
Capt. Prary. Yes. [Continuing reading:]

"Large old floes, hard & level, with patches of sapphire blue ice (the pools of last summer), & surrounded by pressure ridges, some of which almost stupendous, yet casily negotiable either through some convenient gap or up the slope of some huge drift.

"Came on at a good clip for about 4 hours, when the sledges overtook me. After that obliged to sit on sledges most of the time or else run to keep up. Kept the pace for 10 hours. Have no doubt we covered 30 miles, but will be conservative and call it 25. My Eskimos say we have come as far from the Roosevelt to Porter Bay. This, by our winter route, scales 35 miles on the chart.

"Whatever the distance is, we are likely, now that the wind has ceased, to retain what we have made. It is possible that with release from wind pressure the ice may rebound some and return us some of the hard-carned miles it stole from us yesterday and day before. In any event, we are now beyond the S8th parallel, and I am a tired and satisfied man.

"A brilliant day & as we camp late in afternoon near a huge pressure ridge, the sun almost seems to have some warmth.

"Got in above my knees twice to-day in marrow cracks.

"While building igloos a long lead forms east & southeast of us some miles distant as shown by the water clouds. Dogs show effects of yesterday's rest.

"24 march. Sat. Apr. 3.

"Got on the trail 3 hours earlier this morning after a small sleep. Am going to

"Sledge ran over side of my right foot to-day as result of my stumbling while running, but think it will give me no trouble.

"Am tired, but satisfied with our progress. We are in sight of 89. Give me three days more of this weather.

"Temperature at beginning of march —40; put all poorest dogs in one team to-night and began expending them.

"26 march. Monday. Apr. 5.

"Over the 89th!! Started early last evening. The march a dupil-cate of previous one as to weather & going. Temperature at starting —88. Sledges appeared to haul a little easier, dogs on trot much of the time. Last two hours, on young ice of a north-and-south lead, they were often galloping. 10 hours, 25 miles or more. Great.

"A 50-yd. lead open when I reached it, moved enough by time sledges came up to let us cross. Still this biting cold, the face burning for hours (like the inland ice).

"The natives complain of it & at every camp are fixing their clothes about the face, waist, knees, & wrists. They complain of their noses, which I never knew them to do before. It is keen & bitter as frozen steel.

steel.
"Light air from S. during first of march, veering to E. & freshening

"Light air from S. during first of march, veering to E. & freshening as we camp.

"Another dog expended here.

"To-morrow, if ice & weather permit, I shall make a long march, 'boil the kettle' midway, & try to make up the 5 miles lost on the 3rd.

"We have been very fortunate with the leads so far, but I am in constant & increasing dread of encountering an uncrossable one.

"Six weeks to-day since I left the Roosevelt.

"27 march. Tuesday, Apr. 6th.

"On the trail again before midnight, though I gave the party more sleep at this camp than at the previous ones, as we were all needing it; but I wanted to make the next camp in time for a noon sight if the sun was visible.

"Weather thick, like the march after Marvin turned back. A dense, lifeless pall of grey overhead, almost black at the horizon, & the ice ghastly chalky white with no relief.

"Like the ice cap, & just the thing an artist would paint for a polar ice-scape.

"Like the ice cap, & Just the thing an artistic lessape.

"Striking contrast to the glittering sunlit fields over which we have been traveling for 4 days, canopied with blue & lit by the sun & full moon. The going better than ever, hardly any snow on the hard, granular, last summer's surface of the old floes, the blue lakes larger.

"The rise in the temperature to —15 has reduced friction of the sledges 25%, & gives the dogs appearance of having caught the spirits of the party. The more sprightly ones, as they trot along with tightly curved tails, repeatedly toss their heads with short barks & yelps. 12 hours on a direct course. (30 miles.)

"Can I wait to cover those other 5? Not a sign of a lead in this march.

"The thick weather gives me less concern than it might had I not been forehanded yesterday, & fearing a cloud bank in the south took a latitude sight (89 25). This is 2 miles ahead of my dead reckoning & indicates that I have been conservative in my estimates as I intended, or that the ice has slackened back, or both. The wind, which was from the east when we started, gradually veered to the south & died away.

poen forenanded yesterday, & fearing a cloud bank in the south took a latitude sight (89 25). This is 2 miles ahead of my dead reckoning & indicates that I have been conservative in my estimates as I intended, or that the ice has stackened back, or both. The wind, which was from the east when we started, gradually veered to the south & died away.

"Whill we were in camp it blew fresh from the east for some hours."

"Whill we were in camp it blew fresh from the east for some hours."

"On the next day, the 6th, I have this entry, after we had built our igloos and entered them:

I do not care to read this.

Mr. Horson. We understand just exactly how you feel.

Mr. Grago. Let him read it. It is the most natural thing in the world.

Capt. Perry. The only thing about it is it sounds a little bit foolish to be reading it oneself.

Mr. ROBERTS. I think that ought to go in, because, as I understand, you put it in the book. So there is no objection to putting it in to make a continuous narrative.

Capt. Perry Terry Terry of the storm began at Storm Camp. Seven years ago to-day the storm began at Storm Camp. Seven years ago to-day it started north from C. Hecla.

Therefore, You did not record what you did during the 30 hours you were at the pole?

Capt. Perry. I have here memoranda (reading):

"Light breeze from the west after our arrival. Just caught sun through clouds at 12.45 (80° 57'); again ahead of reckoning. Sun disappeared again till about 8 p. m., then cleared away brilliantly, the west wind still continuing. Eskimos rebuilding sledges. Drove on 10 miles with empty sledge and double team dogs, two Eskimos sold to the other the sun now warm ahead of us. Took some photos and then back to camp.

"April 7. Spent day with light sledge, double team, going east and west. Noon observation and looking for a crack where a sounding would be possible. Leave 4 p. m., 30 hours. Minimum temperature, —32°; maximum, —11°; at starting, —25°. Impossi

"All upward leads greatly widened and new ones forward, one north of 88th at least a mile wide.

"All covered with practicable young ice.
"Last half of march ice raftering under and all about us under pressure of the gale. Dogs scudding before it, most of the time on the college.

"Last hair of march ice rattering that an an an arrow pressure of the gale. Dogs scudding before it, most of the time on the gallop.

"Would ha e been impossible to travel except before the gale and following a trail.

"Ice going south with us. There has been no lateral movement yet.

"From here to the pole and back has been one glorious sprint, with a savage finish.

"Its results due to hard work, little sleep, much experience, first-class equipment, and good fortune as regards weather and open water."

Mr. Robers. I want to ask the captain: Have you ever seen that [handing pamphlet entitled "How Peary Reached the North Pole"]?

Capt. Peary. I have.

Mr. Robers. Did you authorize its publication, or its being printed?

Capt. Peary. I did have it printed.

Mr. Robers. Can you fix the date when you did?

Capt. Peary. No; I can not.

Mr. Robers. It was prior to last March, though, was it not?

Capt. Peary. That I could not say without looking the matter up.

(Thereupon, at 12.15 o'clock p. m., the subcommittee adjourned until Tuesday, January 10, 1911, at 10 o'clock a. m.)

SUBCOMMITTEE No. 8 of the Committee on Naval Affairs, Tuesday, January 10, 1911.

The subcommittee this day met, Hon. THOMAS S. BUTLER (chairman) presiding.

STATEMENT OF CAPT. ROBERT E. PEARY, U. S. NAVY-continued.

Mr. Bates. In the last few weeks, Capt. Peary, you have undergone some physical tests of riding and walking?

Capt. Peary. I made tests in compilance with the orders of the Navy

Capt. Peary. I made tests in compliance with the orders of the Navy Department.

Mr. Bates. What did you do?
Capt. Peary. I walked and rode.
Mr. Bates. With what result?
Capt. Peary. I walked and rode.
Mr. Bates. With what result?
Capt. Peary. Perhaps I can cover that whole ground fully in just two or three words. I received orders from the Navy Department in November, stating that the records of the department did not show that I had taken any physical test for 1909 and directing that I take one physical test, which would be credited to me for the year 1909, and that I should take another for the year ending 1910, which would be credited to me for that year. I took those two tests during the month of December. For the year 1909 I selected the walking test. Should I go into such details as the requirements, Mr. Chairman.
Mr. Butler. What is this to prove: that you can walk?
Capt. Peary. It is a formality of the Navy Department.
Mr. Butler. Have you completed the tests?
Capt. Peary. Yes, sir.
Mr. Bates. The ceason for this is that an intimation was made, I will not say any charge was made, in the hearing last spring, that Capt. Peary was an old man, had been crippled, and had no power of locomotion.
How many miles did you walk?
Mr. Mateey Levold the to have the centleman tell exactly what

motion.

How many miles did you walk?

Mr. Macox. I would like to have the gentleman tell exactly what was done, the dates and hours engaged in each test, the circumstances and conditions under which made, and the kind of road that he traveled over when he was making the tests.

Capt. Pearr. The requirements of the official test, Mr. Chairman, which I selected for the year 1909 were that an officer should walk 50 miles in 20 hours, in three consecutive days. I selected that test for the year 1909 and here [exhibiting] is my report to the Navy Department.

for the year 1909 and here the forthey for the year 1909 and here the test?

Department.

Mr. Bates. When did you undergo the test?
Cept. Pearv. On the 18th. 19th. and 20th of December. That was Sunday, and Monday, when it commenced snowing, and Tuesday, when it was still snowing, last month. This is a copy of my report to the Navy Department:

Department of Justice,
Washington, January 2, 1911.

From R. E. Peary. To Bureau of Navigation. Subject: Physical tests.

To furent of Navigation.
Subject: Physical tests.

Referring to the department's letter No. 1438-44 of October 17, 1910, directing me to take a physical test for the year 1909, and a second test for the year 1910. I selected for the year ending December 31, 1909, the walking test of the department's general order No. 50, dated December 21, 1909.

On the 18th of December, I walked 25 miles in 6 hours and 45 minutes; on the 19th of December, 5 miles in 7 hours and 28 minutes; and on the 20th of December, 5 miles in 1 hour and 28 minutes; a total of 55 miles in 15 hours and 39 minutes.

This is submitted as my physical test for the year 1909.

For the year ending December 31, 1910, I selected the riding test of the department's general order No. 50.

On the 28th of December, 50 miles in 4 hours and 53 minutes; on the 29th of December, 50 miles in 4 hours and 45 minutes; and on the 30th of December, 10 miles in 38 minutes; a total of 110 miles in 10 hours and 16 minutes.

This is submitted as my physical test for the year 1910.

The riding test would have lumediately followed the walking test but for the snowfall on the 19th and 20th of December, which made riding in this vicinity impracticable.

R. E. Pearx.

R. E. Peary.

In regard to the places where the tests were taken, my walking test was on the road to Chevy Chase. Chevy Chase Lake, and beyond, and the riding test was taken on what is called the Speedway, down in Potomac Park, which I was told was accepted as official for the walking and riding tests for the Army and Navy.

Mr. Englerright. What was your best day's travel in your Arctic trip either going or coming?

Capt. Peary. The best day's travel was on the second march on the return from the pole.

Mr. Englerright. How far did you go?

Capt. Peary. Fifty geographical miles, estimated.

Mr. Englerright. That was in one march?

Capt. Peary. In one march. The second best marches were the one after that and the two last marches from Cape Columbia to the ship.

Mr. Butler. Now, the conditions were described in your book, but it will be a pleasure to hear them again. On the second march, if I remember, you stated in your book that you did succeed in making about 50 miles, estimated?

Capt. Pearv. I made two camps.

Mr. Butler. What were the conditions that day—the conditions of the ice and weather and the conditions of the men and dogs?

Capt. Pearv. I made two camps.

Mr. Butler. What were the conditions of the men and dogs?

Capt. Pearv. The weather was not bad. It was clear weather, good traveling weather, with indications of a coming storm, which we got the next day—the third march. The character of the lee was as we had experienced it going up. We had our trail to follow. The men were in good condition. They had had double rations at the pole twice. We had lightened our load in every possible way. It was not great. We threw away some items of clothing and had gotten rid of the sounding apparatus. We had the trail to follow and the igloos.

Mr. Butler. How many hours were required to cover that march of 50 miles?

Capt. Pearv. I can not tell you. I made no entry in my diary for two days, for the 7th and 8th of April, and I do not know what the times were.

Mr. Butler. You passed one igloo?

Capt. Pearv. Yes, sir; stopped there for a short time and had tea and lunch.

Mr. Butler. What was the condition of the ice as to smoothness?

Capt. Pearv. As fo smoothness?

Mr. Butler. Yes, sir; on that long march of 50 miles.

Capt. Pearv. The character of the going there was in the shape of large floes, as we call them, of the ice of the previous year or years, and against the edges there is this pressurage Indicating!.

Mr. Butler. The ice squeezes up?

Capt. Pearv. They come together during the movement of the ice in the previous summer or summers, when the ice up there breaks into great fields and will move, perhaps, a field in compact, at times coming together, and the edges will crush and fill up, and the older the ridges are the more rounded line of hummocks.

Mr. Butl

Mr. Butler. On the day you took the long march, did you encounter those?

Capt. Pearf. We encountered no difficult pressurage in our later marches to the pole that I recall now.

Mr. Butler. You had no difficulty in retracing your steps?

Capt. Pearf. We had no difficulty in following the trail back.

Mr. Butler. In your advance to the pole had you cleared your way through the ridges?

Capt. Pearf. We did not have to do any pronounced clearing. We selected a course, for instance, in crossing a field like that Indicating] with a pressurage at this edge of it [indicating]. Of course, across that field it would be comparatively smooth and comparatively regular. At the edge of it would be one of these pressurages. Now, in approaching that pressurage [indicating] you could see whether a short distance here or there there was a chance to negotiate it; I mean to get over it. Those ridges, most of them, were comparatively old and, the snow drifting against them, if we assume this the line of the ridge [indicating], the snow drifting against them would pack and drift on each side, and in approaching one of these pressurages that would be one way of negotiating it, and here [indicating] a little to the right or left is a sloping drift which we could go up or go through a notch in the ridge, or we might go around that particular side of the ridge, one side or the other.

Mr. Butler. Is the snow hard enough there to make the approach? Capt. Peark. As a rule, the snow packed by the wind is comparatively hard.

Mr. Butler. According to some of the illustrations in your book, these ridges seem almost inaccessible, almost insurmountable?

Capt. Peark. In some places they are.

Mr. Butler. During that day you did not encounter any such conditions?

Capt. Peark. No, sir.

Capt. Pearly. In some places they are.

Mr. Butler. During that day you did not encounter any such conditions?

Capt. Pearly. No, sir.

Mr. Bayes. In your journeys you and your men rode on the sledges?

Capt. Pearly. At times.

Mr. Bayes. How much of the time?

Capt. Pearly. That I can not say.

Mr. Bayes. Under what conditions would the men ride?

Capt. Pearly. Take the usual method of travel of the party with myself, which would be this: In the morning, just as soon as our breakfast was completed, I would leave camp and push on ahead, either going or coming—coming particularly—that was our method. The man in charge of the party would leave the camp in morning and push on as rapidly as he could

The Eskimos would put the last few things from the camp on the sledges and harness the dogs and follow and they would overtake that man. What I did on the return was, after walking along like this, the first sledge that came up to me I would drop onto it for a few moments, remaining never over five minutes at a time, the man driving the sledge at that time being here at the upstander [indicating] of the sledge at that time being here at the upstander [indicating] of the sledge, some of the time I being here [indicating] and I would be here [indicating]. or he would be here [indicating] and I would be here [indicating]. After doing that for awhile—I speak of these various methods of traveling—I might then let that sledge go along and walk along until the next sledge overtook me, and I would do the same with that; or I might keep along with the first sledge. By the time I had gotten to the rear sledge, if I did go back as far as the rear sledge, we would likely be at the next igloo for lunch or for the night.

Mr. Englebright. In connection with this matter of travel, I have a few records that I would like to put into the record. I will not go

into the details. I have here a communication dated March 15, 1910, from the Second Assistant Postmaster General, which is as follows:

POST OFFICE DEPRATMENT,

SECOND ASSISTANT POSTMASTER GENERAL,

Washington, March 15, 1910.

Sir: In reply to your letter of the 12th instant, in which you ask for information relative to the time consumed and the distance traveled in the performance of service by dog teams on routes in Alaska, I have the honor to inclose herewith a statement giving such information as is shown by the records of this office.

Very respectfully,

JOSEPH STEWART, Second Assistant Postmaster General.

Second Assistant Postmaster General.

Hon. W. F. Englebright,

House of Representatives.

I will state that Capt. Peary knows about this matter; it is something that I hunted up a year ago, when we had this subject under consideration.

I have here a statement relative to the performance of service on routes in Alaska upon which dog teams are used, ranging from 75 to 560 miles in distance, giving the time actually used.

Mr. Butler, Take the 560-mile trip; how long did it take the dogs to cover that?

Mr. Englebright. For instance, from Eagle to Tanana, 560 miles each way, running time 26 days each way.

Mr. Butler, And covering how many miles?

Mr. Englebright. Five hundred and sixty miles.

Mr. Macon. Over a regular course?

Mr. Englebright. Yes, sir. Nome to Unalakleet, 235 miles each way; running time 8 days; time actually used from 6 to 8 days. Nearly 40 miles a day.

Mr. Macon. Does it say anything about the dogs being changed at any time, like the horses that pulled the old stage coaches?

Mr. Englebright. I am simply putting this in the record for what it is worth.

(The statement referred to by Mr. Englebright follows:)

STATEMENT RELATIVE TO THE PERFORMANCE OF SERVICE ON ROUTES IN ALASKA UPON WHICH DOG TEAMS ARE USED.

"No. 78105. Kenai to Homer, 75 miles each way. Running time, not to exceed 7 days each way. Time actually used, from 4 to 6 days each

way. "No. 78106. Hope to Seward, 102 miles each way. Running time, 6 days each way. Time actually used, from 2 to 4 days each way.

"No. 78107. Nushagak to Celd Bay (no office), 375 miles each way.
Running time, 14 days each way. Time actually used, from 6 to 12 days

Running time, 14 days each way. Time actuary used, from 5 to 22 days each way.

"No. 78111. Eagle to Tanana, 560 miles each way. Running time, 26 days each way. Time actually used, from 23 to 25 days each way.

"No. 78119. St. Michael to Tanana, 427 miles each way. Running time, 18 days each way. Time actually used, from 17 to 18 days. (Through service; heavy mails.)

"No. 78120. Koserefsky to Kaltag, 200 miles. Running time, not to exceed 10 days each way. Time actually used, from 5 to 8 days each way.

way.
"No. 78122. Nome to Unalakleet, 235 miles each way. Running time, 8 days. Time actually used, from 6 to 8 days. (Through service; heavy mails.)"

Mr. ENGLEBRIGHT. Here is another thing:

POST OFFICE DEPARTMENT,
SECOND ASSISTANT POSTMASTER GENERAL,
Washington, March 12, 1910.

Sin: In response to your verbal request of to-day for information relative to the service performed in Alaska by Mr. A. D. Nash during the years 1902 and 1903, I have the honor to inform you that Mr. Nash performed service from Nome, by Solomon, Council, Candle, Keewalik, and Deering, to Kotzebue (Cape Blossom), Alaska, 300 miles each way over the route, from December 1, 1902, to April 30, 1903, and made 10 round trips during that period. It is understood that the service was performed by means of dog teams. There is inclosed herewith a statement showing the time required to make each trip. The route was known as No. 78130, Nome to Kotzebue.

Very respectfully,

Sceond Assistant Postmaster George.

JOSEPH STEWART, Second Assistant Postmaster General.

Hon. WILLIAM F. ENGLEBRIGHT,
House of Representatives.

Here is a record of time made over the 300 miles, varying from 31 days to 9 days, all the way from 10 miles a day to 33 miles a day.

Mr. Butler. What kind of dogs?
Mr. Englebright. The regular Alaskan dogs.
Mr. Butler. Eskimo dogs?
Mr. Englebright. Yes, sir; Eskimo dogs.
Mr. Dawson. Did men accompany those dogs?
Mr. Englebright. Yes, sir.
Mr. Macon. There is nothing to show how many hours were included in any one day?
Mr. Englebright. Mr. Nash was here last year and the statement of the statem

Mr. Englepright. Mr. Nash was here last year, and if we had followed up the matter he would have appeared before the committee.

Mr. Macon. We tried to follow it up, but we were refused.

(The statement referred to by Mr. Englebright follows:)

DEAR SIR: I received your telegram yesterday, and, in regard to snowshoeing. I suppose you want to know how far a man ought to travel in a day on Norwegian snowshoes; that is the kind we use. Well, that depends a great deal on the condition of the snow and the country you have to travel over. But if the snow is solid a man ought to travel on an average 30 miles a day without any trouble.

I have often made 35 miles a day, and I have known men that made 40 miles a day, and I think 30 miles a day would be pretty fair traveling.

ng. And with kind regards, I remain, yours, as ever, B. MURPHY. traveling

Hon. W. F. ENGLEBRIGHT, Washington, D. C.

Hon. W. F. Englebright, Washington, D. C.

Mr. Roberts. In the sweepstakes race in Alaska mentioned in this paper, do the sledges carry the food for the dogs and men or do they have stations?

Mr. Englebright. They get their food on the road.

Mr. Roberts. Do you know the weight of the sledges that the dogs carry? They are entirely different from those used in the Arctic regions.

Mr. Englebright. The men are part of the time on the sledges and part of the time pushing and running.

Mr. Roberts. In this race which you have mentioned they have picked dogs and light sledges?

Mr. Englebright. Some of the dogs on the mail routes carry heavy mail.

Mr. Roberts. How heavy?

Mr. Englebright. Some of the dogs on the mail routes carry heavy mail.

Mr. Roberts. How heavy?

Mr. Englebright. A good many pounds.

Mr. Butler. In this instance you knew that you were on the road home and the Eskimos knew that they were on the road home. Did the dogs know that they were on the road home?

Capt. Peary. I think every dog did. An Eskimo dog certainly knows when he is following a trail. We have an idea that an Eskimo dog knows when he is pointed home. He knows enough to know when he is pointed back the way he has come. Whether he could say that he was really bound for home I do not know, but he knows that he is going back over a trail that he has once been over.

Mr. Bates, How many dogs did you start out with, Captain?

Capt. Peary. These figures may not be correct, but they will be within one or two. We left the ship with 140 dogs absolutely. We left Cape Columbia with 133 dogs absolutely. We left the seventh camp with about 100 dogs. There may have been 96 or 100, I can not say. We left the twelfth camp, where Borup turned back, with approximately 80 dogs. It may have been one or two either way. We left the twenty-second camp, where Marvin turned back, with 60 dogs, more or less. We left the twenty-seventh camp, where Bartlett turned back, with 40 dogs absolutely.

Mr. Bates. How many dogs did you have when you left the pole to come back?

Capt. Peary. I think we had 38 dogs.

Mr. Bates. What was the condition of those dogs, with relation to the rest?

Capt. Peary. Every time a supporting party turned back they went back with the poorest dogs.

Mr. Bates. Then you came back with the picked dogs of the whole flock?

Capt. Peary. Yes, sir. My method at each point where a supporting party was to turn back was to say to my best men to pick out the dogs.

Capt. Peary. Yes, sir. My method at each point where a supporting party was to turn back was to say to my best men to pick out the dogs of the teams who were going to turn back from that particular point—to separate them from the other teams. That is clear to you?

Mr. Bayes, Yes, sir.
Capt. Peary. And I would say to my best men who were going on with me: "Throw out the poorest dog of your team and take the best

dog of the other teams," two or three or four, whatever it might be, and I would then say to the next man the same thing. My order was usually Henson, Ootah, and Egingwah. I felt that if those men lived they would go the full distance. I would say to Henson to take out the poorest dog of his team and to pick out whatever dog he might want from the other teams, and the same to Ootah, to throw out the poorest dog and to take the best dog from the other teams. Then I would go around again, coming back after those men had selected the dogs, and if there were dogs enough I would tell them to pick out the second poorest dogs and to pick out any other dog that they thought might be better than a dog in their team.

That process was carried on when any supporting party went back in the effort to get into the teams going ahead the best dogs of the whole lot. The quality and character of the dogs were determined by the drivers of the different teams working with them in their own team or alongside of them in some other team, and the drivers knew that at the next point where a supporting party turned back they would have a chance to pick another dog to take the place of an imperfect dog that might get into the team. I could not follow the same plan absolutely with my men, because there was the likelihood of an accident or mishap to the men.

Mr. ROBERTS. Where did you get the dogs?

Capt Peary, Right there in the Whale Sound region from the Eskimos themselves.

Mr. ROBERTS. Were they all trained dogs, trained to Sledge work?

Capt. Peary, Yes, sir; every one. The dog is the Eskimos only domestic animal, except those that he carries in considerable number about his person, and it is an animal that is vital to his existence. In other words, the dog is vital to the Eskimo in rounding up a bear. Two good dogs will hold any bear in the Arctic regions until he can come up and harpoon or shoot it. They are very valuable in detecting by scent the presence of a seal hole. The seals have little holes in the ice.

Mr. ROBERTS. What

Mr. Roberts. What I was getting at was how they were used to carry

loads.

Capt. Pearx. They move the Eskimos from point to point. The Eskimos take them on their deer hunts up Kane Basin and in Melville Bay. Those dogs travel miles and miles on practically nothing to eat. They go several days. They are essential to the life of the Eskimo, and every dog is trained.

Mr. Buttler. But on your journey you loaded them more heavily than the Eskimos generally do?

Capt. Pearx. More heavily than if they were going on a bear hunt, but probably not as heavily than if they were moving an Eskimo family from one point to another, or bringing the walrus meat to the shore.

Mr. Roberts. Those trips would be made slowly. They would not expect great speed?

Mr. Roberts. Those trips would be made slowly. They would not expect great speed?

Capt. Peary. Not great speed. They would make in moving an Eskimo family from 15 to 20, 30, or 35 miles a day, and maybe a little more. From Cape York to North Star Bay they would probably make two marches from there to North Star Bay.

Mr. Roberts. What distance?

Capt. Peary. I can not say offhand.

Mr. Roberts. I have read of the dog teams in Alaska that they usually have difficulty for a little while when they put a new dog into a team and that the team does not work harmonlously. Did you find any such trouble with your dogs?

Capt. Peary. There is a tendency of that kind. For instance, in making up the teams in the fall, after I have purchased my dogs, 200 or 250, from the various settlements, they are lumped together and turned loose on the ship. When we go to winter quarters, then they are selected out and each man takes a certain number of dogs. Perhaps a man may have had a full team of his own and he looks after them. Another man may not have any team. He picks out a certain number of dogs. There is some difficulty for a white man than for an Eskimo, because there is certain to be more or less fighting among the new team.

Mr. Roperes. When you took the dogs from the ship and changed.

Eskimo, because there is certain to be more or less fighting among the new team.

Mr. Roberts. When you took the dogs from the ship and changed them from one team to another did you get as good results?

Capt. Peark. I do not remember any fights.

Mr. Roberts. Did they work together just as well?

Capt. Peark. Yes, sir; absolutely. In being fastened together at night and working along the trail there may have been an occasional scrap, but practically nothing. That matter of fighting is a very different matter for an Eskimo driver than for a white driver.

Mr. Butler. Have you anything to submit to the committee?

Capt. Peark. I have one or two points in connection with the last meeting which I was not able to answer fully. I have here [exhibiting] Bartlett's report on his return trip. It is apparently simply a transcript of Bartlett's log.

LOG FROM CAMP (22) TO THE "ROOSEVELT."

April 1, 1909: 3 p. m. left commander with 19 dogs, 1 sledge, 2 huskies, and just enough for 40 days. Midnight reached the twenty-first igloo, where we slept. Fine and clear, fresh NNW. wind. One of our dogs clipped its harness, going back to commander's party.

April 2: 2 p. m. broke camp, reaching the next igloo; boiled the kettle, then started on again. Quite a few changes in trail.

April 3: 10 a. m. reached nineteenth igloo, slept here, killed three dogs. Picked up a tin of blue pemmican. Fresh north wind, fine and clear. Lots of strips of young ice and changes in trail.

April 4: 4 a. m. reached eighteenth igloo. Held up by water. Had a sleep. Noon walked to lead, found it had broadened. Saw a seal. Went back to igloo, had another sleep. Hazy, blowing fresh north, with drift.

Went back to igloo, had another sleep. Hazy, blowing fresh north, with drift.

April 5: 2 p. m. wind dropped. Walked to lead, it had barely caught over. Indications of rafting. Had tea, and by the time we were ready, owing to the rafting, we could cross over. Wind light SW. hazy.

April 6: 10 a. m. reached seventeenth igloo. Repaired our sledge. Had tea. Light SW. wind, fine and clear. About midnight reached the sixteenth igloo, where we slept.

April 8: Reached the fourteenth igloo. Lots of strips of young ice, also leads of water, but by making detours east and west successfully negotiated them, also picking up main trail.

April 10: Reached the twelfth igloo. Simply a repetition of the other two. Marches fine, and clear, moderate E. wind.

April 11: Reached the tenth igloo, dead tired. Strips of young ice and leads of water. Sky overcast. Wind west.

April 13: Shortly after leaving igloo lost main trail, followed Marvin's, losing it on a long, wide strip of young ice. Wind west, strongs, fine, and clear. Built igloo, first since leaving commander. Had a sleep and started on again. Shortly after leaving picked up main trail,

reaching the seventh igloo; built a sledge; also had a sleep. Fine, clear, and calm. From here we could see the land.

April 15: Reached the fifth igloo. Sky overcast, light E. wind. Shortly after leaving lost trail on young ice, where we met a lead of open water. After awhile the lead rafted so that we could cross.

April 16: Bad going at times during this march. Built igloo. Had a sleep. Weather clearing. Land obscured.

April 17: Fairly good going to-day. Fine and clear, hazy at times toward land. Built igloo, where we slept.

April 18: Reached ice foot a few miles west of Cape Nares. Fine and clear. Built igloo; had a short sleep. Started on again, reaching Cape Columbia late in the day.

April 20: Lett Columbia, reaching the ship on the 24th.

R. A. BARTLETT.

Cape Columbia late in the day.

April 20: Left Columbia, reaching the ship on the 24th.

As a matter of fact that dog did retrace the trail.

Mr. BUTLER. You remember that dog joining you?

Capt. Peary. Yes, sir. That makes 41 in all that we had at one time or another.

Mr. Roberts. I infer from what you have just read that Bartlett lost the trail?

Capt. Peary. The last 45 miles he came on his own trail. Part of the time he had Marvin's trail.

Mr. Roberts. He speaks of building an igloo, and he must have lost the trail or that would not have been necessary?

Capt. Peary. No, sir.

Mr. BUTLER. Do you suppose that any of the igloos are remaining?

Capt. Peary. No, sir.

Mr. BUTLER. How long are they likely to stand?

Capt. Peary. Probably not stand through July. It would depend on the season. Some seasons they would stand through June, and you could see the trace of an igloo or could pick up the trace of an igloo, but the igloo as regards its standing would not be there by the end of June. The warmth of the sun in the summer time would be warm enough to cause it to cave in, or if that did not occur, a continuous heavy wind from a certain direction for 12 or 15 hours with a great deal of pressure against the top of the igloo would gradually break it in so that it would be concave on one side.

Mr. Roberts. Did you find that report awaiting you when you got back to the ship?

Capt. Peary. It was not. It was written during May by Bartlett, at my request. We got back the latter part of April and Bartlett was on board the ship. Borup and McMillan wrote me similar reports of their return, including their trips to the west to establish depots, probably in June, because they were away when I came back. They did not get back to the ship until early in June. I have similar reports from them, and if I have leisure I want to compare those reports to ascertain the conditions on those days when my parties were concentrated at various places along the line.

Mr. Gregg. You do not know Bartlett wrote it; did he write it in his

woods as, written during the journey.

Mr. Greeg. You do not know whether he made the log book entries daily?

Capt. Pearx. I would say that he made the entries exactly as they are here.

Mr. Roberts. Do you know if Bartlett kept a diary or daily memorandum while going north and returning?

Capt. Pearx. I have no doubt he did. I can not swear to it, but I know that every member of the party had notebooks furnished for that purpose, and I am sure every member of the party made more or less entries in their books; how continuous I can not say, because I do not now recall having seen the entries after I returned to the ship.

Mr. Roberts. Do you know where the log of the Roosevelt is?

Capt. Pearx. I can not say offhand; perhaps I have it and perhaps Bartlett has it.

Mr. Roberts. Who kept it?

Capt. Pearx. The first mate, as is usual on these trips.

Mr. Roberts. I gathered from what you said that that might be a copy of the log of the Roosevelt.

This is a copy of Bartlett's notebook that he had on the journey.

Mr. Roberts. What he calls his log?

Capt. Pearx. His personal log. The log of the Roosevelt, as far as I know, never left the ship. It was a book of that size [indicating]. I think it was the ordinary printed form for ships and was kept on board the Roosevelt, and was kept, I should say, entirely by Mr. Gushue, the first officer.

Mr. Roberts. That related wholly to the navigation of the ship and what transpired on the ship?

Capt. Pearx. No, sir.

Mr. Roberts. You did not take that log with you when you left the ship?

Capt. Pearx. No, sir.

Mr. Roberts. It is not in your possession now?

Capt. Pearx. No, sir.

Mr. Roberts. It an not say; it may be. If the committee wants it, I will look it up. I have a number of miscellaneous papers, some on Eagle Island and some here, and I do not now recall whether it has been turned over to me, or whether it is in Bartlett's possession of Mr. Gushue's possession.

Mr. Roberts. The ship has been disposed of. That would not go with the ship?

Capt. Pearx. No, sir.

M

(The letters referred to by Mr. Englebright follow:)

DEPARTMENT OF COMMERCE AND LABOR,
OFFICE OF THE SECRETARY,
Washington, January 7, 1911.

Hon. WILLIAM F. ENGLEBRIGHT,
House of Representatives.

Dear Sir: In compliance with your verbal request made to the Acting Superintendent of the Coast and Geodetic Survey, I have the honor to transmit herewith, for the use of the Committee on Naval Affairs of the House of Representatives, copies of correspondence relating to the assignment and duties of Civil Engineer R. E. Peary, U. S. Navy, while on duty with the Coast and Geodetic Survey in 1908-9-10.

The original field notes of the tidal work executed by Civil Engineer Peary will be submitted by the Superintendent of the Coast and Geodetic Survey for the inspection of the committee at such time as they may be required. The results of this work are now in the hands of the printer for issue as a publication of the bureau.

Very truly, yours.

BEN. S. CABLE, Acting Secretary.

[Original in file in C. & G. Survey.] THE WHITE HOUSE, WASHINGTON.

OYSTER BAY, N. Y., July 3, 1908.

ONSTER BAY, N. Y., July 3, 1908.

Sir: Civil Engineer R. E. Peary, United States Navy, has been directed by the Navy Department to report by letter to the Superintendent of the United States Coast and Geodetic Survey, and you are requested to direct this official to order him to make tidal observations along the Grant Land and Greenland shore of the Polar Sea during his projected cruise in the Roosevelt.

It is believed that such observations will throw light upon the Coast Survey theory of the existence of a considerable land mass in the unknown area of the Arctic Ocean.

Respectfully.

Respectfully,

THEODORE ROOSEVELT.

Hon, Oscar S. Straus,
Secretary of Commerce and Labor.

[Original telegram in C. and G. Survey.]

NEW YORK, July 3, 1908.

To Assistant Superintendent Perkins, U. S. Coast and Geodetic Survey, Washington, D. C.:

I have information that you may be authorized to give the instruction concerning tidal observations north coast Grant Land and Greenland will two or three days personal instructions at your office be desirable for my assistants kindly wire. R. E. PEARY.

> [Letter in file of C. and G. Survey.] DEPARTMENT OF COMMERCE AND LABOR, OFFICE OF THE SECRETARY, Washington, July 7, 1998.

SIR: I have the honor to state that in response to the directions issued to the Navy Department Civil Engineer R. E. Peary, U. S. Navy, called in person at the office of the Coast and Geodetic Survey and informed himself fully of the views and requirements of that office in regard to tidal observations along the Grant Land and Greenland shore of the Polar Sea and expressed his intention to make every effort to collect the desired information.

I have the honor to be, sir, your obedient servant,

OSCAR S. STRAUS, Secretary.

The PRESIDENT, Oyster Bay N. Y.

Note.—Commander Peary called at the Coast Survey Office on June 18 and on July 8. Mr. Macmillan reported and spent that day and the morning of July 9 under the instruction of Dr. Harris.

[From press copy in C. & G. Survey.] DEPARTMENT OF COMMERCE AND LABOR,
COAST AND GEODETIC SURVEY,
Washington, July 9, 1998.

Coast and Geodetic Strayer,

Washington, July 9, 1908.

Sia: In pursuance of the orders of the President, transmitted through the Secretary of Commerce and Labor, you will please have tidal observations made along the Grant Land and Greenland shore of the Polar Sea during your projected cruise in the Roosevelt.

The following directions for observing tides in Arctic regions will be followed as far as possible by the observer:

Make hourly (or half hourly) readings of the height of the water's surface above a fixed datum by means of a fixed staff or other form of gauge for periods varying from one day to one or more months at a station, according to circumstances.

Refer all observations extending over more than a few days to one or more permanent bench marks upon the shore.

The kind of time should be distinctly specified. Wherever practicable the observations should extend through all 24 hours of the day.

If the observations continue only a day or two they will be of greater value if made near the time of greatest northern or southern declination of the moon.

At or near the following places observations are especially wanted: Points as far northward as possible.

Cape Columbia.

Cape Sheridan.

Cape Bryant.

Cape Bryant.

Cape Bryant.

Cape Bryant.

Cape Bryant.

Some point on northern coast of Hazen Land.

Some point as far eastward as possible.

Some point near the head of Greely Fiord.

Sketches of specimen gauges for Arctic work and suggestions are given in accompanying memoranda. The sketches are taken from the Arctic work of Hall, Greely, and Ziegler expeditions.

Further directions for observing tides are given in the blank books for tidal records, and in accompanying memoranda; the latter are practically included in the introduction to the Coast Survey Tide Tables and in Chapter I, Appendix No. 9, 1897.

Respectfully,

O. H. Tittmann,

Superintendent.

O. H. TITTMANN, Superintendent.

ROBERT E. PEARY, Commander, United States Navy, Commanding Steamer Roosevelt, Sydney, Nova Scotia.

[Original letter in C. & G. Survey.]

EAGLE ISLAND,

South Harpswell, Me., July 12, 1968.

My Dean Mr. Tittmann: The orders, copy of which I inclose, were received by me only last evening, having been sent from Washington to South Harpswell, then to New York, then back here in pursuit of me.

Otherwise I should have reported to you sooner.

I am leaving here to-morrow morning, the 13th, for Sydney, and am due there Tuesday evening, the 14th.

If the Roosevelt makes good time going east she will probably reach Sydney Tuesday and depart Wednesday.

This would make mail communication from you impracticable, and I beg to suggest that you wire me instructions and follow these with written instructions, which, in the event that I am delayed in leaving Sydney, may reach me or, otherwise, will be received and held by Mrs, Peary.

ary.

With best regards to Mr. Perkins, Dr. Harris, and yourself, I am
Yours, sincerely,

R. E. PEAR

R. E. PEARY.

[Original letter in C. & G. Survey.]

South Harpswell, Me., July 12, 1908.

Sm: In compliance with orders of the Navy Department, copy of which I inclose, I beg herewith to report to you for instructions in making tidal observations along Grant Land, and Greenland shores of the Polar Seas.

CHIEF OF THE COAST AND GEODECTIC SURVEY,
Washington, D. C.

[Inclosed in letter dated July 12, 1908, from R. E. Peary.]

NAVY DEPARTMENT,
Washington, July 2, 1908.

Sir: The unexpired portion of the leave of absence for a period of three years granted you in the department's letter of April 9, 1907, is hereby revoked.

Report by letter to the Chief of the Coast and Geodetic Survey for instruction in making tidal observations along Grant Land and Greenland shores of the Polar Seas.

Respectfully,

TRUMAN H. NEWBERRY,

Respectfully, TRUMAN H. NEWBERRY,
Acting Secretary.

Civil Engineer ROBERT E. PEARY, United States Navy,
South Harpswell, Me.

THE WHITE House, July 6, 1908.

Approved.

T. ROOSEVELT, President.

Memorandum: Received July 11, 1908, 5 p. m. R. E. P.

[From press copy in C. & G. Survey.]

DEPARTMENT OF COMMERCE AND LABOR,
COAST AND GEODETIC SURVEY,
Washington, July 14, 1908.

SIR: Your letter of July 12, reporting for instructions in making tidal observations along the Grant Land and Greenland shore of the Polar Sea, has been this day duly received.
Detailed instructions were sent to you by Mr. McMillin on July 9, 1908.

1908.

O. H. TITTMANN, Superintendent. Respectfully,

ROBERT E. PEARY, Commander, United States Navy.

Commanding Steamer Roosevelt, Sydney, Nova Scotia.

[Letter in files C. & G. Survey.]

[Letter in files C. & G. Survey.]

DEPARTMENT OF COMMERCE AND LABOR,
OFFICE OF THE SECRETARY,
Washington, July 14, 1908.

Sir: I have the honor to state that, since my letter of July 7, in regard to tidal work under Commander R. E. Peary, United States Navy, I have been informed by the superintendent of the Coast and Geodetic Survey that, anticipating Commander Peary's formal compliance with the instructions of the Navy Department, he issued detailed instructions for the guidance of Commander Peary and forwarded them by his assistant, Mr. McMillin, and that he is to-day in receipt of a letter from Commander Peary formally reporting for instructions.

I have the honor to be sir, your obedient servant,
OSCAR S. STRAUS, Secretary.

The PRESIDENT, Oyster Bay, N. Y.

[Letter in files of C. & G. Survey.] [Peary Arctic Club, North Polar Expedition, 1908.]

STEAMSHIP "ROOSEVELT," Sydney, Nova Scotia, July 17, 1908.

Sign: I beg to acknowledge receipt of your letter of July 14.

I beg to acknowledge also receipt of your instructions and those of the Secretary of the Bureau of Commerce and Labor.

Very respectfully,

R. E. PEARY, Civil Engineer, United States Navy.

Supt. O. H. TITTMANN, United States Coast and Geodetic Survey, Washington, D. C.

[From original letter in C. & G. Survey. Mailed St. Johns, Newfoundland, Sept. 30. Received Washington 6 p. m., Oct. 6.] [Peary Arctic Club, North Polar Expedition, 1908.] S. S. "ROOSEVELT," August 17, 1908. (Etah, North Greenland, latitude 78° 18' N.)

(Etah, North Greenland, latitude 78° 18' N.)

Sir: I beg to report my arrival here August 11.

Leaving Sydney July 17, Cape York Bay was reached near midnight of July 31.

The voyage north across the Gulf of St. Lawrence was favorable, the Straits of Belle Isle were free of log, rendering the passage easy, and favoring weather was experienced along the Labrador coast, which was followed as far as Tuinavik Island, latitude 55° 18' N., with two intermediate stops of whale meat.

From Tuinavik a course was set for Greenland coast and about 12 hours of heavy weather ensued. After that the weather was moderate

again until midnight of Saturday the 25th. Following this were three days of strong northerly wind and sea accompanied by rain and fog which rendered the negotiation of Dayis Strait somewhat disagreeable and arduous, From Holsteinberg the weather was favorable again, an energetic southerly wind of some hours' duration off Tuinavik materially assisting us on our way.

Duck Islands were passed just before midnight of July 30 and Melville Bay entered in brilliant sun-lit weather with light air from the porth.

This weather held to the cast side of Cape York Bay, which was reached 11.30 p. m. July 31, no ice having been seen on the passage across the bay. In fact, no ice has been seen in the entire voyage except a narrow string of light scattered ice off the Labrador coast the evening of the 23d.

Heavy weather and an unusual swell held us here till early Sunday morning, when the ship crossed to Cape York, latitude 75° 55′ N. Here I learned that the Erik had passed the day before, but was unable to get into the settlement. Eskimos and dogs were taken on here and the ship's tanks filled with water from the glacler. We then steamed north to North Star Bay, where I found the Erik.

Taking on more Eskimos and dogs here, the ships steamed in company to the northwest end of Northumberland Island, where I boarded the Erik to visit the settlements at the head of Inglefield Gulf, while the Rooscecit proceeded direct to Etah to overhaul and trim ship for the ice.

the Roosevelt proceeded direct to Etah to overnam and the same the ice.

I rejoined the Roosevelt with the Erik late August 11, with additional Eskimos and dogs and some 35 walrus. All dogs were landed on an island in Etah Flord, the Roosevelt was coaled from the Erik, coal landed for the return trip, and two men landed with supplies for the relief of Dr. Cook.

The season has been unusually cold and stormy one, with almost continuous wind and frequent snow.

I have on board a good supply of Eskimos, dogs, and walrus meat, All on board are well. I expect to steam north some time to-night.

Very respectfully,

R. E. Peary,

R. E. PEARY, United States Navy.

SUPERINTENDENT U. S. COAST AND GEODETIC SURVEY, Washington, D. C. (Similar report sent to honorable Secretary United States Navy.)

[From press copy in C. & G. Survey.]

DEPARTMENT OF COMMERCE AND LABOR, COAST AND GEODETIC SURVEY, Washington, September 39, 1909.

Commander R. E. Peary, United States Navy, Care Peary Arctic Club, New York, N. Y.

Dear Sir: Numerous statements having appeared in the press referring to a report from you to this bureau, some of which have been attributed to you personally, suggest the possibility that a preliminary report may have been sent which has failed to reach this office. Will you please inform me of the facts in the case?

Congratulating you most heartily upon your splendid accomplishment,

Very respectfully,

F. W. PERKINS, Acting Superintendent.

[Copied from original on file in C. & G. Survey.]

NAVY DEPARTMENT,
Washington, October 5, 1999.

Sin: The Government has for many years issued through the Hydrographic Office under this department a chart of the Arctic Ocean showing the tracks of search parties and the progress of discovery.

2. The results of former expeditions toward the North Pole have been committed to the Hydrographic Office and incorporated into the official chart. It is therefore requested that the Coast and Geodetic Survey furnish for this purpose the results of the late expeditions carried on by Civil Engineer R. E. Peary, United States Navy, under the auspices of the Peary Arctic Club.

Very respectfully,

The SECRETARY OF COMMMERCE AND LABOR.

[From press copy in C. & G. Survey.]

DEPARTMENT OF COMMERCE AND LABOR, COAST AND GEODETIC SURVEY, Washington, October 7, 1969.

Commander R. E. Pearx, United States Navy,

South Harpswell, Me.

Dear Sir: I beg to thank you for your telegram of this date. Both your determinations of tides and depths will be of greatest use in the discussion of the currents in that region, and will be highly prized.

Very truly, yours,

F. W. PERKINS, Acting Superintendent.

Department of Commerce and Labor,
Office of the Secretary,
Washington, October 8, 1969.

Sin: In reply to your letter of October 5, 1909, I have the honor to state that the Coast and Geodetic Survey will furnish for the use of the Navy Department at the earliest practicable date such portions of the results of the late expedition carried on by Civil Engineer R. E. Peary, United States Navy, as he may furnish that bureau. No results have as yet been received.

Respectfully,

Ormsey McU.

ORMSBY McHARG, Acting Secretary.

The SECRETARY OF THE NAVY.

[Copied from telegram on file in C. & G. Survey.]

PORTLAND, ME., October 18, 1909.

Supt. F. W. Perkins, United States Coast and Geodelic Survey, Washington, D. C.:

Tidal and meteorological records and profile of soundings leaving Portland to-day by express.

[Copied from original on file in C. & G. Survey.]

[Copied from original on file in C. & G. Survey.]

EAGLE ISLAND, SOUTH HARPSWELL, ME., October 18, 1909.

Sir: Referring to my telegram, I am sending you by express the tidal records of the Peary Arctic Club's recent North Polar expedition.

Owing to the unfortunate death of Prof. Ross G. Marvin, some of the chronometer comparisons, particularly of the Cape Bryant observations, are missing.

These comparisons are undoubtedly among Prof. Marvin's private papers; and if so, will be obtained from his relatives later.

Prof. Donald B. Macmillan took many of the observations and is familiar with them all, and can come to Washington to see you any time you may consider it advisable.

I am writing him now to communicate with you at once and to keep you posted as to his address.

I am also sending you profile of soundings from Cape Columbia to within 5 miles of the pole.

If such request is permissible, I will respectfully request that this profile and complete set of soundings be not published at present.

With best regards, I am, very respectfully.

Rober Peark, United States Navy.

Acting Supt. F. W. Perkins.

Acting Supt. F. W. Perkins.

United States Coast and Geodetic Survey,

Washington, D. C.

(Records received by express from Commander R. E. Peary Oct. 20, 1909; 21 vols. tides; 2 reports of D. B. Macmillan, dated Jan. 4 and Jan 9, 1909; 6 photofilms; 5 photoprints; 65 sheets thermograms.)

[From press copy in C. & G. Survey.] DEPARTMENT OF COMMERCE AND LABOR.

COAST AND GEODETIC SURVEY,

Washington, October 21, 1999.

Commander R. E. Pearr, United States Navy,

Eagle Island, South Harpswell, Mc.

Sir: Your telegram and letter of the 18th in regard to the tidal records were duly received; and yesterday the tidal records, thermograms, photographs, and photo films, and the two reports of January 4 and 9 by Mr. Macmilian were received by express. Later Mr. Nichols called and handed me the tracing of the profile of the soundings from Cape Columbia to the pole, for all of which I beg to thank you.

The tidal records will be turned over to the tidal division at once for discussion, and I shall be happy to furnish you with the results in such form as you may desire for publication with the account of your expedition, which I presume you will publish later.

The Hydrographic Office of the Navy Department has asked for your soundings, which I shall send them as soon as I shall have received the data for determining their positions.

I note what you say about giving publicity to the profile and complete set of soundings, and beg to assure you that they will not be made public at present.

Very respectfully, yours,

F. W. Perkins,

Acting Superintendent.

F. W. PERKINS, Acting Superintendent.

[Letter in files of C. & G. Survey.]

South Harpswell, Me., October 28, 1909.

Mr. F. W. PERKINS, Washington, D. C.

Mr. F. W. Perkuns, Washington, D. C.

Dear Sur: Replying to your favor of October 21, I desire to express my sincere appreciation of your kind offer to furnish me the results of the discussion of the expedition's tidal records.

I shall be very glad to receive the same when ready.

In regard to the profile of soundings delivered to you by Mr. Nichols and which you inform me the Hydrographic Office of the Navy Department desires, will say that these soundings were made on the meridian of Cape Columbia, and plotting on that meridian at the latitudes which I think are noted in the table on the profile sheet will give their position.

There are quite a number of other soundings mads on this seep dition and the previous one along the north coast of Grant Land as far west as the eighty-second meridian (Cape Fanshawe Martin); also in Kennedy and Robeson Channels and Kane Basin; also off Cape Alexander and from Cape Morris Jesup, the northern extremity of Greenland, to 84° 15′.

and from the allowing acts of the northern extremity of Greenland, to \$4^{\circ}\$ 15'. If the Hydrographic Office contemplates adding these soundings to Chart No. 2142 or thinks of issuing a new edition of that chart, it would seem desirable to have all of these soundings as well as the work of the previous expedition, defining the shore line from Aldrich's farthest to Cape Thomas Hubbard, and the reconnaissance of the present expedition of Clements Markham Inlet just west of Cape Hecla added to the chart.

May I respectfully suggest that you take this matter up with the Hydrographic Office and, if the work indicated above seems desirable, see if some arrangement can be made for the compensation and expenses of Prof. Donald B. Macmillan, who is familiar with much of this work, so that he may come to Washington with the notes of the soundings and assist in plotting the work?

Prof. Macmillan is now engaged in getting the sounding samples in appe to send a set to your office for such examination as you may

shape to send a set to your office for such desire.

Unfortunately, the samples of soundings on the northern jot beyond the sounding of 110 fathoms were lost with Prof. Marvin. others may yield interesting results under the microscope.

Very sincerely,

R. E. PEARY.

United States Na

R. E. PEARY. United States Navy.

[From press copy in C. & G. Survey.]

DEPARTMENT OF COMMERCE AND LABOR,

COAST AND GEODETIC NURVEY,

Washington, October \$0, 1969.

SIB: I inclose a photograph of the profile soundings taken by the

Peary expedition upon the recent dash to the pole, together with a
copy of a letter just received from Commander Peary in regard to other
soundings, which will be of value to you in the preparation of the
chart of the polar region, to which you referred by phone some days
since.

chart of the polar region, to which you referred by passive.

The suggestion that Prof. Macmillan be called to Washington to assist in working up the notes is a good one, but there is no appropriation available in the Coast Survey which could be applied to this purpose. Yours possibly has greater fexibility.

When the profile of soundings, which is inclosed, was sent to me it was with the understanding that it was to be kept strictly private for the present, but from Commander Peary's letter of the 28th I gather that he has no objection to their being sent to you, but I presume with the understanding that they are not to be given to the press.

Very respectfully,

F. W. Perkins.

The CHIEF OF THE HYDROGRAPHIC OFFICE, Navy Department, Washington.

[Copied from original in C. & G. Survey.] JOHN BLISS & CO.,
MARINE CHRONOMETERS,
128 FRONT STREET,
New York, November 1, 1909.

Mr. R. A. HARRIS, Care of U. S. Coast and Geodetic Office, Washington, D. C.

DEAR SIR: By request of Mr. D. B. Macmillan, we give you herewith the Greenwich time and rates of two chonometers furnished by us to the S. S. Roosevelt:

Chronometer, Blies No. 2998. July 3, 1908. Fast, G. M. T., 0 min. 25.8 sec.
Predicted daily rate, losing 0 min. 0.2 sec.
October 7, 1909. Fast, G. M. T., 17 min. 12.9 sec.
Average daily rate, 461 days, gaining 2.2 sec. Chronometer, Bliss No. 3013.

July 3, 1908. Slow, G. T. M., 0 min. 01.6 sec.
Predicted daily rate, gaining 0.4 sec.
October 7, 1909. Slow, 5 min. 58.1 sec.
Average daily rate, 461 days, losing 0.8 sec.
Yeurs, respectfully,

JOHN BLISS & Co.

[Letter in files of C. & G. Survey.]

Washington, D. C., January 14, 1910.

Dear Sir: In looking over some of my papers, I have come upon two books of additional meteorological observations and chronometer comparisons, made by Prof. Marvin.

I have asked Miss Wetzel, my secretary, to deliver these to you.

Very respectfully,

R. E. PEARY.

Supt. O. H. TITTMANN, U. S. Coast and Geodetic Survey, Washington, D. C.

[Copied from copy on file in C. & G. Survey.] DEPARTMENT OF COMMERCE AND LABOR,
OFFICE OF THE SECRETARY,
Washington, January 15, 1910.

Washington, January 15, 1910.

Sir: The Superintendent of the Coast and Geodetic Survey advises me that Commander R. E. Peary, United States Navy, has submitted to that bureau the records of the tidal observations made by him in the Arctic by order of President Roosevelt. These observations are reported to have been thoroughly made and are satisfactory and of great value. They are now being reduced and discussed by the tidal expert of the Coast Survey.

In view of the fact that Commander Peary has performed the special duty for which he was attached to this department, I have the honor to suggest that he can be detached without detriment to the survey.

Respectfuly,

Benj. S. Carle

BENJ. S. CABLE, Acting Secretary.

The honorable the SECRETARY OF THE NAVY.

[From files of C. & G. Survey.]

JANUARY 18, 1910

Commander R. E. Peary, United States Navy,

The Oakland, Washington, D. C.:

January 14, 1910, two volumes of additional meteorological observations and chronometer comparisons made by Prof. Marvin.

[Copy of original in C. & G. Survey.] DEPARTMENT OF COMMERCE AND LABOR,
COAST AND GEODETIC SURVEY,
Washington, March 16, 1910.

Mr. O. H. TITTMANN, Superintendent Coast and Geodetic Survey.

Sir: I have the bonor to report that the tidal records obtained by Commander R. E. Peary during his latest Arctic expedition consist of practically unbroken series of hourly readings of the height of the

tide taken day and night at the following places and between the dates specified:

Station.	Period of observation.	Length of record.
Cape Sheridan Cape Columbia Cape Bryant Fort Conger	Nov. 12, 1908, to June 30, 1909 (total loss of record, 31 hours). Nov. 16, 1908, to Dec. 14, 1908. Jan. 16, 1909, to Feb. 13, 1909. June 10, 1909, to June 25, 1909 (total loss of record, 5 hours).	Days. 231 29 28 10

The observations were taken day and night, and besides the regular hourly readings numerous additional readings were generally taken near the times of the high and the low waters.

From the records themselves and from plottings constructed from them it appears that the observations were taken with great care and thoroughness.

The principal results from these records have been already obtained and are on file in this office.

In order to show the full geographical value of the results, it will be necessary to consider them in connection with all other tidal results relating to the Arctic Ocean. This work is now under way.

Commander Peary's observations leave little to be desired in regard to tidal observations between Cape Morris Jesup and Cape Columbia; but there are long stretches of the Arctic coast where nothing is available. This is especially true of the Russian coast and the western and corthern portions of the Arctic Archipelago. However, we have recently received some tidal information from the Russian hydrographic office, with the promise of more which will pertain to regions where no knowledge of the tides has heretofore been available.

The results obtained from Commander Peary's records show that the tides along the northern coasts of Grant Land and Greenland are quite different in many respects from what had been heretofore supposed.

For example, his records prove that the tide occurs three hours earlier at Cape Columbia than at Cape Sheridan, and not later as had been generally assumed.

As already intimated, the full significance of these observations in respect to Arctic geography can not be seen at this time.

The meteorological records submitted to this office consist of thermograms covering about 180 days and barograms covering about 260 days.

Respectfully, yours,

R. A. HARRIS.

[Copied from copy in C. & G. Survey.] DEPARTMENT OF THE NAVY, Washington, April 23, 1910.

Sin: You are hereby detached from duty under the Coast and Geodetic Survey making tidal observations along Grant Land and Greenland shores of the polar seas, and from such other duty as may have been assigned you, and will await orders.

Keep the department advised of your address while waiting orders.

Respectfully,

G. VON L. MEYER, Secretary of the Navy.

SOUTH HARPSWELL, ME., July 27, 1910.

SOUTH HARPSWELL, ME., July 27, 1910.

My Dear Prof. Tittmann: Only now am I able to take up my correspondence, and I hasten to express to you my sincere appreciation of your interest and courtesy, particularly in regard to material for an appendix for the narrative of my recent expedition to be published by F. C. Stokes & Co.

I note what you say in your last letter that you can furnish manuscript for such appendix by the 15th of August.

Mr. Stokes has decided upon and already advertised the date of publication of the book for the 15th of September.

To do this every day counts, and to save time I will ask that when the manuscript is ready you kindly have it sent direct to Mr. Stokes rather than to me.

Should it be found practicable to anticipate even by a couple of days the date which you specify (Aug. 15) and have the manuscript in Mr. Stokes's hands the 12th or the 13th, it will be greatly appreciated by both Mr. Stokes and myself.

Kindly remember me to my friends in the Coast Survey, and believe me, always.

Party Supt. O. H. Tittmann,

Supt. O. H. TITTMANN, United States Coast Survey, Washington, D. C.

NOTES ON SOUNDINGS.

The sounding equipment of the expedition consisted of two reels of specially made plano wire of 1,000 fathoms each, and three approximately 20-pound leads, with clamshell device for grasping samples of the bottom. These reels were arranged to be fitted quickly to the upstanders of a ledge when making a sounding, and had handles for reeling in the wire and lead.

One of these reels and leads were carried by Bartlett with his advance party, and the other reel and two leads by the main party.

Portions of the wire and the two leads were lost at various times in hauling up, owing probably to kinks in the wire.

When the sounding at 85° 33' was made, 700 fathems only were left of the sounding wire of the main party, and Bartlett, with the other thousand fathoms, was in advance and inaccessible.

In hauling up the wire from this sounding it parted again, and some 200 fathoms, together with two pickax heads and a steel sledge shoe, which had been used to carry it down, were lost.

When Marvin turned back, the captain's 1.000 fathoms and the remaining 500 fathoms of the other reel were combined.

When Bartlett made the sounding at 87° 15°, I gave him explicit instructions to use the utmost caution in regard to the wire, in order not to lose any more of it, as I wanted it all for a sounding at the pole, should I succeed in getting there.

Acting upon these instructions, Bartlett ran out 1,260 fathoms and then stopped on account of a small kink in the wire, which he feared would part when the wire was hauled up.

When I made my sounding about 5 miles from the pole, the wire parted, as had been feared, and the last lead and nearly all of the wire was lost.

The above feets are noted to explain the irregularity of those sounds.

was lost.

The above facts are noted to explain the irregularity of those soundings which did not get bottom.

The sounding of 310 fathoms at 85° 23' naturally impressed me at ance as surprising, and when Marvin reported the result to me, immediately after taking the sounding. I at once asked him if he was sure that he had the bottom, and he replied that he was, as the fact of this pronounced shoaling from 825 fathoms to 310 impressed him at once, and he made sure that his depth was correct.

Again when the sounding of 700 fathoms and no bottom was made about 10 miles farther north, we both spoke of the peculiar fact of this outlying ridge with deeper channel intervening between it and the continental shelf, and Marvin again said that he was sure of his 310 fathoms reading.

Had it not been for the loss of the last lead and practically all of the wire, while making the sounding at the pole I should, on the return, have interpolated other soundings.

The profile indicates that a line of 5-mile interval soundings from Cape Columbia to the eighty-sixth parallel might develop a particularly interesting profile of the bottom of the Arctic Ocean.

R. E. Peany, United States Navy.

October 18, 1909.

The profile indicates that a line of 3-mile interval soundings from Cape Columbia to the eighty-sixth parallel might develop a particularly interesting profile of the bottom of the Arctic Ocean.

Cortours 18, 1909.

Capt. Prank, There is a matter that I would like to bring to the attention of the committee which may be interesting to some of these gentlemen here as a record of the return speed over the outward trail of the different supporting parties, which, if the committee deems it desirable, can be verified by these gentlemen. I am talking now about the trail from Cape Columbia to the pole.

Mr. Burlem. The lee trail?

Capt. Prank. The lee trail?

Capt. Prank. The lee trail?

Capt. Prank. The trail over the ice of the Arctic regions. Borup returned in 17 marches over 12 outward marches. Bartlett returned in 13 marches over 22 outward marches. Penry returned in 16 marches over 27 outward marches. Penry returned in 16 marches over 27 outward marches. Penry returned in 16 marches over 27 outward marches. Penry returned in 16 marches over 27 outward marches. Those are the times and experiences of the various supporting parties over the same trail.

Mr. Eurammont. In connection with these records of the Coast Survey, mention has been made of a lot of tidal records which are in a number of volumes. I am advised by the Superintendent of the Cond a man over here with them.

Mr. Burlem. There is still one point, Mr. Chairman, if I may. At the last meeting the matter of equipment came up and that has been covered again somewhat this morning. The matter of personnel and equipment at various dates as stated in my narrative were brought up, and I would like to say that the statement as to equipment and precord in the main party at various times.

Mr. Burlem. Those men live far away from her?

Capt. Paany. Borup is either in New York or New Haven at the present time; Bartlett is probably in Boston; and Macmillan is probably in Cambridge. Their addresses can be given to you.

One other point: Mr. Roberts, lave you the pam

concentrated effort in that direction. The result of this last expedition can be attributed. I think, to organization, to previous experience, and to the fact that I was personally on the job every minute.

Mr. Butler. This was your ninth trip?
Capt. Prank. The eighth or ninth voyage north.

Mr. Roberts. I would like to ask you in regard to your detail from the Navy Department, when you went on this last trip? As I understand, and as I think is mentioned in the papers submitted by Mr. Englebright, the detail was simply to the Department of Commerce and Labor, and the Coast and Geodetic Survey gave you instructions to make certain tidal observations?

Capt. Prank. "For the purpose of making tidal observations." I think that was the wording.

Mr. Roberts. You were not detailed for the purpose of making any effort to reach the North Pole?

Capt. Prank. I think I can say positively that that was not included in the precept of the order.

Mr. Dawson. Was there anything in the nature of your detail from the Navy Department which would make it proper or necessary for you to file with the Navy Department any report upon your return?

Capt. Prank. There was nothing in my orders calling for a report, I feel quite sure. I feel quite sure there was nothing of the kind. I did report my return to this country by whe to the Navy Department and I reported specifically by wire to the Coast Survey. That report contained the condensed results of my work, and later I sent them the original observations. I did not send them any detailed report in regard to the tidal, meteorological, and other observations, because they have experts in thele own department who could report on the original Information.

Mr. Dawson. You have made no report to the Navy Department since your return—that its, no extended report of any kind?

Capt. Prank. That is my understanding.

Mr. Englerent. The Navy Department, understanding that you had made soundings on your trip to the North Pole, applied to the Coast and Geodetic Survey for copies of those recor

on which hose soundings are published by the Hydrographic Office of the Navy Department. Those [indicating] are your soundings on the map?

Capt. Pearx (after examining map). Yes, sir.

Mr. Englebrioht. I will file the map with the committee:

In making a trip to the North Pole or South Pole, being a region of ice—according to Shackelton's report of his trip to the South Pole and the finding of land there would be no trouble to leave marks of his expedition, but on a trip to the North Pole, finding nothing but floating ice, the only possible identification that could be made would be a result of soundings, would it not, that any future explorer could identify the position? In other words, if another explorer should go to the North Pole and within 5 miles of the pole should drop a lead down and strike bottom in 100 fathoms of water that would show a defect in your report. The fact is there is nothing else a man could do except to take soundings to identify his position or leave a record?

Capt. Pharr. If a line of soundings were carried to the pole and every one touched bottom that would be an absolute identification and verification right straight through. If a line of soundings were taken and they reported 1.500 feet bottom and somebody else should go there and get only 100 fathoms, that would not look well, but if some one else should go there and should get 2,000 fathoms or 2,500 fathoms, I would say that it would not show anything.

Mr. Englebright. Is there anything you could have done on that trip to have left a mark or made a record?

Capt. Pharr. I was sorry I did not have wire enough with me to go to the bottom.

Mr. Bates. Is this a copy of a letter from the Acting Secretary of the Navy when you were granted a leave of absence [handing Capt. Peary a letter]?

Capt. Pharr (after examining letter). That is a copy of a letter from the Acting Secretary of the Navy, Judge Darling, to me; granting me a leave of absence:

Mr. Bates. In which he states:

"The attainment of the pole should be your main object.

The letter referred to by Mr. Bates follows:

Navy Drartment, September 5, 1903.

Dear Sir: In granting you leave of absence for the purpose of prosecuting your Arctic work, I am moved to remark that I believe you are better equipped than any other person in the country to undertake this work. You have the requisite courage, fortitude, and physique. You have had a longer term of service within the Arctic Circle than any other explorer. You have had large experience in sledge journeying, both upon the land and upon the polar pack. You are familiar with ice conditions through the Smith Sound route and north of Grant Land and the continent. You have demonstrated your ability to maintain yourself in that latitude for a longer period in health and safety than any other explorer. You have reduced the inconveniences and hardships of the Arctic service to the minimum.

You are conversant with the language and customs of the Whale Sound Eskimos and are personally acquainted with every individual in the tribe. They have become accustomed to your leadership, and if you succeed in transporting the selected hunters and the best families to the north shore of Grant Land, as you propose, you will thereby establish a base which will enable you to live in safety and comparative comfort for an indefinite period.

Grant Land as such base has great advantages over Spitzbergen, Franz Josef Land, or any other known point, in that it has an extensive shore line, which a party retreating from the pole can not fall to find, whafever may be the extent of the polar drift.

In establishing a colony of Eskimos at this point you thereby establish a self-sustaining base has not heretofore been established in any such high altitude. Your ability to force your ships to a high northing with this Eskimo colony is all important to your success. Such northing has been made by the Polaris, the Alert, the Discovery, and the Proteus. There would seem to be no reason why you can not do the same. Knowledge of fee conditions that has been gained since t

is fraught with danger and privation, the answer is that geographical discovery in all ages has been purchased at the price of heroic courage and noble sacrifice. Our national pride is involved in the undertaking, and this department expects that you will accomplish your purpose and bring further distinction to a service of illustrious traditions.

In conclusion, I am pleased to inform you that the President of the United States sympathizes with your cause and approves the enterprise. With best wishes for your health and confidence in your success, I am, respectfully.

Chas H Danlys Acting Secretary.

CHAS. H. DARLING, Acting Secretary.

I am, respectfully.

CHAS, H. DARLING, Acting Secretary.

Mr. BUTLER. Captain, is there anything further that you could have done to have marked the place you reached, the most northern point; anything you could have done that would have enabled another explorer to have verified your statement and to make the records any more complete?

Capt. Pears. I do not know of anything, Mr. Chairman, and in that connection I would like to say in regard to the matter of records—I do not know whether you care to have it in your minutes or not—that in 1900 I made a trip with three men, a colored man and two Eskimos, myself, Henson, and two Eskimos. I made a trip over here [indicating] around the northern end of Greenland and up here along the northern portion, and down here along this coast [indicating] we built a pile of rock and put in it a record stating the date and the circumstances of my being there. That was down here [indicating].

Mr. Butler. On land?

Capt. Pears, Yes, sir; on the east coast of Greenland, a little south of the extreme northern point. That was in May, 1900. Seven or eight years later the so-called Danish expedition going north along the east coast of Greenland reached that camp of mine, found those records, and brought them back, together with the receptacle that inclosed them. Those two things, the record and the receptacle that inclosed it, are probably the only things that ever circumnavigated Greenland. I do not know whether that is germane to the subject before this committee at all, but I will put in your notes for entry on the record on, as you think best, the correspondence in regard to that. That record and the package were returned to me through the Danish minister here in Washington. There [exhibiting] is the correspondence.

Mr. Butler. It may be inserted in the record.

Mr. BUTLER. It may be inserted in the record.

(The correspondence referred to by Capt. Peary follows:)

(The correspondence referred to by Capt. Peary follows:)

THE DANISH LEGATION,
Washington, D. C., January 17, 1910.

My Dear Sir: By directions of His Danish Majesty's Government I have forwarded to the Peary Arctic Club, Standard Union Building, Brooklyn, N. Y., the record which you deposited at the terminus of your sledge trip in May, 1900, in the north of Greenland, and which was found on May 12, 1907, and brought home by members of the so-called "Denmark Expedition" headed by the unfortunate Mylius Erichsen, who perished on the same.

As perhaps the circumstances of the finding of your said record might interest you, I beg leave to inclose a translation of the report, which was addressed on this event to the committee of the Denmark Expedidition by one of its members, Capt. J. P. Koch.

I am, sir, with high regard, yours, very truly,

Danish Minister to the United States.

Commander R. E. Peary, The Oakland Apartments, Washington, D. C.

[Translation.]

COPENHAGEN, December 6, 1909.

To the COMMITTEE OF THE DENMARK EXPEDITION:

To the Committee of the Denmark Expedition:

As the committee will be aware, it was for some time intended that I personally, while traveling in America, should deliver to the Peary Arctic Club the report deposited by Commander R. E. Peary at the terminus of his sledge trip in May, 1900, and brought home by the painter Bertelsen and myself.

However, circumstances have caused me to give up the idea of going to America for the present. I therefore take the liberty to request of the committee that they cause Commander Peary's report, together with the wrapping appertaining thereto, to be sent to the Peary Arctic Club, Standard Union Building, Brooklyn, N. Y., which club, according to Mr. Bertelsen, as well as my best judgment, and pursuant to the wording of the report itself, must be considered the legitimate owner of the document.

The particulars incident to the finding of Commander Peary's report are as follows:

On May 12, 1907, in the evening, we came driving from the south along the east coast of Peary Land. Shortly after having passed Cape Clarence Wyckoff we discovered a dark cairn of about 1½ meters in height, which stood out prominently against the low, snow-clad shore. A number of empty cans, having contained preserved food, which were scattered about, removed all doubt. We were standing before Commander Peary's cairn. Inside the cairn was found a report, wrapped in canvas and inclosed in a tin box. We removed the report, in place of which we deposited the following statement:

"A sledge party of the Mylius Erichsen Denmark expedition—Lieut, Koch, Artist Bertelsen, and the Eskimo Tobias Gabrielsen—arrived here May 12, 1907, 10 p. m., on journey northward. I have taken R. E. Peary's record, which was deposited in this cairn.

"J. P. Koch."

" J. Р. Косн."

We had not expected to find the cairn so easily. The surprise, the consciousness of having attained the object planned for, the solemn feeling of having come across the trail of the famous American explorer and to actually hold his autograph in our hands—all this contributed to our enthusiasm. Our little silk flag was taken out and holsted on the American cairn as an expression of our exaltation.

On May 13 we continued our journey northward to complete the American measurements between Grant B. Schley Fjord and Cape Bridgman.

American measurements between Bridgman.

Bridgman.

When on our homeward journey we again passed Commander Peary's cairn we added to our previous statement the following lines:

"May 21, 1907, 7 a. m. Reached Cape Bridgman; stayed 3 days in the Hyde Fjord; lost here 3 dogs, going down over a precipice in pursuit of a musk ox. We are now going southward toward Academy Land, 3 men, 3 sledges, and 20 dogs. Bertelsen and I suffer from not

being able to digest the musk-ox meat; for several days we have had almost no other food. I think we shall be all right again when we shall reach our depot at 82° 30'.

On this occasion we took with us, at the suggestion of Mr. Bertelsen, the tin box and other wrappings which had protected Commander Peary's record, and which we originally had used for our report. On May 27, quite unexpectedly, we came across the sledge party of Mylius Erichsen at Cape Rigsdagen. Mylius Erichsen asked me on this occasion what we were going to do with Commander Peary's record, and when I answered him that it was our intention to send it to the Peary Arctic Club he signified his entire approval of the idea. As is well known, we saw Mylius Erichsen here for the last time, and therefore had no occasion to consult him later on the subject.

With high regard, very respectfully,

J. P. KOCH.

With high regard, very respectfully,

Mr. Greeg. Have you given the Government or the public any way by which your trail can be retraced and somebody else could find the pole along the line you pursued?

Capt. Peary. Of course, there is no trace to follow.

Mr. Greeg. Have you given any data by observations or by parallels of latitude or longitude, or have you any data by which the pole could be found again?

Capt. Peary. It could be reached by anyone, if his equipment permitted, from any point.

Mr. Greeg. I mean, have you any data by which some one else could go to the pole along that route?

Capt. Peary. Nothing that would help them.

Mr. Greeg. I mean, have you any data by which some one else could go to the pole along that route?

Capt. Peary. Nothing that would help them.

Mr. Greeg. Then the North Pole is just as much lost as ever?

Capt. Peary. Yes, sir. Of course, the term "discovery" of the North Pole is a misnomer. It should be the "attainment" of the pole.

Mr. Macon. It is a fiction.

Mr. Bates. You have a record of the latitude and longitude of the course you took?

Capt. Peary. There is nothing more than what appears in these observations—the latitude at different points. Our longitude was not far removed from the meridian of Columbia.

Mr. Englebricht. You started at Cape Columbia?

Capt. Peary. Yes, sir.

Mr. Englebricht. There is a mountain there, and anybody can find the mountain?

Capt. Peary. That coast is well known from the work of the British

Mr. Englebright. There is a mountain there, and anybody can find the mountain?

Capt. Peary. That coast is well known from the work of the British expedition.

Mr. Greeg. Mr. Englebright insists that you did not understand me. Have you any map or chart or anything that some one could take and follow your tracks?

Capt. Peary. To get to Cape Columbia?

Mr. Greeg. Between there and the pole?

Capt. Peary. With Cape Columbia as a starting point and with their instruments and their time and their compass they could follow my course.

Mr. GREGG. You have left the data, then, by which they could use those instruments?

Capt. Peary. They would not need any data I have.

Mr. GREGG. It would have to be an independent undertaking on their part?

Capt. Peary. They would not need any data I have.

Mr. Gregg. It would have to be an independent undertaking on their part?

Capt. Peary. It would have to be an independent undertaking, and after getting to Cape Columbia they could determine what direction they wanted to follow.

Mr. Gregg. And unaided by anything you have?

Capt. Peary. Except my experience; that would be my impression.

Mr. Roberts. What official report, Mr. Peary, did you make under the instructions which were given you by the Navy Department and by the Department of Commerce and Labor on your return? Under the detail from the Navy Department, I presume the instructions were from the Coast Survey?

Capt. Peary. Without referring precisely to the papers, I think the sequence was this, that I was ordered to special duty with the Coast Survey by the Navy Department, and I think the order was countersigned by the President. Those orders can be produced and put in the record, if it is desired. Then I received certain instructions from the Coast and Geodetic Survey in regard to tidal work. Whatever they were, they are a part of the record.

Mr. Roberts. What reports did you make under these instructions of detail from the Navy Department to the Coast and Geodetic Survey; to whom did you make those reports?

Capt. Peary. I made no report at that time to the Navy Department, except that I acknowledged the receipt of the orders and later reported by wire or letter to the Navy Department, reporting my return to the Coast Survey. Then, after my return I sent my telegram from the Labrador coast to the Navy Department, reporting my return to the Coast and Geodetic Survey, stating so many days' tidal observations at such a place, and at such a place, and at such a place, the line of soundings, and something of that kind, a telegram was sent from Battle Harbor or Indian Harbor. Then I sent the original observations to the Coast and Geodetic Survey, but it was filed at Battle Harbor. Doubtless, if that is a point, it can be determined from the record. I say

I do not remember what was said in the letter of transmittal, but that can be obtained. I made no report as to what were the results from the tidal observations. That has been attended to by the experts

from the tidal observations. That has been attended to by the experts of the survey.

Mr. Roberts. Those were all the reports that you made?
Capt. Peary. Yes, sir.

Representative Alexander of New York. I simply wanted to suggest that there is a little bit of misapprehension, over at this end of the table at least, in regard to the answers made to the questions regarding what Capt. Peary has left of record to guide some future traveler to the North Pole. I have read his book within the last three or four days and he there gives the latitude and longitude. He left Cape Columbia and whenever he could make an observation he has made it and made it of record. It seems to some of us here, and I make the suggestion to you, to have it clear on the record if you think it is not so.

Mr. Butler. I had that in mind. There is this one reason why I did not ask any question following Mr. Gregg: Some of the experts

we had last winter said it would have been possible to have made the observations at points in this country.

Mr. Horson. May I suggest that the course pursued or navigated by Capt. Peary can be definitely plotted on a chart, and that having proved practicable once it would be a guide for any party who tried to pass over the same course.

Representative Alexander of New York. The point is simply this: A captain sails from New York to the Madeira Islands. It is all water. He can not leave any lighthouses or any buoys that remain stationary, but he takes his latitude and longitude and he sails to the Madeira Islands on a certain course by which anybody else can go to the Madeira Islands. It seems to a few of us here that that matter has not gone into the record exactly as Capt. Peary and his friends would like to have it.

Mr. Macon. In respect to what Mr. Alexander has said about latitude and longitude observations, I will say that the distinguished members of the committee that passed upon the case of Capt. Peary told this committee that the records showed that Capt. Peary had not taken a single longitude observation on his trip out, and yet the gentleman from New York says that he read in the book that he made the observations.

Mr. BUTLER, Let us go on now and permit Mr. Reberts to finish his examination.

his examination.

Mr. Greeg, The point I was making is this: For instance, when Columbus discovered America it is true, as Mr. Alexander has said, that he sailed through water exclusively, and he could not leave any mark, but he took back a chart by which anybody else could follow his tra.; just as if he had marked it on the water. Have you any chart of that character, any data that will enable anyone else to pursue your track?

mark, but he took back a chart by which anybody else could follow his tral.; 'ust as if he had marked it on the water. Have yon any chart of that character, any data that will enable anyone else to pursue your track?

Capt. Pearx: I have not prepared such a chart as yet.

Mr. Gregg. Have you the data by which you can prepare it?

Capt. Pearx: I imagine that I have the data with which it could be prepared. Here is a chart right behind me [indicating] that gives all that information.

Mr. Butler. Suppose you should make a map and somebody sailed over what there is on the map, could he see whether you went over it?

Capt. Pearx. Nothing can be found after six months on the trail from Columbia to the pole.

Mr. Engleright Is there any difficulty when you arrive at the North Pole about taking proper astronomical observation that will satisfy you that you are at the North Pole?

Capt. Pearx. I do not know of any reason why the North Pole can not be determined approximately the same as the position of the Equator or any point of latitude or longitude on the face of the earth, but there is one pronounced fact that makes some difference in northern work, and that is the matter of the comparatively low altitude of the sun

The sun at the North Pole only gets 22½° above the horizon, and the nearer the sun is to the horizon the more uncertain is the refraction; so that an ordinary observation can not be relied upon with the same accuracy. But if there were land at the North Pole, if an observatories and could have the time at their disposal and could observe stars which are high enough to be free of the errors of refraction, etc., the position of the pole (I will not say the position of the pole, but their position relative to the pole), could be determined with just as much accuracy as the position of Washington. But in summer work the sun is the only thing you can use, because there are no stars. Here is a point that you gentlemen all know, but perhaps it should be brought right home to you here, and that is the role of

Mr. Horson. Less than that.
Capt. Pearx. My opinion would be that a man could so approximately identify his position.
Mr. Englebright, Without any instruments?
Capt. Pearx. He could certainly determine the fact of whether the lower limb of the sun circling around the horizon was touching the horizon here [indicating] and was touching the horizon here [indicating] also. Now, that would show that within certain limits he must be near the pole. What those limits were would depend on the amount of refraction at that time and various other causes.
Mr. Roberts. Is the information contained in your telegram all the information you ever gave to the Navy Department of your trip to the pole?
Capt. Pearx. To the Navy Department direct. I was on duty, but I was not on duty under the Navy Department.
Mr. Roberts And later you transmitted to the Coast and Geodetic Survey the results of the tidal observations?
Capt. Pearx. Tidal and meteorological observations and the soundings.

ings.

Mr. Roberts. What report did you make to the Navy Department when you were finally relieved from duty with the Coast and Geodetic Survey?

Capt. Pearx. I do not recall that I made any report. I was placed

Survey?

Capt. Peary. I do not recall that I made any report. I was placed on waiting orders

Mr. Roberts. Is it not customary for naval officers to make some report to the department when discharged from a duty?

Capt. Peary. I am not aware that that is the case. I was placed on waiting orders, and soon after—only two or three days, I think—I was granted leave. My impression is that the report was made to the Navy Department by the Superintendent of the Coast and Geodetic Survey.

Survey.

Mr. Roberts. In the documents transmitted to the Coast and Geodetic Survey, containing the results of the soundings and the tidal observations, was there any injunction of secrecy on the part of the bureau or department?

Capt. Peart. No; not in my telegraphic report.

Mr. Roberts. I am speaking of the regular report.

Capt. Peart. On page 20 of Mr. Moore's speech you will find my letter to the Acting Superintendent of the Coast and Geodetic Survey, and after inclosing the profile of soundings this paragraph occurs:

"If such request is permissible, I will respectfully request that this profile and complete set of soundings be not published at present."

Mr. Roberts. That was the official report that you made?
Capt. Prart. That was my letter.
Mr. Roberts. Will you tell us why you, being detailed to get certain information for the Government, should request the Government not to publish it or make any use of it until later?
Capt. Prart. I have no objection to giving the absolute reason, but I would prefer to state it simply for the committee. If you will refer to my letter of October 18, 1900, to the Acting Superintendent of the Coast and Geodetic Survey, which contains my only request in this regard, you will see that my words were—
"If such request is permissible, I will respectfully request that this profile and complete set of soundings be not published at present."
You will note that I did not ask the Government to refrain from making use of this data, but only to withhold it from the public "at present," and then only in case such request was permissible.
You will see, further, that this request did not refer to all the data which was furnished the Coast and Geodetic Survey, but only to the soundings and profile, and not to the tidal and meteorological records.
My object in making this request was to prevent any possible improper use of this data at that time by persons not connected with the United States Government.

Mr. Roberts. Something was said about the stars not being visible when you were at the pole and for several days before that. Were there stars visible at any time after you left Cape Columbia?
Capt. Pearr. Probably during the early marches; yes.
Mr. Roberts. Were any observations made with a view to ascertaining your exact position, using the stars instead of the sun?
Capt. Pearr. No.
Mr. Roberts. Could not you correct or verify your solar observations by the stars at the pole?
Capt. Pearr. No, sir.
Mr. Roberts About the soundings, Mr. Peary, as I understood you the other day, you personally made one sounding?
Capt. Pearr. No, sir.
Mr. Roberts About the soundings, Mr. Peary, as I understood you the other day, you personally made one sounding

rent.

Mr. ROBERTS. You did not note the first four soundings made and you can not tell what the tidal conditions were, but you did make the last sounding within a few miles of the pole. As your wire ran out, did you note whether it was a tidal current that carried it away?

Capt. Pearx. There was no strong tidal current as indicated by the wire to sweep it one way or the other.

Mr. ROBERTS. It was not trailed off on the ice by a strong current?

Capt. Pearx. I did not observe it.

Mr. ROBERTS. You do not know whether that was the condition at the other soundings?

Capt. Pearx. I doubt if there is any strong current in the main Arctic Ocean, because the tidal movement at Columbia is very slight.

Mr. ROBERTS. You spoke of some record that circumnavigated Greenland?

Capt. Pearx. Yes, sir.

Capt. Pearx. Yes, sir.
Mr. Roberts. Which was returned to you by the Danish Government?

Capt. Peary. Yes, sir.

Mr. Roberts. Which was returned to you by the Danish Government?

Capt. Peary. Xes, sir.

Mr. Roberts. If that went around the northern part of Greenland there must have been a tidal current?

Capt. Peary. No, sir; you misunderstood the matter entirely. The record that I spoke of was one that I left about here [indicating] in a pile of stones, and some seven or eight years later a Danish expedition passing up from the east coast, also by sledge along the coast, found my pile of stones and brought the record back. If I said "cr-cumavigated," that is, perhaps, a figure of speech. What I should have said was that that record having started from New York, from where the paper it was on was carried by me, to that point, and that it was brought by the Danish expedition back to Copenhagen and thence to me at New York.

Mr. Roberts. There is another question that I would like to ask. It was mentioned here a short time ago what could have been done by you, but as I understood the purport of the question, and if I am wrong I hope I will be corrected, to remove any doubt that might exist in any person's mind as to attaining the pole, and whether anything more could have been done than what you did. I have heard this question asked a good many times by people, and I am going to take the liberty of asking you why, when you went to the pole on your party in order that there might be credible, corroborative evidence if the question was ever raised as to attaining the pole? I do not know whether you care to answer that question.

Capt. Peary. I have not the slightest objection to answering that question, Mr. Roberts. This is accessory to it. I have always made my final spart work up there, with the one exception when Lee was with me, across the Greenland ice cap with one man and the Eskimos. The reason for that has been stated in the book, that the man I took with me was more effective for the combined demands of extended work than any white man I have ever had with me, but, perhaps, what you want in a

Mr. Roberts. Bartlett wanted to go and was very anxious to go?
Capt. Pears. Yes and no. You can, of course, get Capt. Bartlett's
statement in regard to it, but I will give you this information in connection with that subject. No man who became a member of my last
expedition at any time had any reason to expect that he would go to
the pole with me.

They were distinctly told in joining the expedition that they were not to count on that as a part of the expedition; that circumstances might arise which would make it necessary. Bartlett never had any idea that he was going to the pole with me, so far as I knew. He never had any reason for any such idea. At Columbia I told Bartlett that, God willing, I hoped he would assist me in getting to the pole beyond the farthest of Abruzzi, and Bartlett knew I meant it. It was on what he counted. On the last march Bartlett, as he and I were walking along to make the last part of that march, said: "Commander, I would like to go all the way with you, if it can be so arranged." It struck me as a most natural thing for him to have said. I said: "Bartlett, there is no man in the world I would like to have with me more than you, but we have to carry out the program. I would rather you would turn back from the next camp, as proposed," or words to that effect. If you doubt the exact words, Bartlett can probably repeat them to you.

Mr. Roberts, When you left Cape Columbia did each head of a supporting party know how many marches he was going to make to get back?

get back?
Capt. Pearr. No. sir. I told Bartlett just as I have told you. The others, I said nothing to them.
Mr. Roberts, They did not know in which order they would be sent back?

Mr. Roberts. They did not know in which order they would be sent back?

Capt. Peary. No, sir.

Mr. Roberts. There is one other question I want to ask along that line. In selecting these men to go with you on this expedition was there any injunction of silence placed on them as to what they might observe or see on the trip, or were they free to come back to civilization and tell anything or write or lecture—do anything they pleased—with regard to their experiences on the trip?

Capt. Peary. The members of the party were not free to write or lecture after the return without permission.

Mr. Roberts. None of them?

Capt. Peary. No, sir.

Mr. Butler. They were paid for their services?

Capt. Peary. Yes, sir.

Mr. Butler. Were you paid for your services?

Capt. Peary. I was not.

Mr. Butler. All the rest were paid?

Capt. Peary. Yes, sir.

Mr. Macon. Was not the Government paying Capt. Peary's salary?

Mr. Butler. Yes, sir; of course. Did you draw anything except your salary from the Government?

Mr. Roberts. I can not tell just when, but within the last year Henson has been lecturing on his experiences. I do not know that this is material for the record, but it is a matter of curiosity. Was he?

Capt. Peary. It was by permission?

Capt. Peary. It was by permission given, how recently?

Capt. Peary. It was by permission given, how recently?

Capt. Peary. I can not say. I should not say it was very recently, but I can not say when permission was given.

Mr. Talbott, Could you go back to the pole practically over the same route?

Capt. Peary. I could go practically over the same route; yes, sir.

Mr. Talbott. Could you go back to the pole practically over the same route?

Capt. Pearly. I could go practically over the same route; yes, sir.

Mr. Roberts. There was a suggestion made that it would be very much to the enlightenment of the committee if you would come before it, and some person, I am not just certain who, purporting to represent you, said that you felt that you could not come then because you were under contracts to publishers or under contracts that forbade your disciosing any of the results of your recent trip. I want to ask you if you authorized anybody to make such a representation to us?

Capt. Pearly. My position at the time was that I was willing to come before the committee and show all my papers and my journal and answer all questions, but I was not ready to have the results of my work published. That, I think, states the position absolutely. I was ready and willing to come before the committee at any time last year.

Mr. Roberts. The reason you did not wish them published was because you were under certain contracts?

Capt. Pearly. Yes, sir.

Mr. Roberts. Those contracts have now expired?

Capt. Pearly. I presume with the publication of the narrative.

Mr. Roberts. When did they expire?

Capt. Pearly. The book was published last, and I should say it was upon the publication of the book.

Mr. Roberts. When was that published?

Capt. Pearly. In September, I think, or October.

Mr. Roberts. You were bound by the contract with your publishers not to make known or disclose, without their permission, any of the results of your trip?

Capt. Pearly. Yes, sir; in a general way, I should say so.

(Thereupon the committee adjourned to meet to-morrow, Wednesday, January 11, 1911, at 10 o'clock a. m.)

Subcommittee No. 8 of the Committee on Naval Affairs, Wednesday, January 11, 1911.
The subcommittee this day met, Hod. Thomas S. Butler (chairman)

STATEMENT OF CAPT. ROBERT E. PEARY, U. S. NAVY-continued.

Mr. Butler. You may proceed, Mr. Roberts.
Mr. Roberts. Capt. Peary, when you returned from your dash the first people you saw were those at the ship?
Capt. Peary. Yes, sir.
Mr. Roberts. You, of course, told them of the trip?
Capt. Peary. No; I did not. I did not go into any details in regard to the trip.
Mr. Roberts. Did you tell them you had reached the pole?
Capt. Peary. I told Bartlett; no one else.
Mr. Roberts. I recall reading in the papers that on the way from the place where the ship wintered, somewhere on the return journey you met some sportsman. Was if whitney?
Capt. Peary. I met Whitney at Etah, down in the Whale Sound region.
Mr. Roberts. Did you say anything to him. did you have been seen that you have the some sportsman.

Mr. Roberts. Did you say anything to him; did you have any talk with him about your trip?
Capt. Peary. No, sir.

Mr. Roberts. You did not say anything to him about reaching the pole?

Capt. Peary. No, sir.

Mr. Roberts. Did he make any inquiry of you?

Capt. Peary. I do not think he did; I do not recall.

Mr. Roberts. There is another question that has been in my mind and in the minds of many other people, why you did not say something to him, acquaint him with the result of your trip. Do you mind telling us your reasons?

Capt. Peary. It was expected that Mr. Whitney would have a ship come up there for him. As is known by the records I was under honorable obligations to furnish the account of my expedition on my return, and I felt that I should protect the account of the journey by reserving it rather than giving it to anyone else previous to reaching home.

Capt. Passay. It was expected that Mr. Whitney would have a ship come up there for him. As is known by the records I was under honorable obligations to furnish the account of my expedition on my return, and I felt that I should protect the account of the journey by reserving it rather than giving it to anyone else previous to reaching the protect of the control of

Mr. Roberts. Mr. Butler has suggested a question. Was to pemmican something you bought in the open market, or was

Mr. Roberts. A. Butter has sagested a question. Was first specially prepared?

Capt. Peary. It was prepared on order. It is not a thing, as far as I know, that can be obtained in this country. Things called permican can be obtained in the large outfitting establishments in London. I doubt if permican I would care for could be obtained over there, because I had some permican once from there and the basis seemed to be pea flour—more like concentrated pea soup and less meat. The meat is for sustenance and the fat is for the heat giving. Nansen had some permican prepared for him on one of his expeditions and they extracted the fat from the meat. That is, as I recall his narrative.

Mr. Roberts. Is it at all greasy?

Capt. Peary. It is distinctly so. About one-third, approximately, of the permican is nothing but beef suct or tallow.

Mr. Roberts. Now, something was said the other day about the temperature in the igloos.

Capt. Peary. Yes, sir.

Mr. Romeirs. Of course you do the eating in the igloos?

I would car my permitten in the intervals of building the igloo, so when we got in the igloo I was ready to drink the ten and eat the blechts and turn in could not get the tea until you got in the igloo I was ready to drink the ten and eat the blechts and turn in could not get the tea until you got in the igloo I and it was a could not get the tea until you got in the igloo I and it was a could not get the tea until you got in the igloo I and it was a could not get the tea until you got in the igloo I and it was a could not get the tea until you got in the igloo I and it was a could not get the tea until you got in the igloo I and it was a could not get the tea of the purpose of chepping the permitten of whicking up the ice or cutting a piece of snow, and they used the tablespoon for striring the condensed milk in the ca. Of course sixed into the tea in the boller, where the tea for the whole four men as made, so that every man got absolutely the same proportion of whicking up the interval of the purpose of the pu

quite a number of them and reduced the slenderness of the point a little, so that a lance could be used to chip the ice by a man who knows how quite effectively. There was also a light spade for each division of four men. On the upstander of each sledge was a little hatchet for chopping the pemmican about so long [indicating], a saw knife and blade about that long [indicating]. They were attached to the upstander of each sledge.

Mr. Roberts. These tools you speak of were used in making the igloos?

igloss?

Capt: Peary. The saw knife and blade. The saw knife was absolutely essential. The spade is of value sometimes, but is not absolutely essential. The saw knife was absolutely essential. The saw knife was absolutely essential. I mean the instrument with a blade about that long [indicating], a knife on one side and saw teeth on the back. That was used for cutting the blocks of snow for the igloss. If the snow was very hard and there was difficulty in getting it out with the knife edge we would turn it over and saw the blocks. Those were absolutely indispensable. Every man in the party had one and there were one or two spare ones. It was the blade with which the snow blocks could be cut.

Mr. Roberts. What is the weight of the sledge itself?

Capt. Peary. Of my last sledges I can not give you the figures, but my impression is that it was eighty-odd pounds. Each sledge would vary some.

yary some.

Mr. ROBERTS. Your special sledge?

Capt. PEARY. My standard sledges.

Mr. ROBERTS. How did they compare in weight with the Eskimo sledges?

sledges?

Capt. Peary. My sledges were about the same, I should say. The reason why I can not tell you the weight of the sledges that you referred to is that I have had so many different kinds of sledges, so many different lengths, etc., both of the Eskimo type and this type on different expeditions, that I have not the figures clear, but I will say that my sledges on my various expeditions have weighed from the lowest—I think 65 pounds—up to 95 pounds. On the inland ice work one sledge weighed 12½ pounds and carried 400 pounds.

Mr. Roberts. What weight did you carry on these sledges on this trip?

Capt. Peary. Of course none were weighed—we had no facilities—

Capt. Peary. Of course none were weighed—we had no facilities—but from Cape Columbia in no instance did the weight on a single sledge exceed about 500 pounds. The standard load—I mean the load one would try to hew to as much as possible, as the unit for heavy work of a man and a team of eight dogs—would be a sledge weighing less than 100 pounds, and a total gross load on the sledge not to exceed 500 pounds at the start.

Mr. Roberts. Five hundred and eighty pounds in weight, all told? Capt. Peary. Yes. sir; at the start.

Mr. Roberts. That was lightened all the time?

Capt. Peary. Yes, sir. On the early journeys I have started with heavier loads, but it does not pay, because you can cover more distance with a limited load. It is better in every way; the dogs and men feel better.

heavier loads, but it does not pay, because you can cover more distance with a limited load. It is better in every way; the dogs and men feel better.

Mr. Roberts. When you started in the final dash after leaving Bartlett you had five sledges. Were they loaded to capacity?

Capt. Peary. Practically; nearly so. They were not loaded over capacity; a little under it anything.

Mr. Englebright. What was the weight of the load of Bartlett's sledges going back?

Capt. Peary. That I could not say. Bartlett had three men to feed. Mr. Roberts. And the dogs?

Capt. Peary. Yes, sir. He started with the poorest dogs, and he expected to use some of the dogs as dog food on the return. That was part of the proposition.

Mr. Roberts. Not for himself?

Capt. Peary. We hoped it would not get to that point, although I can tell you there is nothing the matter with the hind leg of an Eskimo dog if there is meat enough on it, and the Eskimos at times would prefer it to the pemmican. They were after me at times, at various camps, to let them have a dog, which I did at times.

Mr. Roberts. Have you your memorandum book with you?

Capt. Peary. Yes, sir.

Mr. Roberts. Have you any objection to my reading what is on the outside of it, simply to identify it?

Capt. Peary. No, sir.

Mr. Roberts (reading):

"No. 1. Roberts (reading):

"No. 1. Roberts (reading):

"No. 1. Roberts (reading):

"No. 1. Roberts. These papers [indicating] are separate?

Capt. Peary. There is no objection to that.

Mr. Roberts. These papers [indicating] are separate?

Capt. Peary. There is no objection to that.

Mr. Roberts. I take it that the leaves are in order?

Capt. Peary. There is no objection to be servations.

Mr. Roberts. I take it that the leaves are in order?

Capt. Peary. I can not say; they should be. I was assisting the stenographer last night in completing the record of yesterday.

Mr. Roberts. It was your custom, evidently, to begin a fresh page for each day?

Capt. Peary. That is what I tried to do.

Mr. Roberts. It runs along here a good many days

Mr. Roberts. It was your custom, evidently, to begin a fresh page for each day?

Capt. Peary. That is what I tried to do.

Mr. Roberts. It runs along here a good many days, and each day's entry begins on a new page. I notice that no entries were made on March 16 and 17?

Capt. Peary. No, sir.

Mr. Roberts. Let me ask you. I notice a heading here. What does that mean [indicating]?

Capt. Peary. That means the ninth march and the twenty-third day. Let me make this explanation, please. That is the ninth march from Columbia and the twenty-third day from the ship.

Mr. Roberts. These headings lead me to ask if they were prepared for each page before you left?

Capt. Peary. No, sir. That was done by making an entry like that and then not making an entry for perhaps two or three days later, and I headed an intervening page for each day and started the next entry at the top of the page, thinking that I might get time in the following march to fill in the incidents of those days, but I think in every instance I did not. I did not.

Mr. Butler. I think Mr. Roberts asked you the other day if the entries were not made while you were in the igloos.

Capt. Pears. Perhaps, entirely in the igloos.

Mr. Butler. Of course, that book was written with your bare hand?

Capt. Prany. With the bare hand usually. There may have been times when it was done with the blanket mitten on.

Mr. Roberts. I notice here an entry, "Thursday, March 25, thirty-first day out, seventeenth march." The record of that day runs over to the next page, nearly half of the page.

I find the record of "March 26, thirty-second day out, eighteenth march." That runs over to the second page and fills the second page.

"Saturday, March 27, thirty-third day out, nineteenth march." The record fills that page and runs over to the next page, about two-thirds of the next page,

"Saturday, March 27, thirty-third day out, nineteenth march." The record fills that page and runs over to the next page, about two-thirds of the next page.

I find "Monday, March 29, thirty-fifth day out." There is no record of the number of the march. You expected to put that in? Capt. Prary. There was no march that day; we were hung up there. That is the place where Bartlett got affoat.

Mr. Butler. There was not any march that day?
Capt. Prary. No, sir.

Mr. Roders. I notice on "Thursday, April 1, thirty-eighth day," there is no mention at the top of the number of the march. The record for that day covers three pages. The last page is continued in the margin. I would like the records to show that there is a margin of one-half an inch or more on the left-hand side of each page. The entry runs through the margin of all three pages and across the top of that day's record.

"Friday, April 2, twenty-third march, thirty-ninth day." The record covers a page and one-half and some marginal writing on the first page, interlineations.

"April 3, twenty-third march, fortieth day," the record covers a page and about a half.

"April 4, twenty-fifth march, forty-first day," the record covers two pages and has marginal writing on the left-hand margin of both pages. April 5, that is the forty-second day, two pages and about a third, no marginal notes.

"April 6, forty-third day, twenty-seventh march," the record covers

April 5, that is the forty-second day, two pages and about a third, no marginal notes.

"April 6, forty-third day, twenty-seventh march," the record covers two pages, and has a marginal entry and additional writing.

Then follows two loose leaves. Without careful reading I can not say whether or not they are part of that day's record.

Then follows two blank pages.

"Wednesday, April 7, forty-fourth day, first return march," No record on that day. None on the next page. None on the next page.

Then comes "April 8, forty-fifth day, second return march." No record.

Then comes 'April o, the transfer of the record of that day covers a page and a half. No marginal writing.

"April 10, forty-seventh day, fourth return march." The record of that day covers a page, with marginal writing.

"Forty-eighth day, April 11, fifth return march." The record covers a page with no marginal writing.

"Sixth return march, fiftieth day, Tuesday, April 12," five lines of

"Sixth return march, fiftieth day, Tuesday, April 12," five lines of record.

You have told us, I think, the conditions under which the record was kept. The entry for that day was all written that day, or at least the whole entry of that day was written at one time?

Capt. Peary. Probably. I might, perhaps, have filled in something in connection with it at the next camp, but within those limits, yes.

Mr. Roberts. You never filled anything in later than the next camp? Capt. Peary. No, sir; I do not think so.

Mr. Roberts. Are you certain?

Capt. Peary. I feel quite sure.

Mr. Roberts. Everything written was written the day it purports to have been written here or the following day?

Capt. Peary. Very soon after. As I say, I left some days open to fill in fi I had the time afterwards.

Mr. Roberts. Apparently the last entry made is "Tuesday and Wednesday, April 21 and 22, sixtleth day." I can not just make this out. Here is a memorandum "See near beginning of book for continuation."

Would you leave this book to be examined by the committee?

Would you leave this book to be examined by the committee?

Capt. Pearv. I do not care to leave it with the committee or anyone.

I do not care to let it out of my possession; it never has been.

Mr. ROBERTS. If the members of the committee care to, I would like to have the book examined, particularly with reference to its condition and state. It shows no finger marks or rough usage; a very cleanly

to have the book examined, particularly with reference to its condition and state. It shows no finger marks or rough usage; a very cleanly kept book.

Mr. Macon. Mr. Chairman, the committee having under consideration a bill for the purpose of promoting Capt. Peary to rear admiral for the discovery of the North Pole, which, in a sense, would be to place in his hands on the part of the American people a passport into every phase of human society as an American hero, and remembering that this country and every other country has been infested with bogus heroes as well as real ones, I consider that we ought to go into this matter upon the merits of the case and not becloud it by comparing his marches in a polar region with a dog race in Alaska.

Mr. Butler. Can not that be determined when we meet in executive session?

Mr. Butler. Can not that be determined when we meet in executive session?

Mr. Macon. I am proceeding now. And becloud or confuse it with a description of the character of food that he ate while he was on the trip, but that we ought to consider the facts connected with this case and not treat it as a joke. It is too serious a matter, and hence in my examination of the gentleman I propose to deal with the meritorious facts in connection with his case as I see them.

Capt. Peary, this being, as I said a little while ago, the consideration of a hill to confer high honors upon you. I want to find out whether or not you are entitled to them, whether your services to the Government have been of such moment as to make you worthy of them. If they have been, I want you to have it. Therefore I will ask you, to start with, how long have you been in the service of the Government in connection with your dutles as a naval officer?

Capt. Peary. I entered the service on the 26th of October, 1881, I think.

Mr. Macon. A little over 29 years?

Capt. Peary. The 26th of October, 1881, I think, was the date.

Mr. Macon. How much of that time have you devoted to real service in the Navy Department?

Capt. Peary. That I can not answer offhand. I think this is stated in a letter from the Secretary of the Navy to this committee; it was written last winter.

Mr. Macon. You can approximate it in years; we do not ask for months or days.

Capt. Peary. That information, I think, will be found in detail on page 23 of Mr. Moone's speech? You can not approximate it, then? Capt. Peary. Not unless it is given there.

Mr. Macon. Then I will ask you if you can approximate how many years you have devoted to polar or arctic explorations? I will not say polar explorations, because I do not believe you have been in search of the pole all the time you have been out.

Capt. Peary. My first expedition was in 1886. The answer to that question is also given in detail on page 6 of Mr. Moore's speech.

Mr. Dawson. I suggest that both statements go into the record.

Mr. Macon. I am trying to find out from him. He is supposed to know as much about it as Mr. Moore.

Capt. Peary. These are official documents.

Mr. Macon. He is supposed to know about the official records. I know as much about the ime I have given to my duties as Congressman since I have been a Member of Congress as my official record could disclose.

Mr. Dawson. Of course, if the gentleman from Arkansas does not

since I have been a Member of Congress as my official record could disclose.

Mr. Dawson. Of course, if the gentleman from Arkansas does not want the facts to go into the record—

Mr. Macon. That is what I am after, the facts. That is exactly what I am after. I am not after second-handed facts; I want them first handed.

Mr. Butler. I suggest that we put the official letter from the department which Mr. Roberts has in the record.

Mr. Macon. I am asking him of his own knowledge. Can you tell us how many years you have been making your northern or arctic explorations of your own knowledge?

Capt. Pearr. I can not answer offhand because I have not the dates here. I would have to look them up and, if I looked them up, I should probably get the same information as is presented in this official communication from the department.

Mr. Macon. I have seen it stated that you have spent a great deal of your time for 23 years in making explorations in the North.

Capt. Pearr. My first expedition—on page 6 of Mr. Moone's speech my first expedition is described.

Mr. Macon. Do you not remember when it was?

Capt. Pearr. Eighteen hundred and eighty-six.

Mr. Macon. It is a matter of so little interest that you can not remember when you did go?

Capt. Pearr. I went North the first time in 1886 for about six months.

Mr. Macon. Has most of your time since then been given to arctic explorations or to service in the Navy Department?

Capt. Pearr. It seems to me, Mr. Chairman, that that question is answered here. I can not answer that question, I do not want an

statistics.

Mr. Macon. If you can not answer the question, I do not want an

Capt. Peant. It seems to me, Mr. Chairman, that that question is statistics.

Mr. Macox. If you can not answer the question, I do not want an answer.

Mr. Macox. If you can not answer the question, I do not want an answer.

Mr. Dawson. Those facts are matters of record in the Navy, and the Secretary of the Navy has submitted them to this committee.

Mr. Macox. If the gentlemen will excuse me, yesterday the captain stated to the committee that this matter had been his lifework; that his soul, practically, was wrapped in it to the extent that he was not a state of the growth of the growth anybody on the face wrapped on what he was doing, then he ought to have felt enough interest to be able to give us the information of his own knowledge.

Capt. Peant, I am unable to answer that question in detail without information or the written record.

Mr. Macox. Will you put it in the record?

Capt. Peant, I will ask the committee to accept the statement of the Navy Department for the time I was on leave, and that the time I was no clove, ISSG, will give you the amount of time I have been on duty.

Mr. Roberts, There (handing paper to Capt. Peary) is the whole record from the Navy Department if you care to look it over in order to answer the question.

Capt. Peary (after examining letter). I will say that the letter here states that I performed active duty for 12 years and 9 days. That would be up to the date of this letter, February II, 1910. I have been unemproved the property of the state of the letter, for the property of the state of the letter, for the property of the state of the paper of the state of the paper of the state of the paper of the date of the facter, february II, 1910. I have been unemproved the paper of the date of this letter, for the paper of the date of the paper of the date of the paper of the paper of the paper of the date of the paper of the pa

of 580 fathoms, made by Marvin at 84° 39'; one of 310 fathoms, made by Marvin at 85° 23'. All of those soundings reached bottom. One of 700 fathoms, made by Marvin at 85° 33', no bottom; one of 1,260 fathoms, made by Bartlett at 87° 15', no bottom; and one of 1,500 fathoms, 89° 55', made by myself, no bottom.

If it is permissible, this [referring to a profile of soundings] can be entered on the record in connection with my statement. [Omitted in RECORD.]

Mr. BUTLER. Yes, sir.

Mr. Macon. In making these more shallow soundings they reached bottom?

Mr. Botter. Yes, sir.

Mr. Macox. In making these more shallow soundings they reached bottom?

Capt. Pear. The first six soundings reached bottom; the others did not.

Mr. Macox. I understand that Mr. Marvin is no longer with us—he is a superior of the state of the sounding of the soundings? Were you with him when he made them?

Capt. Pears. When he made the sounding of 310 fathoms; I was with him also when he made the sounding of 700 fathoms; I was with him also when he made the sounding of 700 fathoms.

Mr. Macox. They made a record of it so you could make your record from theirs?

Capt. Pears. They did.

Mr. Macox. What was the result of the soundings made by them—that is, was any wire or anything of the kind lost, any part of the wire?

Capt. Pears. See, sit.

Capt. Pears. Yes, sit.

Mr. Macox. At the second sounding?

Capt. Pears. Yes us how much?

Capt. Pears. Yes us how much?

Capt. Pears. Yes us how much?

Capt. Pears. The wire had been marked on board the Roosevelt by Bartlett before starting on the expedition.

Mr. Macox. How were the measurements of this wire made, as recled off into the water?

Capt. Pears. The wire had been marked on board the Roosevelt by Bartlett before starting on the expedition.

Mr. Macox. And they kept an account of it as they recled it off into the water?

Capt. Pears. The wire had been marked on board the Roosevelt by Bartlett before starting on the expedition.

Mr. Macox. And they kept an account of it as they recled it off into the water?

Capt. Pears. The wire had been marked on board the wire.

Mr. Macox. They were the measurements of this wire made, as recled off into the water?

Capt. Pears. The wire all ran out.

Mr. Macox. It is not hav

AMERICAN STEEL & WIRE Co., New York, March 9, 1910.

Hon. W. F. Englebright,

House of Representatives, Washington, D. C.

Dear Sir: Replying to your question regarding the weight of music steel wire sent to Commander Peary June 29, 1908, beg to advise that it was 0.028 inch in diameter and weighed 0.00207 pound per foot, resulting in a weight of 12.42 pounds per 1,000 fathoms.

We forwarded to Commander Peary one reel of 12,000 feet and two recis of 6,000 feet each.

If there is any further information we can give you, we shall be very glad to respond.

Yours, very truly,

American Steel & Wire Co.

AMERICAN STEEL & WIRE Co., F. A. KEYES, Sales Agent.

Mr. Bates submitted the following letter:

Mr. Bates submitted the following letter:

The Dresden, 2226 Connecticut Avenue NW.,

Washington, D. C., January 5, 1911.

My Dear Sir: I inclose herewith photograph of a sounding lead, the same as the ones used by me on my sledge journey to the pole, together with a sample of my sounding wire.

The lead shown in this photograph is in the possession of the American Museum of Natural History in New York City, which has all my Arctic scientific material and trophies.

The photograph shows the lead as used from the Roosevelt, with a piece of rope spliced into the eye at the top of the lead.

On the sledge journey the sounding wire was rove directly through the eye of the lead.

When the lead reached the bottom the points of the small clam shells entered the mud or gravel at the bottom and tripped the hinge spreader (as shown in the photograph) and the spiral spring closed the clam shells upon the material at the bottom, thus securing and retaining the material for future microscopic or other examination.

The lead is one of several made expressly for the expedition by John Bliss & Co., of New York City, in accordance with a pattern sent me by Sir John Murray.

Very sincerely,

Peary.

Congressman ARTHUR L. BATES.
The Cochran, City.

The Cochran, City.

(Note.—Photograph and sample of wire filed with committee.)

Mr. Macon. Manufacturers can be mistaken about some things. You know they have not been up there and they do not know whether a wire of the dimensions mentioned in the letter will stand making a sounding in the Arctic Ocean.

You said something about there being no ice for the wire to have to contend with. Is there any floating ice in the Arctic Ocean?

Capt. Peary. There is not apt to be very much floating ice at the time we were there.

Mr. Macon. Do you know whether there was any at the time you were there?

contend with. Is there any floating ice in the Arctic Ocean?
Capt. Peary. There is not apt to be very much floating ice at the time we were there.

Mr. MACON. Do you know whether there was any at the time you were there?
Capt. Peary. There was no ice floating against the sounding wire. The sounding made by McMillan, the 96-fathom sounding, and I think the sounding made by McMillan, the 96-fathom sounding, and I think the sounding made by McMillan, the 96-fathom sounding, and I think the sounding made by Maryin previous to that, but I will not be positive, were made in this way: The movement of the ice had cracked the heavy floes of packed ice, leaving open water, which, if the ice remained still, would, of course, have quickly frozen over, but if the big sheets of ice continued to separate there would be water there. In making a sounding like that the reel of wire was attached to the upstander of the sledge. We will say this [indicating] is a crack in the ice, to put it that way, and the sledge is pushed up like this [indicating], with the reel on the upstander until the sledge overhangs the water clear of the ice, and at the end of this reel [indicating] there were wooden cranks for bringing the wire in, and the wire and lead is then allowed to go into the water.

Mr. Bayes. It is clear of the ice?
Capt. Pearx. Yes, sir; the sounding at 700 fathoms; that was a lead which had been opened, as I remember, 6 or 8 feet and then frozen over, and the ice was perhaps a foot or maybe 2 feet thick. We broke a hole with the pickax to let the lead and wire go down. That, of course, let the wire go down through a fixed hole in the ice.

Mr. Butler. And the water below was clear?
Capt. Pearx. Yes, sir; there was no floating ice under the surface.
Mr. Macon. What was the weight at the end of the wire—how heavy was it?
Capt. Pearx. The sounding lead made for the expedition, on a suggestion to me by Sir John Murray, was, I think, 20 pounds. That I can ascertain absolutely from Bartlett. I feel quite sure those are the figures.

Capt. Peary. Yes, sir.
Mr. Macox. When you were within 5 miles of the pole?
Capt. Peary. Yes, sir; that is right.
Mr. Macox. I believe you stated that there was no current?
Capt. Peary. I noticed no indications of current. I had no current meter with me.
Mr. Macox. Can you explain about the facts set out in your book, which indicate that there was a great crushing of ice coming together and sweeping along? The ice itself would not move without something under it.

which indicate that there was a great crushing of ice coming together and sweeping along? The ice itself would not move without something under it.

Capt. Pearx. In the Arctic Ocean the movement of the ice is more dependent on the wind than it is on the current.

Mr. Macon. How thick is the ice?

Capt. Pearx. Anywhere from a few inches—newly formed ice—to 20 or 25 feet thick.

Mr. Macon. You do not mean to tell the committee that the wind could move that ice?

Capt. Pearx. The pressure of the wind would move that ice if there was any space for it to move in. I can explain that. If we have a big field of ice like that [indicating] and another one like that [indicating] and another here [indicating] and another here [indicating] and another here [indicating], if it is continued for any length of time, will tend to move those fields of ice lind in moving they will have a levering or twisting motion like that [indicating]. If the ice is up against the land, it can not move; but if it is ice between the sea and the land—some hundreds of miles at these various places—with comparatively thin ice interspersed between it, that ice will twist and endeavor to slide, and the result will be that in some places the young ice will crush up and might open a little like that [indicating].

Mr. Macon. This ice being 25 feet thick when it would pack, what would cause it to produce the leads you speak of so often in your book?

Capt. Pearx. The wind would be a most important factor in producing pronounced and rapid changes in the ice. Wind at some distant place in the polar basin, by this pressure which I have just spoken of, might cause the fields of ice miles distant to change their position and to crush up at one end and to open up at another. Also, what has been determined by my last two expeditions and which, as far as I know, was not recognized before, is the fact (I say it is a fact; it is my pronounced impression, susceptible, perhaps, of modification by the work of the experts) that the strong tides of every month, the ti

Capt. PEARY. No; I had no current meter with which to do so.

Mr. MACON. Is it not natural for a layman to conclude, in the absence
of your having made the investigation, or anyone else I have ever heard
of, that when this ice 25 feet thick was broken that it must have had
something underneath it to press it up or push it in some way? That
would be just as logical a conclusion, if not more so, than yours of the
wind?
Cant. Prace. In the conclusion of the conclusion of the conclusion.

wind?
Capt. PEARY. Is that a question?
Mr. Macon. Yes, sir.
Capt. PEARY. I can say that every man could, of course, have his own opinion. In regard to the facts of the case, my personal impression, as the result of my work north, is that the wind is a very powerful factor in the movement of the ice.
Mr. Macon. I' there was a current underneath, could it be possible that a small wire such as you indicate, with only about 14 pounds of weight at the end of it, would go down in a perpendicular manner 1,500 fathoms?

weight at the end of it, would go down in a perpendicular mainter 1,500 fathoms?

Capt. Pharx. My impression would be that a wire of that diameter would be deflected but slightly by any moderate current.

Mr. Macon. You do not know that it would be almost as horizontal as it would be perpendicular?

Capt. Phart. I should be pretty sure that under those conditions the wire would not be anywhere near horizontal—nowhere near 45 degrees.

Mr. Macon. You said something about the loss of part of your wire in a scunding you made 5 miles from the pole?

Capt. Phart. Yes, sir.

Mr. Macon. Did ou lose all of it?

Capt. Phart. Yes, did it break off?

Capt. Phart. Not far from the reel.

Mr. Macon. What depth?

Capt. Phart. I can not say precisely; perhaps 100 or 150 feet. I do not recall, except I remember my men running out a short distance on the ice.

Mr. Macon. You do not know how far?

on the ice.

Mr. Macon. You do not know how far?

Capt. Pearr. No, sir.

Mr. Macon. Might it not have been 25 or 30 feet long?

Capt. Pearr. I should say it was more than 25 feet. My impression is that the piece of wire was 100 or 150 feet in length.

Mr. Macon. Is it not possible that your wire had been carried underneath this ice 25 or 30 feet, so when you began to reel it up the edge of the ice had something to do with the breaking of the wire—that the sweeping by a current might have broken it?

Capt. Pearr. I do not think so. I doubt it. I noticed nothing of the kind.

Capt. PEARY. I do not think so. I doubt it. I noticed nothing of the kind.

Mr. Macon. Did you notice anything to the contrary?

Capt. PEARY. No., sir.. If there had been any pronounced deflection of the wire, the man taking the sounding would undoubtedly have noticed it.

of the wire, the man thaing the soluting would indoubtenly have moticed it.

Mr. Macon. You said that Mr. Marvin lost all his records of soundings and observations; they were all lost with the poor man?

Capt. Phary. Ics. sir. I think I have a sample from one of the soundings, or Bartlett has it, one of the series of the first six soundings, or Bartlett has it, one of the series of the first six soundings, or Bartlett has it, one of the series of the first six soundings, or Bartlett has it, one of the series of the first six soundings, or Bartlett has it, one of the series of the first six soundings, or Bartlett was one of your party make a single complete sounding north of 40 miles out?

Capt. Phary. The last complete sounding was at 85° 23'.

Mr. Macon. How far was that out from Bartlett's camp?

Capt. Phary. That sounding would be 2° 16', approximately, north of Columbia.

Mr. Macon. You did not make a sounding as high up as where Bartlett urned back?

Capt. Phary. Bartlett made one at 87° 15'.

Mr. Macon. How many observations were taken upon your journey and what was the character of them?

Capt. Phary. The observations taken were those by Marvin on the 22d of March, by Marvin on the 25th of March, by Bartlett on the 1st of April, by myself on the 6th and 7th of April. The observations were solar observations. They were taken with a sextant and an artificial mercurial horizon.

solar observations. They were taken with a sextant and an artificial mercurial horizon.

Mr. Macon. All latitude and no longitude observations?
Capt. Pearr. No longitude observations were attempted.

Mr. Roberts. I would like to place in the record a letter from the Secretary of the Navy, dated February 17, 1910; another letter from the Secretary of the Navy, dated February 24, 1910; a letter from the Secretary of the Smithsonian Institution, dated February 25, 1910; and a letter from the Acting Secretary of Commerce and Labor, dated February, 24, 1910.

(The letters referred to by Mr. Roberts follow:)

THE SECRETARY OF THE NAVY, Washington, February 11, 1910.

MY DEAR CONGRESSMAN: I take pleasure in sending you herewith the information regarding Civil Engineer Peary, United States Navy, which you requested February 10.

Believe me, faithfully yours,

G. v. L. MEYER.

Hon. ERNEST W. ROBERTS,
House of Representatives.

DEPARTMENT OF THE NAVY, BUREAU OF NAVIGATION, Washington, D. C., February 10, 1910.

[Memorandum for the Secretary of the Navy.]

[Memorandum for the Secretary of the Navy,]

In compliance with the request contained in the memorandum from the private secretary to the Secretary of the Navy, dated this date, the bureau transmits herewith a brief record of the service of Civil Engineer Robert E. Peary, United States Navy, since the date of his entry into the naval service, which shows the amount of leave of absence granted to that officer and the time such leave was granted; the amount of active service performed by him, with dates of the orders assigning to and detaching from such duty; and the amount of unemployed service, including leave of absence and waiting orders.

Relative to the amount of pay drawn by Civil Engineer Peary while employed on active duty and while on leave of absence, the Paymaster General has been furnished with a copy of the record of service of Civil Engineer Peary and has advised the bureau that information regarding said pay will be furnished by the Bureau of Supplies and Accounts as soon as possible.

Regarding Civil Engineer Feary's education, the bureau has to state that its records do not afford any information bearing thereon, nor does its records show the occupation in which said officer may have been engaged prior to his entry into the naval service in 1881. The bureau understands unofficially, however, that said officer was educated in engineering at Bowdoin College, in Maine, and later served in the Coast and Geodetic Survey, service for a period.

It is assumed that this information is desired for use in connection with a bill which has been introduced in Congress in behalf of Civil Engineer Peary for the purpose of rewarding him for his having reached the North Pole, and while his having successfully accomplished this, self-imposed task is most commendable and reflects great credit both upon himself and the entire Nation, his various exploring expeditions can not be regarded as having been strictly conducted for military or naval purposes, and for this reason it seems inappropriate to confer upon him a title (rear admiral in proposed bill) for which his previous education, training, and service have not fitted him. The bureau believes that Civil Engineer Peary should be advanced in rank, but in his own corps, and has made recommendation to the department on the legislation proposed in his behalf accordingly.

The bureau has just learned that Civil Engineer Peary, prior to entry into the naval service in 1881, entered the service of the Coast and Geodetic Survey on cartographic work on July 10, 1879, at \$40 per month; was regularly employed in that service on February 1, 1880, at \$75 per month; compensation was increased to \$90 per month on February 2, 1881; and resigned in the latter part of October, 1881, to enter the naval service as a civil engineer.

In this connection the bureau has to state that so far as it knows only two-officers of the Navy have in the past been given the full pay of a rear admiral on the retired list by virtue of congressional action—Rear Admiral John L. Worden, in recogn

DEPARTMENT OF THE NAVY,
BUREAU OF NAVIGATION,
Washington, D. C., February 10, 1910.

RECORD OF SERVICE OF CIVIL ENGINEER ROBERT E. PEARY, UNITED STATES

6. Born in Pennsylvania.
26. Appointed a civil engineer. (Appointed from Maine., 29. Commissioned.
37. To the navy yard, Washington, D. C.
30. Detached october I and wait orders.
4 To the navy yard, Washington, 2d instant.
24. Duty until November 15; then wait orders.
24. Special duty Key West.
26. Detached and wait orders.
16. To Coaster's Harbor Island.
29. Detached and to duty, Washington, D. C.
6. Detached and leave 8 months abroad.
8 To the Bureau of Yards and Docks.
31. Detached and leave 6 months abroad.
18. Leave extended 6 months abroad.
19. To the navy yard, New York, N. Y.
31. Detached and to the navy yard, League Island.
21. Duty to continue.
24. Detached and leave 18 months from May I, abroad.
24. To the mayy yard, Norfolk, December 1.
25. To the navy yard, New York, (Renorted Nov. 21).
26. To the navy yard, New York, (Renorted Nov. 21). 1856, May 6.
1881, Oct. 26.
1881, Dec. 8.
1881, Dec. 8.
1882, Sept. 30.
1882, Oct. 4.
1882, Oct. 24.
1882, Nov. 24.
1883, Aug. 16.
1885, Aug. 29.
1886, Apr. 6.
1887, Jan. 8.
1887, Oct. 31.
1888, Oct. 10.
1889, Jan. 31.
1899, Jun. 21.
1891, Feb. 24.
1892, Oct. 24.

1895, Oct. 26. To the may yard, New York. (Reported Nov. 21.)
1896, Apr. 15. Detached and walt orders. (Detached Apr. 16.)
1896, May 2. Leave, 6 months abroad, without pay.
1896, Oct. 30. To the navy yard, New York, N. Y., November 9.
1897, Jan. 11. Leave seven days.
1897, May 25. Detached and leave, five years abroad. (Detached May 26.)
1901, Jan. 10. Attained rank of lieutenant commander from January 5. 1901.
1901, Nov. 26. Leave extended until July 1, 1902.
1901, Dec. 7. Letter November 26 modified; leave 6 months instead of to July 1, 1902.
1902, Apr. 6. Attained rank of commander from this date.
1902, Sept. 27. Commissioned from April 6, 1902.
1903, Sept. 9. Detached upon completion of board duty and three

1902, Nov. 26. Temporary duty Bureau of Taras and Docks, November 277

1903, Sept. 9. Detached upon completion of board duty and three years, leave abroad. (Completed Apr. 11, 1904.)

1907, Apr. 9. Leave, three years, to undertake expedition to North Pole, etc.

1908, July 2. Unexpired leave of April 9, 1907, revoked. To duty under. Coast and Geodetic Survey in making tidal observations in Grant Land and Greenland.

1909, Sept. 10. Reports return and holsting of Navy ensign on North Pole April 6, 1909.

During his service in the Navy Civil Engineer Peary has performed active duty for 12 years and 9 days.

He has been unemployed for 16 years, 1 month, and 16 days. Of this unemployed duty approximately 13 years and 5 months have been spent on leave while unattached and the balance on waiting orders or leave

on leave which do not be not considered any record in the department of Civil Engineer Peary's place of education or occupation prior to entry into the Navy, but is unofficially informed that he was educated in engineering at Bowdoin College and later served in the Coast and Geodetic Survey.

Statement of pay received by Civil Engineer Robert E. Peary, United States Navy, from the date of his entry into the service (October 26, 1881) to December 31, 1999.

For the six months from May 5, 1896, to November 4, 1896 (with the exception of two days of duty. October 25 and October 26). Civil Engineer Peary was on leave without pay.

THE SECRETARY OF THE NAVY,
Washington, February 24, 1910.

My Dear Congressman: In response to your request of February
23d for copies of any and all reports made by Civil Engineer Robert E.
Peary, United States Navy, I have the honor to inform you that the only
report in our files of this nature from Mr. Peary is the following telegram from Battle Harbor, received September 11, 1909:

"Respectfully report my return; hoisted Navy ensign on North Pole
April 6."

A report made Appart 11, 1909

April 6."

A report made August 11, 1908, and received October 8, 1908, of Mr.
Peary's voyage from Sydney to Etah, from July 17 to August 7, 1908,
was sent to the White House, from the Navy Department, shortly after
it was received here.
Faithfully, yours,

G. v. L. MEYER.

Hon. Ernest W. Roberts, House of Representatives.

SMITHSONIAN INSTITUTION,
Washington, D. C., February 25, 1910.

Dear Sir: Replying to your inquiries of February 23 addressed to the Smithsonian Institution and the National Museum, I beg to inclose a list of specimens presented to the Museum by Commander R. E. Peary in 1887, the only ones which have been received from him. I also inclose a pamphlet account of "North Polar Exploration," by Commander Peary, which was published in the Smithsonian Report for 1903. Commander Peary has made no direct communication to the institution regarding his Arctic explorations.

With reference to your telephone inquiry, I am informed that the Cape York meteorites brought down by Commander Peary have been purchased by a private individual and presented to the American Museum of Natural History in New York, where they had been on exhibition for some years.

Very respectfully, yours,

Charles D. W.

Hon. Ernest W. Roberts, United States House of Representatives, Washington, D. C.

List of specimens received as a gift from Lieut. Robert E. Peary, United States Navy, in 1887.

One small kyak.

Alcoholic specimens of shells and fishes from Greenland.

Specimens of steatite, volcanic rock, mineral dust, etc.; 2 specimens of graphite, and 2 specimens of lignite from Greenland.

One specimen of rose quartz, 1 specimen of pyrite, 2 specimens of terrestrial native iron, 1 specimen of muscovite, and 1 specimen of tour-

DEPARTMENT OF COMMERCE AND LABOR,
OFFICE OF THE SECRETARY,
Washington, February 24, 1910.

Hon. Ernest W. Roberts, House of Representatives, Washington, D. C.

DEAR SIR: Your letter of the 23d instant requesting copies of reports made by Commander Robert E. Peary, United States Navy, relative to his Arctic explorations has been referred to the Navy Department for attention. Very truly, yours,

BENJ. S. CABLE, Acting Secretary.

(Thereupon at 12 m. the committee took a recess until 2 o'clock p. m.) AFTER RECESS.

The subcommittee reassembled at 2 o'clock p. m., pursuant to adjournment

STATEMENT OF CAPT. ROBERT E. PEARY, U. S. NAVY-continued.

STATEMENT OF CAPT. ROBERT E. PEARY, U. S. NAVY—continued.

Capt. Peary. Before we commence this afternoon, may I show something here and make a few remarks?

Mr. BUTLER. I have not the siightest objection.

Mr. BATES. Certainly.

Capt. Peary. Here is something I would like to show in connection with looking at my notebook to-day. I would like to say a few words as to how my notebook was carried. As a result of my experience in previous expeditions in the case of notebooks, this bag [indicating] was made of surgeon's waterproofing, with waterproofing inside, and my notebook was carried in it. Here [indicating] is a draw string and my notebook was carried in here [indicating]. This [indicating] during the day was carried also in a canvass pocket on my siedge. If I can make it clear, on the upstander of the sledge, like this [indicating], there is a piece of canvas here [indicating], and on that piece of canvas was sewed a pocket for a thermometer here [indicating], a pocket for my notebook [indicating], and here [indicating] a pocket for the binoculars, and at the bottom [indicating] a pocket for my camera. During the day the notebook was inclosed in this bag and the mouth drawn up. When I went in the igloo at night this [indicating] was taken out in this way [indicating], carried into the igloo, and laid down beside me. The notebook was taken out to make the notes and was immediately returned to it, and tied up again to protect the notebook from the moisture in the igloo, the dropping of snow which was the condensation from our breaths.

Mr. Macon. I believe we left off with the observations. We had just taken up the subject of observations. I believe I asked you to tell the committee what observations were taken on this trip, the number and character of them, and you explained certain ones. You said, I believe, I had you took no longitude observations at all?

Capt. Pearly. I took no observations for longitude at any time on the trip.

Capt. Pears. I took no observations and geographers and explorers and scientists that it is impossible for any one in a broad field, as you were going over on your explorations of the North Pole, to tell exactly the direction they were traveling unless they took longitude observations. What do you say about that?

Capt. Pears. I should say that would be an opinion to be left to constant.

plorers and scientists that it is impossible for any one in a broad field, as you were going over on your explorations of the North Pole, to tell exactly the direction they were traveling unless they took longitude observations. What do you say about that?

Capt. Prant. I should say that would be an opinion to be left to Mr. Maoox. Then, it the experts differed about the matter, there would be some confusion?

Capt. Prant. Ay opinion is that at the were able to keep our course, My opinion also is that at the time of the year, and under the conditions existing there, any attempt at taking longitude observations would time.

Mr. Macon. Why so?

Capt. Prant. In be middle part of the journey the altitude of the sun was so low that presumably any longitude observations would have been unnecessary, and in the neighborhood of the pole it is generally recognized that longitude observations are not practicable with any degree of accuracy.

Mr. Macon. Then, you do thold to the teachings of other sciential and the second control of the sun was so low that presumably any longitude observations you can not know exactly the direction in which you are traveling?

Capt. Prant. I do not think that I care to go into a discussion of general principles. I will state the facts, and also my determination of those facts, to the committee or to any experts.

Mr. Macon. You are an explorer, so reputed, and we want to find out whether or not you knew what you were doing. When you send a rewill not do much intelligent work.

Capt. Prant. No more than was contained in my earlier replies—that I thought any attempt to take longitude observations would have been a waste of time.

Mr. Macon. You have no scientific opinion to offer?

Capt. Prant. No more than was contained in my earlier replies—that I thought any attempt to take longitude observations in three different directions at four different state on by you after you have worked the control of the sun at two different stations in three different directions at four different stations in

there had been a bamboo pole put in the boxes and at the top a little piece of red bunting. I expected that the cache and the bamboo pole would be buried in the snow. I sent those men, or was going to start them to see if there was any indication for us to dig for, when one of the Eskimos called my attention to the fact that one of the dogs had either slipped his harness, or perhaps had not been harnessed, and that this dog was digging in the snow, and the Eskimo intimated that porthaps the cache was there.

I ran out with the Eskimo and found a little ripple there in the snow. On the windward nothing could be seen, but here on the leeward side, was a little part of the top of the pole that the dog had of the scen or smelled and gone to, and that pole and gone of the pole down and that I would do that every time, but it shows that I was fortunate that time. The fourney 1 speak of across the cap was approximately 500 miles cach way, and I made the land both going and coming on that journey.

Mr. Macos, It being settled astronomically and scientifically, so to speak, that the latitudes run north and south and the longitude seast and west, how could you ascertain that you were 4 or 5 miles from the pole toward Bering Sea on the 7th, having taken no longitude observation? You had never taken longitude observations which run north and south?

Capt. PEARY, What is the question?

Mr. Macos. How did you come to the conclusion that you were 4 or any longitude observation? What have the series of observations?

Capt. PEARY, I dok no observations for longitude.

Mr. Macos. But you took no longitude observations which I had noted, I felt I knew approximately my position, as indicated in the book.

Mr. Macos. Explorers and a certain class of scientists tell us that conditions are such in the Arctic Zone that no bleet will have a very much larger appearance to the naked cyt of the service of would appear close to you. What do you know about that?

Capt. PEARY, I have had no object that might appear small here would be about

captain.
Mr. Englebright. Was that Mr. Baldwin?
Mr. MACON. Yes, sir. Can you say he is not a credible witness?
Mr. Englebright. I do not know whether he is or not. He was Mr. MACON. Yes, sir. Can you say he is not a credible witness?
Mr. Englemeight. I do not know whether he is or not. He was here this morning.
Mr. Macon. Have you submitted all of your observations with the computations to the department?
Capt. PEARY. I have not.
Mr. Macon. Did you submit any observation of temperature for air, water, barometer readings, wind velocity, and the direction of the water?
Capt. PEARY. Meteorological reports were submitted to the United

Capt. Prant. Meteorological reports were submitted to the United States Coast and Geodetic Survey. I took no water temperatures on the sledge journey. I think some were taken on the upward voyage and the return voyage. The direction of the wind has not, as far as I know, been compiled separately from the notes of the party. That is a matter I touched on yesterday. I had it in mind later on to make a compilation of the weather and temperature conditions, a series by various parties simultaneously, those parties being scattered over a considerable area of territory, some parties being at Camp Jessup, some at Fort Conger, and others at the ship. The data as to the direction of the wind and general water conditions at different points on the same day has not been compiled and worked up, but that could be done.

on the same day has not been compiled and worked up, but that could be done.

Mr. Macon. Can you prepare a map showing the exact location, giving the hours at each point, on April 6, 10 a. m.; April 6, noon; April 6, midnight; April 7, 6 a. m.; April 7, noon, April 7, 4 p. m.? Capt. Prant. Such a map can be prepared.

Mr. Macon. It was not prepared?

Capt. Prant. I have not personally prepared it.

Mr. Macon. Could you prepare it here just as well as you could up there?

Capt. Prant. I would say that here would be the only place that it could be prepared, after a careful reduction and discussion of the observations. It could be prepared approximately up there.

Mr. Butler. Have you sufficient observations—excuse me, Mr. Macon, will you ask Capt. Peary where he has sufficient observations from which such a map could be made?

Mr. Macon. Have you a record of such observations that were made at the time from which you could prepare such a map?

Capt. Prant. Yes.

Mr. Macon. Have you submitted that to the committee?

Capt. Prant. Have I submited what?

Mr. Macon. Have you submitted it to this committee, or did you submit it to the committee that passed upon your report—the Geographic Society?

Mr. Engleright. It might save some time to state that we have gentlemen present who prepared such a map from the observations that Capt. Peary made at the North Pole, independent of Capt. Peary's calculations, and using data that was not available to Capt. Peary at all in the way of chronometer observations. The chronometer observations are before this committee.

Mr. BUTLER. If the committee want the map, they can have it. I do not want to see it: I would not understand it if I saw it.

Mr. McON. Mr. Chairman, we are making a record here—
Mr. HUTLER. That is all right, if the gentleman wants the map—Mr. Macon. (continuing). And we want to have Capt. Peary's knowledge—
Mr. BUTLER. It is your privilege to question him, Mr. Macon.

Mr. MACON (continuing). About these matters.

Mr. BUTLER. Yes; that is right.

Mr. MACON. That is right.

Mr. MACON. That is right.

Mr. MACON. To which does the compass point?

Capt. Peary. The compass tends to point—that is, the north end of the needle in the northern hemisphere tends to point toward the north magnetic pole. If you get near enough to the magnetic pole, where the strength of attraction is sufficient, it will point to it.

Mr. MACON. To which does the compass point?

Capt. Peary. It does not point toward the real pole? Capt. Peary. It does not point toward the real pole except in certain positions on the globe.

Mr. MACON. Then if you took no observations would your compass lead you directly, over a broken course of 133 miles, to the North Pole when it tended to point toward the magnetic pole?

Capt. Peary. That I can not say offuand, but I will say approximately 1,600 or 1,600 miles.

Mr. DAMSON. It is just 20 degrees on that map [indicating].

Capt. Peary. That I can not say offuand, but I will say approximately 1,600 or 1,600 miles.

Mr. DAMSON. It is just 20 degrees on that map findicating l.

Capt. Peary. That I can not say offuand, but I will say approximately 1,600 or 1,600 miles.

Mr. DAMSON. It is just 20 degrees on that map findicating!

Capt. Peary. That I c

Capt. Feart. Flat I comman.

Mr. Macon. It would be a considerable angle, would it not?

Capt. Peart. As I have said, I could not tell without measuring it from the map.

Mr. Engleright. The map speaks for itself. I submit there is a map that shows the magnetic pole and shows the course Capt. Peary took.

Mr. Macon, I submit, Mr. Chairman, that I am examining Capt. Peary.

took.

Mr. Macon, I submit, Mr. Chairman, that I am examining Capt. Peary.

Mr. Engleright. Then examine him on the map.

Mr. Macon. He is at liberty to use any map that he sees fit, but when he is using the gentleman from California he is not using a map.

Mr. Bates. I do not know that any one gentleman has a day to examine him. I don't know that any one gentleman of the committee has a mortgage on a whole day of this committee's time to examine this gentleman.

Mr. Macon. Let us have an understanding. I want the gentleman from Pennsylvania to understand that he can not influence me.

Mr. Rates. The gentleman does not try to influence the gentleman from Arkansas.

Mr. Macon, I want to say right here, Mr. Chairman, that we had it distinctly understood when this proceeding opened that each member of the committee should have an opportunity of making such examination of Capt. Peary as he saw fit.

Mr. Bates. But not the exclusive right.

Mr. Bates. But not the exclusive right.

Mr. Bates. Oh, no; there are several other questions to be asked.

Mr. Macon. I say I have waited until every other member of the committee has examined him; my name was last on the subcommittee and I waited until the last before proceeding with my examination.

Mr. Bates. We may not be through when the gentleman from Arkansas is through.

Mr. Macon. Then you have the right to take up the examination and go on.

Mr. Bates. I am very glad you accord me that right.

kansas is through.

Mr. Macon. Then you have the right to take up the examination and go on.

Mr. Bates, I am very glad you accord me that right.

Mr. Macon. I will not question it.

Mr. Bettler. Will you answer the gentleman's question?

Mr. Macon. I don't care if you ask a question, but I do not want a member of the committee to make suggestions to the captain about this, that, or the other; I am asking him the questions.

Mr. Butler. While Mr. Macon is examining his memoranda here, if you will permit me, I will ask a question. You and Capt. Bartlett agree that at a certain latitude, according to Capt. Bartlett's own measurements, you separated?

Capt. Peary. Yes.

Mr. Butler. That was on the 1st day of April, 1909?

Capt. Peary. Yes.

Mr. Butler. Bartlett returned south over the trail and you went directly north?

Capt. Peary. I did.

Mr. Butler. And you marched six days or nights together? You made six marches?

Capt. Peary. We made five marches from early in the morning of the 2d until a little before noon of the 6th. If I may make one point. Mr. Chairman, I would say that march and day are not synonymous in this work.

Mr. Butler. Well, this, in part, takes you over what you have already stated. I would like to have it in my mind again. Your aver-

age march with Bartlett up to a certain point amounted to how many miles a day?

Capt. Prary. I would have to calculate. That would be from 83° and 7' north to 87° and 47', which would be 4° and 40'. So we would divide 280 miles by 22.

Mr. Butler. I understand that you called out the very best dogs won had?

and 7 north to 87 and 47, which would be 4 and 40. So we would divide 280 miles by 22.

Mr. Butler. I understand that you called out the very best dogs you had?

Capt. Peary. An actual selection.

Mr. Butler. You took a rest of about three hours—

Capt. Peary. We took a rest there. We got in some time on the last day of March and rested through the 1st of April—24 to 30 hours.

Mr. Butler. And then you took these five successive marches directly north from that point?

Capt. Peary. I did. I would like to make one point of explanation in that connection: That on the upward journey my dogs had a chance to rest and be double rationed every five marches. On the fourth march from the land we waited six days, resting the dogs and feeding them. We were compelled to wait there on account of an open lead. At the end of the seventh march all the dogs had a full day's rest. At the end of the twelfth march all the dogs had a full day's rest. At the end of the seventeenth march, when Marvin turned back, they had a day's rest on double rations, so that at intervals of five marches on the upward trip the dogs had a full day's rest. They did not get any rest on the return march.

Mr. Macon. When Messrs. Gannett and Tittmann were before the committee last spring they stated that they could not have relied upon the report of the observations taken by you for ascertaining where you were or about discovering the pole. Do you know whether or not their calculations about that are correct?

Capt. Peart. I know nothing about it. I do not know what their testimony was; I do not know what their statement was, what they may have said.

Mr. Macon. They stated they examined your instruments at the station—presumably the station here in Washington. A cursory examination of your instruments here would not be evidence of their being used at all, would it?

Capt. Peart. That I could not say, sir,

instruments here would not be evidence of their being used at all, would it?

Capt. Pears. That I could not say, sir.

Mr. Macon. Would recomputing the records of your observations be satisfactory evidence of where you were when they were taken—recomputed here in Washington?

Capt. Pears. I do not know that I understand that question.

Mr. Macon. I ask you if a recomputing of your records—the records of your observations—would be a satisfactory evidence?

Capt. Pears. I should say that it would be generally so considered.

Mr. Macon. It would be generally so considered?

Capt. Pears. That would be my opinion.

Mr. Macon. Then, when they could not rely upon them, you appear to differ from them—Messrs. Gannett and Tittmann—who passed upon your record. Your narrative could have been written here in Washington or at Bartletts camp. That could not be considered competent or satisfactory evidence by geographers or scientists, could it?

Mr. Bates. This witness is not here to be lectured.

Mr. Macon. I am asking questions.

Mr. Bates. This witness is not here to be lectured.

Mr. Macon. I am not lecturing him.

Mr. Bates. You were giving an opinion of Mr. Macon.

Mr. Macon. If am offensive to the gentleman from Pennsylvania—Mr. Bates. No; you are not; but you are taking up valuable time.

Mr. Macon. My time is as valuable to me as it is to you, and I insist I am taking up time trying to ascertain the truth—not what pemmican is made of. You did not complain when they were asking about immaterial things this morning.

Mr. Bates. I objected because the gentleman's remarks were, in a sense, a severe stricture on the witness, who came before us at our request.

Mr. Macon. I am asking him questions. He can decline to answer

Mr. Macon. I am asking him questions. He can decline to answer any one of them if he wants to.
Mr. Butler. Ask a question, Mr. Macon. We invited Capt, Peary to come, and I am sure he will answer anything he feels he can

to come, and I am sure he will answer anything he recent answer.

Mr. Macon. Mr. Roberts asked you something yesterday about a pamphlet you had published, which is sort of a cursory history of your route. Did that contain the report that you filed, with all the facts contained in the report that you filed with the Geodetic or Geographic Society when you came back?

Capt. Pears, It did not contain the tidal or meteorological observations or all of the soundings.

Mr. Macon. Does not your book contain all of those?

Capt. Pears, It does not. It contains simply a summary of them.

Mr. Macon I believe Mr. Roberts asked you if, in submitting your report to the Government, you made the request that if it was permissible that they would not make public your profile and set of soundings.

Soundings.

Capt. Peary. That is covered, I think, in the hearings of yesterday formally and completely.

Mr. Macon. You said, I believe, that you would file with the committee your reasons for asking secrecy on that occasion.

Capt. Peary. I did.

Mr. Macon. Have you done so?

Capt. Peary. I have that part of the report yet to insert; that answer is in my possession now. I was furnishing material for completing the hearings previous to that, nearly all last night, and did not have time to complete it; but it will be in the committee's hands in a very short time. I would like to make this statement in connection with that point: It was simply a request on my part that it be done, if permissible; it was not an insistence or anything of the kind; it was simply a request that if it were permissible it might be delayed for the present the present

for the present

Mr. Macon. The reasons given the committee by the gentleman who appeared before it in explanation of your refusal to submit your proofs a year ago—or last spring, practically a year ago—were that you were under contract with some magazines, and that it would interfere with the financial end of your discovery if you were to disclose your findings of facts to the committee. Did you afterwards have to change that contract with the magazines—the monetary part of it?

Capt. Prany. What was that last part, please?

Mr. Macon. You were under contract to some magazines—

Mr. Bates. I object to that question. I think the committee will sustain my objection.

Mr. Macon. The gentleman can refuse to answer if he wants to.
Mr. Bates. The personal and financial arrangement of Capt. Peary
have nothing to do with finding the pole.
Mr. Macon. The gentleman can refuse to answer if he wants to. I
am not going to fall out with him for refusing to answer any question.
Mr. Bates. I respectfully say this. Mr. Chairman: That it does not
seem to me that that is a proper line of inquiry before this subcommittee
to ask the captain to answer the question.
Capt. Pears. It seems to me it was covered yesterday.
Mr. Robers. We have not any right to compel Capt. Peary to
answer any questions.

Says any questions.

Capt. Praky, Was not the identical question asked by you yesterday?

Mr. Roberts. If you will pardon me, I was not paying attention

to that question Mr. BUTLER. I said he had a perfect right to refuse to answer any-

Mr. Roberts. If you will pardon me, I was not paying attention to that question
Mr. Butler. I said he had a perfect right to refuse to answer anything.
Mr. Roberts. As far as I am concerned. I want Capt. Peary to understand that my idea of the hearings is that it is purely voluntary on his part, and that he will not be compelled to answer any question that he does not want to answer.
Capt. Peary. I think that identical point, or an essentially similar point, was covered by a question of Mr. Roberts yesterday or the day before.
The question was repeated upon request, as follows: "You were under contract," I said, "with some magazines?"
Mr. Roberts. You covered that yesterday, I think.
Capt. Peary. I did answer it; yes.
Mr. Macon. Captain, did you find any evidence of increase or diminution of weight at the pole?
Capt. Peary. I did not, except the weight of the members of the party and the dogs.
Mr. Macon. I mean change in weight except for lack of foodstuff?
Capt. Peary. Not that I noticed; no.
Mr. Macon. Did you find any decided atmospheric changes?
Capt. Peary. I did not.
Mr. Macon. Did they change except perhaps for lack of foodstuff?
Capt. Peary. Not that I noticed; no.
Mr. Macon. Did you find any decided atmospheric changes?
Capt. Peary. The direction of the compass was fairly constant there.
Mr. Macon. Did the needle answer to the primary or the secondary magnetic pole?
Capt. Peary. The direction of the compass was fairly constant there.
Mr. Butler. Will you tell me, please, what that means?
Mr. Macon. I asked him whether the needle answered to the primary or secondary magnetic pole.
Mr. Bates. What are they?
Mr. Macon. They are known in science.
Mr. Bates. But I am not a scientific person.
Mr. Dawson, I would be glad if the gentleman from Arkansas would explain.
Mr. Macon. The gentleman from Arkansas is going to ask questions, and he not a going to ask any foolish ones, either.

Mr. Dawson. I would be glad if the gentleman from Arkansas would explain.

Mr. Macon. The gentleman from Arkansas is going to ask questions, and he is not going to ask any foolish ones, either.

Mr. Evalenciotr. Is he trying to test the captain's knowledge on science by asking such questions—ridiculous questions?

Mr. Macon. I have asked no ridiculous questions.

Mr. Evalenciotr. Did you ever hear of a primary or secondary magnetic pole?

magnetic pole?

Mr. Macon, Yes; I have.

Mr. Englebright. Where—in Arkansas?

Mr. Macon, Where I have heard of everything else—no; in Washington. And I want to say to the gentleman from California If he intends it as a slur in regard to Arkansas, that it is unworthy of him.

Mr. Englebrightt. I withdraw the remark.

Mr. Macon. I want it understood that Arkansas is the equal of California in everything in the world except a little gold in the earth and a few hungry fellows for an exposition.

Mr. Butler. I will ask the members of the subcommittee not to further interrupt you.

Mr. Butler. I will ask the members of the subcommittee not to further interrupt you.

Mr. Macon. I am advised by a school of scientists that it is a physical impossibility for man or beast to reach the North Pole, for the reason that the diminishing centrifugal action—did you ever hear of that?

Mr. Butler. I never did. I have heard of dogs and sledges, though.

Mr. Macon. For the reason that the diminishing centrifugal action and, in proportion, the increasing center of gravity near the pole causes a complete failure of man and animal energy that produces a kind of paralysis of the senses and of motion, a paralysis of sensation in any part of the body, including the exercise of the faculty of the mind. Do you know anything about that contention on the part of scientists?

Mr. Butler. That is an indication of lunacy, is it not, or feeble

Mr. Butler. That is an indication of lunacy, is it not, or feeble mind—a sort of combination of the solids and fluids?

Mr. Macon (continuing). So that it would be almost impossible for them to exercise their independent functions so that anybody could ascertain a real fact—intelligently ascertain a fact.

Mr. Butler. What was your observation?

Capt. Peary. I have never heard of the matter,

Mr. Butler. You never did?

Capt. Peary. I never heard of the subject matter of the question.

Mr. Macon. You never heard of that before?

Capt. Peary. Never heard of the theory.

Mr. Butler. Never heard of the theory.

Capt. Peary. And I have not noticed any such condition or effect or circumstance.

cricumstance.

Mr. Butler. On either man or dog?
Capt. Peart. On any member of my party or dogs.

Mr. Macon. You remember. I reckon. to have read when you were a school child about the inhuman drubbings that had to be given to Arctic travelers to keep them from falling down asleep, have you not. when their energies would be so dissipated that they could not everylise them?

not. When their energies would be so dissipated that they could not exercise them?

Capt. Peart. I have read of that kind of treatment being given to men who were on the point of succumbing to the effect of cold, in order to keep them moving, but I never saw the thing; never had the experience on any of my own expeditions.

Mr. Macon. Then It did not affect your party that way? You were in as cold a latitude as other explorers?

Capt. Peart. I have seen the thermometer 73% below zero.

Mr. Macon. And it did not have that effect on you or anybody with

you?
Capt. Peary. It did not.
Mr. Macon. It left your faculties and energies just as bright and as forceful as if you had been in a more favorable climate?
Capt. Peary. So far as I know.

Mr. Macon. It is always insisted that in climates of that character it is almost impossible for a man to stand erect. You never had any experience of that kind?

Capt. Pearny. I did not.

Mr. Macon. You were able to stand as erect and move as freely as you did down here when you were marching over the smooth paved road from here out by Chevy Chase?

Capt. Pearny. Yes.

Mr. Macon. And just there you will pardon me for calling attention to one observation that I noticed in your book. Just before you got to the pole you state that the dogs even caught the spirit of the occasion, or of the party, and tossed their heads in the air and curled their tails and emitted yelps, and so on. What in the world could have brought about such a feeling as that upon the dogs?

Mr. Butler. They were going toward the pole.

Mr. Macon. No; they were going toward the pole.

Mr. Mucon. No; they were going toward the pole.

Mr. Mucon. No; they were going toward the pole.

Mr. Butler. I tasked him about the return—the joy of the dogs. That I could appreciate, when the dogs' heads were turned toward home.

Capt. Pearn. I don't locate the point in my book, but my impression is that I stated that the dogs appeared to have caught the spirit of the party, and I think, aithough I do not see it here, that I stated that that might be due perhaps to the reduced friction of the sledges; in other words, the reduced force necessary to drag them resulting from the rise in temperature. If that answer will be accepted I will make it as such, although the precise language can be found in the book.

Mr. Macon. Now, Captain, you said it was 133 miles from where Capt. Bartlett left you to the North Pole, and before starting you were walking to and fro and made up your mind that you were going to reach the pole in 5 marches, and you proceeded along the lines mapped out, and did make it in 5 marches, getting to the pole just about the time you said you were going to get there, about 10 o'clock in the morning, in time to take an observation. How far did you

its side, and make a pretty close guess at the number of knots the snip was making. But I will let the first part of my answer stand as my answer.

Mr. Macon. I was going to ask you a question in response to the latter part of your answer. I was going to ask if it was not easier for a navigator to estimate the speed of a vessel on a smooth surface of water than it would be for an explorer to estimate the travel he was making over such ridges as you were talking about, up and down, stopping to cross the leads and sometimes taking longer to cross one lead than another? That occurs, does it not?

Capt. Peart. It is a matter of judgment in both cases, I would say. Mr. Macon. So you would just figure the matter out along the line of your judgment. Now, you made the 133 miles in 5 marches?

Capt. Peart. One hundred and thirty miles.

Mr. Macon. Your book said 133 miles, I think.

Capt. Peart. We made the distance from the camp where Bartlett left me to Camp Jesup in 5 marches.

Mr. Macon. That was 133 miles; it would be 26g miles per day. Can you call to mind the travels of any explorer that discloses such a record as that—5 days marching with an average of 20g miles, over an unknown sea of ice?

Capt. Peart. I can not give the figures right here. If it is material in that connection, that can be inserted in the record of the committee, if it desires it. Beginning on page 29 and ending on page 30 of Mr. Moore's speech of last winter, comparative distances are to be found, which I think have not as yet gone into the record.

Mr. Bates. What date was that speech, so it can be identified as being part of the Congressional Record?

Capt. Peart. March 22, 1910.

Mr. Bates. Who furnished him with the data, do you know?

Capt. Peart. It is stated that Mr. Gilbert H. Grosvenor, director and editor of the National Geographic Society, furnished it. It is as follows:

"Referring to the time occupied by Pearty in his last dash to the pole, Mr. Gilbert H. Grosvenor, director and editor of the National Geographic Society, says:

"

"Referring to the time occupied by Peary in his last dash to the pole, Mr. Gilbert H. Grosvenor, director and editor of the National Geographic Society, says:

"In view of the recent published statement by a Member of Congress doubting the distances traveled by Peary on his last northern sledge journey, I have gone to some trouble to obtain correct figures from the narrative of Peary's last and previous expeditions,

"Anyone who cares to take the time and trouble can verify these figures and will find the following results:

"Peary's average distance per march from Cape Columbia to where Bartlett turned back was 12.8 miles. Had it not been for the north wind two days, setting them back, this average would have been 133 miles. Between two observations taken by Marvin the average of three marches was 163 miles. Several of the marches were 20 miles.

"His average, from the time Bartlett left him, to the pole was 26 miles. His average on his return was 25.6 miles.

"For comparison with the above figures, as showing that these averages are not at all excessive, the following facts can be taken from the narrative of the last expedition and previous ones:

"Peary's last two marches on the return from Cape Columbia to the Roosevelt, were 45 miles each. On this and previous expeditions the journey from Cape Hecla to the Roosevelt, a distance of 45 to 50 miles, was made in one march. The distance from Cape Columbia to Hecla was also made on other occasions in one march. The march from the Roosevelt to Porter Bay, a distance of 35 miles, was repeatedly made in 8, 10, and 12 hours. Macmillan and Borup returning from Cape Morris Jesup to the Roosevelt, made the distance from Cape Wilkes to Cape D'Urville, a distance of 65 to 70 miles, in one march. Peary, in one of his carlier expeditions, made the distance from Cape Wilkes to Cape D'Urville, a distance of 65 to 70 miles, in one march. He repeatedly made the march from Cape D'Urville to Cape Fraser, a distance of 40

miles, in one march, and in the winter of 1899-1900 traveled from Etah to a point in Robertson Bay, 60 miles distant, in less than 12 hours.

"On his return from Independence Bay to Bowdoin Bay, Peary averaged 20 miles a day for 25 successive marches, 210 miles in 7 successive marches (an average of 30 miles aday), making the last march of 40 miles, all these with dogs not driven by Eskimo drivers.

"On more than one occasion in the fall of 1900 Peary's parties went from Lake Hazen to Fort Conger, both by the Bellows route and by the Black Vale route, distances either way of 50 miles overland, in one march. This after the sun had set for the winter.

"In February, 1899, before the sun returned, Peary (with both feet frozen six weeks before), sledged from Conger to Cape D'Urville, a distance of over 200 miles, in 11 marches, in an average temperature of 53½° below zero, an average of about 20 miles. In March of 1902 he went from Cape Sabine to Fort Conger, a distance of 250 to 300 miles as traveled, in 12 marches, an average of 21 to 25 miles, and later covered the same distance again in 11 marches, an average of 22 to 27 miles.

miles.

"In the history of polar explorations no one has had so much and such long-continued training in ice work as Peary; his speed is the result of long years of practice, resulting in great physical endurance and skill in the use of the sledge."

Mr. Macon, Mr. Grosvenor is a member of the National Geographical Society, is he not?

Capt. Pearr. It states here he is director and editor.

Mr. Macon. There was nothing in what he said that attempts to compare conditions—

Mr. Butler, What is the average dog travel? Does Mr. Moore say there?

there?
Capt. Peary. There was no average given.
Mr. Macon. Under similar conditions as these I am talking about. I am not talking about dog races up in Alaska.
Mr. Butler. If we only had somebody else that had been up there with the dogs; but he is the only man that has been up there.
Mr. Mutler. If mean under like conditions with these many dogs.
Mr. Mutler. I mean under like conditions with these many dogs.
Mr. Macon. That is what I am trying to get at. Under like conditions and circumstances. Can he show where any other explorer ever made such a record as he has made?
Capt. Peary. There is one point, Mr. Chairman, that I would like to note, and that is, as far as I know, no other expeditions than my own have ever utilized Eskimo drivers and the full-blooded Eskimo dogs in their entirety and perfection. I may be wrong in that statement; there may be one or two exceptions to that statement, but that is my impression.
Mr. Macon. A good deal has been said here about your having the

have ever utilized Eskimo drivers and the full-blooded Eskimo dogs in their entirety and perfection. I may be wrong in that statement; there may be one or two exceptions to that statement, but that is my impression.

Mr. Macon. A good deal has been said here about your having the best dogs all the time, keeping the best dogs. The best dogs could not travel any faster than the poorest dogs, could they, when they were yoked together?

Mr. Butler. They were all the best dogs.

Mr. Macon. If they were yoked together, the good and the bad, the good ones could not travel any faster than the worst ones.

Capt. Pearx. No sledges can travel any farther than the combined tractive force of the team. Some dogs would pull better than others.

Mr. Butler. Just as a chain is no stronger than its weakest link.

Mr. Macon. Therefore when you have the best dogs taken out of a team and put together, and the weak dogs in another, that would be no advantage from the fact that they had to go along together.

Mr. Dawson. Except that they sent the weak dogs going forward all the time and some of them even killed as they were no account. I am trying to find out about these things.

Mr. Engleright. I would like to insert there in the record that the Coast and Geodetic Survey report of 1901, in describing the experiences of Mr. Turner, reports that he left Rampart, on the Porcupine River, and back, a round trip of 400 miles, crossing a mountain range from 5,000 to 7,000 feet high in 18 days. The homeward trip was made in 6 days, or an average of 33 miles a day.

Mr. Macon. Were the conditions the same as these?

Mr. Engleright. It was arctic travel.

Mr. Macon. The same territory? The dogs had not traveled for a great many days before they started on this mad rush for the pole, either. These dogs of Capt. Peary, as I understand it, had been traveling for quite a number of days before they got to where he made the final dash for the pole—all of them, and therefore they could not have been in the same fine condition that they were when he

had better climate, better conditions, better materials to work with and on?

Capt. Peary. I don't know that the sledges could be made better up there than they were when they started, but where a sledge was broken repairs would consist of lashing up a crack or injury to the sledge, and in some cases, at the long stops, breaking up a poor sledge and utilizing the material to replace parts of broken sledges, broken crossbars, and the like.

Mr. Macon. But you will not contend that those sledges were better than when they started with Capt. Bartlett for Columbia and therefore you would travel faster with them than while he was with you breaking the ice for you? If you do not care to answer that I would ask you how it was that you could travel so much faster with nobody to break the ice, nobody to construct your igloos except yourself than you could when you had supporting parties, that I understand were with you for the sole and express purpose of helping you to break the way so you could preserve your strength to make this final dash; how could you travel so much faster than you could with the assistance you had before Capt. Bartlett turned back?

Capt. Peary. I would like to refer to the narrative in regard to that and say that it was a question of a spurt and dash with every man.

Mr. Butler. Is it all written in the book—the reason for that.

Mr. Butler. Would you be willing to let us put that book in evidence?

Mr. Macon. You can put the whole book in evidence.

ence?
Mr. MACON. You can put the whole book in evidence.
Mr. BUTLER. All right, rather than to have to read it over now.
Mr. ENGLEBRIGHT. I would suggest that you offer the book in evidence.
Mr. Macox, I offer the book in evidence.

Mr. Butler, It will cost something to publish that book. I intended to ask to have read just that part of his statement here.

Mr. Macon. This record is going to be independent of the book, and I want it in the record.

Mr. Englebright. You can offer, Mr. Macon, the parts of the book to which reference has been made.

Mr. Macon. I will let the captain do the offering. I am asking the questions, and he can answer them in his own way.

Capt. Pears. I think I answered that.

Mr. Macon. You answered by saying you referred to the book. I want this record complete. If you are going to designate the parts of the book that you want to go in, I want to follow that up.

Mr. Bates. He explained that in his oral testimony yesterday.

Mr. Macon. Did you ever hear of the other side asking a question over when it was not satisfied with the answer given?

Mr. Bates. This is not a court of law, with technical cross-examination laws.

Mr. Macon. Did you ever hear of the other side asking a question over when it was not satisfied with the answer given?

Mr. Bates. This is not a court of law, with technical cross-examination laws.

Mr. Macon. But there are two sides to this, as in every other question, as I understand it.

Mr. Dawson. I can see no reason for repeating all the testimony.

Mr. Macon. I do not remember to have asked a single question that Mr. Englebright or Mr. Bates has asked or that you have asked.

Mr. Dawson. I have not asked any.

Mr. Macon. I would like to have that in the record, Capt. Peary, so as to make the record here complete—what your average travel was while you had your supporting parties with you, while your dogs were fresher than they were when you left Bartlett, 87° 40°.

Capt. Pearv. I think that question was answered, what the average speed was per march. The stenographer, I think, figured that out.

Mr. Macon. With Capt. Bartlett. We figured out what yours was after you left.

Capt. Pearv. I think he has the figures here from Columbia to Capt. Bartlett's camp.

Mr. Macon. To 87° 47°; I would like to have that in the record to show just what your average travel was. The dogs were fresher then than they were afterwards.

Mr. Roberts. If you want to refer to it, I have it right here.

Capt. Pearv. Well, I will refer to that page in the book.

Mr. Roberts. It is at page 286.

Capt. Pearv. The last two paragraphs of page 286 in my book:

"So that with my party reduced to five or six men, every man, dog, and sledge under my individual eye, myself in the lead, and all recognizing that the moment had now come to let ourselves out for all there was in us, we naturally bettered our previous speed.

"When Bartlett left us the sledges had been practically rebuilt, all the best dogs were in our pack, and we all understood that we must attain our object and get back as quickly as we possibly could. The weather was in our favor. The average march for the whole journey from the land to the pole was over 15 miles. We had repe

cring trips around?

Capt. Pearx. An estimated distance of about 50 miles. A greater protion of that—or half of it—with light sledge and double team of dogs.

Capt. Pear. An estimated distance of about 50 miles. A greater portion of that—or half of it—with light sledge and double team of dogs.

Mr. Macon. You say you traveled an estimated distance of 10 miles out in one direction?

Capt. Pearl. That was not on the 7th.

Mr. Macon. That was not on the 7th.

Mr. Macon. I know, at 4 o'clock, but this is before 4 o'clock. It is some little time on the 7th before 4 o'clock. I understand he traveled 10 miles out and 10 miles back on the 7th.

Capt. Pearl. No.

Mr. Bares. His return trip was on the 7th.

Capt. Pearl. No.

Mr. Macon. I know, at 4 o'clock, but this is before 4 o'clock. It is some little time on the 7th before 4 o'clock. I understand he traveled 10 miles out and 10 miles back on the 7th.

Capt. Pearl. No.

Mr. Macon. And 8 miles out in another direction and 8 miles back, and then left and made a sounding on the way to—what camp was it you stopped at the night of the 7th?

Capt. Pearl. The night of the 7th, our last upward camp.

Mr. Macon. How far was that from the pole?

Capt. Pearl. An estimated distance of 30 miles from Camp Jesup. We slept at that camp.

Mr. Macon. Thirty and 20 would be 50 and 16 would be 66?

Capt. Pearl. Excuse me.—

Mr. Macon. They are all estimated?

Capt. Pearl. Excuse me. The travel on the 7th was 10 miles return from the farthest point (estimated); an estimated 8 miles to the right and back; and then the distance to our last forward camp. Whether that last march was all on the 7th or not I can not say; it may have been after midnight when we reached our igloo. The first 10 miles that you have there are not in the count.

Mr. Macon. Those were nautical miles, were they not?

Capt. Pearl. They are estimated nautical miles; yes.

Mr. Macon. What is the difference between a nautical and a statute mile; how many statute miles would that be?

Capt. Pearl. They are estimated nautical miles; yes.

Mr. Macon. What is the difference between a nautical and a statute mile; how many statute miles would that be?

Capt. Pearl. Macon. How you have

Capt. Peary. I found him at the Roosevelt at Cape Sheridan.
Mr. Macon. How long had he arrived there before you did?
Capt. Peary. Four days.
Mr. Macon. He was there four days before you arrived?
Capt. Peary. Four days.
Mr. Macon. He had to travel back over a road the marks on which were much fresher than when you got to them, were they not.
Capt. Peary. Under the conditions of existing weather, I should say that there would be little or no difference in the character of the trail at the time that Bartlett passed over it and its character when I passed over it, with this difference, that the trail would have the additional marks or additional travel of Bartlett's sledge.
Mr. Butler, Did Bartlett strike a lead?
Capt. Peary. That is covered in his journal. There is this point, also brought out in his journal, that the last 45 miles before reaching the land Bartlett had to break, or did break, a new trail. He perhaps could have found the trail from that lead in, but he could see the land, and he preferred to go straight in for the land rather than waste time hunting for the trail, and did so. I had his trail to follow when I came along there.
Mr. Macon. On the 7th of April, while you were making this trip.

for the trail, and did so. I had his trail to follow when I came along there.

Mr. Macon. On the 7th of April, while you were making this trip, you made a sounding of 1,500 fathoms?

Capt. Pearv. Yes.

Mr. Macon. About how long did it take you to make that sounding? Capt. Pearv. It did not take us very long. In making a sounding the wire runs out very rapidly.

Mr. Macon. You did not estimate the time?

Capt. Pearv. I did not estimate the time. If we had been able to reel in that wire and lead, it would have delayed us a good deal, but the running out of the wire and lead is not a long operation. The reel will go out rapidly.

Mr. Macon. How long before that had the wire been used in making the soundings—the last sounding preceding that—how long a time had intervened?

intervened?

the soundings—the last sounding preceding that—how long a time had intervened?

Capt. Pear. Bartlett made a sounding on the 25th or 26th of March; or possibly the 27th, somewhere along there.

Mr. Macon. What was the temperature then?

Capt. Pear. I could not say offhand. It may be noted in the book.

Mr. Macon. Was it cold enough for the water to have frozen to the wire as you reeled it in, so as to have made it stick and make it hard to unreel when you attempted to make another sounding?

Capt. Pear. It did not make it hard to unreel, and on no occasion was there any sluggishness of the reel in running out the wire and the lead. At times, and perhaps I might say on every occasion, the wire, as it came in, before it came to the reel, passed through a fur-mitten, or blanket mitten, or a piece of fur, or something, as it was reeled up in such a way [illustrating] as to take nearly or quite all the water off the wire before it went on to the reel. But independent of that, there was not any sluggishness or retardation of the action of the reel in running out as the result of the different strands of wire freezing together.

Mr. Macon. What was the condition of the weather while you were at the pole?

wire before it went on to the reel. But independent of that, there was not any sluggishness or retardation of the action of the reel in running out as the result of the different strands of wire freezing together.

Mr. Macon. What was the condition of the weather while you were at the pole?

Capt. Pearn. As stated in my book.

Mr. Macon. I believe you stated in the book that during the 30 hours you stayed at the pole it was clear and calm, cloudless and flawless. Let me have that book, please.

Mr. Butler. How late are we going to stay here?

Mr. Bates. I have another question or two I would like to ask.

Mr. Macon. I am not through yet.

Mr. Bates. Well, how long are we going to continue this examination?

Mr. Bates. Well, how long are we going to continue this examination?

Mr. Bates. Well, how long are we going to continue this examination?

Mr. Bates. Well, how long are we going to continue this examination?

Mr. Bates. Well, how long are we going to continue this examination?

Mr. Bates. Well, how long are we going to continue this examination?

Mr. Macon. I don't know.

Mr. Macon. If the gentleman says I have not been interrupted I don't understand the definition of interruption. Perhaps he has a different definition of the word.

Mr. Macon. In gentleman from Arkansas has, or even one-fifth of it.

Mr. Macon. No gentleman has consumed the time to-day—that is all of to-day. I did not start until Mr. Roberts finished. The gentleman can have the rest of the time as soon as I get through. I will say that to show my fairness in the matter.

Mr. Butler. I have some regard for the exigencies of the occasion, and I do not propose to take up more than five minutes of time.

Mr. Macon. In response to that—"clear and calm, cloudless and fawless"—I desire to submit a few pictures here in your book, Captain. The flags taken up there, to be found on pages 284 and 290, appear to be waving in a gale. These two appear to be waving in a gale, blowing like that [indicating]. You would not call that breeze-less, would you?

Capt. Pearly, I think some many pictures.

Mr. Macon. But this is all shadow [indicating].
Capt. Pearly. That, I think, would be a question for a photographer to answer. The reproduction can not be quite as sharp and clear as the original photographic print or negative.

Mr. Englemeneut. The question of exposure makes quite a difference in the showing of the picture as to light or darkness, does it not?

Capt. Pearly. Yes.

Mr. Butler. Did you take those pictures?

Capt. Peary. I took those pictures myself.

Mr. Macon. Getting back to the distance, I would ask if you joined with your friends in protesting against the report made by Cook of naving traveled a little over 24 miles a day with light sleds and a small party up in the Arctic belt, and some of them went as far as to say it was impossible to make 24 miles a day up there?

Capt. Peary. I do not recall stating that it was impracticable to make 24 miles a day up there.

Mr. Macon. I am informed that Admiral Melville said it was an absolute impossibility to do it, and that when you came back and made your report of 26 miles and over a day he congratulated you upon it and did not have the kindliness of feeling to apologize to Cook for having doubted his veracity when he said he had traveled 24 miles a day.

made your report of 26 miles and over a day he congratulated you upon it and did not have the kindilness of feeling to apologize to Cook for having doubted his veracity when he said he had traveled 24 miles a day.

Capt. Pear That is a matter of which I have no knowledge. Mr. Macon. You do not know anything about that?

Capt. Pear I have no personal knowledge of that.

Mr. Macon. Now, Captain, at the risk of incurring the displeasure of some of the members of the committee, I want to ask you again why it was that when you concluded to find the pole that you rid yourself of every white man who had any knowledge, any astronomical knowledge and experience in the northern regions, and sent them back and only tock one Negro and four Eskimos with you to testify to your work? I think you answered that yesterday.

Capt. Pear. I think I answered that.

Mr. Butler. Mr. Roberts asked him about that, and it appears in print this morning.

Mr. Macon. So I will ask you this question: You knew that Commbus had discovered the West India Islands and that he had quite a party that accompanied him, and that none of them shared the glory of the discovery of the Islands with him; that Americus Vespucius had discovered this continent, and that it was named for him, and that he had quite a party with him, and that none of them shared the glory of the discovery with him; that Magellan discovered the glory of that discovery with him, it hat Magellan discovered the glory of that discovery with him, that De Soto discovered the glory of that discovery with him, that De Soto discovered the glory of that discovery with him, that De Soto discovered the Mississippi River with quite a party, and that nobody shares the glory of that discovery with him. Then, according to your answer yesterday, I want to ask you why it was that you feared that Tapt. Bartlett would share the glory of the discovery of the pole with you when you were the leader of the Peary Arctic exploration?

Capt. Pear, I do not recall that I considered while north or thought of

Mr. Engleright. I submit that is a question for the public to pass upon.

Mr. Macon. He has a right to answer it if he wants to.

Mr. Engleright. He need not answer it if he does not want to.

Mr. Macon. He need not answer any question if he does not want to.

Mr. Butler. Every one of us here is independent of the other, but I understand this inquiry to be whether or not Capt. Peary had reached the North Pole, and what his motive may have been in dismissing these men I do not think is pertinent.

Mr. Macon. Have you read what Mr. Wellman said as to what the best evidence of the discovery of the nole would be?

Mr. Butler. We are considering the question and not Mr. Wellman.

Mr. Macon. Captain, Mr. Roberts asked you something about the material you took with you on this trip to the North Pole; that is, the things that you took on your sleds to make up the weight of them. You did not enumerate any nails or hatchets or things of that kind to mend the sleds with.

Capt. Peary. I think I enumerated a hatchet.

Mr. Macon. A small meat hatchet.

Mr. Macon. Sui you did not have anything to repair the sleds with?

Capt. Peary. I had no nails, but I had a few screws and a screw driver. A nail is the last thing in the world to put into a sledge for Aretic work.

Mr. Macon. You used screws?

Coat. Peary. Screwer for remaining the sledges. I will make that

driver. A nail is the last thing in the world to put into a sledge for Arctic work.

Mr. Macon. You used screws?

Capt. Pearx. Screws for repairing the sledges. I will make that addition, that we had a few screws and a screw driver for replacing the screws in the steel shoes of the sledges, which might come out or be broken off.

Mr. Macon. You have stated how you were clothed, but about what did your clothes weigh? How much were you carrying while you were making the distance that you say you made up there?

Capt. Pearx. My first suit for Arctic work, an Eskimo fur suit—I did not weigh it on the last expedition, but the weight would be comparatively the same as such a suit used on previous expeditions—is essentially the same as the weight of my ordinary winter business suit in New York or Washington, not including the overcoat. About 123 pounds, I should say, or possibly 13 pounds.

Mr. Macon. Did you have snowshoes?

Capt. Pearx. We had a pair of snowshoes.

Mr. Macon. What do they ordinarily weigh, such as you use up there? Capt. Pearx. Possibly 8 pounds; possibly 7 pounds. That weight can be determined from the makers.

Mr. Macon. What was the weight you carried on each foot in making that trip?

Capt. Pearx. That I could hardly tell. In regard to the snowshoes, I would say that we did not wear the snowshoes constantly; in fact; the snowshoes were used comparatively little on this first expedition, probably not one-tenth of the time.

Mr. Engleright. You do not lift the shoes, do you; that is, you shuffle along in the shoes?

Capt. Peary. Ordinarily a snowshoe is not lifted fully.

Mr. Macon. In shuffling along, would not that make it harder to travel than if you had your foot above any obstruction so you would not have to shuffle it through it—like snow or mud that would have to be shuffled through? It looks to me like that would be quite burdensome before you had traveled a great distance, to shuffle shoes through snow. Capt. Pears. The question of the use of snowshoes is, of course, determined by the conditions of the snow. A man very quickly finds whether he can travel easier with or without snowshoes. They were not used very largely in this last expedition.

Mr. Macon. There having been quite a rivalry between your friends and the friends of Dr. Cook over the discovery of the pole and his having submitted his proofs, as they are called, to the Copenhagen University. I want to ask you if you would be willing on account of that rivalry to have your proofs submitted to the same tribunal, to be passed upon by it?

Capt. Pears. I should prefer not to go into that question at all. I think the question is one that could be answered for himself by any and every member of the committee.

Mr. Macon. Now, the geutlemen who were before us last spring sald that they were of a subcommittee that examined your proofs, and they admitted that they had made up their minds about your having discovered the pole before they saw any of them at all. Therefore they could not have been an impartial jury to sit upon your case. That is the reason why I ask whether or not you would be willing to allow your proofs now to be submitted to the same impartial tribunals that passed upon the credibility of Dr. Cook's proofs. If you are not willing to submit proofs to them, all you have to do is to say so; nobody has any power to make you do so.

Mr. Butler, My recollection is that the Danes concluded that Cook reached the North Pole—

Mr. Macon. No; that was all done before they examined the proofs—

Mr. Butler. That they did that before they examined the proofs

proofs—
Mr. Butlen. That they did that before they examined the proofs?
Mr. Butlen. That they did that before they examined the proofs?
Mr. Macon. Yes.
Mr. Dawson. Cook exploded in the meantime, did he not?
Mr. Macon. No; he did not explode at all.
Mr. Butlen. What is the question?
Capt. Pearr. I think I answered the last question.
Mr. Macon. The question I asked was whether he would be willing to submit his proofs, that he said he did not want to go into that subject. In other words, he declines to say whether he will or will not. Of course that will carry the idea that he refuses to do so.
Mr. Bates. Nothing of the sort.
Mr. Macon. It does.
Captain, have your proofs been submitted to any geographical or scientific society to be passed upon except this National Geographic Society?
Capt. Pearr. Yes.

Capt. PEARY. Yes. Mr. Macon. What society? Have you any evidence of what society has passed upon them?

Mr. Bates. Is that a letter from the Royal Geographical Society of

Mr. Bates. Is that a letter from the Royal Geographical Society of London?

Mr. Macon. We have that in the record.

Mr. Bates. No; I read it. I asked if those are the copies of letters you have received, and if so, whom from, and I would like to have them in the record? They were not put in the record.

Capt. Peary. This is a copy of the letter received by me from Maj. Leonard Darwin, president of the Royal Geographical Society, of London [indicating]. This is a copy of a letter received by me from Mr Douglas W. Freshfield, member of the council of the Royal Geographical Society.

Mr. Macon. Will you read that letter? It will explain the answer to my question.

(Capt. Peary read the two letters referred to, as follows:)

ROYAL GEOGRAPHICAL SOCIETY, 1 SAVILLE ROW, BURLINGTON GARDENS, London, W., December 5, 1910.

Commander R. E. Pearr, Eagle Island, South Harpswell, Me., United States.

Eagle Island, South Harpswell, Me., United States.

Dear Commander Pears: Please accept our sincere thanks for the documents you have sent us, including copies of the observations taken by you at the pole. They have been thoroughly examined by us. In the opinion of my council there is nothing in this or any other new matter which has come to their notice that in any way affects the position indicated by me which I, on behalf of the society, presented you with a special gold medal at the Albert Hall for your explorations, during which you were the first to reach a pole of the earth.

With best wishes, believe me,
Yours, sincerely,

LEONARD DARWIN, President R. G. S.

Pall Mall, S. W., December 7, 1910.

Dear Commander Peary: You will receive an official letter from Maj. Darwin thanking you for communicating copies of your polar records to the R. G. S. and stating that they have been most thoroughly and critically examined by our scientific instructor, who takes the same view of them as that taken by the committee of the United States Geographic Society, on whose report the council of the R. G. S. acted. Having accepted this report as final, our council felt a certain difficulty in saying anything further.

But some of us held that a bare acknowledgment of your courtesy in communicating your records might be open to misinterpretation, and that it was due to you to prevent this risk by stating explicitly the result of the independent examination made in our office.

I trust that the course followed may be satisfactory to you.

With kind regards and all good wishes for the New Year, believe me, Yours, very truly,

DOUGLAS W. FRESHFIELD, Member of the R. G. S. Council.

Mr. Macon. Does that show that the Geographical Society made the examination?

Mr. Bayes. Certainly. Their expert made it; the president of the society certifies to it.

Mr. Macon. Did they say that the society examined the records?

Mr. Bayes. Certainly. The society can not examine the record. They have an expert.

Mr. Macon. They do not have a committee to pass upon it like this one, but just have an expert pass upon it. Did this Geographical

Society have a full copy of the records that you have furnished to this committee?

committee?
Capt. Peary. They did not have all the material that is here to-day. Mr. Macon. What did they have?
Capt. Peary. They had copies of all of my observations, and they had copies of a considerable portion of my journal.
Mr. Macon. But a scientific society right here, of which you are a member, I understand, said that your observations were not any good without your narrative?
Mr. Bates. I object to that.
Mr. Butler, Is that a question?
Mr. Macon. Yes.
The question was repeated as above recorded.
Capt. Peary. That is a matter of which I have no personal knowledge.

edge.
Mr. Macon. Captain, did you read the report that Dr. Cook made of his discovery of the pole before you denounced him as a faker and his report as a gold brick?

Capt. PEARY. That is answered on the face of the circumstances,

his report as a gold brick?
Capt. Peary. That is answered on the face of the circumstances, by a comparison of dates.

Mr. Macon. Did you not corroborate him in many things about the route, the travel to the pole, even to the descriptions surrounding the pole, the description of conditions surrounding the pole?

Mr. Englebright. I would like to supplement that by adding this to it: When Dr. Cook published his story did he not have the newspaper accounts of yours first?

Mr. Dawson. I would like to inquire whether the committee is going into the Cook question at all?

Mr. Butler. I do not know about the committee. I know I am not going into it. I am only a member of the committee.

Mr. Macon. We are trying to ascertain whether or not—

Mr. Dawson, Material questions I have no objection to.

Mr. Englebright. Those records have all been published and speak for themselves.

Mr. Dawson. There is no use in leading us on in the wilderness of the Cook business.

Mr. Macon. I am not going into the wilderness of the Cook business.

Mr. Macon. I don't know. I am asking Capt. Peary.

Mr. Englebright. Did not Cook take Peary's story first and then use it to make up his own?

Mr. Rollebright. Well, I am asking Capt. Peary.

Mr. Rollebright. Well, I am asking you.

Mr. Bayes. Now, Mr. Chairman, men who are scientists and explorers do not, I am sure, desire to make criticisms in public hearings, and it is not pertinent to this inquiry in any manner or shape whatever.

Mr. Macon. I believe you said, Captain, that the Eskimos that you

and it is not pertinent to this inquiry in any manner or shape whatever.

Mr. Macon. I believe you said, Captain, that the Eskimos that you selected to go with you to the pole would walk through hell with you if you said so. I believe that language is in your book, and that they, and Henson, the colored man you took with you for witnesses, were as pliant to your will as the fingers of your right hand. You made that statement, did you not?

Capt. Peary. If that is in my book, I will stand by it.

Mr. Macon. Do you really think those men would walk through hell for you, or was that just a figure of speech?

Mr. Bates. What do you think about it, Brother Macon?

Mr. Macon. I don't know; I am trying to find out.

Mr. Bates. What has that to do with whether Peary reached the pole?

Mr. Macon. It has something to do with it when you take into

Mr. Macon. I don't know; I am trying to find out.

Mr. Bates. What has that to do with whether Peary reached the pole?

Mr. Macon. It has something to do with it when you take into account all of the circumstances in connection with this question.

(The question was repeated as above recorded.)

Capt. Peary. I think those men would go with me out on the ice just as far as I went, even if they felt pretty well satisfied in their own minds that their ever coming back to land was a doubtful question. That is my opinion.

Mr. Butler. Of course the statement presupposes that there is a hell. Mr. Macon. And it presupposes that they would say whatever the captain told them to say and abide by it.

Mr. Butler. Are you through?

Mr. Macon. I am.

Mr. Butler. Mr. Englebright?

Mr. Bates. I think that last remark better be struck out.

Mr. Macon. I do not think the committee has anything to do with it.

Mr. Bates. He interjected a remark.

(Upon direction of the chairman the stenographer read as follows:)

"Mr. Macon. And it presupposes that they would say whatever the captain told them to say and abide by it."

Mr. Butler. We will settle that in executive session.

Mr. Macon. Yes; we will settle all that later.

Capt. Peary. I will ask, Mr. Chairman, that that be struck out of the record, if permissible.

Mr. Butler. We will take that up in executive session.

Mr. Hobson. As an outside member of the committee, I want to ask if those other humble members of the expedition had a hearing? I move it be stricken out.

Mr. Butler. What do you say?

Mr. Hobson. I ask that he withdraw it.

Mr. Mccon. No; I do not want to withdraw it. I want to ask another question. I suppose you have seen press reports that Mene Wallace, who went up north with you 14 years ago, says that the Eskimos say that you did not go to the pole? Do you know anything about that?

Capt. Peary. I have seen such an alleged report.

Mr. Macon. I notice did not go to the pole; do you know anything about that?

Capt. Peary. I have not seen such an alleged report

that?

Capt. Pearr. I have not seen such an alleged report.

Mr. Macon. I notice where the Norwegian, Knud Rasmussen, says that some missionaries saw Henson, and that you told them that you had not been to the pole. Do you know anything about that?

Capt. Pearr, I have seen some such alleged report.

Mr. Macon. I notice that Prof. Gallet, who was reported to have been a very distinguished scientist, an astronomer, and so on, gives out that he has examined your narrative of the trip to the pole, and he finds that it is not sufficient to sustain a verdict in its favor. Do you know anything about that scientist?

Capt. Pearr. I have seen such an alleged report. If Mr. Macon has this full newspaper report, or a newspaper report in regard to Mene Wallace, if he has the full original statement as it appeared in the papers, I will ask that it be entered on the records.

Mr. Macon. Here it is.

Mr. Butler. Look at that and see whether or not that is the statement.

Capt. Peary (after examination). That is not the complete statement, Mr. Chairman; that is only part of the original.

Mr. Butler. Have you the complete statement?

Capt. Peary. I have not, but I can find it probably. As far as I know, the original statement appeared in the New York World of a certain date not long ago, and I would like to have the first full alleged statement of Wallace entered upon the record, and if that is found and entered, I will also ask permission to enter this [referring to some papers which the witness produced] on the record immediately following such alleged statement.

The papers referred to are as follows:

MENE, ESKIMO BOY SENT NORTH, WRITES OF STRUGGLE TO GET HOME. SAYS HE WAS PUT OFF SHIP IN STRANGE PART OF GREENLAND, WITHOUT

SAYS HE WAS PUT OFF SHIP IN STRANGE FART OF GREENLAND, WITHOUT GUN OR FURS.

"Mene Wallace, the Eskimo boy who as an infant was brought to this country by Peary 14 years ago and was taken back in July, 1909, on the ship that went to the relief of Peary on his memorable trip north when he discovered the pole, has at last been heard from.

"R. Chester Beecroft, of No. 1402 Broadway, who was the boy's friend in this country, has received a letter from Mene, in which the Eskimo boy relates that he was put ashore, with no provisions, no furs, no sleds, and no dogs, in a strange part of Greenland, far from Etah, where Peary had agreed that he should land.

"The boy, with his father, who was chief of the tribe, and two others were brought to this country and used for various scientific experiments by the American Museum of Natural History. All the others died here.

"Here Mene attended the public schools and Manhattan College, and was fairly intelligent for a youth from the frozen North. But he wanted to go back to the land of his fathers. There was no way for him to go except on some polar expedition.

"Finally he was allowed to go back with the Peary relief expedition on the promise that he would stay in the North, as he had been in several escapades here and showed a strong liking for the white lights of Broadway. The promise that he would stay in Eskimo land was extracted because it was feared he would want to return to New York after he had been home a while.

"Here is his letter to Mr. Beecroft:

"KJOBENHAVN, Sept. 2, 1910.

"'KJOBENHAVN, Sept. 2, 1910.

"Here is his letter to Mr. Beecroft:

"'Bear Dob: I am still alive, how or why I can't tell you. First, let me explain that you would have heard from me long ago only I couldn't get them to take a letter to you. Peary had them land me at North Star Bay a long way south of my home. We had to sign their agreement, you remember, that I would land when Peary said, but they promised in return for the black-hand papers they made you sign to take me back to Etah.

"But as they had broke faith and human rule with we when I was there (?) stolen gest I was not surprised when they dump me off, by Peary's orders, in a strange part of Greenland, with no furs, gun, sleg dogs, or equipment to battle for life in the desolit ice.

"They refused to carry my letters back to you, though they took my card to Mrs. Cook. Well, I can't tell you here all the fighting and suffering and trouble I went throu to get back to Etah, for the Eskimos were as strange to me at North Star Bay as whites would be to you landing at California. At last I reached home, and in a letter I will tell you a wonderful interesting story of my meeting with the people of my father whome the Americans murdered in the name of science (?), how they live, how I efected them, how the new-old life efected me, what chanhes I made in them and them in me; later, beause the ship is waiting.

"'Whitney also refused to take a letter home to you, and mails seems to follow me even beyond the North Wind. So to get a letter to you at last I had to make a trip to Cape York, and I neednt tell you the danger and hard ship of that. I wanted to prove how I love the only tile that binds me to the land of warmer climate and colder hearts. (My hand is getting awful tired.)

"I know you will expect something about Cook. Well, Dob, I have gone to the bottom of the matter. No one up here believes that Peary got much farther than when he left his party. His name up here is hated for his cruelty Cook made a great trip North. He has nothing in the way of proofs here that I can find. I belie

"'From ice. I expect a white Xmas, Dob.—Squab.
"'I can't spell—maybe next time I cant write.
"'P. S. Dob, would there be some way to send me a gun?—Squab.'"
(Signed receipt of Mene Wallace, for guns, supplies, and equipment given him by Commander Peary at North Star Bay, Aug. 23, 1909:)

"S. S. Roosevelt, August 23, 1909.

"I hereby acknowledge the receipt from Commander Peary of the following items of supplies and equipment, the same being all that I have asked for and all that are needed to make me entirely comfortable: Four cases biscuit; 1 case tea; 1 case coffee; 1 case sugar; 1 case beans; 1 case oil; salt and pepper; 1 double barrel 10-gauge shotgun; 100 loaded shells; 1 40-82 Winchester repeating rifle; 200 rounds ammunition; 11 pieces lumber for sledge, kayak, and paddle; 1 pair steel sledge shoes, 6 dozen screws for same; 2 pieces lumber for harpoon and lance shafts; 250 primers; 1 hatchet; 1 saw knife; 2 knives; 2 pair scissors; 2 flies; 2 fox traps; 4 papers needles; 12 spools thread; 14 thimbles; 2 pair smoked-glass goggles; 1 cooking pot; 1 cup; 1 plate; 1 bowl;

1 knife and fork; 3 pipes; 3 or 4 pounds tobacco; 2 dozen boxes matches; 1 sweater.

"MENE P. WALLACE."

"MENE P. WALLACE."

In this connection I wish to say that the entire Mene letter is no more reliable than the part to which this signed receipt is a conclusive refutation.

Mr. Butler. Send both to us, then.

Mr. Butler. Send both to us, then.

Mr. Butler. You handed me, the other day, a sample of the wire you used for making the soundings, with a photograph of the sounding lead, did you not?

Capt. Peary. I did, Mr. Bates, I have those at my hotel, and ask leave to make them a part of the record.

Mr. Butler. Very well.

Mr. Englebright. You stated you made no observations for longitude?

Capt. Peary. I did not make any observation for longitude.

tude?

Capt. Peary. I did not make any observation for longitude,
Mr. Englebright. You made three observations at camp Jesup and
one other observation near the North Pole?

Capt. Peary. Three sets of observations.

Mr. Englebright, When you left New York you had your chronometers conversed?

nometers compared?
Capt. Pearr. They were compared, yes; the ship's chronometers.
Mr. ENGLEBRIGHT. They were not compared again until after your return?

nometers compared?
Capt. Peart. They were compared, yes; the ship's chronometers. Apt. Peart. They were not compared again until after your return. Molleburght. Did you have a record of those comparisons of chronometers after you came back?
Capt. Peart. No; not so far as I know.
Mr. Engleburght. Did you have a record of those comparisons of chronometers after you came back?
Capt. Peart. I did not.
Mr. Engleburght. As to any astronomical observations made up north, to be complete the chronometer comparisons would be a part of the essential thing in making careful calculations?
Capt. Peart. They would be a part of the final discussion and reduction of those observations.
Mr. Engleburght. Have you got the chronometer comparisons now? Capt. Peart. I have not.
Mr. Engleburght. I will state that they are in the record of the Coast Survey memorandum.
Mr. Rogleburght. I will state that they are in the record of the Coast Survey memorandum.
Mr. Rogleburght. I will state that they are in the record of the Coast Survey memorandum.
Mr. Rogleburght. I will state that they are in the record of the Coast Survey memorandum.
Mr. Rogleburght. I will state that they are in the record of the Capt. Peart. Not precisely, no; the photographs were made at different times; as I had opportunity.
Mr. ROBERTS. Vou arrived about noon time on the 6th of April?
Capt. Peart. I should say that they were.
Mr. ROBERTS. Were any of them made that day?
Capt. Peart. I should say that they were.
Mr. ROBERTS. Were any of them made that day?
Capt. Peart. I should say that some of those photographs were made effore you had made your astronomical observations or afterwards?
Capt. Peart. I should say that some of those photographs were made. In the flour that were pointed out in the book; those are the particular ones I am talking about. I wanted to identify those particular ones. Capt. Peart. They were taken after 8 o'clock of the 6th; I can say that. I do not know that I can recall the precise time, other than to say that they were taken after 8 o'cloc

find the first distance mentioned is 30 or 25 miles, and a statement that the Eskimos estimated that you had traveled 35 miles that first march.

Capt. Peary. They thought the march was equivalent to a distance near the ship, which was in reality about 35 miles. I do not mean to say that the Eskimos said to me: "We think we have traveled 35 miles"; but they said, "We think our march to-day has been equivalent to the march from the Rosecelt to Porter Bay."

Mr. Roberts But you said that you think you traveled 30 miles, but in order to be conservative you call it 25 miles. I am not giving the exact language of the book, but that was the summary.

Capt. Peary. Yes.

Mr. Roberts. The next mention in the narrative of the distance traveled is 20 miles. Then the next as I find is a distance of 25 miles from the pole. You stopped at some camp 35 miles from the pole?

Capt. Peary. Yes.

Mr. Roberts. Then the final distance mentioned is 30 miles. So in the narrative you give the distances traveled on three marches, and two marches you do not give any distance.

Capt. Peary. It is not stated there?

Mr. Roberts. No.

Capt. Peary. I do not recall.

Mr. Roberts. No.

Capt. Peary. I do not recall.

Mr. Roberts. No.

in this pamphlet I find that on pages 18 and 19 that you estimate your first march 10 hours, 25 miles; the second, 20 miles in 10 hours; the third. 10 hours, 20 miles; the fourth, without mentioning the hours, 25 miles or more; and the last 12 hours that you made 30 miles. I understood you also to say that Camp Bartlett was a distance of 133 geographic miles from the pole?

Capt. Peary. From the pole; yes.

Mr. Roberts. Now, let me ask you, how could you give the distances traveled for each of those five days in this pamphlet and in the book published later you did not give it?

Capt. Peary. I should say it was simply a matter of inadvertent omission. I think the figures appear in my journal.

Mr. Roberts. Then, in adding up the distances traveled as mentioned in the pamphlet, as distinguished from the book, I find that these five marches, two of them 20 miles each, two 25 miles, and one 30, total 120 miles.

Capt. Peary. One of those 20 miles is a typographical error in that pamphlet.

Mr. Roberts. In here?

Capt. Peary. One of those 20 miles is a typographical error in that pamphlet.

Mr. Roberts. In here?
Capt. Peary. Yes.
Mr. Roberts. Does it state that the first is 20 miles?
Capt. Peary. The first was 25.
Mr. Roberts. The second 20?
Capt. Peary. Twenty. And the third is 20.
Mr. Roberts. The third is 20.
Capt. Peary. The third is 20.
Capt. Peary. The third is 20.
Capt. Peary. The third is given 20 in the pamphlet, and that is a typographical error or an error of transmission.
Mr. Roberts. And that should be what?
Capt. Peary. Twenty-five miles.
Mr. Roberts. Then, calling that 25 miles, that puts you 125 miles from Camp Bartlett, or 8 miles south of the pole, if I may use that term, south—8 miles away from the pole?
Capt. Peary. Yes.
Mr. Roberts. And yet Camp Jesup, where you stopped at the end of those marches, places you within about 3½ miles of the pole. So there was an error somewhere of 5 miles or more.
Mr. Hobson. The last was by observation.
Mr. Butler. Can you find out how many hours they actually traveled after they left Bartlett camp until the end of the fifth day?
Mr. Roberts. I think with one exception, this does give the number of hours of travel, but on that fourth march I did not find any mention of the number of hours of travel; but I do find the statement 25 miles or more was made. If it is material, the speed averaged from 2 miles to 2½ per hour.
Mr. Butler. After they left Bartlett until the end of the second day?
Mr. Roberts. Taking four of the marches, it averaged 2½ miles of

from 2 miles to 2½ per hour.

Mr. Butler. After they left Bartlett until the end of the second day?

Mr. Roberts. Taking four of the marches, it averaged 2½ miles of actual traveling. Now, there is one point I forgot when I was asking some questions before: I would like to go into the examination of your records made by the Geographic Society committee, if you have no objection. I would like to have from you just what was said and done. Let me premise that by asking you this question: Did you ask, directly or indirectly, the Geographic Society to pass upon your record; in other words, was the initiative taken by you to get some reports on the records of your trip?

Capt. Pearx. No.

Mr. Roberts. It came from other parties; you were invited by the Geographic Society to present your records?

Capt. Pearx. I was.

Mr. Roberts. I understand you first sent them through a Mr. Nichols, a statement of some sort, sent it from Portland or somewhere in Maine. Is that the fact?

Capt. Pearx. I sent them papers; yes.

Mr. Roberts. Do you object to telling us what those papers were?

Capt. Pearx Well, I will suggest as to that that the members of that subcommittee who had those papers—and it is probably on their records—could give that information with absolute accuracy. I don't know that I have a memorandum of what those papers were.

Mr. Roberts. I would say in reply to that that we sought those papers from that committee last spring, and they declined to give them to us on the ground that they were under a certain injunction as to secrecy and could not give them out. That is why I asked you about them.

Capt. Pearx. I would prefer that that question would be taken up with the subcommittee—

them.

Capt. Peary. I would prefer that that question would be taken up with the subcommittee—

Mr. Robers. I am not asking you as to the subcommittee, but whether you sent them.

Capt. Peary (continuing). As to their records, the record of what was sent to them, and what their examination was.

Mr. Robers. Have you any record of what you sent by Mr. Nichols?

Capt. Peary. I can not say whether I have or not; I will look and see.

Capt. Peary. I can not say whether I have or not; I will look and see.

Mr. Roberts. You knew at that time, of course, that there was a question looming up in the public mind as to the truth of the claims made by Dr. Cook, and also that there was some question in the public mind as to whether you had obtained the pole.

Capt. Peary. The controversy was on.

Mr. Roberts. You knew a controversy was on at the time you were asked to submit your proofs to the Geographic Society?

Capt. Peary. Yes.

Mr. Roberts. In reply to that request of the Geographic Society you sent them something by Mr. Nichols?

Capt. Peary. Yes.

Mr. Roberts. And you do not wish to tell us now what it was?

Capt. Peary. I could not tell you, that I know of, now.

Mr. Roberts. And you did not keep any copy of it?

Capt. Peary. And I would prefer, as I said, that the question as to what was said to the committee and what action they took would be put to the committee.

Mr. Roberts. As long as you have not copies of it and, as I understand it, you do not want to trust your memory to tell us just what you sent, we will go on a step. Did the Geographic Society's committee act upon that information you sent by Mr. Nichols at that time?

Capt. Peary. How far they acted I can not tell you of-hand.

Mr. Roberts. What did you next hear from that committee, after sending them those documents or that information or whatever it was that you did send?

Capt. Peary. I can not say that I heard from the committee, after sending them those documents or that information or whatever it was that you did send?

Capt. Peary. That I come on and meet the committee.

Mr. Roberts. How did you get that request?

Capt. Peary. That I can hardly say whether by wire or letter, and I do not recall from whom the request came.

Mr. Roberts. How did you get that request?

Capt. Peary. Not that I recall; no.

Mr. Roberts. How did you get that request?

Capt. Peary. Not that I recall; no.

Mr. Roberts. How did you get that request?

Capt. Peary. Not that I recall; no.

Mr. Robert

the committee, when they requested you to come and bring your originals?

Capt. Pearr. I thought when I sent my material to the committee that I would come before the committee later with my instruments

and my notebooks.

Mr. Roberts. That is, then, you did not expect that the data that you sent by Mr. Nichols would be sufficient—

Capt. Peary. Because it was not all of my records.

Mr. Roberts. Did it purport to be a part of the record?

Capt. Peary. Yes.

Mr. Roberts. It purported to be only a part, and put them on notice—

Capt. Peary. That I was ready to appear personally before them. Mr. Roberts. There was a statement of that sort contained in it,

Capt. Peary. That I was ready to appear personally before them.
Mr. Roberts. There was a statement of that sort contained in it,
was there?
Capt. Peary. That would be my recollection. I know the idea was
that I was ready to appear before them.
Mr. Roberts. You got a request or an invitation to come down. Do
you recollect how that was worded; what they wanted you to
Capt. Peary. I do not, but probably I have the communication,
whether a telegram or a letter.
Mr. Roberts. In response to that you came down?
Capt. Peary. I did.
Mr. Roberts. In response to that you came down?
Capt. Peary. I brought with me my instruments and the material
that I have here to-day.
Mr. Roberts. Did you bring any more than you have shown the committee thus far?
Capt. Peary. I brought all of my photographs, or nearly all of them,
and, I think, my negatives. I am not sure of that.
Mr. Roberts. What time did you reach the city, Mr. Peary?
Capt. Peary. I could not say.
Mr. Roberts. Did you get here in the morning?
Capt. Peary. I came from Boston, I should say, on the Congressional
Limited, but what time I got in I could not say.
Mr. Roberts. If you had luck, and did not get hung up on the river,
you would get here the next morning?
Capt. Peary. Yes; I got here sometime the next day.
Mr. Roberts. What did you do when you arrived in the city; where
did you go?
Capt. Peary. I do not recall what my movements were.
Mr. Roberts. Perhaps I will ask some leading questions, as the
lawyers say, and suggest in my question the answer. You went to the
Geographical Society's rooms sometime in the forenoon?
Capt. Peary. I do not remember when I went there. The members
of the board can tell.
Mr. Roberts. You went to the Geographical Society's rooms?
Capt. Peary. That I can not say.
Mr. Roberts. You went to the Geographical Society's rooms?
Capt. Peary. That I can not say.
Mr. Roberts. Well, let me ask this question: Where did you meet
the committee that had been appointed to investigate?
Capt. Peary. The meeting of the committee, but where did you meet t

Mr. Roberts. No; where did you meet them? I am not asking the place of the meeting of the committee, but where did you meet the committee or any of its members?

Capt. Pears. There, as I recall it. The members of that committee

Capt. Pearr. There, as I recall it. The members of that committee can tell you.

Mr. Roberts. I would like to have the best recollection you have about when you first saw any of the members of the committee, and

Capt. Peary. That can be put down. I will endeavor to answer

Capt. Peary. That can be put down. I will endeavor to answer that—
Mr. Roberts. No; I want to get your recollection now.
Capt. Peary. I do not recall about that, about my meeting any members of the committee.
Mr. Roberts. You would not want to say that you did not meet two of the members of the committee at the room of the Geographical Society, would you?
Capt. Peary. I would not want to say I did or did not.
Mr. Roberts. Well, we will go a step further. You did finally go to the house of Admiral Chester?
Capt. Peary. I want to the house of Admiral Chester.
Mr. Roberts. And three members of that subcommittee were there with you?

Mr. Roberts. And three members of that subcommittee were there with you?

Capt. Peary. They were; yes.
Mr. Roberts. Or arrived soon after you arrived?

Capt. Peary. Yes.
Mr. Roberts. You are not certain just how you all got there?

Capt. Peary. No.
Mr. Roberts. Can you give us anything definite as to the time of day you got there?

Capt. Peary. No; I could not.
Mr. Roberts. Before lunch or after?

Capt. Peary. No.
Mr. Roberts. You could not tell that?

Capt. Peary. No.
Mr. Roberts. Can you recall how long you were there?

Capt. Peary. Until sometime in the evening.
Mr. Roberts. What did you do while there with the committee?
I want to find out how this examination of the proofs was made. That is what I am trying to get at, Mr. Peary.

Capt. Peary. There again, as the members of the committee are accessible, I would prefer to have them take that up.
Mr. Roberts. No; I want to have your recollection, if you can give it.

Capt. Peary. I recall that I was there at Admiral Chester's house

Mr. Roberts. No; I want to have your recollection, if you can give it.

Capt. Peary. I recall that I was there at Admiral Chester's house with the members of the committee, and some others. I think, came in in addition to the members of the subcommittee, and I remember, too, that I was there until sometime in the evening; I could not say how late.

Mr. Roberts. Have you exhibited to the subcommittee that original memoranda that you have shown us? Did they read it?

Capt. Peary. This book?

Mr. Roberts. Yes: that you have shown us.

Capt. Peary. I think that is covered in the hearing of yesterday or the day before.

Capt. PEARY. I think that is covered in the hearing of yesterday of the day before.

Mr. Roberts. That you exhibited it to that committee?
Capt. PEARY. That I exhibited it to the committee.

Mr. Roberts. And they read it?
Capt. PEARY. How much the different members of the committee read I can not say

Mr. Roberts. And you submitted the data of your astronomical observations?

Capt. Prary. That I had there.
Mr. Roberts. You did submit at that time?
Capt. Prary. That is my impression. I had it there with me, and I presume they saw portions of it, perhaps all of it.
Mr. Roberts. Did they verify any of the computations in your presence; that is figure over again the necessary computations?
Capt. Prary. The only thing that I can say is that I think Prof. Gannett was making some figures. Whether he carried out the full computations or not, I can not say.
Mr. Roberts. Do you recall Admiral Chester going over the astronomical computations?
Capt. Prary. I remember Admiral Chester having a chart showing the projection of the sun.
Mr. Roberts. How many hours would you say. as the best estimate you can give, you were there with that committee?
Capt. Prary. Well, I should say that I was there the greater portion of the day.
Mr. Roberts. I don't know that we have it here. Do you recall when it was that you were there? Do you recall the month or the day?
Capt. Prary. It was sometime in October, I should say.

Capt. Peary. It was sometime in October, I should say.

Mr. Roberts. Did you bring with you to Admiral Chester's house your instruments?

Mr. Roberts. Did you bring with you to Admiral Chester's house your instruments?

Capt. Peary. No.
Mr. Roberts. Where were they?
Capt. Peary. They were at the station.
Mr. Roberts. Did the committee see those instruments?
Capt. Peary. They did.
Mr. Roberts. Did they see them? Where did they see them?
Capt. Peary. At the station.
Mr. Roberts. Did you go with them?
Capt. Peary. I did.
Mr. Roberts. Do you recall what time you got to the station?
Capt. Peary. No, sir, I do not, except it was pretty well along in the evening.
Mr. Roberts. It was after dark?
Capt. Peary. It was after dark.
Mr. Roberts. When you got to the station what did you or the committee do with regard to the instruments?
Capt. Peary. I beg your pardon, what was that?
Mr. Roberts. First, bow did the instruments come down?
Capt. Peary. They came in a trunk.
Mr. Roberts. Your trunk?
Capt. Peary. Yes.
Mr. Roberts. After you reached the station and found the trunk what did you and the committee do with regard to the instruments?
Capt. Peary. I should say that we opened the trunk there in the station.
Mr. Roberts. That is, in the baggage room of the station? station

Mr. ROBERTS. That is, in the baggage room of the station?

Mr. Roberts. That is, in the baggage room of the station?
Capt. Peart. Yes.
Mr. Roberts. Were the instruments all taken out?
Capt. Peart. That I could not say. Members of the committee will probably remember that better than I.
Mr. Roberts. Well, you do not have any recollection of whether they took them out and examined them?
Capt. Peart. Some were taken out, I should say; whether all were taken out I could not say.
Mr. Roberts. Was any test of those instruments made by any member of the committee to ascertain whether or not the instruments were accurate?
Capt. Peart. That I could not say.

Capt. Pears. That I could not say.
I should imagine that it would not be possible to make tests there.
Mr. Roberts. Were those instruments ever in the possession of the committee other than the inspection at the station?
Capt. Pears. Not to my knowledge.
Mr. Roberts. Has this original memorandum you read from ever been left in the hands of the committee?
Capt. Pears. No.
Mr. Roberts. Have they ever had copies of it?
Capt. Pears. When did they get copies?
Capt. Pears. That I can not say.
Mr. Roberts. Before or after they had made a report to the society?
Capt. Pears. That I could not say.

clety?

Capt. Pearr. That I could not say.

Mr. BUTLER. The end of your fifth day, after you left what we have termed here Camp Bartlett, what was the condition of the atmosphere; how far do you suppose you could see, what distance?

Capt. Pearr. At Camp Bartlett?

Mr. BUTLER. At the end of your fifth day, when you were near the pole at Camp Jesup, we will call it, what distance do you suppose you could see with the naked eye?

Capt. Pearr. We could see on the ice as far as the visual horizon would permit.

Mr. BUTLER. What distance was that, in miles?

Capt. Pearr. If we were 20 feet above the sea level it would be probably 9 miles.

Mr. BUTLER. You could see 9 miles?

probably 9 miles.

Mr. BUTLER. You could see 9 miles?
Capt PEARY. That is an estimate.
Mr. DAWSON. Could you tell me, for my information, about what latitude north at the time you were up there at that period of the year the condition of all daylight prevailed?
Capt. PEARY. I beg your pardon. Mr. Dawson.
Mr. DAWSON. About what latitude does this condition of no night

Mr. Dawson. About what latitude does this condition of no night appear?

Capt. Peary. Anywhere within the Arctic Circle there is a greater or less period of constant daylight.

Mr. Dawson is the condition of daylight practically the same, other conditions being the same, throughout the 24 hours?

Capt. Peary. If the sun is continuously above the horizon; yes, Of course, there is a period when the sun is below the horizon; that is, the transition from the winter night to the summer day is through a time when there is alternating night and day. The sun will be below the horizon part of the time, but after the sun gets above the horizon continuously then the light is essentially the same throughout the 24 hours.

Mr. Dawson. In the course of your trip, when you were in this condition of perpetual day, for how many periods of 24 hours; that is, how many calendar days were you in this perpetual daylight; was it all the way from Camp Columbia, up and back?

Capt. Peary. Not from Camp Columbia; no. From about the 26th of March, where we were, there was constant daylight from there to the pole and back.

Mr. Bayes. Did you select this time of year with reference to its being most advantageous?
Capt. Peary. No: I started on my sledge trip at the earliest possible moment we could travel, with the first returning light, leaving the ship the 15th of February.

Mr. Buyler. Leaving the Roosevelt on the 15th of February?
Capt. Peary. Yes.

Mr. Roberts. Just one question or two I forgot. You spoke of submitting copies of your records to the Royal Geographic Society of London. Did they request you to do so?
Capt. Peary. I was asked if I would bring my records with me.

Mr. Roberts. On what occasion?
Capt. Peary. When I went over there; I stated that I would bring them and submit them to the society.

Mr. Roberts. Did you take the originals?
Capt. Peary. I did.

Mr. Roberts. But you submitted copies?
Capt. Peary. I submitted copies.

Mr. Roberts. That was after the award of the medal?
Capt. Peary. Has any other geographic or scientific body requested you to submit proofs?
Capt. Peary. No; not that I recall.

Mr. Roberts. Has any other geographic or scientific body requested you to submit proofs?
Capt. Peary. I do not recall that I have.

TESTIMONY OF MR. O. H. TITTMANN.

Mr. Bayes. Are you the Superintendent of the Coast and Geodetic

TESTIMONY OF MR. O. H. TITTMANN.

Mr. BATES. Are you the Superintendent of the Coast and Geodetic

Mr. Bates. Are you the september of your bureau Messrs. Hugh Mr. Tittmann. I am.
Mr. Bates. Have you in the employ of your bureau Messrs. Hugh Mitchell and C. R. Duval.
Mr. Tittmann. Yes, sir.
Mr. Bates. What are they, what is their business?
Mr. Tittmann. They are professional computers.
Mr. Bates. As the head of that bureau, what would you say as to their efficiency in that line of work?
Mr. Tittmann. I think they are unsurpassed anywhere in ability or experience.

the clock error and of the observer's being off the meridian as much as 5 miles would decrease this latitude by about 28".

"IV. Observations by Peary at Camp Jesup. A snapshot of the sun, a single altitude of one limb, was obtained on April 6, when the sun was on meridian 67½" west. The principal value of this observation is to check the observations of the next day, April 7, when the sun was on meridian 67½" west. The principal value of this observation is to check the observations of the next day, April 7, when the sun was on determination of the geographic position of Camp Jesup, as follows:

"Latitude 89° 55' 23".

"Longitude 137° 00' west.

"This places Camp Jesup 4.6 geographic miles from the North Pole.

"This latitude is not sensitive to errors of the clock, the clock correction of 10 minutes changing the latitude by only 5" or 6". Errors of observation in measuring altitude, while entering more strongly into the result, are apt to work against one another and minimize their combined effect. It is probable that this position is not in error by more than 2 geographic miles.

"After taking the observations at noon of the 6th at Camp Jesup, the expedition marched straight ahead 10 geographic miles and took a set of observations on the sun, the time being midnight, sixtieth meridian (west) time. This line of travel has been plotted, assuming that its direction is directly opposite to the direction of the sun when the noonsight of April 6 was obtained. Assuming a longitude from the plotting made, and computing the latitude from the observations, we get the latitude of point of observations of April 6 midnight equal to 89° 49°, which may be in doubt by as much as 3 miles. This agrees satisfactorily with 89° 504' which was scaled off the map.

"On the morning of the 7th, when observations showed that Camp Jesup was probably in the direction of Bering Sea from the pole, a march of 8 miles was made in the direction of the sun, under the belief it was being viewed directly over the pole. Computations of the azim

two, assuming that Camp Jesup was about in the longitude that these others gave, it determined a latitude within 2 or 3 miles of what the other two gave—

Mr. ROBERTS. You say a single observation on a celestial body does not give you a position?

Mr. MITCHELL. Yes.

Mr. ROBERTS. And yet you take two and it gives you a position?

Mr. MITCHELL. Yes; but it was not comparable with the others for accuracy. And here was a third one, was it not?

Mr. MITCHELL. Yes; but it was not comparable with the others for accuracy. And yet it agreed with them within the limit of what you might call the accuracy of the observation.

Mr. ROBERTS. It was inaccurate, that first one?

Mr. MITCHELL. It was more inaccurate than the other.

Mr. HOBERTS. Were they inaccurate?

Mr. MITCHELL. It was more inaccurate than the other.

Mr. HOBERTS. How do you know how inaccurate they were?

Mr. MITCHELL. It will be sun in the same independent poservations on the 6th and 7th, with the sun in the same independent within 2 or 3 miles. That would be an index that they were pretty nearly right.

Mr. ROBERTS. You had three there.

Mr. MITCHELL. If you have enough you can; if you have only two, you can not.

Mr. ROBERTS. You had three there.

Mr. MITCHELL. If you have enough you can; if you have only two, you can not.

Mr. ROBERTS. You had three there.

Mr. MITCHELL. Well, it is hard to say—

Mr. DAWSON. Did you say the first one was taken under unfavorable conditions?

Mr. MITCHELL. Yes; and it was incomplete. It is not competent to determine the possible error of the complete observations.

Mr. ROBERTS. Thow do you know the conditions were unfavorable on that first observation?

Mr. MITCHELL. Before leaving New York the chronometer was placed, as I understand it from this letter, part of the record, in the hands of Bilss & Co. to have its daily rate determined. That means for them to determine whether it rom this letter, part of the record, in the hands of Bilss & Co. to have its daily rate determined. That means for them to determine whether it w

certain amount and that the average care.

Mr. Roberts. What rate did you use in making your corrections?

Mr. MITCHELL I used the true average rate for that period—

Mr. Roberts. That is the difference between the number of seconds it was slow on the start and the number of minutes it was fast when it got back.

Mr. MITCHELL. I have forgotten whether it was slow or fast on the start.

Mr. MITCHELL. I have forgotten whether it was slow or fast on the start.

Mr. ROBERTS. Can you tell why that clock changed its habits of life so suddenly and remarkably?

Mr. MITCHELL. Well, there is nothing remarkable about it. There has never been a chronometer that did not have a rate: even in the most precise work we do it is necessary to deduce a rate, and of course, the question of when that changes its rate is a matter of assumption. But clocks are subject to temperature and handling, and the best we can do in a case like that, when we have only two comparisons, is to assume that the rate between those two comparisons is constant.

Mr. ROBERTS. Is it not usual for a watch or chronometer or clock that is losing to continue to lose?

Mr. MITCHELL. No.

Mr. ROBERTS. It will of its own accord turn around and begin to gain, will it?

Mr. MITCHELL. In our most precise longitude work the same chronometer will have a plus rate one night and a minus rate the next night.

nometer will have a plus rate one night and a minus rate the next night.

Mr. Roberts. What was the difference between the extreme and the average rate that you used? You used the average. What is the difference between that and the extreme?

Mr. MITCHELL. I do not catch the question.

Mr. Roberts. For instance, as I understand it, when the chromometer came back it was, we will assume, five minutes fast.

Mr. MITCHELL. The correction we used at the time of computation.

Mr. Horson. You are talking about the error and he is talking about the rate.

Mr. Mitchell (continuing). Was a correction of 10 minutes.

Mr. Roberts. I am trying to get the thing clear for myself and for the record. As I understand, when the chronometer was rated it was

Mr. Roberts. I am trying to get the thing clear for myself and for the record. As I understand, when the chronometer was rated it was losing.

Mr. Mitchell. Yes.

Mr. Roberts. And it was predicted that it would lose so many seconds per day?

Mr. Mitchell. Yes.

Mr. Roberts. Then at some period it turned around and began to gain, so that when the chronometer came back to Bliss & Co. it was found to be—can you tell us how many minutes fast?

Mr. Mitchell. No; I can not. It is a matter of record in that letter, I believe.

Mr. Roberts. How much faster was it when the clock came back?

Mr. Mitchell. That is in the Bliss & Co. letter; it is in the record that the Coast Survey sent over.

Mr. ROBERTS. You do not recall, then, how much that chronometer was fast?

Mr. MITCHELL. Not at the first comparison. I remember what we determined to be the first correction to the chronometer at the time of the observations. That is contained in that paper in front of you.

Mr. ROBERTS. You had to have a starting point to base that on?

Mr. MITCHELL. Yes.

Mr. ROBERTS. And that must have been the extreme variations of that chronometer?

Mr. ROBBITS. And that must have been the extreme variations of that chronometer?

Mr. Mitchell. If that letter can be found I think your question will be answered there in several lines.

Mr. ROBBITS. Well, we can not find the letter, and I would like to have you answer it, if you will.

Mr. Mitchell. I can not remember that; I can not answer that.

Mr. Hobson. It is clear that he used the average rate up to that time.

Mr. MITCHELL. I can not remember that; I can not answer that.

Mr. Horson. It is clear that he used the average rate up to that time.

Mr. Roberts. That is what I am getting at; but I want to know how much it varied from the actual time of the chronometer. That is what I am after.

Mr. Hobson. He has to take the time of the chronometer—

Mr. Hobson. What difference would it make in an observation, taken at the greatest variation of that chronometer from true time, when you applied what you called an average rate to it? That is, what difference would it make in locating a spot on the surface of the earth?

Mr. MITCHELL. I made the computation first without applying that chronometer correction. I did not have it at first. Later I applied that chronometer correction of minus 10 minutes, and the latitude was changed by the introduction of that chronometer correction of 10 minutes—the change was in the neighborhood of 5 seconds.

Mr. Roberts. What does that mean in geographic miles?

Mr. Roberts. And that was the result of the assumed average rate, as you term it, that you applied? When you come right down to it, that average rate was a matter of guesswork, was it not?

Mr. ROBERTS. Well, we all guess within limits, do we not?

Mr. ROBERTS. Well, we all guess within limits, do we not?

Mr. ROBERTS. Well, we all guess within limits, do the rating of those chronometers for the purpose of using them in working up those detail records?

Mr. MITCHELL. Yes,

chronometers for the purpose of using them in working up those detail records?

Mr. Mitchell. Yes.

Mr. Englebright. It was not for the purpose of the subject we have under consideration, but for another purpose?

Mr. Mitchell. Yes; it was for another purpose.

Mr. Butler. Mr. Mitchell has been vouched for and that satisfied

Mr. Butler. Mr. Mitchell has been vouched for and that satisfied me—
Mr. Mitchell, I do not know whether I can live up to Dr. Tittmann's recommendation—
Mr. Butler. But I will ask you how long you have been making such computations?
Mr. Mitchell. I have been a computer in the Coast and Geodetic Survey for seven years, and as such have handled a large number of the miscellaneous computations as well as the routine computations. They have involved a great many computations of different classes.
Mr. Butler. Suppose these figures submitted to you by Capt. Peary had been made here in Washington or in New York or Boston, how could you have made the detection?
Mr. Mitchell. Well, that is rather a difficult question to answer. I believe it is altogether a matter of experience that any dishonesty in observations or computations will show up in the reduction of those observations or computations. I can not say that at a particular point a certain figure would show that something was wrong; I can not say that. It is purely a matter of experience in the past.
Mr. Dawsov. But at the same time it will show?
Mr. Butler. At some point of the work it will come out; yes. That is a belief. That is not a mathematical demonstration.
Mr. Butler. How about this map?
Mr. Hobson, I request that this be maintained for use in the committee and on the floor of the House, or even a larger copy made of it for that purpose, if there is no objection of Mr. Tittmann.
Mr. Speaker, the foregoing is all the so-called evidence or

Mr. Speaker, the foregoing is all the so-called evidence or proof presented by Robert E. Peary or any member of his expedition or any of his friends in support of his claim to the discovery of the North Pole. The flimsy meretricious nature of this so-called evidence is so plainly apparent that, instead of proving Peary's claim, it shows finally and conclusively that Robert E. Peary did not discover, attain, or reach the North

Abraham Lincoln.

EXTENSION OF REMARKS

HON. JOSEPH TAGGART. OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 12, 1916.

Mr. TAGGART. Mr. Speaker, on this birthday of Abraham Lincoln it gives me pleasure to put into the Record a memorial of some of the men who served in the mighty Army that he commanded. We have read and we have heard harsh words applied to men who were born in a different land. We have heard them spoken of on the floor of this House as if they were the enemies of the United States and were so excited about the Europea war that they forgot their loyalty to their adopted country. They have been called "hyphenated Americans." A former President of the United States claims the distinction of being the first to use this epithet.

This is a day in which we should reflect and look back into the history of our country. This country is the Old World transplanted in the new. Men came to America to make it a home for themselves and their children for all time to come. This is particularly true of the Germans. One of the secrets of their great success is that they not only came to stay, but when once settled they stayed in one place. They are a permanent people.

In 1861 the preservation of this Government depended on the men who went to the front at the call of Abraham Lincoln.

We needed soldiers then, and that great military people, whose achievements have filled the world with wonder, responded with unfailing loyalty to the call for volunteers. There were less than 8,000 Germans in Kansas in 1860, including men, women, and children. The record shows that no other class of men enlisted more promptly than they. The First Kansas Volunteer Infantry was mustered into the service of the United States within six weeks after the first call. In two weeks more the men of the First were marching toward the front, and on August 10, 1861, when they were less than four months in the service, they took a glorious part in the first great battle of the Civil War in the West, at Wilsons Creek, near Springfield, Mo. For five hours the First and Second Kansas Infantry sustained a terrible fire in open ground from both infantry and artillery. Out of less than 800 men engaged the First lost 77 killed and 204 wounded. It was in the midst of this regiment that Brig. Gen. Nathaniel Lyon, who commanded the Union forces, fell gallantly in defense of his country. He was descended from the Puritan fathers and belonged to one of the families that first settled Connecticut. In that forgetfulness that is our besetting sin we have failed to mark the spot where this hero and nearly a thousand of the men who were with him gave their lives under

The Regular Army officers who were present were lavish in the compliments that they bestowed on the new regiment. They

said that the men of Kansas fought like veterans.

The First Kansas Infantry was typical of many of the regiments that were raised in the West. They were like the West of that day:

For here the exile met from every clime, And spoke in friendship every distant tongue; Men from the blood of warring Europe sprung Were here divided by the running brook.

It gives me pleasure to insert in the Record the names of 141 officers and enlisted men of the First Kansas Infantry who answered the first call for volunteers in 1861 and were present at the first great battle for the Union west of the Mississippi River, at Wilsons Creek, near Springfield, Mo., August 10, 1861.

The records of these men, as shown by the report of the adjutant general of Kansas, 1864, were honest and faithful. Their nativity is carefully indicated in the same report. The names are not all spelled correctly in the Adjutant General's report. Those names were not as familiar then as they are now:

COMMISSIONED OFFICERS, FIRST KANSAS INFANTRY, WHO WERE NATIVES OF GERMANY.

Capt. Gustavus Zesch, Lieut. Francis Becker, Lieut. Charles Dressel, Lieut. Frederick W. Patz, Lieut. Henry Sarstedt, Lieut. Emil Umfried.

Charles Anacker, Louis Asher, Adolph Baun, Frederick Becker, Thomas Behne, Peter Bender, Ernest Benedict, Henry Berger, C. Berntzen, George Bissman, Charles F. Boehme, Frederick Boehme, Henry Boehme, Caesar Boehme, Reinhold Brandt, Fred Breet, Christian Brunke, Gustavus Conrade, Frederick Daub, Charles D. Dauphin, John Draher, Antoine Dresback, Ferdinand Duerr, Ferdinand Dupskie, Otto Eckert, Otto Fabricus (Company F), Otto Fabricus (Company F), Charles Fillweber, Alex. Foerstner, Albert Formowski, Charles Franke, Henry Franke, Fred Friedriskie, Charles F. Fritton, Joseph Gornett, Ferdinand Gottlieb, Edward Gottzhow, Francis J. Grimm, Martin Grubber, Christian Grund, Frank Gunther, Francis Hackel, Peter J. Hager, Jacob Haiter, Rudolph Hanni, Andrew Hannibal, Gottlieb Hamrith, F. Heshenbeiner, Henry Hiller, Henry Hinck, Leopold Hipp, John Hitzman, Gotthardt Hoel, Frederick Hoffman, H. Hoffsommer, Frederick Kaler, A. Kaller, John Krestel, H. Kettlegerdes, Peter Killian, Chris. Kintzle, George Kintzel, Christian Klein, Adam Knauber, George Kneupfer, Philip Knoblock, Bartholomy Koch, John Kotz, Frederick Kousserow, John Krengel, Theodore Kroll, Andrew Kruth, John Kruth, C. Landenberger, Henry Kempke, Richard D. Lender, George Linderman, Charles Linder, Henry Lorenzen, Frederick Luetgens, Frederick Mahn, William Mamby (Mambe), Mathias Marshall, George Mattern, Peter May, Christian Meyer,

Laurenz Miller, Frank Moritz, A. E. Moritz, John Mueller, Joseph Munzenmayer, Benedist Neuner, Charles Otto, Albert Permosky, Claus Peters, August Rathman, Charles Rauchfoss, John Reheis, Julius Relhan, Joseph Repp, Adam Reinhol, Charles Rinecke, William Rinehart, Herman Sabban, Mathais Saile, Frederick Shay (Schee), Andrew Scheid, Peter Schenaw, Peter Schinte, Andrew Schmidt, F. W. Schmidt, George Schmidt, Charles Schneider, Charles Schubye, Conrad Schuechlor, Conrad Schueler, Fred Schultheiss, A. Schumann, Gustav Sels, Louis W. Sherman, Ellas Simon, F. Specolman, George Speiser, Gustavus Straibich, Valentine Subacher, John Treu, Theodore Voeth, Otto Volk, Gottfreid Vollfried, B. Waggoner, Theodore Wagner, Louis Walb, Charles Walter, Henry Warner, Emanuel Weigert, Edward Weigert, Charles Weisenborn, John Woerts, Augustus Wolf, Peter Young.

Fifteen of these brave men proved their devotion to the cause of the Union with their lives in their first battle. They gave us all they had—their brave young lives; and here 1 reverently

record the names of those citizen soldiers.

GERMANS OF THE FIRST KANSAS INFANTRY KILLED IN THE BATTLE OF WILSONS CREEK, MO., AUGUST 10, 1861.

Thomas Behne, Ernest Benedict, Caesar Brandt, Fredetick Daub, George N. Devein, Charles Fillweber, Alex. Forstner, Frank Gunther, Peter Killian, Adam Reinhol, Herman Sabbam, Conrad Schuechlor, Louis G. Sherman (Schurman), Charles Walter, and Edward Weigert.

"Stern history shall not forget the man who flings away his life for truth."

The Eighth Kansas Infantry was enrolled in the autumn of 1861 for three years. The men who enlisted then knew that they were enlisting for a real war. This regiment, like the First, had many different elements in it. It ranks high among the organizations that have served the United States. The Eighth took an active part in every great battle in the West, and if a medal was struck for the survivors it would be proper, if there was room, to place the following names on it:

Perryville, Chickamauga, Orchard Knob, Mission Ridge, Kenesaw Mountain, Peach Tree Creek, Atlanta, Nashville, and a half dozen other engagements—every one of greater consequence

than San Juan Hill.

It is my pleasure also to insert in the Record the names of 134 officers and men who rendered faithful service in the Eighth Kansas Infantry, and all of whom, as shown by the record, were natives of Germany:

COMMISSIONED OFFICERS, EIGHTH KANSAS INFANTRY.

Lieut, Col. Edward F. Schneider, Capt. Ferdinand A. Berger, Capt. Claudius Kiefer, Lieut, William Becker, and Lieut, Zach, Burchardt,

ENLISTED MEN EIGHTH KANSAS INFANTRY.

COMPANY A.

Fred M. Berger, Charles Engleman, Christian Harrold, Augustus Miller, Theodore Otter, Jacob Rider.

COMPANY B.

Burnhardt Aring, John Binger (color bearer, succeeding Charles Rovohl), John P. Buckler, George Boss, Charles Brenter, Henry Dahms, Gustavus Deacon, John Dick, Henry Derris, Frederick Frank, John Glaser, John Ganski, Joseph Gans, Casper Geyer, Peter Ginther, August Golsch, John Griesel, William Haack, Henry Hegner, Henry Hagen, Jacob Hartman, Frederick Hegele, Louis Hepp, Georges Hess, Frank Heyer, Albert Hinzpeter, Peter Hoffman, Christian Kaelber, John Keck, Fred Kempter, Jacob Kenck, Adam Klein, Aubert Kneip, Dionis Kneip, Frederick Kraut, Adolph Kruger, Benedict Kulmus, John Ladenzor, William Melchert, Jacob Mauger, Christian Marx, John Maurer, Emil Peters, Theodore Reck, Charles Ruek, Edward Ruppert, Wendel Ruther, Charles Schmetz, D. Schmitt, Charles Subold, Christian Staudan, Andrew Stalger, Henry Stroth, F. Struckmann, Frederick Sulzer, Augustus Schultz, Phillip Trump, John Ulrick, John H. Ulrick, Franz B. Vogel, Charles Weyel, Charles Waiter, Eugene Wettke, Peter Wettstein, Anton Wideman, Edward Zapp.

COMPANY C.

Barney Blenker, Leonard Boor, G. Brandner, William Becker, John H. Creamer, Henry Gilbert, Edward Hamil, Adam Keutzler, F. Kleeschult, Henry Lushe, Francis Shelling, Augustus Urban, Christian Vogler, Jacob Widmire, Louis Weise.

COMPANY D.

C. M. G. Dusenchor.

COMPANY E.

William Boerst, Frawry Blaise, Henry Bockell, Henry Grümur, Charles Kenntner, Henry Lutby, Henry Naegle, J. H. Peppmire.

COMPANY F.

George Adam Deitz, Andrew Deatrich, Jacob Miller, Charles Nobiles, Jacob Nohles, Peter Walters, Christian Wagner, John

Herman Christell, Christian Herman, Jacob Maitinger, Christian Schwope, Gotlieb Schope, Frederick Weis, John G. Weis, Felix Wentzell.

COMPANY H.

William Helving, Henry Niemeier, Henry Pelstein, Lewis Schmidt.

COMPANY I.

Francis Lisko, Charles Rovohl (color bearer, killed in action at Chickamauga), Martin Snider, Henry Seers, Gottfried Watts. COMPANY K.

Ernest F. Grosche, H. Heiderbreder, August Kosemann, Henry Kerissen, Jacob Kyle, Michael Malter, F. Niederbroker, Henry Ortcutter.

I can not forbear to insert here an account of two color bearers of the Eighth Kansas Infantry as given by their gallant colonel, John A. Martin, who was twice elected governor of The names of these two heroes, Charles O. Rovohl and John Binger, are found in the list that I have inserted.

Kansas. The names of these two heroes, Charles O. Rovohl and John Binger, are found in the list that I have inserted.

A man who might have stood for the original of the principal figure of Rogers's "Last Shot" was Charles O. Rovohl. Tall, erect, compactly built, masterful in strength, with a fine head set on a finely proportioned body, his appearance would have attracted attention in any crowd of men. His soldierly qualities were no less conspicuous, and he was soon chosen for that post of honor and of danger, the regimental color bearer. He had enlisted in Company I, Eighth Kansas, at White Cloud, April 3, 1862; on the 1st of January, 1863, he was promoted to be a corporal; and in August, 1863, he was appointed color bearer of the regiment.

Around him at Chickamauga was a remarkable group of boyish-looking soldiers, the eight corporals constituting the color guard: William E. Wendell, Company E; Thomas Adamson, Company D; John Binger, Company B; George Mathews, Company F; Charles Morgan, Company H; Benjamin Sprouse, Company G; Hugh Turner, Company K; and Allen B. Bozarth, Company H. Rovohl was about 26 years of age; most of his comrades were under 21. Selected, as the color guard always is, from different companies, and with a carefulness inspired by regimental pride, the color bearer and his guard of honor formed a striking group—he tall, powerful, manly, grave, and silent; they boyish, beardless, laughing, chattering, careless, but one and all of them daring and gallant beyond what was common even in those heroic years.

Within an hour after the battle began, Rovohl, the color bearer, was mortally wounded. When he fell his comrades indulged in a fierce dispute as to which of them was entitled to carry the flag. Several claimed it, but Wendell, affirming his scalority of rank as a corporal, secured it. Two of them proposed to carry Rovohl to the surgeons in the rear, but he refused all help, saying: "My life is nothing; keep the flag to the front." Corp. Wendell was soon mortally wounded, and Adamson then t

The grandsons of the survivors of these men of the First and Eighth Kansas Infantry are among us in Kansas. They could fill two regiments. They have the same undaunted fortitude and steadiness that their grandfathers had. We could depend upon them in any emergency. They would never let the flag touch the ground.

Productive Capacity of the United States in Dyestuffs.

EXTENSION OF REMARKS

HON. EBENEZER J. HILL.

OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 12, 1916.

Mr. HILL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter on the productive capacity of the United States in dyestuffs.

The letter is as follows:

NATIONAL ASSOCIATION OF CLOTHIERS, 13 Astor Place, New York, February 4, 1916.

To the Hon. WILLIAM G. REDFIELD,

Secretary of Commerce, Washington, D. C.

MY DEAR MR. SECRETARY: I am addressing you this letter on behalf of the representatives of the various leading organizations, composed of individuals, firms, and corporations, directly interested in and seriously affected by the shortage in this country of the supply of dyes made from coal-tar products. These representatives of organizations formed themselves into a joint conference committee.

I trust you will accept this communication in the spirit in which it is written. The members in all the organizations referred to are inspired by the same desire which I believe inspires you—to help the country out of the dilemma in which it finds itself through a cause not of its own making and to provide for such protection as may be necessary for the establishment of an American coal-tar dye product industry and for the permanent upbuilding thereof.

In the line of this work the facts have been presented to the officers of the State Department and its foreign trade advisers, as well as to the great department of which you are the honored head. In addition conferences have been held with the official representatives of the British and German Governments, respectively.

These steps were taken in the hope that some arrangement might be made by which there could come to this country a sufficient supply of German dyes to tide over the present crisis, which threatens to become even more serious than it is now.

The joint conference committee also actively supported the bill in the House of Representatives introduced therein by Congressman E. J. Hill, of Connecticut, and known by his name, which is now before the Ways and Means Committee, providing for a tariff which shall suitably protect the American industry.

Frequent conferences have been held with and much valuable data obtained from the officials of your department, and thanks are due for the hearty cooperation which has always been shown not only by yourself, but by Dr. E. E. Pratt, Chief of the Bureau of Foreign and Domestic Commerce; his assistant, Mr. E. A. Brandt; and Dr. Thomas H. Norton, the dyestuff specialist of that bureau.

Those forming the joint conference committee were greatly surprised at reading in the public prints, just after the last visit of the committee to Washington, extracts from a monograph prepared by Dr. Norton in November, 1915, from which it would appear to the average layman that this country was then making practically one-hal

near cells are obtained from Germany in the near future there was no real cells of a light, or not until after such period as the industry should have become perfected in this country, which would not be for a long time.

The statements presented to the Ways and Means Committee and to Government officials were made by practical manufacturers in the industries affected by the existing conditions, such, for instance, as those engaged in the manufacture of domestic dyes, the converters, the manufacturers of cloth and cotton goods of all kinds, of hosiery and underwear, of upholistery, of carpets, of worsted cloths, of clothing, of paper and pulp, of lithographs, of carpets, of chemicals, of paints, olls, and material is a basic factor. These the manufacture of which coloring exactly the conditions affecting their respective industries. They also have first-hand knowledge of the effect of the shortage of dyes, as well as the effect on their respective lines of manufacture of the unsatisfactory substitute dyes to which many of them have been obliged to resort. The situation had, as you know become further complicated by the action of Great Britain in placing an embargo on logwood chips and extract from Janaica and British Honduras. Conditions have been action of Great Britain in placing an embargo on logwood chips and extract from Janaica and British Honduras. Conditions have been. Dr. Norton's paper we summon of that embargo.

Dr. Norton's paper we summon of the embargo on logwood chips and extract from Janaica and British Honduras. Conditions have been any other man in the United States the actual facts in the domestic dyestiff situation. He was also be

"To this end I would ask you to kindly furnish me with a list of the dyestuffs you are at present manufacturing together with quan-titles of the same. In case you consider it inexpedient to furnish me with this detailed information, I would appreciate it even if you would

furnish me with the different classes of dyes you are actually manufacturing together with aggregate amounts of the same. Any information in this line which you will furnish will be held absolutely confidential, as in my report only the total quantities of different classes of dyestuffs will be presented.

"Trusting that you will recognize it to be to your best interests to cooperate with me in this matter and awaiting your prompt reply, 1 am."

Quite a number of these firms have written me in reply and have given me some very satisfactory information. The comments that I have to make on these various companies from their replies or otherwise are as follows:

"The Barrett Mfg. Co.: Make only coal-tar crudes.

"Bayway Chemical Co.: No reply—can obtain no information.

"Baind & McGuire: No reply—can obtain no information.

"Samuel Cabot: Make only crossote preservatives and protective paints—no dyestuff products.

"Isaac Winkler & Co.: Naval stores—no dye products.

"Thomas A. Edison: No dyestuffs—only aniline oil and parapheny-lendiamine—carbolic acid he uses himself for making his phonograph records.

cords.

"Benzol Products Co.: Nitrobenzol and aniline oil—no dyestuffs.

"Midvale Chemical Co.: No reply—can obtain no information.

"American Synthetic Color Co.: Make no products applicable to the xitle industry.

"Blackstone Chemical Works: No reply—can obtain no informa-

tion.

"Paul Weiller (Weiller Mfg. Co.): Small amount of aniline oil.

"Mildlesex Aniline Co.: No reply—can obtain no information; understand they are attempting to make aniline.

"May Chemical Co.: No reply—can obtain no information; understand they are planning to make aniline oil.

"Upton Bros.: No reply—can obtain no information.

"United States Coal Tar Products Co.: Planning to make sulphur black

black.
"Seydel Manufacturing Co.: Making a small amount of aniline oil.
"Chemical Co. of America: No reply—are making a small amount of

aniline oil.

"Butterworth Judson Co.: They have a small aniline plant known as Newark Aniline Co. make phenol; no dyes.

"American Synthetic Dyes: No reply—understand they are at present making only picric acid—are erecting plant for aniline.

"Standard Aniline Products Co.: Make beta naphthol, some paranitraniline and paraphenylenediamine.

"Monsante Chemical Works. No reply—can obtain no information—understand they are making some dinitrochlorbenzol used in manufacture of sulphur black.

"Middlesex Chemical Co.: Have been making some synthetic phenol; not used for dyes; at present in hands of receiver.

"Heller & Merz: No reply; understand they are making small amounts of nigrosine and magenta and soluble blue for paper trade only.

amounts of nigrosine and magenta and only.

"Central Dyestuff Co.: No reply: no information obtainable as to dyes made: understand they are trying to make betanaphthol.

"Consolidated Color & Chemical Co.: No reply; can obtain no information; understand they are planning to make betanaphthol.

"The Pearsite Co.: No reply; can obtain no information; understand this company is not in operation.

"The Federal Dyestuff & Chemical Co.: No reply; understand they are experimenting in manufacture of picric acid and sulphur black; no product as yet.

"The Federal Dyestuff & Chemical Co.: No reply; understand they are experimenting in manufacture of picric acid and sulphur black; no product as yet.

"A Klipstein & Co.: No statement of dye manufacture in this country. "The Dow Chemical Co.: Are expecting to turn out some indigo in July; make no dye products as yet.

"American Cooperative Dyes & Chemical Co. (now the Stanley Anliine Chemical Works): Are making nothing at present. Expect to produce some direct cotton dyes in near future.

"United Securities Dye & Chemical Co.: No reply; can obtain no information.

"W. Beckers Aniline & Chemical Works: Makes about 2,000 tons per year. Chrome mordant colors for wool, acid blues, methyl violet, basic navy blue, and basic black.

"Schoellkopf Aniline & Chemical Works: Makes about 3,500 tons per year. Sixty-five per cent of this consists of cotton blacks and sulphur black, cotton red. cotton blue, cotton green, cotton yellow, and cotton orange. Some wool colors in small amount.

"The Bayer Co.: Makes about 900 tons per year of coal-tar dyes, including soluble blue, Bismarck brown, chrysoldine, and nigrosine.

"The consensus of opinion, both as obtained from buyers of dyestuffs and from the presumed manufacturers, is that there are only three companies in the United States at the present time that are actually producing finished dvestuffs in any quantity worth consideration in a commercial way and for use in the textile industries. These companies are the Schoelikopf Aniline & Chemical Works, at Buffalo, who are now producing at the rate of approximately 3,500 tons of dyestuffs per year, of which 65 per cent consists of blacks, presumably direct cotton black and sulphur black, and the rest is made up of a few other direct cotton dyestuffs and some wool colors. The W. Beckers Aniline & Chemical Works, of Brooklyn, appear to be producing 2,000 tons of dyes per year, principality of chrome mordant colors for wool dyeing based on logwood and gallocyanine and a couple of acid blues and a few basic colors, such as methyl v

Bayer Co., of Rensselaer, are producing about 900 tons of basic dyes chiefly.

"Most of the manufacturers mentioned in Dr. Norton's article, in so far as their producing any materials which may be classed as dyestuff productions, are making only comparatively small quantities of anilline. The Standard Anilline Co., at Wappingers Falls, N. Y., is producing betanapthol and paranitraniline. A number of the companies listed in Dr. Norton's article do not seem to have produced any commercial dyestuffs, such as the Pearsite Co., the Federal Dyestuff & Chemical Co., A. Kilpstein & Co., of West Charleston, the American Cooperative Dyes & Chemical Co., and the United Securities Dye & Chemical Co. In fact, it has been impossible to obtain any information as to the operations of most of these corporations, the general impression being that they are merely paper concerns with an indefinite future, "Heller & Merz, of Newark, N. J., are manufacturing some dyestuffs such as migrosine and some magenta products, but these colors appear to be used exclusively in the paper trade and form a very small amount of the actual demand even in this amount of work. The chief color produced by this firm is ultramarine blue, which is a mineral pigment and is not used in textile dyeing. I am appending herewith the replies I have received from the various concerns, and I am forced to the opin-

does that the only real producers yet in America as finishers of coal tar dyestuffs are the three firms already mentioned, the Schoellkopf Aniline & Chemical Works, of Buffalo; the W. Beckers Aniline & Chemical Works, of Brooklyn; and the Bayer Co., at Rensselaer.

"You will notice that nearly all these manufacturers of coal-tar products agree with us that Dr. Norton's statements are very much exaggerated, and they all claim that it will be necessary for the Government to give some proper protection to the industry in order to allow it to become firmly established.

"In conclusion I would like to say that as a result of my various communications with these manufacturers and from my conversations with several of them and many other people interested in both the consumption and manufacture of dyestuffs, my opinion is that there are at the present time about 0,500 tons of dyestuffs being made in the United States, but this tonnage is confined very largely to a very few colors and includes mostly black dyes. A small quantity of what are known as colors, such as reds, greens, blues, yellows, etc., only are produced, and of the great majority of colors used in wool, silk, and cotton dyeing there are absolutely none as yet made in this country.

"L. M. Matthews."

"J. M. MATTHEWS."

Undoubtedly a great deal of confusion has been created in the public mind by some of the published statements, as taken from the pamphlet prepared by Dr. Norton, well intentioned though they be. The committee believes that you are as much interested as it is in clarifying the atmosphere which has been thus created, and therefore takes great pleasure in submitting to you the report of Dr. Matthews.

With kind regards and expression of high esteem, I beg to remain, Respectfully, yours,

(Signed) DAVID KIRSCHBAUM.

Child Labor.

EXTENSION OF REMARKS

HON. ROBERT M. McCRACKEN,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 2, 1916.

Mr. McCRACKEN. Mr. Speaker, it seems strange, indeed, that it should be necessary in this twentieth century to legislate upon the subject of protection to little children. Man of Galilee said: "Suffer the little children to come unto me and forbid them not, for of such is the Kingdom of Heaven. It seems impossible to believe that there is any man on earth who would dare affront the very footstool of God by compelling little children to give of their health and happiness, yea, their very souls, in order that he might thereby obtain gain. And yet we know we have just such men in parts of the United States or we would not be here to-day trying to shield the children of the Nation from those who would profit by their labor.

Did it ever occur to you how much of the business of this country is done upon the patronage of children. There is the man who sells candy and confectioneries; his business could not exist in a community where there are no children. Then there is the book and stationery man; the larger part of his business comes from children from the grades up to and through the high school. Then there is the picture-show man: how long would his business last in a community where there are no children? What do we see when we go to the county fair and to the circus? Invariably we meet the man who is selling balloons and pink lemonade and a nundred and one other things of no value in themselves, but which attract the eye of the child and induce either him or his parents to separate from a certain amount of coin. I know whereof I speak, for I have four children, ranging from 11 to 16 years, who keep me fully advised of everything that is of interest to them.

John Ruskin said:

There is no wealth but life.

How true it is. The better our children are physically, the better they will be mentally and morally. The world will get the best that there is in the healthy man and woman, and therefore the world is the better for their having lived.

The bill before the House seeks to prohibit interstate commerce in certain of the more flagrant and vicious forms of child It has been shown to us that the laws of the States of North Carolina and South Carolina permit the employement of children 12 years of age to labor in factories as much as 11 hours per day, and that there is no factory inspection whatever in the State of North Carolina. Any father and mother knows that the children of the age of 12 years need proper sleep and that their bodies should have plenty of plain nourishing food. child is so fortunate that he can find employment in the open field, then he might stand as much as 11 hours of not incessant labor without injury to him; but to think of placing a 12-year-old boy or girl in a factory or cotton mill and requiring him to apply his immature body and mind throughout a 10-hour day to a single, monotonous task, often amid noise and vibration, is placing a burden upon him which no State or Government should permit, and if permitted, as we are informed it is, by some States, then it is time for the Federal Government to lay a heavy hand upon the product of any mill or factory which may have such a ruthless disregard for child life.

The dangers to children who are permitted to labor long hours under the conditions described are best stated in a few words

of three noted physicians, whom I quote, as follows:

of three noted physicians, whom I quote, as follows:

Alfred Stengel, M. D.: I am very glad to state for any use my opinion may be in the matter of childhood legislation that I would consider a 10-hour day almost certain to be injurious to the health of an average factory child between 14 and 16 years of age.

J. William White, M. D.: I am unqualifiedly of the opinion that a 10-hour day of indoor work of any description whatever by children between 14 and 16 years of age, is sure to be harmful and to interfere with proper growth and development, both physical and mental. It is equally sure to render them more susceptible to disease, whether acquired de novo or resulting from inherited tendencies.

Charles H. Frazier, M. D.: There can be no doubt in the minds of those who have had anything to do with the physical and mental care of children that to work 10 hours a day in a factory would be injurious to their health, and particularly at a most important time of their lives. If the time allowed by law could be reduced to S hours a day, I am sure we would be accomplishing a great deal for the health of future generations.

There has been much cultiview.

There has been much criticism of the national child-labor committee in this country, but the day has come when the Nation is ready to pay its homage to those noble men and women who early saw the evils of child labor and started out to combat it. Much criticism has come to it, because it has cited a few individual cases. It is the evil which one sees in the individual case that moves individuals and nations to action. It was the single case which inspired Harriet Beecher Stowe to write her famous Uncle Tom's Cabin, yet this one picture, painted in words by a sweet-spirited woman whose heart was bleeding because of the anguish that she felt when she wrote it, moved a Nation to settle once and for all the question of the abolition of human

Dr. Felix Adler, one of the pioneers in the movement for the prohibition of child labor, said at the Child Labor Conference last August in San Francisco that his sense of duty was awakened by a single circumstance that came under his observation. He said it was a case of a man waking up a little boy of 8 years at 4 o'clock in the morning to take him to his work. The season was winter, it snowed hard outside, and it was only with the greatest difficulty that the father succeeded in rousing the little fellow. The child was so drowsy that he almost fell asleep as they were walking. Finally the father took him on his back and carried him to the brickyard where he was to stay at work all day long. "This picture," said the doctor, "of a father carrying the drowsy boy on his shoulder in the cold winter morning and then leaving him in a brickyard to work all day has remained with me as an inoffaceable, and blot on the all day has remained with me as an ineffaceable, ugly blot on the memory.

I have been an advocate of this kind of legislation for the last 10 years, and my interest in it was aroused one day when a case was presented to me while serving in the office of district attorney. In one of the towns of my county I was told that a family had recently moved there from the State of Tennessee. In this family of six people all were adults except one girl about 13, who, the father represented, had been adopted in another State. Some neighbors observed that during the cold weather, when the thermometer registered below zero, the adopted child was required to go down to the creek near the house, cut a hole in the ice, and carry back the water necessary for the family washing; then she and no else washed all day long on an open porch. Naturally, after this had happened two or three times the neighboring women became aroused and demanded, as they had a right to do, that something be done, and they came to me to ascertain if there was not some way that the case might be reached. To my amazement, I found no law upon the statute books which would meet the situation. That one case fixed my determination to bring about the enactment of a child-labor law in Idaho at the next session of the legislature. I

was elected to the Idaho Legislature in 1906, and when I arrived in the capital city I found that Mrs. Bertha Stul' Green, of Mountainhome, who is an able attorney at law, had been authorized by the Federation of Women's Clubs in my State to draft a bill which would prohibit child labor under certain

As soon as the bill was prepared I introduced it, and very soon it was before the house of representatives for debate. Strange as it may seem, there was in the far-off State of Idaho strenuous opposition to it, and in order to save the bill I was obliged to secure its recommital to the judiciary committee, where it was revised to meet the objections which had been urged against it, and finally passed both houses and was signed by the governor. It took work and vigilance on the part of all who were interested in its passage to force its final consideration; and right here I desire to mention the names of two women, Mrs. Eva Hunt Dockery and Mrs. Fred Pittenger, of Bolse, who were members of the degislative committee of the federation, and who worked faithfully and skillfully to bring about its enactment.

As you are aware, the women in my State are permitted to vote for candidates for every office from coroner to President of the United States. They not only vote, but they insist that certain laws be enacted, and I do not know of any legislation ever proposed by them that was not good and which did not receive consideration by the legislature.

The law fixing the age of consent at 18 years was promoted by the late Rebecca Mitchell, of Idaho Falls, who was one of the most skillful women I have ever known in advancing legislation

looking to the moral uplift of the State.

While the Idaho child-labor law is not all that it should be. you can depend upon it that whenever the need arises for its amendment that the women of the State will be the first to demand that the present law be changed as required to meet new conditions

I am strongly in favor of the passage of the bill now under consideration before this House, designed to prohibit child

labor in the United States.

The Dyestuffs Situation.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 12, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, the demand for dyestuffs in industries of the United States is becoming more and more acute. The Ways and Means Committee hearings on bill H. R. 702, proposing an increase in the rates of duty on dyestuffs, developed the fact that the ramifications of the dyestuffs influence extend throughout the industries and on to the farm. The people demand colored wearing apparel, whether it be hosiery or hats. They do not want and will not buy white goods exclusively. Hence, if the manufacturer can not obtain dyestuffs, he has less demand for raw wool and raw cotton from which textiles are made.

Germany has been the great center of the dyestuffs indus-The British embargo upon German-made products has kept them out of the American market. Great Britain, which was likewise dependent upon Germany for dyestuffs, has been compelled to subsidize dyestuffs manufacturers in England in order to keep the textile industries alive. The United States, hitherto dependent upon Germany, can not obtain relief from Great Britain, which now needs all home-made dyestuffs for her own mills, The only remedy which the United States seems to have in this crisis is to enact a tariff law which will give sufficient protection to American manufacturers to induce them to engage in the dyestuffs business. Such manufactories as we now have are not sufficient to meet the demand for dyestuffs, nor will they expand until some assurance is given that they will be protected against foreign dumping at the close of the European war.

A BUSINESS ARRANGEMENT HARD TO BEAT.

To show how Germany was able to control the dyestuffs industry prior to the war without permitting the German manufacturers to be outdone by their competitors in the United States or Great Britain, I submit a somewhat remarkable circular which has come to me with the names of the parties

It evidences a business "efficiency" which, if indulged in in the United States, would doubtless run up against the Sherman antitrust law:

JANUARY 81, 1911.

To all salesmen:

This circular on Interessen Gemeinschaft issued to Messrs. -

You must not try to get business which now belongs to either one of the two other Interessen Gemeinschaft firms, namely, the Berlin Aniline Works and the Badische Co.

If you are asked for quotations for any product which will compete against a product sold by one of the two other convention firms, you must quote so that it will cost the party 10 per cent more to dye with ours than with the product of the other Interessen Gemeinschaft firms. This applies to verbal requests for quotations or written requests as well.

You will please immediately report any infringement of this rule by either one of the two other Interessen Gemeinschaft firms.

Please return signed.

For Mr.

ENGLAND RESORTS TO SUBSIDY.

At the same time it is not to be supposed that Great Britain, which was not enamoured of the "made in Germany" idea, would permit herself to be outdone in the industries by Germany without resorting to some form of retaliation. Nor was it to be expected that Great Britain would adopt this course for the benefit of the United States. What Great Britain did, and did very promptly after the dye shortage set in, was to reverse her free-trade notions and resort to subsidy to encourage the manufacture of dyestuffs in England. I append an article from the London Daily Mail of January 22, 1916, showing what progress has been made by Great Britain in her own behalf.

BRITISH DYES-PROGRESS OF STEPS TO CAPTURE GERMAN TRADE.

At the annual meeting of the Huddersfield Chamber of Commerce yesterday the Mayor of Huddersfield (Alderman J. Blamires) referred to the progress of British Dyes (Ltd.). He said the output of dyestuffs had been doubled since British Dyes took over the concern of Messrs, Read, Holliday & Sons, half a million sterling had been spent on new plant which had been fixed, and a quarter of a million capital had been expended on plant which is to be used in making something never before made in this country. It was something this country could not do without, and in making it they would be competing with Germany.

Another chemical firm in Huddersfield had installed a large plant for the manufacture of other essential materials, which also had not been made in this country before. He urged manufacturers and dye users to subscribe to the capital of British Dyes because the firm was bringing new and essential industries to the country.

Sir Algernon Firth said he believed British Dyes (Ltd.) was going to be a great success. America, Canada, and Australia were already asking for its productions, but they had been told that they would get dyes in due time as the Government's requirements would first have to be met.

The advisory committee formed to consider what was necessary to continue the enterprise against German competition had made its report, and this would shortly be published. The committee had represented to the Government that immediate steps should be taken to subsidize or to guarantee the protection of these now enterprises.

AMERICA THE DYESTUFFS ORPHAN.

Meanwhile, Mr. Speaker, the American textile world is clamoring for dyestuffs; Germany has all she wants for her own mills, which are running; and Great Britain is taking care of herself by subsidizing the dyestuffs makers, thus establishing independence from German dyestuffs control. The United States, which ought now to have the markets of the world, is undergoing a dyestuffs famine, which threatens higher prices to the consumer of textiles and a decrease of production of cotton and wool; and all this for the want of a protective-tariff law which will give capital some assurance that it will not be confiscated within a few months after it engages in a purely American dyestuffs business. If Germany can take care of herself and Great Britain can take care of herself, surely the United States ought to be placed in a position to keep in the running.

WIDESPREAD BUSINESS THREATENED.

As showing the extent of possible damage to American industries, should the dyestuffs situation not obtain relief, I submit the following letter from Mr. Frederick E. Kip, a leading textile manufacturer. Mr. Kip's statement is in line with many others from a variety of interests more or less dependent upon the use of dyestuffs:

SALT'S TEXTILE Co., INC., February 8, 1916.

Hon. J. Hampton Moore.

Washington, D. C.

My Dear Mr. Moore. In the statement filed by the writer before the Ways and Means Committee there was a clerical error made, viz, it states that bill H. R. 702 would make an increase of duties amounting to \$5.280,000. This should have been an increase of duties amounting only to \$1.584,000, and this would not be one-thirtieth of 1 cent per yard on the total production in the textile industry, to say nothing of the printing and other industries using dyes, and if passed it would be impossible that such an insignificant advance could ever reach the consuming public. suming public.

On the other hand, when you consider that capital has stated in positive terms that they would invest a number of millions of dollars in the

manufacture of dyes in America if bill H. R. 702 were passed, and that such investment on their part would for all time prevent the paralyzation of industries in the textile line, alone producing annually \$1,554,180,000 worth of dyed fabrics, it would seem almost positive that the statesmen of Congress must give relief by the passage of this bill. No statesman could, it would seem, refuse the addition of \$1,554,000 duties to permanently establish an aniline dye industry here and prevent for all time the paralyzation of a yearly production of dyed fabrics to the extent of \$1,554,180,000, and, in addition to this, prevent any paralyzation of the printing and other industries using said dyes.

The industries of the United States therefore look forward with confidence that this bill will be passed and become the law of the land.

Very sincerely, yours,

(Enclosure, one statement.)

FREDERICK E. KIP.

STATEMENT FILED BY FREDERICK E. KIP, PRESIDENT OF THE SALT'S TEXTILE MANUFACTURING CO.. REPRESENTING THE PILE FABRIC MANUFACTURERS OF AMERICA.

The present Underwood tariff rate on aniline colors or dyes is 30 per cent ad valorem. Bill H. R. 702 adds thereto a specific rate of 7½ cents per pound.

If passed, the new rates (bill H. R. 702) would make an ad valorem equivalent on the cheapest dyes of 65 per cent. an ad valorem equivalent on the medium-priced dyes of 45 per cent, and an ad valorem equivalent on the more expensive dyes of 35 per cent.

The average ad valorem equivalent thereunder would probably be 42 per cent, or an increase over the present duty of 12 per cent ad valorem. The imports for 1913 of aniline dyes were 44,000,000 pounds (value about \$13.200.000); duty paid about \$3.960,000.

These new rates being a 12 per cent ad valorem increase over present existing rates would make an added duty of only \$1.584,000 if all were imported or if the United States manufacturers got the full benefit (which is not usually the case) of the added duty called for in bill H. R. 702.

Industry.	Total yearly value.	Estimated per cent and amount dyed.			
Woolen. Silk Cotton. Leather (tanned or dyed only). Hosiery	\$507,000,000 197,000,000 628,000,000 328,000,000 200,000,000	90% \$456,300,000 96% 189,120,000 67% 429,760,000 100% 328,000,000 80% 160,000,000			
Total	1,860,000,000	85%=1,554,180,000			

The \$1.584,000 added by bill H. R. 702 would not make more than one-thirtieth of 1 per cent per yard on all the yards manufactured in these great industries, with a combined yearly value of \$1.860,000,000. Even if we should figure same as one-half of 1 cent per yard, such insignificant increase per yard would never reach the consuming public, much less be felt by them. Yet the lack of this \$1.584,000 increase of duties will prevent the proper establishment of the aniline-dye industry in the United States, the lack of which may paralyze the industries for producing \$1.554,180,000 dyed fabrics per year and throw out of employment, directly and indirectly, millions of workers, with most disastrous industrial and political results.

Why, the loss of wages alone (by shutdowns due to lack of these dyes) in anyone of our large textile cities would amount to far more than \$1.584,000.

All our citizens and businesses take out insurance. When the risk is fully considered, what better insurance can the consuming public and the industries of the United States take out than \$1.584,000 per annum to avoid and make impossible such a widespread catastrophe as the paralyzation of industries producing annually \$1.554,180,000 and throw out of employment millions of the workers now engaged therein?

At least three things can happen in the future to paralyze our vast United States textile and leather industries. Viz:

First, Germany may be at war with Great Britain, as is now the case. Suppose that in 1916 or 1917 the allies should reach the Rhine and destroy all the great dyestuff plants in this district (all German plants are situated there)? With no United States dyestuff industry to supply us, what would happen to our vast textile and leather industries and the millions of workers employed therein? The passage of bill H. R. 702 will establish such United States aniline industry.

Second. The United States might be at war with Germany or Germany might embargo all dyestuffs.

Third, Great Britain might be at war with either German

done in 1915) all aniline dyestuffs from being shipped into the United States.

Is it right to take such terrible chances fraught with such terrible consequences, both industrially and politically, for the sake of a pairry \$1.584,000 per annum, particularly when practically every industry consuming these aniline dyes and paying the bills is imploring Congress to raise the duties to those provided by bill H. R. 702, when capital, on the passage of such a bill, will invest millions of dollars and thereby prevent all chance in the future of paralyzing (from want of dyes) those vast industries?

The establishment of an industry in time of peace means protection in case of war. It is conceded by all that the United States has at the present time all of the raw materials within its borders to manufacture therefrom all of the aniline dyes consumed in the United States.

The following additional reasons for the establishment of this industry should weigh heavily with Congress, viz:

That the capital is ready (on the passage of bill H. R. 702) to immediately start building large works to establish an industry in the United States sufficient to supply our wants in aniline dyes. Such an industry can be used in time of war to manufacture within its plants materials for high explosives, which will then be so imperatively needed in large quantities for the national defense and honor.

The present war has placed this matter beyond a political question. It is a matter of statesmanship, independent of party principles, and we feel sure that the members of the Ways and Means Committee will so view same and vote to report this bill favorably, to the end that this industry may be established in the United States and avoid for all times the possibility (of the lack of a few million dollars worth of dyes) to paralyze those wast industries and the labor employed therein.

Address of Hon. B. B. Cahoon, Sr., on Abraham Lincoln.

EXTENSION OF REMARKS

OF

HON. WALTER L. HENSLEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 12, 1916.

Mr. HENSLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include an address delivered at Farmington, Mo., by Hon. B. B. Cahoon, sr., of Fredericktown, Mo., under the auspices and on the invitation of the United Daughters of the Confederacy. The life story of Abraham Lincoln should be diligently studied by every youth of the land. To study it means that the youth will, so far as he is capable, emulate his many virtues. The story of his many struggles and the ultimate triumph fighting for principles and the union of his country is an inspiration to any person. This address brings out in a very impressive way perhaps some of the phases of the life and history of President Lincoln which have not heretofore been treated. Mr. Cahoon was a colonel in the Union Army and knew President Lincoln and many of the great generals of that day personally. He is a resident of my district, and I proudly claim him as my personal friend.

The address follows:

"Mrs. President, it is an honor to respond to your invitation to lecture on Abraham Lincoln, following the lecture you have caused heretofore to be delivered on Gen. Robert E. Lee, who, considering the men and means at his command, was the ablest general the Civil War produced—a good man, a great hero, who ably, humanely, and conscientiously did his duty as he saw it. In that respect Lincoln and Lee, though on different sides in the Civil War, did the same. Time, which allays asperities, softens memories, and makes all things even, is with us to take a broad, charitable view of the causes and times in which they well played their part. As the women of the South, by their impartially strewing with flowers adjacent graves, early in the Civil War, of the heroic dead Confederate and Union soldiers gave occasion for its great poem, "The Blue and the Gray," so it is fitting that the United Daughters of the Confederacy inaugurate, as your Farmington Chapter, seeking to enlighten present youth, has done, this series of lectures on the greatest men prominent in the war on both sides.

"Lincoln's ancestry was English Quaker. He was of the true strain, only he had combativeness. He was not an accident.

"His Kentucky father, Thomas, was obscure. His mother, Nancy Hanks, was a gentlewoman, though poor. Thomas was a shiftless carpenter. He could read and write a little; had good judgment; was a justice of the peace. His wife was better educated. She taught her children, Abraham and Sarah, to read and to write. Her earnest, sweet, gentle, refined nature so impressed Lincoln that he said all he was he owed to his angel mother, who died when he was 10. The lonely boy rode many miles to have an itinerant clergyman preach her funeral sermon.

"The father discouraged the boy to get an education. He said "learning spoiled a good hand." Lincoln contributed all his

father's life to his support.

"Emigrating from their native Kentucky, where they were born and raised, the Virginian-born grandfather having been killed by the Indians when Thomas was 12, to malarial Indiana when Abraham was 7, the first two winters in a lean-to dirt cabin, open on the south were trying. Abundant game provided meat, and there was corn bread. Things improved when Thomas married the Kentucky widow, Sarah Johnston. An ideal, encouraging stepmother, Lincoln dearly loved her. With his first good law fee he settled on her 160 acres of best Illinois prairie land. Though she had a son, she said Abe was the best boy she ever knew. Sympathize as we do with Lincoln's early hard life and poverty, yet they were his best inheritance—constant spurs to improve his condition, without which we possibly would not know Lincoln ever lived. He spent one year in school. Genius, he needed no more to rise. His intense hunger for light and knowledge is shown by his reading every book he could borrow. Ciphering, before the chimney's fire, on the wooden shovel, leading in spelling bees, reciting all sermons and speeches he heard from his good memory and making original speeches on all occasions. Walking 16 miles to hear lawyers plead in a murder case, he resolved at 16 to be a lawyer.

murder case, he resolved at 16 to be a lawyer.

"He was 18 when he made his first dollar ferrying travelers across a river. He said it opened visions that he could earn

money and get ahead in life. So passed his boyhood and youth in toil and study, but as a kind leader of boys. Borrowing and getting wet Weems's Life of Washington, he gathered corn

three days to pay for it.

"At 21 fairly well read, driving three yoke of young oxen, the family moved to Illinois. Crossing a thin-ice covered shallow river, breaking the ice to do it, the squirrel dog, forgotten, could not make it, but was piteously whining. Lincoln waded back and brought it over. That kindness to beasts proclaimed his universal kindness. When a lawyer, traveling the circuit, seeing a squealing pig fastened under a fence, he released it. 'Lincoln,' said Judge David Davis, his companion, 'you say all man's acts are prompted by motives; what was yours in releasing that pig?' 'I could not sleep to-night for hearing the distressed pig,' said Lincoln. Helping build a cabin for his father and stepmother, his sister, Sarah, having died in Indiana, Lincoln shifted for himself, working on farms and as a rail splitter. He was 6 feet 4 inches, slim, but so muscular he could hold an ax straight out by the helve. His skill as a rail splitter gave him employment; his kindness and willingness to help everybody he met, which trait always brought him friends, made him welcome in all homes, which his wit and story telling enlivened. To initiate him the Clary Grove boys pitted Jack Armstrong, their brawny leader, to down Lincoln in a wrestle, betting on the result. Armstrong failed, became Lincoln's friend, and took him often to his home. His wife, Hanna, had fixed his trousers and Abe nursed baby William, whom Lincoln, when in 1858 the leading lawyer and statesman of Illinois, cleared of mur-As President, at his mother's request, he discharged William as a soldier in the Union Army. All his life Lincoln had deep interest in everything concerning his friends. That was his never-falling characteristic. Two trading flatboat trips to New Orleans showed Lincoln, with female slaves sold at auction, the worst side of slavery and fixed his dislike of it. That he had a good, kind, domestic, parental side, we know. Clerking in a country store, then postmaster, so widened his acquaintance and popularity that at 23 he was elected captain and led his company in the Black Hawk Indian War. Next he became a small country merchant, to fail, \$1,200 in debt, which, at 12 per cent compound interest, it took him 18 years to pay. But he paid it all. To do it he could not invest in best Illinois lands under the graduation act at a 'bit' an acre, which made others rich.

"At 24, after six weeks study, he was deputy county surveyor. His horse, bridle and saddle, were sold to pay part of his store debts. A friend, James Short, came out of the darkness, bought and turned them over to Lincoln. He became insolvent and moved to California. As President, Lincoln provided for Short's old age, by appointing him Indian agent. The Short and Armstrong stories prove Lincoln's gratitude, without which

no man is noble.

"At 25 Lincoln was first elected to the Legislature of Illinois, in which he served three two-year terms in succession, and made his mark. At 26 he loved and lost, by her untimely death, Ann Rutledge, then 22, his first and only sweetheart. That event clouded his after life with melancholy. While President he said to an old friend, 'I loved her; I love her yet; I love the name of Rutledge.' Goethe says, 'the good woman's soul ever leadeth us upward and onward to God.' Lincoln's grief put him on the borderland of insanity; his friends watched him for days and nights. Beautiful, tender, refined, intelligent, Ann Rutledge's association with Lincoln drew out his latent refinement; it emphasized his habitual kindness. Had she lived, so happy would they have both been, that possibly Lincoln, profoundly ambitious as he was, always seeking distinction, might have been content with a quiet life with her. At 33 he married the brilliant but high-tempered Kentucky Mary Todd, who was the victim of a bad temper she could not control. As she died in-sane we should be charitable to her. Douglas sought her—she preferred Lincoln, predicting he would be President. Lincoln broke the engagement; again he was well-nigh insane. was renewed. Lincoln could not love her as he did Ann Rut-ledge. Mrs. Lincoln's temper, kind and loyal husband and fond and affectionate father as he was, often drove Lincoln from home. Yet she told Herndon, Lincoln's law partner and biographer, after his death, that Lincoln, though mild, was terribly firm, when he put his foot down, and no one could rule him when he once fully made up his mind. When on the circuit other lawyers went home Saturday-Lincoln remained until court opened Monday in the next county seat.

"Lincoln sought surcease of sorrow not in drink or cards, as many other men in like circumstances have done, but in politics, the law, and in fraternizing with and enjoying the association of all sorts and conditions of men, becoming a great mixer with and beloved by and in turn loving them. He owed that

to Mary Todd. Out of it he reached eminence. His was a hard road, for the sensitive man he was, to climb upward. From his twenty-seventh to his fifty-second year, Lincoln was a lawyer. At 25 he got in a barrel of rubbish he bought Blackstone's Commentaries, which he devoured. Going 20 miles from New Salem to Springfield he borrowed other law books, studied hard, mastering Euclid later on to help him, he said, 'demonstrate.' His intellect was mathematical, clear, logical, imaginative, indulging in story telling to enforce points. No man of his time surpassed Lincoln in concise, convincing argument. Too poor to buy furniture for one room, his Kentucky friend, Speed, shared with Lincoln his bed over his Springfield store. Dropping therein his saddle bags, all he owned, Lincoln said, 'Well,

Speed, I'm moved.'

"Stuart took him into partnership. At first his income was so scant that for years his friend, William Butler, boarded and clothed him. As a lawyer Lincoln was a mental concentrator, singling out the strong point of the case and winning on it. He did not show his hand to associates in cases. He paddled his own canoe. He was a poor lawyer in a bad case; a great one in a good case. He compromised doubtful cases. He was secretive. Secretive are usually selfish men. Lincoln was generous to a fault. He stuck to and steadily advanced in politics. Defeated the first time, he announced for the next legislature, to which he was elected, saying, 'I go for all who bear the burdens of government, sharing in all rights, by no means excluding women.' That made Lincoln—Jefferson preceding him in also favoring it-one of the first in the country to favor female suffrage, as he favored temperance, both then unpopular, from which he never receded. When elected President, Herndon says Lincoln told him that, in time, the justice and wisdom of the country would extirpate the sale of liquor as a beverage and give votes to women. Lincoln's political creed beyond those two questions, until he became President, embraced internal improvements and protective tariff.

"'If we buy,' he said, 'a thing made in this country, we have it and the money to develop our country; if we buy it from abroad, we have the thing and the foreigner has our money to strengthen his country.' That is the essence of protection to this hour. Lincoln's great rise in politics, though he was a presidential elector and a Henry Clay Whig Congressman from 1846 to 1848 and opposed the Mexican War, as it meant, as he said, to extend slavery, dated from 1856, when, breaking loose from the Whig which in 1854 had come within three votes of electing Lincoln to the Senate of the United States-in the Bloomington convention, he made, in joining the Republican Party, the most inspired impromptu speech of his life in opposition to the extension of slavery in the new Territories, brought about under the lead of Douglas by the repeal, in 1854, by his Kansas and Nebraska bill, of the Missouri compromise of 1820. That repeal gave Lincoln what he had never before had, a moral issue, in opposing the extension of slavery in the new Territories

"On the new issue followed Lincoln's debate with Douglas in 1858, the most brilliant Democrat of his day, who said he did not care whether slavery was voted up or down in the new States when formed, but that slave owners, under the Dred Scott decision of 1857 by the Supreme Court of the United States, had the right, their slaves being property, to take them into the Territories. If slavery was a vested right, Lincoln held, it in the end would go into the old States if not curtailed. Lincoln got the best of Douglas. The Republicans carried Illinois, though under a favorable legislative districting system, Douglas was returned to the Senate, beating Lincoln, whom the

Republicans had nominated.

"Those remarkable debates which proved he was a great man and Lincoln's wonderful Cooper Institute speech in New York in 1859, in which he proved a majority of the signers of the Declaration of Independence and the makers of the Constitution of 1787 opposed slavery and hoped for its early extinction, made Lincoln the Republican nominee for President. Lincoln, the poverty-stricken youth without schools, self-made, unpretending, at 52 leader of the bar in Illinois, leader of the Whig, and then the Republican Party there and in the Nation, and elected in November, 1860, President. He was out of debt, worth not over \$6,000. His previous experience had prepared him for the Presidency. He was kind, patient, knew and loved men. He had vast reserve power of mind and heart, which fitted him for the great work ahead of him.

"Inaugurated March 4, 1861, the country was in utter crisis. Responsibility, unlike that of any other President and greater than Washington's, met Lincoln. No man loved peace more and wanted war less than Lincoln. He said so repeatedly. Southern States were seceding; war was impending; it soon began. Agitating politicians brought it on; the plain people wanted peace. love each other, as every other member of his Cabinet, save, per-The South said the election of Lincoln meant destruction of haps, Chase, loved and leaned on Lincoln. As Lincoln died,

slavery in the slave States. The war so resulted. Lincoln always said he did not mean to touch slavery in the slave States. A higher power led him to depart from that. He was driven to destroy slavery. Lincoln felt that it was necessary to save the Union, slavery being the South's main support in the war. The war was inevitable. The social and business system of the South rested on slavery. It is academic to discuss now the justifica-tion or lack of it for the war. We know that to-day the brain and heart of the South acquiesce in the result and rejoice that the Union was saved and slavery destroyed. Brave men only can reserve their error and resume their judgment. How Lincoln acted and what he did in that crisis is his chief biography. We

need to tell it to disclose our hero.

"In his February, 1861, speeches, journeying to be inaugurated at Washington, Lincoln was conciliatory, saying there was no need of war, would be none if the people but remained calm; that the Government would not be the aggressor. His conciliation but exasperated the South, led it to quick and further aggression. By his course Lincoln, when Fort Sumter was fired upon, April 12, 1861, gained the support of the border States. They refused to secede, though they had slaves. More, he rallied to the country's support outside of the South fully three and a half out of five men. The South was solid, the North divided. The war lasted four years. The North, not counting 600,000 reenlistments, enrolled 2,000,000 soldiers; the South, Six hundred battles and skirmishes were fought. cost, including emancipated slaves, \$8,000,000,000-two-thirds of the then taxable wealth of the country-1,000,000 men were killed or died from disease. Through it all Lincoln was the Nation's leader.

"Naturally tender hearted, he became, next to Grant, our greatest fighter and military leader. His letters to his generals in the field proved that. He knew that only by subduing the South could the Union be saved, and that meant the conquest of the best soldiers led by the best generals of all history. North was not trained to arms, horseback riding, or rifle shooting, as was the South; lacked its military instinct and training.

It took long to cultivate both.

"Gen. Sherman told me on Christmas, 1890, that if the South had fought solely on the defensive, had had our supplies, ammunition, and arms the war would have been longer and the result in greater doubt. God meant it to end in a reunited Nation, as we never before were. In that respect it has no To save the Union-with or without parallel in history. slavery, with a part free and a part slave or all free or all -so the Union was saved was Lincoln's shibboleth in his letter to Greeley. Lincoln did save the Union, not alone, but he was the indispensable leader—through his forbearance, his pertinacity, his harmonizing all selfish men, and using them and many cross currents to that great end. Even the emancipation proclamation was, as Lincoln said, more a matter of military necessity than of humanity. Lincoln knew that with the Union saved, in time, under the logic of the Declaration of Independence, which was his political Bible, all enslaved men everywhere would be freed.

"Calm, cool, sensible, humane, sensitive, thirsting for appro-bation, merciful, sparing deserters' lives, Lincoln was the leader,

and all others in the end discovered he alone led.

"Seward, Secretary of State, early proposed he would dictate the policy of the administration and be responsible. Lincoln told Seward that he was doing and meant to do both. Seward wanted war declared against England and France, 'One war at a time is enough,' said Lincoln, as he toned down Seward's belligerent notes to both countries.

"Stanton, Secretary of War, self-willed and violent, who had in the McCormick Patent case before the war, insulted Lincoln, misled by the humble, ungainly appearance, by refusing to argue on the same side, but who, in spite of it, was put in the Cabinet by Lincoln, who ever refused to live on his hates and prejudices, as the fittest man for his place, soon learned his mas-

ter and obeyed him, not always complacently.

"Lincoln sent to Stanton a young man to be commissioned lieutenant. He was unfit, but Lincoln wanted to do him a kindness. In a jiffy he was back, saying Stanton refused to issue the commission, adding, he says 'You are a fool for ordering it.' 'If Stanton says that, it must be true; he knows me well; he means no fool President should undertake to make a lieutenant out of a fool, and that ends the matter.'

"Another time the matter involved principle. He directed Stanton to issue the order. He refused, saying it ought not to be made; that he would not sign it. 'Yes, you will; Mr. Secretary,' said Lincoln looking him in the eye. Stanton signed the order, trusting Lincoln's better judgment. Both men grew to

with tears streaming down his face, Stanton said, "He belongs to the immortals,

"At the outset every member of the Cabinet believed he was Lincoln's superior. In time they changed; all admitted his intellectual and moral superiority; all declared he was the kindest and best man they ever knew-all but Chase, who hoped to succeed Lincoln in 1864, which Ohio's Legislature dispelled-Chase hailing from the State-by early indorsing Lincoln's renomination. In spite of that, Lincoln appointed Chase Chief Justice of the Supreme Court of the United States, because he said his services to the country demanded that reward. Charles Sumner, the most scholarly of all Senators of that day, was one of the first to recognize Lincoln's greatness and goodness. He always supported him.

The war was not fought wholly outside the Constitution. Vested with supreme power, with each stretch of it, Lincoln became more merciful. If wrong was done him and forgiveness asked, he said, 'my statute of limitations is short; if you are sincerely sorry, I forgive you and forget the incident

"'Suppress all copperhead papers' was the frequent demand on him, especially when they abused him the fiercest. said Lincoln, 'liberty demands a free press; criticism helps me more than flattery; by it I see and avoid mistakes. Let abuse of me be unrestricted; if we fail, angels will not be able to justify us; if we succeed, that and time will answer every calumny and right all wrongs.' Lincoln early learned never to forget the hardships and needs of poor, plain people; never forgot that he had sprung from them; always kept close to them in feeling; always trusted them as he was trusted. He was our first real Commoner President. He held that labor created capital and is entitled to the first consideration. Lincoln was, as we said, extremely tall and strong; thin of breast; rawboned; weight, 180; stooping; face in repose, kind but dull; homely; melancholy, with gray, sad, hollow-ringed eyes; nose large; long, blunt chin; coarse, black hair; long legs and arms; high cheek bones, dark sallow complexion, indicating poor digestion, and protruding underlip; orator's big mouth; large ears, indicating great generosity; big Adam's apple; mole on one cheek; overhanging eyebrows; tall but not wide head; broad sloping forehead; awkward, ungainly, shambling walk, but every step was firm and flat-footed. In this he was like Patrick Henry. Aroused by speech, he was transfigured, made bold and graceful, with face animated and eyes sparkling. His smile was angelic. With applause, especially from ladies, I have seen him blush like a schoolgirl, so great was his love for approbation.

'As he told stories in private—he rarely used them in publicface, eyes, hands, head emphasized them to their culmination when his laughter was as uproariously hilarious as that of his listeners. His story-telling was the foil of his habitual melan-choly. 'I would die,' he said, 'if I did not thus relieve my melancholy.' When alone he was given to monologues, which he broke off on the approach of others. More than once, attending meetings, forgetting he was not alone, with his mind on some amusing subject, he would break out into a sudden, high guffaw, to his embarrassment and the disturbance of the audi-

"Lincoln's good heart was a marvel. Never was he cruel; he was ever kind. Visiting a Union hospital he saw a mortally wounded Union soldier; asked him what he could do for him. 'Write to my mother; tell her I love, but may never see her again.' Lincoln sat by his side; calling for pen and paper he wrote the letter. 'Is there anything else I can do for you,' asked the President. 'Sit with me and hold my hand,' said the dying boy. He did so until the end came, when bursting into tears he rushed from the building, to add a tender postscript to the letter to console the bereaved mother on the death of her son.
"His letter to Mrs. Bixby, whose five sons were slain in battle,

is a classic in condolatory expression.

"The week before his death he visited at City Point, Va., a hospital; first, where Union soldiers lay, shaking every hand. 'That is all of them,' said the escorting young surgeon; 'the others are rebel soldiers; you do not care to see them.' federate soldiers, you mean,' said the President. 'Yes, I do,' said Lincoln. 'I mean to see them, too.' He shook hands and said cheering words to each wounded Confederate soldier, consolingly saying, 'This sad war will soon be over; you must all get well; soon you will go home and we will all live in peace.' Grant was then surrounding Lee, who surrendered in three days, April 9, 1865. When the news of Lincoln's assassination, on April 14, reached those wounded Confederate soldiers, their grief for and denunciation of his taking-off, says that surgeon, Dr. Jerome Walker, now an old man, living in Brooklyn, N. Y., was as intense as it was sincere.

"In bidding the surgeon good-by the President said: 'Pay the same attention and give the same care to those Confederate wounded as you do to our own. They are our brethren-our countrymen; we must love them as we love ourselves, because I am sure we will all be at home together in our Father's house.'

"Yet the man was abused and derided as man never before was. 'Idiot,' 'ape,' 'butcher,' 'brute,' 'mountebank,' 'tyrant' were epithets hurled at him, especially by northern copperheads, to which, still refusing to live on his hates and prejudices, he made no reply. What other man in history, save Christ, so treated his calumniators. Grant and Sherman in their memoirs say Lincoln directed that in the soon-expected surrender of the Confederate Armies most liberal terms should be granted. us quickly restore the Union,' he said. Secretary Wells tells us that Lincoln, always superstitious, said great news was coming, because he last night dreamed of seeing the sailing ship which he dreamed of prior to most of the great events of the war. In his diary he further says the last days of Lincoln's life were the happiest; that wrinkles left his care-worn face.

"With his Cabinet in session for the last time the President, realizing that with Lee's surrender and the fall of Richmond the war was ended, in a solemn, tender mood said: 'The war is over; no more blood, no more proscription; soon, please God, peace and a restored Union.' Lincoln's assassination is inexplicable. The Nation needed him to quickly bind up its wounds. It is the irony of fate that Lincoln's death gave power to the radicals who hated him; enabled them to mislead the country; helped them put back a fully restored, homogeneous Union 40 years. All his cherished purposes were long delayed, nay, frustrated-the immediate restoration of the seceded States to their proper places as of old, minus slavery, and such of the negroes only who were intelligent enough to justify it and those of them who had borne arms in support of the Government to vote.

That is as far as he favored suffrage.

"At the hour of his assassination Lincoln was the one man in the country, Grant being next, who more than all others took in North and South clearer than any other man. He saw the needs of the South, and summoned from his warm heart and great brain more of excuse and forgiveness for her than any other man. Had he lived there would have been no proscription for any southerner; no brutal Ku-Klux outrages on negroes; no dismal failure-for such it was-of the harsh reconstruction; no rascally carpetbag southern State governments to prey on the impoverished South, as they criminally did; and no wholesale enfranchisement of the negro race, most of whom at the time were unfitted to wisely vote. More, we believe the slaves of the South would have been paid for had Lincoln lived. say so because

"First, Stephens, in his 'War Between the States,' says, in effect (vol. 2, p. 617), that at the Hampton Roads conference, February 3, 1865, just two months and six days before Lee's surrender, between Lincoln and Seward and the Confederate commissioners, with Vice President Stephens at their head, to see on what terms peace might be restored, that Lincoln, in effect, declared, in spite of the action and instructions from President Davis that no terms but the recognition of the independence of the Confederate States could be enter ained, 'Let me write "Union restored, slavery abolished," and you can write all other terms of peace." Stephens declares that Lincoln said that on those terms the enforcement of all confiscation and other penal acts being left, as they were, to him, he would not enforce them; that he was willing to be taxed to remunerate the South that the North was as much responsible for slavery as the South; that if the war should then cease with the voluntary abolition of slavery by the Southern States he favored the Government paying, as he had urged it repeatedly for the border States slaves, only to be turned down by their leaders, a fair indemnity for the loss of the slaves; that Congress had paid \$1,000,000 for the slaves emancipated in the District of Columbia; that the feeling had an extensive existence North, as high as paying the South \$400,000,000; and that the Confederates would be astonished to learn the great names of northern statesmen who favored such payment, if the war should then cease without further expense and with the abolition of slavery. Stephens's reply was the matter could not, under President Davis's instructions, be considered; only the recognition of the independence of the South. Grant says Lincoln told him all the above things, and that he (Grant). too, approved them. He shows how generous Lincoln was and how eager he was to end the war. (Personal Memoirs, vol. 2, pp. 591, 640-644.)

"Second. Our next proof of Lincoln's willingness to pay for the slaves on the above terms are these facts, printed at page 1, volume 11, of Lincoln's Complete Works, by Nicolay and Hay, his private secretaries: Notwithstanding the rebuff at Hampton Roads, Lincoln, at the first meeting of his Cabinet, two days afterwards, to wit, February 5, 1865, submitted to it the draft in his handwriting of his proposed message to Congress, containing a joint resolution to be passed by it, paying, in the 6 per cent bonds of the United States, \$400,000,000 for the slaves in the border and seceded States, based on the census of 1860, on the conditions that slavery was abolished and that the war ceased by April 1, 1865, one half to be then paid the owners of such slaves and the other half on July 1, 1865. The Cabinet unanimously disapproved Lincoln's proposition, because the offer, in the face of the South's Hampton Roads slap at peace with the Union without slavery belittled and would humiliate the country, and would be looked upon as whining for peace, but to be insulted by the South's standing out for the unconditional recognition of its independence. Sadly he said, 'You are all against me.' The authors say the project was nearest his heart; he meant to present it to the Cabinet at a later day, hoping for its more favorable consideration. Lincoln's heart was set on that compensation. He had never failed when he undertook a great task. Our belief is that with the war over, if Lincoln had lived, the gratitude of the Nation that peace and union had been restored would have been so great that with Lincoln, then intensely popular, to guide it, as he would have done, and all the South and fully half the North favoring, the proposition would have, in gushing generosity, carried and the slaves been paid for at least to the extent of \$400,000,000. Lincoln's influence would have been so great as to bear down opposition to that and the policy he favored. Considering everything, what just heart or fair mind revolts at the thought of paying for the slaves, the existence of whom had been the Nation's, not alone the South's sin, just as the war, because of prior agitations and recriminations on both sides, was the Nation's fault?

"We submit we have made good our statement that when he was assassinated, Lincoln was the best friend the South had;

yea, he was the country's best friend.
"The intelligent South recognizes that is true. by Henry Watterson, whose inspired lecture on Lincoln is the best ever delivered, Lincoln's name and memory are as precious with the best part of the South as in the North. Time but increases the South's love and admiration for the great humanitarian soul of Lincoln. Missouri people should especially love Lincoln because of this fact not generally known: Lincoln's letter of February 20, 1865, but 50 days before Lee's surrender, to the governor of Missouri reflects his noble humanity. Written when he could see the end of the war with victory for the country, it typifies Lincoln as much as any document he ever wrote, Because of its terseness, logic, and good English, it is impossible to condense without marring it. We give it entire from volume 11, pages 36-39, of said Complete Works:

"EXECUTIVE MANSION, "February 29, 1865.

"Gov. Fletcher: It seems that there is now no organized military force of the enemy in Missouri, and yet that destruction of property and life is rampant everywhere. Is not the cure for this within easy reach of the people themselves? It can not but be that every man not naturally a robber or cutthroat would gladly put an end to this state of things. A large majority in every locality must feel alike upon this subject, and if so, they only need to reach an understanding one with another. Each leaving all others alone solves the problem, and surely each would do this but for his apprehension that others will not leave him alone. Can not this mischievous distrust be removed? Let neighborhood meetings be everywhere called and held of all entertaining a sincere purpose for mutual security in the future, whatever they may heretofore have thought, said, or done about the war or anything else. Let all such meet and waiving all else, pledge each to cease harassing others, and to make common cause against whoever persists in making, aiding, or encouraging further disturbance. The practical means they will best know how to adopt and apply. At such meetings old friendships will cross the memory, and honor and Christian charity will come in to help.

"Please consider whether it may not be well to suggest this to the now afflicted people of Missouri.
"Yours, truly,

A. Lincoln.

"Lincoln could not have given that advice had he not been other than the best of humanitarians. Not immediately getting a reply he, a week later, February 27, 1865, telegraphed Gov. Fletcher thus:

"Have you received my letter of the 20th? I think some such thing as therein suggested is needed. If you put it before the people, I will direct the military to cooperate. Please answer.

"A. LINCOLN.

"Gov. Fletcher met the demand; did all he could to carry out Lincoln's humane policy. Lincoln, March 19, 1865, telegraphed Gen. Pope, commanding in the Missouri, he would be sustained in proceeding on the policy. The good original understanding in this State, in spite of the adoption of the Drake 1865 proscriptive and disfranchising constitution, soon followed. Lincoln was Missouri's first conciliator.

"The religion of Lincoln was this development: Up to Ann Rutledge's love for him-a doubter, if not an infidel. He wrote a paper deriding the Bible and denying the miracles of Christ; just as Jefferson wrote his testament omitting them. His friend, Sam Hill, threw the paper into the fire. Advancing, Lincoln, when elected President, believed in the fatherhood of God and the brotherhood of man and in the immortality of the soul, as is shown by a prior letter to his dying father, telling him of the meeting beyond the grave he would have with his loved ones gone before. In parting in February, 1861, with his Springfield neighbors, he invoked prayers from all people for himself and our

"When a delegation of negroes presented him with a Bible, he said, 'It is the best of all books; without it we would know nothing of our precious Savior; would not know how to live or how to die.' That spoke the full-orbed Christian. Lincoln was the reverse of a hypocrite. Had he not so believed he would not have so spoken. The death of his son, Willie, deepened his religious convictions and made him feel how dependent he was on God. He who so feels is a Christian, though he may not be a member of any church. Lincoln, in Spring-field and in Washington, usually attended the Presbyterian Church. Just before he died he declared his purpose to become a church member. He said he wanted to find and to join the church founded on 'I believe in God with all my mind, all my heart and my soul, and I love my neighbor as myself."

"Lincoln wrote a few poems. My Childhood's Home, written when he was 40, is beautiful. His favorite was Knox's melancholy poem, Oh, Why Should the Spirit of Mortal be Proud? If oratory is to persuade and convince doubters, then Lincoln was a great orator; witness the revolutionary effect in Illinois of his convincing debates with Douglas. In them, as in all of his State papers, his clearness, logic, and convincing argumentation have never been surpassed. As a writer the world recognizes that Lincoln's first and second inaugural addresses and his Gettysburg oration are classics. That oration and St. Paul's discourse on charity (I Corinthians, 13) each contain 270 words. Read both as samples of sublime oratory. In volume 12 of the complete works are 61 pages, 'Anthology of sayings of Lincoln,' as wise as Lord Bacon and

Dr. Franklin ever uttered.
"Where did Lincoln get his expression? Where did Burns and Shakespeare and Milton get theirs? From the inspiration of all genius—God. Lincoln read but few and never owned many books. Herndon says-it is an exaggeration-that Lincoln never read a book through in his life. His absorbing mind could by reading a sentence here and there see all the writer was driving at and enlarge on it. Lincoln's style was gracious, heroic, appealing, and humorous; not startling, but melting the heart. It was best when his whole heart was enlisted; always full of engaging frankness and intellectual honesty. While he saw and felt his side of an argument, he honesty. While he saw and felt his side of an argument, he clearly saw and sympathized with the side of his opponent. That is proof of the inherent honesty of the man. The chief characteristics of his expression are its morality, insight, and its prophecy. No one can know Lincoln fully by any or all of the 1,000 copyrighted biographies and monographs written of him and listed in Lincoln's Bibliography, volume 11, said works, 243 to 376. To know him best is to read all his letters, speeches, messages, and his anecdotes.

"Lincoln was the soul composite of all good men and women. His combination was as versatile as it was unique; genius, common sense, analytical thought; speech same, but only once dazzling; thorough knowledge of himself; a patient listener, but so strongly self-reliant as rarely to seek advice except to confirm his views; a profound knowledge of men and of the motives controlling them; great capacity to use them wisely and skillfully for good ends; deliberate to act; rarely made a mitches inflevible honesty; loying and following truth at mistake; inflexible honesty; loving and following truth at whatever cost; cautious, but not timid; a born leader of men, directing them diplomatically; always seeking office; ambitious to succeed, but never putting a thorn in any man's flesh; never thrusting a rival out of his way; competing openly with them all, as he placed in his Cabinet every Republican rival for the presidential nomination at Chicago in 1860; never scheming nor manipulating for place; gaining solely on his merits; yielding in nonessentials, but firm as a rock in clinging to principle; ng in honessentials, but him as a rock in chighing to principle; peaceful, yet for duty's sake a great fighter; simple and direct in character; modest and humble, yet ever working for distinction; intensely human; merciful; tender; charitable; patient; possessing great moral courage; had the physical courage of a lion; no vices; did not drink, chew, smoke, or gamble; no scandal in his life; no graft; melancholy and hilarious; greatest of all story-tellers; had complete equipoise of head, heart, and morals; his judgment was unerring. Lincoln read less and

thought more and deeper than any other able man of his era. Compare now Jared Sparks's estimate of Washington, and we see how many characteristics the two men had in common. But Lincoln was a greater man, warmer hearted, and more human than Washington, and will be equally revered. His influence will never cease to encourage poor, struggling boys and to make men better and liberty securer. Blessed is the country having Washington and Lincoln our ideals to elevate our individual and

"Lincoln was economical and thrifty: Witness his selling—all his little cash investments at a profit—pins, needles, thread, and so forth, on the family move from Indiana to Illinois. His great secretiveness, making him 'as wise as a serpent, as gentle as a dove,' related only to his personal life and ambition. In his public views he was the soul of candor and of outspoken frankness. Lincoln's gift of humor was providential for the part he played in the Civil War in that it took all sanguinary thoughts away and enabled him to be merciful to others—helped him to see and to sympathize with the other side and the other man's views—something ordinary politicians never can do. Men of a genuine sense of humor are never tyrants. It inculcates toleration and enables its professors to quickly forgive and to forget wrongs—the very qualities needed in leaders in civil wars. Lincoln's view of the relation of capital and labor—mutually dependent on each other, hence should through cooperation always be partners; laborers should always aim to become capitalists, be they large or small—is and always will be the only true solution for capitalistic and labor differences. His labor and capital views are so fair and just as to be worthy of constant repetition and publication. As Lincoln always and most logically contended, secession, or breaking the Government, short of the action of a majority of the States, met deliberately and so deciding to sever it, was null and void. He never considered the South was the contended to the South sever it. sidered the South out, but still in the Union, only unlawfully ceasing to work in cooperation with the General Government, to do which, as it revolted by war, he by force would make them return to their places precisely like a lot of strayed horses from

"When they so returned forcibly or peacefully Lincoln insisted they resume their State governments under their old State constitutions and laws, minus slavery which they, he insisted, should recognize as destroyed by the war and the thirteenth amendment to the Federal Constitution which they must approve with no demand on the seceded States for test oaths or negro suffrage qualifications, suffrage being still as he recognized as now being within the rights of the States, subject only to change by Federal constitutional amendments. The congressional plan of reconstruction finally adopted was the reverse of Lincoln's plan; was based on the admission that States were by secession taken outside the Union, and should only one by one be admitted as they adopted the conditions imposed by Congress and the thirteenth, fourteenth, and fifteenth amendments to the Constitution, chief of which was unqualified and unlimited negro suffrage for all adult negro males over 21 years of age, which Lincoln, while favoring it for intelligent and Union soldier negroes, never approved; to enforce congressional reconstruction which kept the country in turmoil for 40 years, only to see it as now practically is overthrown in the South as it will be until the negro race there so improves in intelligence and property ownership that its general voting will be welcomed there in the lapse of time, the negroes as a class growing to merit suffrage and to wisely exercise it. All those things Lincoln foresaw, as he saw anarchy in government, where it was chiefly built on the ignorance and poverty of man, black or white, and not on his intelligence and property ownership.

"Who dares now to say the Union savior and the great emancipator was wrong as the conciliator of the differences between his distracted countrymen; that his policy was not only the best, but as Grant, the magnanimous warrior who in all things approved Lincoln, declares (2d Memoirs, p. 591, 641-644) was the only one to quickly restore harmony to our dis-turbed country. The thunders of Sinai do but terrify, but the sweet calm voice of Calvary softens, subdues and brings us to God. Wars hypnotize ordinary rulers and men; in them they lose balance, yield to passion and prejudice, say and do cruel and inhuman things which make and mar historic wrongs, to remedy which require toil and time. Because he was what he was and did what he did, seizing our imagination, Lincoln has become a world hero, because he did not lose his balance, his justice, judgment, humanity, and mercy in war's turbulent excitement, but held fast to and exercised them, while lesser men on both sides of our great tragedy, acting in disregard of them, did unjustifiable things.

"Those qualities, with Lincoln's great ability, his wisdom, his unusual methods, his quaint saying and original doings, his refusal to be misled by provincialism, and his taking in so wide a view of his environments as to at once sagaciously see the present and the future bearing of all passing events are the foundations of Lincoln's immortal world-wide fame-a fame to which every thing contributes, because the Lincoln spirit is and will always be necessary to advance civilization and humanity.

"Let no one charge I am throwing around Lincoln a false liberality or borrowed halo. I have truly described him as he was. Read all his letters, messages, and speeches and you will have Lincoln's greatness sink into, soften, and broaden your soul, and enlarge your patriotism. If though a mortal, you wish to assimilate Christ's spirit, make Lincoln your study.

"He believed in, practiced, and all his life fived the maxim that love is stronger than hate."

The War and America.

EXTENSION OF REMARKS

HON. WILLIAM KENT,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 12, 1916.

Mr. KENT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article which I wrote on the peace situation.

The article is as follows:

[From Harper's Weekly for May 22, 1915.]

THE WAR AND AMERICA-IV. EUROPE AND AMERICAN DEFENSE. (By WILLIAM KENT, Congressman from California.)

Although out of hearing of the guns, out of sight of the cripples, the starving, the widows, the fatherless, we Americans are suffering and shall suffer in mind, soul, and estate from the

Down through the ages comes the rumble of the grim tramp of armies bent on destruction and waste and the crime of collective murder, and likewise through the ages have been heard the voices of great teachers who told of better things, and then the tale of the song of the angels at Bethlehem broke in upon the roar of the rhythmic tread of warriors.

A saner view of the problems of sustenance and welfare, of cooperation and of social relations, has been growing and there has been evolving a scheme of democracy. The sad world began to believe that war was retreating back into the forgotten hinter-land of Odin and Mars, and that men hereafter might live and let live.

But suddenly the rumble and roar has started anew, and manmade misery is augmented without bounds or limit.

There are groans of men; there are tears of women and wails of children and present suffering that will be projected far down into future generations. The sins of the fathers of our day will

be visited on those to follow, and forever.

The greatest of dirges, the Funeral March of Chopin, begins with solemn, measured tread; it is lightened by a glad song of life and hope and ends in the sorrowful beat of footsteps turned toward the grave. Is this the way of the world, or will there succeed another song of cheerfulness and life? The angels will not write this song; will the nations of men set about the task?

Inter arma silent leges—the path we have trodden under orderly development—under the scheme of democracy has been leading us to a belief in the essential relationship of all men to each other. Our trade was becoming cosmopolitan and was leading to mutual interdependence that meant peace with profit as well as with honor. Working on the hypothesis of peace, natural disasters brought quick assistance from the ends of the earth, national boundary lines were fading, jointly we have been fighting pestilence and famine. But now we rub our eyes and wonder whether we were not absurd Utopians to have dreamed that the world has become different and better.

We can not understand this war; it is too big and we are too near. It is as though a small boy tries to appreciate a circus poster at close range and during the process of its consecutive pasting on an adjacent wall.

We know war is bad, that this greatest of wars is bad—wholly bad—a great red smudge. We know it is a smear of

crime and of waste and of folly unutterable. We know that blasphemous prayers to God neither diminish its wickedness nor shift responsibility from "the frivolous race of men filled with dark ignorance and hurrying unsure thought."

Each of the nations engaged in rapine and slaughter claims to be fighting for its national existence, while as an aggregate, the nations involved are fighting for the destruction of this generation, and the ill faring of the future. Is an artificial system of nationalism worth the price? Are splashes of color on the map of Europe a substitute for the beatitudes and the commandments?

How pleasant would be the world to those of good impulse if it were possible to be logical instead of being forced to work out the solution of social problems by a series of approxima-

The warring world has driven us back on ourselves. We as Americans, must protect our peaceful nationality even if we must fight to protect it; otherwise we shall become a part of the vast turmoil, of the gigantic ignorance.

We, Americans, are neither cowards nor mollycoddles, nor is there any danger of our becoming such. The war has proven that the fighting instinct is universal, and that no men are cowards. We are not rabid, we have no impulse to bite our neighbors, nor is there probability of our being attacked.

It may be that we shall invoke in vain that fiction known as international law, which has all the stability of a motion picture. Possibly our rights (so called by us, but denied by others) to circulate freely in a maelstrom of mines, submarines, and battleships may be denied. Nations that are fighting for their existence—for a place in the sun, or in the moon, or in any other of the leading seaports, or for "kultur"—fighting as all these nations are, in serious devotion to ideals, are under such a condition of nervous strain as to be apt to be rude to innocent bystanders. Our prayer should be that we may be slow to anger and very patient in such time of stress.

same flesh and blood, no better and no uniterest in from those who have died and those who are killing. We are from those who have died and those who are killing. We are same flesh and blood, no better and no different in character more fortunate and should hold to our good fortune. that the warring nations hate us. Envy in times of bitterness is easily transmuted into hatred, but a dislike born of envy and not of wrong is easily cured.

Commercial rights! It is far better for us to abandon our trading in disputed territory and disputed goods than to take part in the debacle. If belligerents fail to deal fairly with us as a nation, we can refuse as a nation to deal with them at all. If this is not a better choice of evils than blustering and bullying with warships, then the civilization that has done away with private personal assaults growing out of differences of opinion between individuals is a mollycoddle institution that should be abolished.

Let us not only use our heads, but search our hearts that we may know our duty in these times of hesitation. Day by day new problems are before the Nation that must be met by those who have the stern, hard responsibility upon them. Peace is a state of mind, as well as a physical condition. Peace is not with us if we are boastful or smug or unsympathetic or quick to anger. Peace means patience and self-control and the exercise of reason, especially amongst the unreasonable. It does not mean nonresistence to oppression, to conquest, or loss of essential

It is a sad thought that in the world to-day there exists a need for defense against aggression. This carries with it a necessity for military strength, which we lack. By getting rid of the Philippines we can circumscribe vastly the limits to be defended, and by abandoning the mouth-filling boast of being a "world power" we can curtail the causes of friction. We shall be a greater nation and a better example of self-contained self-respect if we forget the "world power" language.

Our Navy should be strengthened until such time as the world shows a revival of sanity that will lead to disarmament. And without doubt or question there should be a training of citizen soldiery under a system like that of the Swiss-a system educational and promoting physical training, permeated by the sole motive of defense—and a large plan looking toward the education of officers; there should be adequate reserves of rifles and munitions if ever they are needed.

No citizen soldier should ever be compelled to wage war on foreign soil, and no tropical islands or other foreign disorders should be annexed by our naval or Regular Army forces, except after as cumbersome procedure as is needed to amend the Constitution. All munitions of war should be under Government monopoly, to the end that profit may not be coined out of murder and misery

In spite of all individual disagreements, in spite of all the clash of partisan jealousy, our people must recognize the cool, calm leadership of the President, who, as patriot, American, and Christian, is opposed to war. When the light of peace dawns over stricken Europe it is to

be hoped that our record may be such that we may act as friends of all the combatants, and that our people will respond as they have already responded, and ever will respond, to the appeal of the greatest President to "bind up the nations' wounds." Then, if the angels refuse to repeat their song, may the men and women of the world sing it for them.

Preparedness.

EXTENSION OF REMARKS

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 18, 1916.

Mr. GARDNER. Mr. Speaker, under leave to extend my remarks, I insert the following:

NEW PREPAREDNESS MANUAL FOR DEBATERS AND OTHERS.

Facts shown by extracts from the official documents. challenge contradiction of these facts.

Part I. The facts. Part II. The arguments.

Part III. Where our money goes.

GEORGE WASHINGTON.

[Speech to both Houses of Congress, Jan. 8, 1790.] To be prepared for war is one of the most effectual means of preserv-

EZEKIEL.

Then whosoever heareth the sound of the trumpet and taketh not warning, if the sword come and take him away, his blood shall be upon his own head.

But if the watchman see the sword come, and blow not the trumpet, and the people be not warned, if the sword come and take any person from among them, he is taken away in his iniquity; but his blood will I require at the watchman's hand.

PART I .- THE FACTS.

THE NAVY.

The following tables are taken from a document entitled "Information Concerning Some of the Principal Navies of the World," an official publication of the Office of Naval Intelligence, United States Navy Department. (N. B.-Ask your Congressman or Senator to get you a copy.)

RELATIVE STANDING AT OUTBREAK OF EUROPEAN WAR.

[Extract from Table I.1 Relative order of warship tonnage.

[July 1, 1914.]

Present order (tonnage com	ipleted).	As would be the case if vessels now building were completed.

RELATIVE STANDING OF OUR NAVY TO-DAY.

[Extracts from speeches of President Wilson as reported in the press.] [Cleveland, Ohio, Jan. 29, 1916.]

And the Navy of the United States. You have been told that it is the second in strength in the world. I am sorry to say that experts do not agree with those who tell you that. Reckoning by its actual strength, I believe it to be one of the most efficient navies in the world, but its strength ranks fourth, not second. And you must reckon with the fact that it is necessary that that should be our first arm of defense, and you ought to insist that everything should be done that it is possible for us to do to bring the Navy up to an adequate standard of strength and efficiency.

[Kansas City, Mo., Feb. 2, 1916.]

Do you know the sweep of the coast from the canal to Alaska? It is nearly one-fourth the circumference of the earth. And the coast from the St. Lawrence to the Gulf? Do you think a Navy that ranks fourth is sufficient?

[Letter from Acting Secretary of the Navy Franklin D. Roosevelt, Apr. 20, 1915.]

Navy Department, Washington, April 20, 1915.]

Navy Department, Washington, April 20, 1915.

My Dear Mr. Gardner: In reply to your letter of the 17th instant, you will find inclosed a table giving the number and total tonnage of each type of the vessels lost by the German and English in the present war. This information is based upon reports published in the daily press which the department has been able to verify more or less satisfactorily, and is probably not far from the actual truth. The beligerents do not always acknowledge officially the loss they have sustained. This table does not include the loss of the Audactous, a British battleship of 24,000 tons. The American papers have stated that this vessel was lost off the northern coast of Ireland. No such statement has appeared in British papers.

As all of the belligerent nations are rushing naval construction with the greatest possible vigor, and as they have all taken possession of vessels building in home shipyards for foreign Governments, the actual present strength of their navies is greatly in excess of what it was at the outbreak of the war. It has been estimated by some writers that the English will have in commission before the end of this year 16 new

dreadnaughts of the latest type. I am therefore forced to the conclusion that our Navy probably stands fourth on the list at the present time.

I would thank you very much not to mention in your address that any of this information has been officially received by the Navy Department. As I stated before, it is all based upon reports published in the daily press and verified by the department as far as is practicable.

Sincerely,

FRANKLIN D. ROOSEVELT,
Acting Secretary of the Navy.

THE ATLANTIC SUBMARINE FLOTILLA.

[Extracts from the evidence of Commander Yates Stirling, jr., commanding the Atlantic submarine flotilla of 17 vessels, before the Committee on Naval Affairs of the House of Representatives, December 15, 1914 (Hearings, p. 866):]

Representative ROBERTS, I am asking you that question because ome newspapers state that there is only 1 submarine out of the 17 that

Representative Roberts. 1 am assing you that the some newspapers state that there is only I submarine out of the 17 that will dive.

Commander Stirling. I think I can explain where they got that impression. The commander in chief ordered a mobilization of the Atlantic submarine flotilia at Hampton Roads on the 1st of November of all available vessels. He left it to me to say what vessels I would bring down there. He did not consider the 5 at Colon. That reduced the submarine flotilia to 12. * * * * So when we got down there the admiral wanted to know what we could do. I told him we had then only I submarine that I thought could efficiently take part in the maneuvers at sea off the coast.

[Extract from the report of Admiral F. F. Fletcher, commander in chief of the Atlantic Fleet, Aug. 15, 1916. S. Doc. 251, 64th Cong., 1st sess., p. 13.]

SUBMARINE FLOTILLA.

The condition of the submarine flotilla has been very unsatisfactory, particularly the condition of the machinery of these vessels. So much time has been required to keep the machinery in condition that little time has been available for training officers and crews to operate their ships. The submarine flotilla, even more than the other types of vessels in the fleet, has been hampered by lack of officers of experience. While there are 12 submarines in full commission assigned to operate with the fleet, only 6 of these vessels were in condition to proceed to Pensacola for the winter's work. All 12 were assembled in May in New York, but only 10 were available for the war problem May 18-25. Of these 10 a number were soon incapacitated by machinery troubles, and at times not more than 5 submarines were ready for duty. Due to untrained crews, some of the 5 were not ready to undertake submerged work.

[Extracts from the report of the General Board of the Navy, November 17, 1914.]

The General Board in its indorsement No. 449 of August 30, 1913, and accompanying memorandum brought to the attention of the department the dangerous situation of the country in the lack of air craft and airmen in both the naval and military services.

At the present time, more than a year later, the total number of air craft of any kind owned by the Navy consists of 12 aeroplanes, not more than two of which are of the same type, and all reported to have too little speed and carrying capacity for service work.

In view of the advance that has been made in aeronautics during the past year and the demonstration now being made of the vital importance of a proper service to both land and sea warfare, our present situation can be described as nothing less than deplorable. As now developed air craft are the eyes of both armles and navies, and it is difficult to place any limit to their offensive possibilities.

In our present condition of unpreparedness, in contact with any foe possessing a proper air service, our scouting would be blind.

[Extract from the testimony of Capt. Mark Bristol, United States Navy, commanding the Aviation Service of the United States Navy, before the Committee on Naval Affairs of the House of Representatives, Dec. 3, 1914 (Hearings, p. 299).]

Representative Browning. Captain, I wish you would tell us how the aircraft equipment of the various nations compare.

Capt. Bristol. At the beginning of this war our best information gave, approximately, France, 22 dirigibles and 1,400 aeroplanes; Russia, 18 dirigibles and 800 aeroplanes; Great Britain, 9 dirigibles and 400 aeroplanes; Belgium, 2 dirigibles and 100 aeroplanes; Servia, 60 aeroplanes; Germany, 40 dirigibles and 1,000 aeroplanes; Servia, 60 aeroplanes; Germany, 40 dirigibles and 1,000 aeroplanes; Austria, 8 dirigibles and 400 aeroplanes; and the United States, 23 aeroplanes. [Extract from the report of the Secretary of the Navy, Dec. 1, 1915.]

There are now in the service 15 aeroplanes and 15 aeronautic motors.

There are now in the service 15 aeroplanes and 15 aeronautic motors. By the first of the next year at least 15 new aeroplanes and a number of new motors will be delivered, etc.

Extract from the testimony of Lieut. Col. Samuel Reber, United States Army, before the Committee on Military Affairs of the House of Representatives, Jan. 18, 1916 (Hearings, p. 13).]

Col. Reber (speaking of aeroplanes under Army control). We have actually in our possession 19 that the Government owns to-day. We have 6 under orders, etc.

ADMIRAL FISKE'S VIEWS.

[Extracts from the testimony of Rear Admiral Bradley A. Fiske, United States Navy, senior naval adviser to the Secretary of the Navy, before the Committee on Naval Affairs of the House of Representatives, Dec. 17, 1914 (Hearings, pp. 1023, 1024).]

I would say it would take about five years to get ready with our Navy to fight successfully and effectively against an effective navy (p. 1023). I am not thinking so much of the material of the ships as of the operations. What I have in mind all the time is what I would do if we were to have war to-morrow or next month. When I think of the number of things that we would have to do in order to get the Navy into

really effective shape—by which I mean having plans, plans of preparation and plans of conduct of the war, and properly drilled mine layers and mine sweepers and the aeronautical branch—when I think of all that has to be done in preparing general plans and detail plans of war, in getting the personnel enlisted and trained, ready to fight our battleships that are now in reserve and in ordinary, and figure it all out, I conclude that it will take at least five years (p. 1024).

THE GENERAL BOARD'S VIEWS.

[Extract from the Report of the General Board of the Navy, 1913.] The absence of any definite naval policy on our part, except in the General Board, and the failure of the people, the Congress, and the executive government to recognize the necessity for such a policy has already placed us in a position of inferiority which may lead to war; and this inferiority is progressive and will continue to increase until the necessity for a definite policy is recognized and that policy put into

FIFTEEN TROUBLES OF THE ATLANTIC FLEET.

[Extract from the report of Admiral F. F. Fletcher, commander in chief of the Atlantic Fleet, Aug. 15, 1916. S. Doc. 251, 64th Cong., 1st sess., p. 19.] RÉSUMÉ.

In brief, the principal weaknesses and requirements of the fleet are as follows:

llows:

(a) Shortage of officers.
(b) Shortage of men.
(c) Lack of fast armored ships and fast light cruisers.
(d) Limitations of mobility and seagoing qualities of submarines.
(e) Lack of aircraft.
(f) Lack of radio direction finder.
(g) Too frequent overhaul of battleships.
(h) Necessity of maintaining full complements in active ships of the

feet.

(i) Need of additional mining and sweeping vessels.

(j) Desirability of mobilizing ships in reserve annually with the

(j) Desirability of mobilizing ships in reserve annually with the active fleet.
(k) Need of battle target practice at long ranges.
(l) Necessity for increased facilities at fleet rendezvous.
(m) Provision for division commanders for mining division and auxiliary division.
(n) Provision for more speed in design of fighting craft intended to operate with the fleet.
(o) Need of antiaircraft guns.

Building program for Navy recommended for fiscal year ending June 30, 1917.

	Secretary	General Board of	General Board of
	Daniels's plan.	Navy's first plan.	Navy's second plan.
Dreadnaughts	2 2 30 15 7	4 4 37 28 24	4 3 22 10 10

Appropriation necessary for coming year to carry out above plans:

Secretary Daniels's plan General Board's plan No. 1 General Board's plan No. 2 \$57, 003, 000 113, 020, 587 82, 792, 500

The figures for Secretary Daniels's plan and for General Board's plan No. 2 were taken from the Report of the Secretary of the Navy, December 1, 1915, page 7 and page 85. The figures for General Board's plan No. 1 were taken from a letter dated January 22, 1916, from Secretary Daniels to Hon. E. W. Roberts, of the Naval Committee of the House of Representatives.

In addition to the foregoing building program, Secretary Daniels recommended for the ensuing year an appropriation of \$2,000,000 for aviation and \$8,000,000 for naval ammunition. The General Board plan No. 2 recommended \$3,000,000 for aviation and \$3,000,000 for aviation and \$4,000,000 for aviation and \$4,000 ation and \$11,000,000 for ammunition. The General Board plan No. 1 recommended \$5,000,000 for aviation, but made no mention of ammunition.

Note.—The General Board plan No. 1 was submitted July 30, 1915, "in compliance with the oral order of the Secretary of the Navy to express its opinion at the earliest practicable date as to a policy which should govern the development of the Navy and a building program." (See Report of the Secretary of the Navy, Dec. 1, 1915, p. 75.)

Notwithstanding this report the Secretary on October 7, 1915, (See Report of the Secretary of the

called on the General Board to present a program which would

involve only about \$100,000,000 per year.

In compliance with this letter, General Board plan No. 2 was presented, the General Board interpreting the \$100,000,000 limit

presented, the General Board Interpreting the \$100,000,000 limit as covering air craft and ammunition. (See Report of the Secretary of the Navy, Dec. 1, 1915, pp. 75, 85.)

General Board plan No. 2 is included in the Secretary of the Navy's report. General Board plan No. 1 was given to the public December 24, 1915, and can be found in the daily newspapers of December 25, 1915.

THE ARMY.

[Extract from the Report of the Secretary of War, Nov. 15, 1914.] For the purpose of information the following table is presented, showing the area, population, and military resources on a peace and war footing of other nations in comparison with ours:

	LAND FORCES OF VARIOUS COUNTRIES.							
	Area (square miles).	Popula- tion.	Peace strength.	Total trained war strength.

THE ORGANIZED MILITIA OR NATIONAL GUARD.

[Extracts from the Report of the Chief of Staff, United States Army, Oct. 15, 1915, pp. 31, 32.]

Strength and organization: According to the latest returns the total reported strength of the Organized Militia is 8,705 commissioned officers and 120,693 enlisted men, a decrease over last year of 87 officers and an increase of 1,442 enlisted men.

Attendance at inspection and drills: Reports show that 83 per cent of the numerical strength of the Organized Militia were present at the annual inspection and that 79,621 enlisted men, or about 63 per cent of the reported strength, have attended at least 24 drills of one hour a day during the year.

Field or camp service for instruction: During the season just closing there were 41 special camps of instruction for officers and noncommissioned officers, at which there were present 2,395 commissioned officers and 1,415 noncommissioned officers. There were 162 camps of instruction attended by organized units, at which there were present 5,328 officers and 77,558 enlisted men.

Small-arms target practice: Information concerning small-arms target practice for the calendar year 1914 is incomplete. Two States have reported that no practice was held, two States have submitted reports that are unintelligible, and four States have submitted no reports. In the remaining States, of a strength of 91,570 men armed with the rife, only 49,652, or 54 per cent, attended target practice during the year. As judged by reports received, instruction in small-arms target firing is in a fairly satisfactory condition in eight of the States and is unsatisfactory in all the others, with varying degrees of deficiency.

AMMUNITION SHORTAGE.

[Extract from the testimony of Brig. Gen. William Crozier before Committee on Military Affairs of House of Representatives, Jan. 25, 1916. Hearings p. 76.]

"The total number of rounds of such [field artillery] ammunition on hand and under manufacture is 967,500, of which 481,000 have been completed."

NOTE.—European reports have mentioned that as many as 1,000 rounds of field-artillery ammunition are sometimes fired in a single day by a single gun. The Chief of Staff, United States Army, in his annual report, November 15, 1914, stated that as an accumulation in anticipation of war we need 11,790,850 rounds of field-artillery ammunition.

SHORTAGE OF FIELD ARTILLERY.

[Extract from table presented by Brig. Gen. William Crozler, Chief of Ordnance, United States Army, before Committee on Military Affairs, House of Representatives, Jan. 25, 1916. Hearings, p. 76.]

"Total batteries field artillery completed, 176."

Nore.—As each battery consists of 4 guns, this means that we have only 704 field guns completed. The Chief of Staff, United States Army, in his annual report, November 15, 1914, stated that as an accumulation in anticipation of war we need 2,834 field guns (exclusive of giant

[From above hearings, p. 4.]

Gen. CROZIER. The heaviest piece of field artillery which is now in our service is the 6-inch howitzer. We have been trying for several years to experiment with two calibers of fieldpiece heavier than the 6-inch howitzer, of which I think I have spoken to this committee before. We have been trying to get out a design for a howitzer of about 7.6-inch caliber, and we have also been trying to get out a design for a howitzer of about 9.5-inch caliber.

PROPOSED ARMY INCREASES.

At the beginning of the present fiscal year we had a Regular Army of 105,993 officers and men. Secretary Garrison now proposes to provide a Regular Army of 141,843 officers and men. The War College Division of the General Staff of the United States Army proposes to provide a Regular Army of 281,000 officers and men.

The above figures embrace the Philippine Scouts and the men of the Hospital and Quartermaster Corps. At present alto-

gether they amount to some 14,000 men.

(See Chief of Staff's Report, Oct. 15, 1915, p. 6; Secretary of War's Report, Nov. 15, 1915, p. 25; and War College Statement, Sept. 11, 1915, p. 21.)

COAST FORTIFICATIONS. AMMUNITION SHORTAGE.

[Extract from the report of the Chief of Staff, United States Army, 1914.]

There is a serious deficiency, however, in ammunition for these coast defenses, the supply which the department has been attempting to maintain being on the basis of approximately an hour's full and active operation of the guns in the United States proper and a two hours' full and active operation of the guns in over-sea fortifications. According to the report of the Chief of Coast Artillery, the amount of ammunition now available and provided for by appropriations is equal to about 73 per cent of this requirement for the guns and 50 per cent for the

mortars.

[Extract from the report of the Chief of Staff, United States Army, Oct. 15, 1915, p. 23.]

The full effectiveness of the existing seacoast armament can not be attained under present conditions because of the shortages in the supply of the essential accessories, such as ammunition, searchlights, and fire control. Of the latter deficiencies, that of ammunition is the most serious, as the total supply on hand is only about three-fourths of the so-called one hour's allowance. That allowance is deemed wholly inadequate, and no material measure of relief will be afforded unless future appropriations for ammunition are greatly in excess of the annual appropriations for that purpose that have been made heretofore

The completion of the submarine mine matériel required for the mine defenses is another urgent need. This matériel should be maintained at all times in a state of preparedness for immediate service, as naval attacks upon our seacoast cities may occur coincidently with, or even may precede, a formal declaration of war.

EXPOSURE OF OUR SEACOAST CITIES.

EXPOSURE OF OUR SEACOAST CITIES.

[Extracts from the testimony of Brig. Gen. E. M. Weaver, United States
Army, Chief of Coast Artillery, before the Committee on Military
Affairs of the House of Representatives, Jan. 19, 1916 (Hearings,
pp. 42 and 68).]

Gen. Weaver. I am going this afternoon before the Fortifications Committee to urge additional fortifications, the necessity of which has been brought about by the evolution of naval attack. These new forti-

fications include those at Cape Henry, Rockaway Beach, San Francisco, and one or two other places.

Gen. Weaver. When we mounted guns at Fort Hamilton and Fort Wadsworth and at Sandy Hook it was not thought that ships could stand outside of Rockaway Beach and fire over the whole width of Long Island and Brooklyn and reach New York City. There were no guns mounted that could do that at that time. Now there are. A ship could do that and be beyond the range of any gun we have mounted.

Could do that and be beyond the range of any gun we have mounted.

[Extract from the testimony of Lieut. Col. William G. Haan, Coast Artillery, United States Army, before Senate Committee on Military Affairs, Jan. 28, 1916.]

Lieut. Col. Haan. I reported officially that there are points in Boston Harbor where an enemy's ship can lie now and destroy the Boston Navy Yard, the statehouse, the Fore River Shipyards, and the business part of Boston without our being able to reach him with our short-range runs.

CHESAPEAKE BAY UNFORTIFIED.

[Extract from the report of the National Coast Defense Board, Feb. 1, 1906.]

Commercially and strategically Chesapeake Bay is to-day, as it always has been, of the very first importance. With the entrance, as it is now, unfortified, a hostile fleet, should it gain control of the sea, can establish, without coming under the fire of a single gun, a base on its shores, pass in and out at pleasure, have access to large quantities of valuable supplies of all kinds, and paralyze the great trunk railway lines crossing the head of the bay. (The above was written 11 years ago. The entrance to Chesapeake Bay is still unfortified. A. P. G.)

SHORTAGE OF MEN FOR SEACOAST GUNS.

The entrance to Chesapeake Bay is still unfortified. A. P. G.)

SHORTAGE OF MEN FOR SEACOAST GUNS.

[Extracts from the report of the Chief of Coast Artillery, United States Army, Oct. 2, 1915, p. 4.]

As the defenses outside of continental United States have been completed and made ready for their garrisons, it has been necessary to transfer to these a considerable number of Coast Artillery troops from the home fortifications to provide the requisite manning bodies. When the over-sea fortifications are complete, 291 officers and 6.800 men will be required for duty outside of the United States. This will leave in the United States only 410 officers and 12.219 men, which is approximately 44 per cent of the officers and 53 per cent of the enlisted men necessary for providing a minimum manning body for all mines and for that one-half of the guns and mortars which it is contemplated shall be manned by Regular troops.

Apart from this, the action of the coast States has been most discouraging in their failure to provide Coast Artillery personnel from the State forces for the manning body of the other half of the gun and mortar batteries in the United States. Of the 711 officers and 17,329 enlisted men, which it was hoped and expected the States would furnish for this purpose, there were, at the 1915 annual inspection, only 440 officers and 7,438 enlisted men organized and available (p. 4).

At the present time many of the coast fortifications have been so stripped of the personnel that they have been placed in the hands of caretakers, who can only keep the matériel in serviceable condition. The garrisons for the coast defenses of Portsmouth, the Delaware, the Potomac, the Cape Fear, Charleston, Key West, Tampa, Mobile, Galveston, and the Columbia are greatly below what they should be under the policy which contemplates that one-half of the guns and mortars be manned by Regular troops.

Guns now mounted or being mounted, after eliminating batteries declared obsolete by the War Department Board of Review (p. 5).

THE ENEMY COULD LAND.

A LETTER FROM ADMIRAL GEORGE DEWEY, UNITED STATES NAVY. OFFICE OF THE ADMIRAL OF THE NAVY, Washington, December 10, 1915.

Hon. A. P. Gardner, House of Representatives, Washington, D. C.

Hon. A. P. Gardner,

House of Representatives, Washington, D. C.

Dear Mr. Gardner: I beg to acknowledge the receipt of your letter of December 9 asking me to write you setting forth my views on the question of the possibility of large hostile forces landing on our coast, and inviting my attention to an article by Eric Fisher Wood, which appeared in the Century last month.

The part of the Atlantic coast mentioned in Mr. Wood's article extends from Eastport, Me., to Cape Henry, Va., and in this area we have permanent defenses on the Penobscot and Kennebec Rivers, at Portland, Portsmouth, Boston, and New Bedford Harbors; at Narragansett Bay; at the eastern entrance to Long Island Sound; at the entrance to New York Harbor; on the Delaware River; at Baltimore; on the upper Potomac River, and at Hampton Roads. Of these defenses only those at Portland. Narragansett Bay, entrance to Long Island Sound, and the entrance to New York protect the coast, the others are solely harbor defenses.

It is true that a large hostile force can land on the open coast wherever the transports can get within reasonable distance of the shore, and especially so where their landing is covered by the gunfire of the naval escort, even though the landing be opposed by troops: the most recent example of this is the landing of the alled troops on the Gallipoli Peninsula. We have similar examples in our own Instory, as the landing of Scott's army near Vera Cruz, the landings near Fort Fisher, and the landing of Shafter's army on the south coast of Cuba.

From Eastport, Me., to Cape Henry, Va., there are but very few places where large ships can not approach with safety to within 2 miles of

Cuba.

From Eastport, Me., to Cape Henry, Va., there are but very few places where large ships can not approach with safety to within 2 miles of the coast, and the extent of this shore line that is too precipitous or too ragged to make a landing impracticable is small. The only force that can prevent such a landing is a Navy of our own strong enough to prevent such an expedition from reaching our coast.

In saying that a hostile expedition can land upon our coast at will, outside the range of our coast-defense guns, I mean that it is physically possible, and with no very great difficulty. I do not mean that such a force could accomplish its object by landing anywhere on our coast. No commander would desire to have his force isolated on the peninsulars of Maine nor on the sand dunes of New Jersey, Delaware, Maryland, or Virginia, with inland waters between them and the mainland.

They will prefer to land where there are railroads and good roads leading to their objective, which would probably be one of our large cities. Such places are numerous along the coast of Massachusetts, both shores of Massachusetts Bay, the eastern end and south shore of Long Island, and in the Delaware and Chesapeake Bays.

A landing place sheltered from the force of the sea would greatly facilitate the disembarkation of a hostile force, but is not a vital necessity; such sheltered places are too numerous to name, but among them are Frenchmans Bay, Penobscot Bay, Bue Hill Bay, Sheepscott River, Casco Bay, in Maine; Rockport, Gloucester, Salem, Plymouth, Provinceton, Vineyard Sound, and Buzzards Bay, in Massachusetts; Fort Pond Bay, and then to the southward Delaware and Chesapeake Bays. Only the Navy can prevent landings at those places, and that Navy must be strong enough to defeat the enemy; and should we have such a Navy the enemy would not attempt an invasion as long as it remained in existence.

Our main defense and protection from invasion must therefore always rest with the Navy, which must ever remain our first and best line of defense. This defense, unless adequate, is impotent; and, as before stated, adequacy is not reached until the Navy is strong enough to meet on equal terms the navy of the strongest probable adversary.

Sincerely, yours,

GEORGE DEWEY.

LAND ALMOST ANY PLACE.

[Extract from the testimony of Rear Admiral Frank F. Fletcher, United States Navy, commanding Atlantic Fleet, before the Commit-tee on Naval Affairs of the House of Representatives, Dec. 9, 1914, (Hearings, p. 536.)]

Representative Witherspoon. How many unbarbored places are there on the coast where they (the enemy) could land?

Admiral Fletcher. In smooth water and fine weather, they could land almost any place, as we did from the open sea at Santiago.

COULD BE DONE RIGHT NOW

COULD BE DONE RIGHT NOW.

[Extract from the testimony of Brig. Gen. William Crozier, Chlef of Ordoance, United States Army, before the Committee on Military Affairs, House of Representatives, Jan. 25, 1916. Hearings, p. 73.]

Representative McKenzie. Do you think any power on earth can land 600,000 or 700,000 men on our shores in less than eight or nine months?

Gen. Crozier. I think if there were a power which had no entanglements near home, and which was free to do it, it could be done right now, as far as anything we could do to prevent it was concerned, within the time you mentioned.

Preparedness of the great powers for over-sea expeditions.

1 240,500 territorials
2 Japanese field regulations indicate the intention to use steamers of 1,000 tons; for this reason and because of the large amount of steamers between 10 and 12 knots speed, all Japanese steamers over 10 knots speed and 1,000 tons gross have been considered.

Fifty per cent has been assumed as the figure representing the amount of shipping in or within call of home ports at outbreak of war. The foregoing figures refer to the status of the various nations before the European war.—A. P. G.

PART II.-THE ARGUMENTS.

[Extracts from sundry addresses of Hon. Augustus P. Gardner, of Massachusetts.]

. Baltimore, Md., April 9, 1915. PREPARE AGAINST WAR.

"All Europe is reeling drunk with slaughter. When mankind is maddened with drink, is that a proper time to lay in a fresh supply of liquor?" cries the pacificist. Perhaps not; but it is a mighty good time to secure some additional policemen and see that they are supplied with good stout night sticks. What has been troubling the allies has not been too much drink, but too much peace dope. When you see your neighbors staggering under the blows which they received before they could shake off the effects of their pipe dreams, is that a proper time to lay in

a fresh supply of the same sort of dope that drugged them?

I am here to advocate the preparation of the United States against war. There is all the difference in the world between being prepared for war and being prepared against war. It is true that if a nation has deliberately prepared for war it is mighty likely to find war. Germany was prepared for war and she made war. Switzerland was prepared against war and so far she has escaped war. Belgium was prepared neither for war nor against war, so war overwhelmed her.

It may be true that the man who arms himself with a revolver and goes looking for trouble is the man who finds trouble. But it is not because he carries the revolver that he finds trouble, it is because he is a trouble maker and is looking for trouble.

We arm our police with revolvers, and we teach them to use them in the hour of need. We send our police abroad where trouble is brewing; but who is there that believes that police-

men stir up riot because they are armed with revolvers?

Does a city invite a conflagration by equipping itself with machines and firemen to fight against fire? Just as much as a nation invites war by equipping itself with machines and men to fight against aggression.

ARBITRATION TREATIES.

Nowadays we are told that if the United States will only go ahead and mind its own business then we shall not get into any If the United States in the year of grace 1915 suddenly begins to mind its own business, it will be doing what it has never done before in the whole course of our history. Take up to-morrow morning's newspaper, and I venture to say that you will find on the front page more than one instance where the business of the United States is so entwined with the business of other nations that you can not tell where one leaves off and the other begins. Do you suppose that the world thought we were minding our own business away back in 1823, when the Monroe doctrine put a spoke in Spain's wheel to prevent her getting back her South American possessions? Do you suppose Great Britain thought we were minding our own business when we insisted on her arbitrating the boundary between British Guiana and Venezuela? Do you suppose that Spain thought we were minding our own business when we told her what she ought to do with her colonists down in Cuba? And yet we are told that we are to mind our own business and enter

into treaties to cover a few other odds and ends by arbitration. I am sorry to say that I have not as much faith in the efficacy of treaties as I used to have. Even the United States did not toe the mark when it came to carrying out our treaties with

the Indians or even with China. If Belgium had put less faith in a particular treaty now known as "the scrap of paper," and put more faith in being prepared against war, the invasion of France would probably have taken place to the southward and Belgium would have been spared as Switzerland and Holland have been spared.

MUST WE ARBITRATE THE MONROE DOCTRINE AND ASIATIC EXCLUSION?

Now, the Monroe doctrine stands like a flaming sword notifying Europe that she will not be permitted to colonize South America or Mexico. Do you suppose that that flaming sword is going to be effective against impoverished nations teeming with population unless we have something substantial in the way of military power with which to back it up? You might just as well expect a hungry hyena to respect the defenselessness of an unprotected bone. Moreover, we have looked the proudest nation of Asia square in the eyes and we have said to those fighting Japaneses. "We will have said to those fighting Japanese, "We will have none of you here. We don't want you within our borders." The Japanese Government professes friendship for America, you say. True enough; but suppose that some fine day the people of Japan should wake up and say to their Government, "We demand from the people of the United States the same treatment which they give other nations." The Japanese will never be so unreasonable, you think. Won't they? How do you know? In these days the wisest man can not look very far into the millstone of the future. After all, is it so very unreasonable from the Japanese point of view, I wonder?

We do not know whether or not the Japanese are going to demand the same treatment as other nations for their people who desire to come to this country. But suppose they do make the demand. What is our answer going to be? Shall we let them in as if they were Europeans? Shall we grant them naturalization? Never by my vote, I hope, nor will I arbitrate that question either; nor will the American people arbitrate that ques-

tion any more than they will arbitrate the Monroe doctrine.

Ask any man from the Pacific coast whether he will vote to arbitrate the question of Mongolian exclusion, and risk a decree of an international court admitting into this country hordes of Chinese and Japanese. Just ask him, and see what he says. As to the philosophy of an international government based on the brotherhood of man, that may come in the sweet bye and bye when Californians have learned to intermarry with Chinese and Mississippians have begun to select negresses for their brides. DISARMAMENT.

After this war is over, assuming that the allies are successful, many people think that there will be a general disarmament, and that Great Britain will consent to forego her navy. Let us not forget that Great Britain is the only populous country which can not come anywhere near feeding itself. Therefore it is essential to Great Britain's security that she take no risk of being shut off from her ocean trade. Will she be willing to trust the safety of her ocean trade to the good will of other

Such a notion seems to me to be fantastic, yet, of course, it is conceivable that Great Britain might consent to forego her navy if other nations did the same. That would be no true disarmament, however, for in case of war her ocean-going merchant marine is so enormous and so much more powerful than that of other nations that she could easily convert a part of her fleet into warships and still have plenty left for commerce.

Great Britain undertakes to have as big a navy as any two European nations put together. Are we forever to ignore what that means? Recently I received a petition asking me to vote for a reduction in the estimates for our Navy, Why? Because, as my petitioner declared, everybody will be exhausted and unable to fight after this European war is over, except perhaps Great Britain, and she, we are told, is friendly. is friendly to-day, but in international affairs it is just as it is in politics. Your friend of to-day is the man you may be fighting to-morrow. If we are going into a match against Great Britain in the business of whittling down navies, I should like to start on a good deal longer stick than we have at present. I do not relish whittling off a short stick while we let Great Britain whittle off her long stick. One decided advantage in naval disarmament would be that it would spike the tongues of the noisome slanderers who declare that the crusaders for this Nation's security are inspired by the makers of armor plate and the builders of ships.

EXHAUSTED NATIONS?

As to successful nations being so exhausted after this war that they can not fight, the notion is fanciful. We were never stronger in a military sense than we were in 1865 after four exhausting years of war. Moreover, the victor nations in this European war will, if they think best, provide themselves with funds by the exaction of war indemnities from the vanquished.

During our Civil War Europe argued that the North and

South would exhaust each other and have no strength left for the enforcement of the Monroe doctrine. What happened? France sent an army into Mexico and placed an Emperor on the throne and laughed in our faces. Just as soon as the North could spare the troops, along toward the end of the Civil War, we sent Gen. Phil Sheridan with an army. He lined his men up on the Rio Grande. Out went the French army and down went the Emperor, without a single shot being fired except the shots which the executioners fired when they stood the poor Emperor up against the wall. That ended the theory of exhausted nations being unable to fight until Austria forgot the lesson last July. The wiseacres in Vienna nodded their heads sagely as our wiseacres do to-day. They whispered to each other, "Servia has been exhausted by a double war; Belgrade is at our mercy, and within a few weeks we shall have another Balkan fief under our dominion." But it did not work out that way. Little Servia seemed stronger than ever. Weeks and months elapsed before the Austrian army got into Belgrade, and it was fired out again in pretty short order.

SHATTERED DREAMS.

I can tell you what the trouble with the situation is. It is not the Navy League and the like which are improperly influencing the public opinion. It is the millions of a certain vain and. I hope, remorseful Crosus, named Andrew Carnegie. Annually he devotes the income of \$10,000,000 to pay for the spilling of printer's ink galore and the hiring of smooth tongues to secure the distortion of public opinion. Many a seductive pipe dream can be inspired by a half a million dollars a year; but the two grandest dreams of all were rudely shattered at the end of last July. Oh, how the air has resounded for the last few years with the shout that the bankers of the world would never permit another war. Oh, what myriad of chautauqua platforms have rattled with the prancing of the Carnegie orators as they inspired their hearers with the belief that the workingmen of Europe would refuse to fight each other. What, oh, what has happened? Evolution sternly shook the dreamers. What did happened? Evolution sternly shook the dreamers. the bankers of Europe do when it came to the pinch? David Starr Jordan says that the bankers of Europe would have stopped the war if they had been given time enough. Perhaps they would have stopped the war; but the fact is that the bankers' advice and consent was not asked for. The only question which the bankers were asked to answer was just how quickly would they supply a billion or two of dollars, and accompanied with the question was an intimation that they had better step lively or some one would know the reason why. So far as the workingmen of Europe were concerned, they flew at each other with surprising willingness. Every capital of Europe was thronged with gleeful citizens shouting the national anthem, and peace advocates, instead of being greeted with cheers, were greeted with jeers.

INTERNATIONAL COURTS AND INTERNATIONAL ARMIES.

But a new manifestation has materialized in the seances conducted by the Carnegists. In the future, we are to have an international court with an international army and an interna-

men of other nationalities to be admitted into this countrywhich, by the way, is by no means an unlikely decision for an international court to render-do you think that our workingmen would allow us to lie down and permit it? Supposing the international army and the international navy were obliged to attack us in order to force the admission of those Chinese and Japanese, would the American division of the international army fight with the rest of the international army or against it? And if it mutinied, what would be the future of that international force?

Supposing the international court decided that if we would not secure debts owed to foreign countries by Mexico and would not protect foreign investments or persons in Mexico the international army would have the right to do it in our stead-and that is also a very possible verdict—what would happen then? Should we stand by and see that international army invade Mexico? And if the international court decrees an invasion, shall we have no need for an Army and Navy to resist the inter-

national army and the international navy?

My friends, the theory is growing up in the world that the various peoples of the world have an inherent right to migrate to the United States or elsewhere if they so desire. You meet that theory in every sort of foreign publication. Our right to exclude immigration seeking to come to these shores has been challenged more than once. Do you suppose our people would bow to an international decision which denied our right to control immigration? How should we have fared throughout this Nation's history if instead of fighting our battles we had been asked to depend upon decrees of international courts? Would the revolutionists of 1775 have left it to any international court to decide whether or not New England ought to be taxed? Yet such was one of the main issues which brought on the Revolution, unless we are to believe that the insolence of the British authorities in Boston was the main cause, which, after all, may perhaps have been the case. How should we have fared if we had submitted to arbitration the dispute which caused the Mexican War? We assisted Texas to get away from Mexico and then we proceeded to annex Texas. Plainly and bluntly stated, our purpose was to get some territory for American de-How do you think we should have come out before velopment. an international court in these days?

Would the North have consented to arbitrate the question of slavery? Would the Nation have permitted an international tribunal to decide whether or not the battleship Maine was blown up from the inside or from the outside, or whether Spain should be forced to evacuate Cuba? If this question had been submitted to the international court, how would the international court have decided, and would we have submitted to its decision? Would other nations' representatives in that international court have unanimously consented to our coercion? Obviously not. As a matter of fact, a sort of international court actually convened itself to sit on the very question of our dispute with Spain. You may have forgotten about that court. It was known to the world as the concert of European powers, and a grand old harmonious concert it was when Great Britain broke in with a false note. The rest of the orchestra had attuned their fiddles to the popular air of "Down with your Just at that moment Great Britain started to Uncle Samuel." blow an entirely different note, and to this day I, for one, have not forgotten it. Anyway, Great Britain broke up that concert of European powers, and I reckon that was about as near an international court as we shall get within the next 50 years.

So much for the last dream of the peace preachers. I could dream as fast and as often as any Carnegist that ever advocated a sane and safe Fourth of July if you would only give me the income on \$10,000,000. Even without the payment of a single cent I could dream of the day when there will be no burglars. Meanwhile, inasmuch as I live half a mile from the nearest neighbor, I shall not at present get rid of my watchdog.

ARE WE GOING TO WAR?

Now, do I expect war? Of course, I do not expect war. No sensible man ever expects war, but sometimes war comes. If I go into a neighborhood where there is smallpox, I do not expect to catch smallpox, but I get vaccinated just the same. I hope I shall not run into anybody with my automobile this year, and I do not expect to do so, but I propose to carry some automobile insurance.

Wars come nowadays without much warning. The last and greatest war of all came like a thunderbolt out of a clear sky to the British Nation. Here is an extract from a speech made in November by David Lloyd George, chancellor of the exchequer of Great Britain.

When this war broke out we were on better terms with Germany than the thing had been for 15 years. There was not a man in the cabinet who the Chinese and the Japanese ought to have equal rights with

Fortunately for Mr. David Lloyd George and for his country, Great Britain has kept her navy in the acme of condition for pretty nearly a hundred years. No matter what Great Britain has of late years neglected, she has kept the blade of her navy bright and clean. I wish that we could say the same. I wish that I could disbelieve the testimony of Admiral Fiske, and Admiral Kalght, of Capt. Bristol, and Capt. Sterling, of Assistant Secretary Roosevelt, and the hundreds of officers and enlisted men who corroborate in private what a few of their superior officers have the courage to say in public.

House of Representatives, October 16, 1914.

All the Carnegie millions in the world will not silence those of us who believe that bullets can not be stopped with bombast nor powder vanquished by platitudes.

House of Representatives, January 21, 1915.
HISTORY REPRATS ITSELF.

Three years ago this Committee on Military Affairs carried through the House of Representatives a bill reducing the Army of the United States; and there stands the gentleman who did it—the chairman of this committee, the gentleman from Virginia. Fortunately the Senate did not pass that bill. I have not forgotten the gentleman's words; neither have I forgotten the words of a certain other gentleman from Virginia, who once upon a time spoke to another resolution of the same sort. Here is that other resolution:

Resolved, That the Military and Naval Establishments ought to be reduced.

Listen to what that other gentleman from Virginia said:

With respect to war, we have, thank God, in the Atlantic a fosse wide and deep enough to keep off any immediate danger to our territory. The belligerents know as well as we feel that war is out of the question.

A good many of you have been saying exactly that same thing which that other gentleman from Virginia said. Do you know who he was? He was John Randolph, and what I have just read you came from his utterances in this House on March 22, 1810.

Yet two years afterwards the War of 1812 broke out, the impassable fosse was crossed by a hostile army, and before the war was over the British soldiers had applied the torch to the very Chamber where Randolph made his mad appeal to the mad vanity of his countrymen. "We can lick all creation," "Everything ready for the drop of the hat," "Trained citizenry leaping to arms"—all the well-known jargon appears in the annals, including the familiar argument that foreign nations would wear each other out and would have no strength left to challenge us.

Great Britain-

Says the Revolutionary veteran, Potter, in opposing the militia bill on March 20, 1810—

Great Britain has no men to spare to send here to invade our territory; and if she had, she would know better than to do it. And if France was ever so much disposed to send an army into this country, it would be in vain. She could not send them.

ABSOLUTELY UNPREPARED, AS USUAL.

Dawson, of Virginia, on December 13, 1811, arose in his place in this House and solemnly uttered this ghastly folly:

I feel myself authorized to state that we have all the necessaries, all the implements, all the munitions necessary for a three years' close war against any force which any power can send to this continent.

Contrast that with Dolly Madison's account of a little later of our rout at Bladenshurg and the burning of the White House by Ross, the British general.

Alas-

She wrote-

I can descry only groups of military wandering in all directions, as if there was a lack of arms or of spirit to fight for their own fireside.

Make no mistake, there was nothing the matter with those Pennsylvania and Virginia and Maryland militiamen whom Mistress Dolly saw, except that they had not been trained for

Six weeks before war was declared John C. Calhoun on May 6, 1812, told Congress:

So far from being unprepared, sir, I believe that in four weeks from the time that a declaration of war is heard on our frontiers the whole of upper and a part of lower Canada will be in our possession.

History does not record that conquest of Canada; but it records the fact that 100 days after Calhoun spoke Detroit was in the hands of the British, mostly because less than 1,000 of the trained citizenry of Ohio and Michigan sprang to the standard of Gen. Hull. Thomas Jefferson, who had written to Duane that—

The acquisition of Canada so far as Quebec will be a mere matter of marching—

conveniently called this disaster "the detestable treason of Hull."

ARE WE BETTER PREPARED THAN EVER BEFORE?

Some of the gentlemen who oppose any expenditure of money on preparations for our national defense console themselves by the comforting thought that we are better prepared than ever before in our history, Better armed? Perhaps, More secure? Certainly not.

It may be true—in fact, it is true—that we have more reserve artillery, more reserve rifles, and more reserve ammunition than formerly; but how does that fact alone dispose of the

question of our security?

Our reserves in material of war may be quite sufficient if we never pick a quarrel with any enemy more dangerous than Huerta and if we never fight a battle more bloody than the battle of Vera Cruz in the second Mexican war. But suppose we should meet a real enemy. The other great nations have been striding forward by furlongs, while we have been crawling along by inches, so far as military progress is concerned. Do you think that the modest increase in our reserve war material justifies the assertion that we are better prepared than ever before?

Boston, Mass., May 6, 1915.
DOES PREPAREDNESS PREVENT WAR?

The fact is that preparation is not a "safeguard" against war, if the word "safeguard" is to be held to mean the same as "preventive." Preparation against war assists us in avoiding war, and, likewise, puts us in a much more advantageous position should war break out. In fact, I believe that the want of adequate preparation in China to-day will result in the subjection of that gigantic Empire to Japan for a century to come.

Of course it is true that being unprepared for war very often keeps a nation out of war, just as timidity keeps many a boy from standing up for his rights. Meanwhile he sees some bully

insult his sister in the street.

As to preparation for war making a nation quarrelsome, I think that our history shows that we have been pretty quarrelsome, even when unprepared for war. I do not think that policemen are a quarrelsome class or that firemen tend to become incendiaries, yet we arm our policemen and train them to use revolvers, and we maintain a fire department in order to fight fire.

To say that Germany's participation in this war is owing to her preparedness, to my mind, shows loose thinking and an inadequate study of the great movements of the war. Germany's preparedness is the result of certain causes, and Germany's entrance into this war is a result of precisely the same causes, to wit, Germany's philosophy, Germany's prolific population, and Germany's ambition. Bismarck's scheme for the "unification of Germany" was deliberately undertaken with the purpose of making Germany a great nation with Prussia at the head. The price which the German States paid was three wars in eight years, terminating in the establishment of the German Empire in 1871. From that time on it has been perfectly evident that the German nation meant, by hook or by crook, to get "its place in the sun," which means that nothing except force will prevent the German people from overrunning their present boundaries and taking their Government with them.

I by no means lay it down as a certainty that Switzerland's and Holland's preparation against war is the sole force which has kept those countries at peace since August, 1914. Nevertheless such is my belief. Even if the neutrality of both countries should be violated later on, no one could deny that at least they are to be congratulated on escaping the fate of Belgium.

Some one of you has suggested the possibility of a sort of competition in preparation between three countries which you call A, B, and C. You say A prepares for war; then B and C provide a similar or superior armament. What has been the gain for A? Obviously nothing. But that is not what happens in this world. Suppose we put it this way: A and B and C are three rival nations. A and B prepare for war and C lags behind. What becomes of C if it comes to a fight? The fact is that the United States is the only Nation upon earth which can afford to go into this competition without the people feeling it.

One of the gentlemen here suggested that there was no use in building warships unless we built enough to make us safe under any and all circumstances. I understood him to picture a possible alliance against us of Great Britain, Germany, and France. Then he triumphantly asked whether I proposed that we should build a navy as great as that of Great Britain, Germany, and France combined. This is my answer: If we Congressmen are to sit with folded hands while we contemplate what might happen if we should try to prepare against an attack by the whole world, we descrive to be locked up in an asylum. You send us to Washington to legislate against probabilities and reasonable possibilities, not against nightmares and imaginabilities.

Now, ask yourself this question: Supposing that Great Britain adheres to her doctrine that her navy must be greater than that of any other two nations combined? Suppose we continue in the future, as we have in the past, to submit to that doctrine, where is the inducement to Great Britain to change it? On the other hand, let us suppose that instead of submitting to the doctrine we start in shipbuilding on a big scale. Two can play that game, you say. Possibly so, although that has not been true in history. Two can not play at that game very long, however, without one side or the other giving in or asking for a limitation of armaments.

Concord, N. H., November 11, 1915.
A CHANGE OF POLICY.

Mr. Bryan exclaims that it will mark a change in this Nation's policy if we arm ourselves to defend our rights. Just so it will be a change, precisely as it was a change in our policy when we purchased a third part of this great country from Napoleon and precisely as it was a change in our policy when we destroyed slavery by force of arms. Are we to understand that this Nation must never change its policies? Does Mr. Bryan deny the countless waste of lives and treasure which in our previous wars has resulted from our defenselessness, and does he shrink from a new policy which would prevent that waste?

Because the thought of war is indigestible for the pacificist, is that a good reason for flying in the face of history and human nature? Undefended America is, indeed, a dainty morsel; but where does history or fable tell us of a hungry wolf respecting

the defenselessness of an unprotected fold?

ARMENIA OR IRELAND-WHICH IS HAPPIEST?

"But," says Mr. Bryan, "if you arm for defense, you will pick a quarrel with your neighbor. Arm a man with a revolver and he will long to shoot someone." Well, Mr. Bryan himself was armed with a revolver in the Spanish War. Did he long for a human mark on which to display his prowess? . Did his forefinger itch to pull the trigger and send some other mother's darling boy to an untimely grave? We arm our police force with revolvers. Does that circumstance tend to encourage homicidal mania among patrolmen? Oh, this degeneration of idealism, this persistent refusal to face the facts of existence, this flapdoodle fancy that soft answers will placate savages and that vacuities will satisfy vampires! If Carnegie and Ford were right in their fantasies, Armenia to-day would be a land flowing with milk and honey. The policy of the Armenian has been the policy of Mr. Bryan-the policy of peaceful persuasiveness. policy of the Irishman has been exactly the opposite. He has been far outnumbered by the English, but he has not taken much stock in pudgy pacificist platitudes, and he has not always been conciliatory. On the contrary, for a thousand years or so he has followed a fairly consistent plan of raising particular Gehenna when he did not fancy the way things were going. result is that no one that I know of displays any especial alacrity to tread on the tail of the Hibernian coat.

PART III.—WHERE THE MONEY GOES.
[From the New York Times, Dec. 12, 1915.]
WHERE THE MONEY GOES.

WHY THE AMERICAN ARMY COSTS SO MUCH—GEN. SCOTT, CHIEF OF STAFF, SAYS THAT UNDER OUR SYSTEM THE AMOUNT WILL CONTINUE TO BE EXCESSIVE.

WAR DEPARTMENT, OFFICE OF CHIEF OF STAFF, Washington, December 7, 1915.

Mr. Joseph L. Delafield,

35 Nassau Street, New York City.

Sm: Replying to your letter dated November 20, 1915, wherein you requested to be furnished whatever printed matter there may be showing how the present appropriations for national defense have been applied, and why it is that other nations have been able to do so much more on smaller appropriations, I am directed by the Secretary of War to inform you that there is no printed matter of an official character which discusses our appropriation from the point of view you mention.

From time to time statements have appeared in current publications showing the large appropriation necessary for the support of the Military Establishment of the United States and the relatively small cost of the German Army. By dividing each of these amounts by the total strength of each Military Establishment an effort is made to compare the high cost of one of our soldiers with the cost of a German soldier, which is very much lower than ours. No intelligent comparison can be

made between the cost of the German and American Military Establishments without having first a clear understanding of the differences in the military systems of these two countries.

The German pays his military obligations to the State in personal service, while we go into the labor market, where we are forced to compete with other employers of labor in order to secure our soldiers. In addition, there is a small class of volunteers in the German Army who, in exchange for certain privileges as to service, maintain themselves and supply their own uniform and equipment. Again, the normal wages in our labor market, where we obtain our recruits, are much higher than in Germany. The comparative cost of these two soldiers in dollars and cents, therefore, means little except to emphasize the cost to our Government, and indirectly to the citizen, of maintaining a Military Establishment on the voluntary principle. If we wish, then, to compare the cost of our Army with the cost of those of other nations, we must limit our comparison to those nations which employ the same general system as ourselves. We will find that only one other nation in the world does so—Great Britain.

In 16 trades and callings, data for which were obtainable in both the United States and Great Britain for 1912, we find that the average wage was 159 per cent higher in this country than in Great Britain. But the difficulty does not end here, for the price we pay to induce our soldiers to enlist and to maintain them thereafter is affected by the standard of luxury and the cost of living in the two countries under consideration. Again, taking British figures (which are well known to be higher than the German), we find that the cost of the food consumed by the average workingman in this country was 66 per cent higher than in Great Britain, the cost of fuel 21 per cent higher, and the cost of rent 91 per cent higher.

In addition, there are many other factors which enter into the necessarily high cost of our Army under present conditions, only a limited number of which can be mentioned here. One of the many items of expense in this country is that of transportation, both of men and supplies. In this country the Government must pay in cash at the commercial rate for all transportation, while in Germany the railways are State owned. Everything which we buy in this country for the maintenance of the Army is higher than corresponding articles in Germany, and after purchase must be transported over vastly greater distances.

The above are only a few of the items which make our Army more costly than that of Germany. All of them are due to the system we employ to maintain our military forces. There are, of course, a number of items which render the cost of the Army unduly high which are really imposed on the country as a result of political considerations. One of these is the maintenance of the large number of park-like Army posts scattered all over our vast country. Another is the proviso of law which compels us to shift the individuals of our oversea garrisons once in two years. Another is the detached-service law, which makes it necessary to shift officers all over the country at frequent intervals.

Conditions of this nature are susceptible of correction by legislation, and really affect only a fraction of the increased cost of our Army. The great cost of our Army is due to the system we employ, and just so long as we continue to rely on a voluntary military system we will have to continue to pay an excessive amount for national preparedness. Taking into consideration the handicaps under which the Government has to work in maintaining our Army under the present system, it will be found that it is administered as economically as that of Germany or any other country.

I hope the above may, in part at least, answer your questions. There is really nothing in print on this subject which is at all authentic. As stated above, a number of comparisons of the cost of our Army and foreign armies have been made at different times, but the bases of comparison were even more faulty than the data used, and sound conclusions can not be drawn from any such discussions.

Very respectfully,

H. L. Scott, Major General, Chief of Staff.

[From the New York Times, Dec. 16, 1915.]
CONGRESSMAN GARDNER ON DEFENSE COSTS—WHERE THE DETAILED EXPENSES OF THE ARMY AND NAVY FOR RECENT YEARS ARE SET FORTH.

Committee on Ways and Means, House of Representatives, Washington, D. C., December 13, 1915.

To the Editor of the New York Times:

I noticed in a recent issue of the Times a letter from Joseph L. Delafield, inquiring into the reasons why we spend so much money for our Military Establishment and get so little in return.

Mr. Delafield speaks of our annual military expenditure as amounting to \$490,000,000. Probably he has accepted the figures of the pacifists who include our pension roll as a military expense, regardless of the fact that this roll is the obvious result of our policy of unpreparedness before the Civil War. a matter of fact, the correct total of our military appropriation last year, including the Army, the Navy, the coast defenses, the Military and Naval Academies, and the pension roll, was \$422,-880,895.65. Of this amount, the appropriation for pensions was \$164,100,000, leaving the net total for our actual Military and Naval Establishments \$258,780,895.65. (See statement of the chairman of the Committee on Appropriations of the House of Representatives in the Congressional Record of March 15,

Franklin D. Roosevelt, Assistant Secretary of the Navy, in the Economic World of September 4, 1915, published a very complete and painstaking analysis of our naval expenses as compared with those of Germany and Great Britain. Roughly speaking, the expenses of Great Britain the year before last speaking, the expenses of Great Britain the year before last were \$260,000,000, as against \$147,000,000 for the United States and \$112,000,000 for Germany. This analysis shows that our Navy pay account amounted to \$41,000,000, while the German Navy pay account amounted to only \$13,000,000. Outside the matter of pay for the personnel of the fleet, if Mr. Delafield will consult Mr. Roosevelt's tables he will readily see that for the most part the greater expenses of our Navy are the result of the fact that wages are so much higher in the United States than they are in Germany than they are in Germany.

I think that it is probably true that we have some superfluous

navy yards. Even so, any extra expense arising from that cause is a mere drop in the bucket. I know of no graft in the Navy Department, and what is more, I do not believe that there is any graft, either there or in the War Department, or, for that

matter, in any other department here in Washington.

As to the detailed expenses of our Army Establishment, they are completely set forth in Secretary Garrison's recent report. Our Army Establishment cost us \$111,000,000 last year. Of this Our Army Establishment cost us \$111,000,000 last year. Of this amount the principal items were as follows: Pay, \$48,000,000; subsistence, \$10,000,000; transportation, \$14,000,000; clothing and equipage, \$6,000,000; regular supplies, \$8,000,000; ordnance, \$3,000,000; militia, \$5,000,000; fortifications, \$6,000,000, leaving a balance of \$11,000,000 to be accounted for by the Medical Department, the Military Academy, the Signal Corps, the Army process, and bearracks, and sundries. I do not doubt that some of posts and barracks, and sundries. I do not doubt that some of the Army posts are superfluous and an unnecessary expense. Abolish them by all means, but let us not fool ourselves into thinking that we shall make a great saving.

A P. GARDNER.

[From the New York Times, Jan. 20, 1916.]

COST OF A NAVY HERE AND IN GERMANY—SECRETARY DANIELS SHOWS THAT OURS IS THE CHEAPER NATIONAL INSURANCE, ALTHOUGH THE EXPENSE MUST BE GREATER.

NAVY DEPARTMENT, Washington, December 29, 1915.

My DEAR SIE: In reply to your letter of December 13, in which you express a desire for information concerning the relative results produced by the funds appropriated for the German Navy and those appropriated for the United States Navy, the measuring of results is a difficult matter, since it appears to be a fact that a part of the money devoted by the German Empire to naval purposes does not appear in their naval acts. I speak, of course, of the period prior to the outbreak of the European war. Information concerning European expenditures, ship construction, etc., since July 1, 1914, is not available.

The differences in the systems of naval appropriations are another element which adds to the difficulty of comparisons, but from such statistics as can be made roughly comparable the fact stands out that, while approximately 28 per cent of the United States naval appropriation is for pay and allowances of officers and men, the German appropriations for these purposes are but 12 per cent of the whole, an estimated difference in 1915 of some

\$28,000,000.

This fact is largely due to the higher general scale of salaries and wages in this country, and to the fact that under a system of voluntary enlistment, such as we, of course, have, the Navy must offer financial inducements somewhere near equal to those obtaining in civil life.

The higher general scale of wages in this country is also reflected in the labor element in our expenditures for construction and repair of vessels and in purchase and manufacture of supplies. The labor cost at our industrial navy yards in the fiscal year 1915 was some \$20,000,000, and the labor element in the ship construction performed by private contractors was in

the neighborhood of \$9,000,000. Furthermore, in our expenditures of about \$17,000,000 for material used in work at industrial navy yards, in the material charge of about \$9,000,000 for new construction work done under contract, and in the cost of about \$8,000,000 worth of armor, the labor element in the material itself as manufactured products is similarly high.

There is appended a statement which may be of interest to you, showing how the published expenditures of foreign powers prior to the European war compare with those of the United States on a basis of the ratio which they bear to the estimated wealth of the various countries and on a per capita basis. The angle from which the subject is approached is, of course, that of national insurance, and the figures show that the premium paid by the United States is 0.00071, or \$1.42 per capita, and in the case of Germany 0.00088, or \$1.59 per capita. It should be noted that the comparisons could not be made for precisely identical periods of time. * *

I will be very glad to furnish you with any further informa-

tion within my power.

As your letter concerns also the appropriations and expenditures of the War Department, it has been forwarded to the Secretary of War.

Sincerely, yours,

JOSEPHUS DANIELS, Secretary of the Navy.

Mr. Joseph L. Delafield, 35 Nassau Street, New York City.

Statement on naval expenditures, prepared by the Navy Department. RATIO OF NAVAL EXPENDITURES TO WEALTH.

Data obtained from above-mentioned Census bulletin, heing summary of information concerning wealth of principal nations, assembled by Augustus D. Webb, fellow of the Royal Statistical Society, published in "The New Dictionary of Statistics." Authorities quoted: For United Kingdom and British Empire, Sir Robert Giffen; for Germany, Steinman-Bucher: for France no authority is stated.

Data obtained from the United States Bureau of the Census, Bulletin No. 122, entitled "Estimates of Population, 1910, 1911, 1912, 1913, 1914," published Mar. 31, 1914, p. 6.

Data obtained from the Statesman's Year Book for 1915, edited by J. Scott Keltie, LL. D.

HOW MUCH OF OUR INCOME?

House of Representatives,

Washington, D. C., February 8, 1916

My Dear Sir: Some time ago I received from you a letter in which you told me of a certain minister in Rochester, N. Y., who states that "at the beginning of the European war Germany was spending for past wars and preparations for wars (on its army and navy) 55 per cent of the total amount of revenue collected; Japan, 45 per cent; Great Britain, 37 per cent; the United States, over 60 per cent."

Our total Federal revenues for the fiscal year ending June 30, 1915, were \$778,000.000. Uur expenses for the Army and Navy were \$258,000.000, and for pensions were \$164,000,000. To this ought to be added War and Navy Department office and rental expenses, estimated at perhaps \$4.000,000. In other words, including pensions our Federal military expenses for the last fiscal year were approximately \$426,000,000, or a little less than 55 per cent of our Federal income.

But is that a fair statement of the case if a comparison is to be made with the expenditures of foreign nations?

The misleading nature of the pacifist's argument as to expenses is, of course, apparent.

The misleading nature of the pacifist's argument as to expenses is, of course, apparent.

First. The pacifists include as military expenditure the amount we pay for pensions. If we had been prepared, we should have had mighty short wars and very few pensions. No other nation has such a pension system as ours.

Second. The pacifists speak only of the revenues of the United States Federal Government and give no heed to the revenues of the various States of this Union. The great bulk of the expenditures which with us fall on the several States are borne by the central government in foreign countries. To make a comparison fair we ought to calculate the gross revenue of the United States plus that of the various States. Then we ought to take the sum which the Federal Government spends annually for the Army and Navy and to it we ought to add the amount expended by the various States of the Union for National Guard or militia purposes. This latter sum amounted last year to \$8,463,000

according to the Chief of the Division of Militia Affairs, United States Army. Of course a good deal of this militia expense is properly chargeable to police; but let us reckon it all as a military charge and see what the figures show.

According to the most recent tables of the Department of Commerce, the revenues of the various States of this Union amounted in the year 1913 to \$367,000,000. Add that amount to the Federal revenue and we find a grand total of \$1,145,000,000 as the revenues of the Nation. Of this sum we spent \$142,000,000 for the Navy, \$115,000,000 for the Army, \$4,000,000 for the War and Navy Departments, while the various States of the Union spent \$8,500,000 for National Guard or militia purposes. Our total mintary expense was therefore \$270,500,000, or less than 24 per cent of our national revenue.

My figures as to our revenue and expenditure are from the "Summary of receipts and disbursements in 1915," prepared by the United States Department of Commerce. It is fair to say that I was obliged to estimate the departmental office and rental expenses of the Navy Department, as I can not find them in detail. I estimated them at \$2,000,000, as the report of the Secretary of War shows that the departmental office and rental expenses of the War Department were a little less than that sum.

Very truly, yours,

A. P. Gardner,

THOMAS FARRAR, Esq., 10 Elmhurst Street, Rochester, N. Y.

Beef Trust Investigation.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 14, 1916.

Mr. BORLAND. Mr. Speaker, I have introduced a resolu-tion to require the Federal Trade Commission to investigate certain packers, under the express authority of the Federal trade act, and submit herewith the following statement:

Whereas the Cattle, Swine and Sheep Feeders' Association of Missouri, at its annual meeting at Columbia, Mo., in January, 1916, adopted resolutions urging an investigation of the Beef Trust by the Federal authorities, which said resolutions were immediately forwarded to the Congressmen and Senators from Missouri at Washington City: There-

resolutions urging an investigation of the Beef Trust by the Federal authorities, which said resolutions were immediately forwarded to the Congressmen and Senators from Missouri at Washington City: Therefore.

1. Resolved, That we extend our sincere thanks to Hon. William P. Bolland, Congressman from the fifth district of Missouri, for at once the senatory of the presentative of the request at loss essolutions; and that he has now pending before the Judiciary those isolutions; and that he has now pending before the Judiciary the senatory of the House of Representatives a resolution providing for an investigation of said Beef Trust at Kansas City, but throughout the Union. And we congratulate Hon. William P. Bolland that, heeding the resolutions of our organization above mentioned, he has become the ploneer in Congress of this great and much-needed movement.

2. Resolved, That we desire to express to Congress and to the Judiciary Committee of the House our deep conviction of the overwhelming necessity of this investigation. During the past year or 18 months the Beef Trust has ignored the honest laws of supply and demand as it has never done before. By an illegal conspiracy it has controlling now, the price of fat cattle at all of our great markets. It pays just what it pleases. Honest farmers buy feeders in our markets, take them to their pens, feed them the corn they have raised, and then bring them back and are compelled to sell them to these packers at ruinous price of the great agricultural and cattle-feeding districts of currections in the great agricultural and cattle-feeding districts of currections in the great agricultural and cattle-feeding districts of currections in the great packing houses, they have so arranged it that the cattle feeder who ships to a given market such as a sea to the great packing houses, they have so arranged it that the cattle feeder who ships to a given market such as a destroyed competition between the great packing houses, they have so arranged it that the cattle feeder on th

The Papago Reservation-Fraudulent Claims to Indian Lands

EXTENSION OF REMARKS

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, February 8, 1916.

Mr. HAYDEN. Mr. Speaker, a reservation has been recently set apart for the Papago Indians in southern Arizona, and I ask leave to extend my remarks in the Record by printing the following letter, which I addressed to the Secretary of the Interior on this subject-

WASHINGTON, D. C., December 31, 1915.

The honorable the Secretary of the Interior, Washington, D. C.

The honorable the Secretary of the Interior, Washington, D. C.

My Dear Sir: If it can be arranged so that mining development will not be hindered or prevented, I can see no reason why an Executive order reservation should not be established for the benefit of the Papago Indians in southern Arizona. I understand that the State land commission of Arizona has decided not to make selections in the Papago country, so that objection from this source is withdrawn.

While the area to be reserved must necessarily be large in order to support the Indians who now reside in this most arid portion of my State, yet they have used these lands for many years and are, therefore, entitled to continue their occupancy thereof. I take it, of course, that the rights of the white men, who now live within or graze live stock in the area to be reserved, will not be disturbed.

The Indians of Arizona do not engage in mining, and the mineral resources of the various reservations, which include about one-fourth of the area of the State, have not been developed. The people of Arizona complain greatly about this state of affairs, for it is known that many of the reservations are rich in minerals. If Arizona is to prosper, all of her mineral wealth should be made available for use. I must, therefore, object to the creation of any more Indian reservations in Arizona if the old policy respecting mineral lands is to be followed.

It has been argued that the President is without authority to include mineral lands within Executive order Indian reservations, but that such lands can only be reserved for agricultural and grazing purposes. Whether or not, as a matter of law, this doctrine is sound, yet I am convinced that it is the proper policy. The United States now issues patents to its citizens for the surface of mineral lands, reserving the minerals for disposition under the mining laws. This same method should be followed in establishing a reservation for the Papagos. The Indians should have the same right to locate mining claims as any white

I am informed by the Indian Office that the new Papago reservation contains about 2,700,000 acres of land, of which about 650,000 acres are mountainous. It lies chiefly in Pima County, objective are mountainous. It lies chiefly in Pima County, and may be described roughly as the country between the Baboquivari Mountains on the east and a line drawn north and south a few miles east of Ajo, and from the Mexican boundary on the south to a line just south of the old Vekol Mine in Pinal

The Executive order establishing this reservation contains a description of the lands withdrawn and is as follows:

EXECUTIVE ORDER.

Exclusive of a tribal right to the minerals contained therein, all surveyed lands and all unsurveyed lands which when surveyed will fall within the townships and ranges hereinafter described be, and the same hereby are, withdrawn and set apart as a reservation for the Papago Indians in Arizona:

ereby are, withdrawn and set apart as a reservation for the Papago ndians in Arizona;

The foregoing reservation is hereby created with the understanding that it shail not interfere with prospecting for minerals, under such rules and regulations as the Secretary of the Interior may prescribe, or the filing of entries in accordance with the mineral land laws of the United States: And further, That nothing contained herein shall affect any existing legal right of any person to any of the lands herein described.

WOODROW WILSON.

WOODROW WILSON.

THE WHITE HOUSE, January 14, 1916.

I also desire to print a statement by Mr. F. A. Thackery, superintendent of the Gila River Indian Reservation, which recently appeared in the Arizona Gazette:

recently appeared in the Arizona Gazette:

I suppose there is no section of the entire continental area of the United States about which so little is known as the new reservation.

From the Baboquivari Mountains in the east and the Mexican boundary in the south there is a stretch of arid country that has been occupied for at least 300 years by Indians, who have managed to make a living, and not a bad one, from what seems an utterly hopeless land.

Our recently completed census shows that there are 6,500 Indians living in 42 villages, and they have attained a considerable skill in their agriculture. Their irrigation system is a fine example of the ability of savages to accommodate themselves to conditions.

To the west of the mountains there is, naturally, a large run-off from the seasonal rains, but for 100 miles there is no running stream. The waters simply disappear into the desert, and few of the washes extend more than a few miles from the foothills.

The Indians have fenced their communat fields at about the point where the flood waters disappear, and these fields are from 60 to 320 acres in size, each of them supporting a village. They are fenced with posts and interlaced branches of mesquite, and in the inclosures the agriculture is carried on and the stock herded.

To increase the irrigable area they have built dikes reaching in funnel shape back to the mountains, so as to divert as much of the flood waters as possible. Some of these dikes are 6 miles or more in length. Near the village and to one side of the dike system they built a large pond, which is used to store drinking water.

On the personal application of Congressman HAYDEN and Senator ASHURST all existing rights are preserved to such settlers as are in the territory covered by the order, and no interference with the rights of prospectors or miners will be made. This is the great feature of the department order and one for which all interested in mining have reason to be grateful to our representatives.

The following article, which appeared i

The following article, which appeared in the Casa Grande Bulletin, gives the history of the establishment of this res-

MINERAL RIGHTS IN THE NEW PAPAGO RESERVATION.

With reference to the Executive order made on January 14, 1916, by President Wilson establishing a reservation for the Papago Indians of southern Arizona, we learn in a recent conversation with Superintendent Frank A. Thackery, of the Pima Indian Reservation, that the articles published in the Phoenix papers recently are somewhat misleading, in that this reservation was not established at the Instance or upon the recommendation of Representative Hayden and Senators Ashurst and Smith.

During the visit of Hon. Cato Sells, Commissioner of Indian Affairs, in this section of the country last August, he appointed a committee of eight to report on the Papago matter. This committee was composed of Superintendent Frank A. Thackery; Superintendent Henry J. McQuigg, of Tucson; Superintendent of Irrigation Charles R. Olberg, of Los Angeles; John R. T. Reeves, of the Indian Office; Father Bonbentura Oblassar; Rev. F. S. Herndon; Jose Xavier Pablo; and Hugh Nortis.

Norris.

This committee recommended the establishment of an Executive-order reservation. When Representative Hayden and Senators Ashurst and Smith learned that a reservation was about to be made they especially urged that in the establishment of this reservation no claim should be made to the mineral land for the Indians, and that the rights of any citizen living within the boundaries of the reservation should be respected. The representation of Representative Hayden and Senators Ashurst and Smith were respected in these matters.

The creation of this reservation ought to put an end to the efforts of a set of swindlers who have been operating out of Los Angeles, Cal., who claim an undivided half interest in the Papago lands, under an alleged agreement which Col. Robert M. Hunter, deceased, is supposed to have made with the Indians some years ago. I understand that R. M. Martin, an attorney in Los Angeles, who says t'at he represents the Hunter heirs, has succeeded in selling several tracts of Papago land containing 2,000 acres each, at \$1,000 for each tract. I know that during the past year he has visited the Papago country accompanied by prospective purchasers. Martin has been very careful, however, not to use the United States mails in carrying on this fraud, so that he has not, as yet, been prosecuted by the postal authorities.

Some time ago I wrote to the Commissioner of Indian Affairs, asking for information relative to the Hunter claim to the Papago lands, and received the following reply:

SEPTEMBER 6, 1913.

MY DEAR MR. HAYDEN: I am in receipt of your letter of August 26, 1913, inclosing a clipping from the Arizona Sentinel, under date of August 21, 1913, relating to lands of the Papago Indians in Arizona, wherein it is said that a concern in Los Angeles is offering for sale one-half of the land belonging to these Indians.

For your information it may be said that as early as 1903 Col. Robert F. Hunter, in the capacity of "relator" in behalf of the Papago

Indians, claimed that their title to large tracts of land was identical with that acquired by the Pueblo Indians in New Mexico, and that the Government had no authority or right to make other disposition of any of these lands. Col. Hunter also requested that all prior entries, patents, easements, etc., affecting these lands be canceled.

The matter was carefully considered at that time by the Indian Office, the General Land Office, and the department. Under date of June 16, 1903, with reference to these lands and to the claim submitted by the said Robert F. Hunter, the department advised the Commissioner of the General Land Office, in part, as follows:

"If the tenure of the alleged holding of the Indians is not by grant emanating from the Government of Spain or Mexico, it is not such a property right as was provided for and protected by the treaty. The mere possession of the land as Indian country, with the right of use, did not prevent it from passing under the dominion of the United States as public lands, whatever the obligation of the United States to the Indians might be.

"All the territory above described has been treated as public land, except such portions as are in private claims, including the villages and lands held by Pueblo Indians by grants under the laws of Spain and Mexico, and many of such claims have been confirmed under the laws made and provided. Out of the public lands remaining specific reservations have been created, which are deemed ample for the needs of the Indians.

"There is nothing in the papers submitted to show in whose interest or by what authority the relator appears; but, independently of this, no reason is shown why the department should take cognizance of the matters alleged in said communication. Where lands have been disposed of as public lands, private rights have been acquired, and the executive department is not sufficiently impressed with the contention of Mr. Hunter to withhold any of the remaining lands from disposal as

"The department is not sufficiently impressed with the contention of Mr. Hunter to withhold any of the remaining lands from disposal as public lands or to make any recommendation to the Department of Justice in relation to those that have been disposed of. You will so advise him."

Advise him."

A number of inquiries have been received from time to time regarding the status of these lands, and invariably this office has advised the writers that the Papago Indians, as a tribe, or the various bands or villages thereot had no title to the lands occupied by them which they could disposed of to others.

Cordially, yours

CATO SELLS, Commissioner.

Hon. CARL HAYDEN,
House of Representatives.

The Hunter Leirs are not the only claimants to Indian lands in Arizona. One Robert Connelly, also of Los Angeles, claims 100,000 acres in the Colorado River Indian Reservation, based upon what is known as the "Moses Abromet grant." Connelly has an alleged abstract of title, prepared by John W. Lawson, an attorney at Parker, Ariz., which sets forth that

Moses Abromet, sr., came to America from France, and formerly lived in Louisiana. After the death of his wife he came to Arizona and was made chief of the tribe. The present Moses Abromet is the only son and heir of Moses Abromet, sr. Moses Abromet, sr., died in the year 1902, and his monument on the Colorado River marks the corner of the 200,000 acres mentioned in this abstract, which was conveyed to his son in 1888.

The deed to Abromet is supposed to have been signed by

Chief Langdow and also the following chiefs and squaws:
Chiefs: Rodney Overton (son of Chief Langdow), Three
Feathers, and Chief Moses Abromet, sr.

Squaws: Wauseka Leuta, Bright River, and Mountain Top.
Moses Abromet, jr., of Helena, Mont., is supposed to have
transferred this land to William Graves, of Vincennes, Ind., who sold the south half of the grant, containing 100,000 acres, to Connelly.

I have had considerable correspondence with the Indian Office relative to this matter, which I shall print in the RECORD:

FEBRUARY 3, 1914.

Hon. CARL HAYDEN,
House of Representatives.

House of Representatives.

My Dear Mr. Hayden: Referring to your letter of January 31, 1914, transmitting a letter addressed to you by Mr. J. S. Griffin, of Phoenix, Ariz., you are respectfully advised that, as near as it is possible to determine from the sketch submitted with Mr. Griffin's communication, the land claimed is included within the boundaries of the Colorado River Reservation as enlarged by the Executive order of May 15, 1876. It is believed that the claimant in this case bases such claim on the so-called 'Moses Abromet grant,' which has been referred to in office letter to you of April 8, 1913, relative to a similar claim by Mr. Robert Connelly. It is possible that these two claimants are one and the same person.

onneily. It is possible the person is utterly impossible of substantiation, there even being such a claim is utterly impossible of substantiation, there even being ome doubt as to whether such a person as Moses Abromet ever actually some doubt us --existed. Very truly, yours,

C. F. HAUKE, Second Assistant Commissioner.

Hon. Carl Hayden,

House of Representatives.

My Dear Mr. Hayden: Complying with your telephonic request of Saturday, I am sending herewith photographic copies of certain letters and other papers, including a map, relating to the so-called Moses Abromet grant.

I think you will find ample justification in the attached papers for the statement that the claim or grant can not be substantiated. In this connection your particular attention is invited to the fact that the last Mexican grant was made prior to 1853 and the Colorado River reservation referred to in the alleged deed to Robert Connely was not established until 1865.

The records of the General Land Office fail to show a grant of this character within the confines of the Colorado River reservation, and

so far as this office is informed no such person as Moses Abromet over existed.

Very truly, yours,

C. F. HAUKE, Chief Clerk.

COLORADO RIVER AGENCY, Parker, Ariz., April 21, 1911.

Honorable Commissioner of Indian Affairs, Washington, D. C.

Sin: Office letter, under date of March 16, regarding a grant of 100,000 acres of land, known as the Moses Abromet tract and grant, has been received.

I have made inquiry among the people of this vicinity, both white and Indian, and have been unable to find anyone who has ever heard of this grant or tract. The oldest prospector in the mountains was inquired of concerning it, and he said that he had been in here for more than a generation, but had never heard of the grant or of that name.

I think there must be a mistake as to the location of the grant, if such grant exists.

Very respectfully,

P. T. LONERGAN, Superintendent.

COLORADO RIVER AGENCY.
Parker, Ariz., February 19, 1912.

Commissioner of Indian Affairs.

Washington, D. C.

Sir: In reply to your letter of the 13th instaint, noted above, I will say that this matter has been brought to my attention before.

The claim was based upon the Mexican grant which purported and was supposed to be described by metes and bounds, mentioning as part of its boundary the Colorado River Reservation. On the face of it it appears so absurd that I gave it no attention, Inasmuch as the last Mexican grant would be prior to 1853 and the Colorado River Indian Reservation was established about 1865, making it impossible tor the Mexican grant to legally mention the reservation as partly part of the grant.

Mexican grant to legally mention the very grant.

I am in this mail asking the superintendent of the Yuma Reservation to examine record book No. 23 to see if any such transfer is recorded therein. Concerning record book No. 2 at Parker I would respectfully state that no such record book exists.

I am of the opinion, supported by all facts which I can find, that this is in a nature of a swindle, and the burden of proof would rest upon its perpetrator. It will be my pleasure to notify your office of any further information concerning this matter which may come to my knowledge.

Very respectfully,

OMAR L. BABCOCK, Superintendent.

MEMORANDUM FOR MR. HAYDEN.

"The Moses Abromet Grant," so-called, involves approximately 100,000 acres in the Colorado River Reservation, and the claim of one Robert Connely regarding this tract has been under investigation by the Post Office Department and by the Department of Justice for several years. The last action of record is described in a letter from the assistant United States attorney at Los Angeles, Cal., a copy of which was submitted to this department in 1914 by the Hon. Attorney General. For convenience a part of said letter is here given:

"Will say that the writer to-day, in company with Post Office Inspector C. E. Webster and Ralph Dominguez, a notary public, called upon Mr. Connely for the purpose of requesting himself and wife to execute a quit-claim deed to the Government for his claimed interest in such reservation. The writer asked Mr. Connely if he had thoroughly investigated the condition of the title there and the circumstances surrounding it, to which he replied that he had and was satisfied with it; that he had had the best lawyers in Arizona and Washington examine into it. The writer informed him that there was absolutely no basis for his claim and demanded the execution of his deed, which was refused. We also informed him that there was no such attorney in Parker, Ariz., as Lawson, who purported to prepare the abstract and examine the title nor any such family or chefs as the Abromets nor any such record or deed at Parker as the abstract claimed."

The lands embraced in the alleged grant are included within the boundaries of the Colorado River Indian Reservation as established by Executive order of May 15, 1876, and the office has invariably advised all inquirers that such a claim as that made by the alleged transferee of Moses Abromet is impossible of substantiation.

The Late Representative Joseph A. Goulden, of New York.

MEMORIAL ADDRESS

HON. DANIEL J. RIORDAN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 23, 1916,

On House resolution (H. Res. 101) paying tribute to the memory of Hon. Joseph A. Goulden, late a Representative from the State of New York.

Mr. RIORDAN. Mr. Speaker, by the death of Joseph A. Goulden, not only we from New York but many from other States, has lost a stanch and sincere friend. The House lost one of its most useful Members; the United States a loyal and intelligent defender; the State of New York a notable citizen; and the city of New York a Representative ever true to her

interests and zealous in her support.

Congressman Goulden to the last excelled in vigor, energy, and initiative. He never became interested in a cause that he

did not become useful and devoted to it.

When a very young man he lived near the battlefield of Gettysburg, and though he saw all the horrors of that awful field the sight did not deter him from enlisting in the Navy soon after. His service was faithful, and during all the years that followed a veteran of the wars or a sailor or soldier of the Regular Establishment had a friend in Congressman GOULDEN.

He served on innumerable Memorial Day committees; was secretary of the committee which built the soldiers and sailors' monument on Riverside Drive, New York City; a trustee of the Soldiers Home at Bath, N. Y.; organizer of associate posts of the Grand Army of the Republic and active wherever he could do a real service to an old soldier, to his widow, or to his children. Hundreds of families to-day owe their humble comfort to pensions received through Col. Goulden's knowledge, sympathy, and untiring industry.

During the Spanish-American War Col. GOULDEN, without reward, recruited volunteers for the Army, and ever afterwards deemed it an honor that he had been permitted this

He was loyal to the flag he had served. He secured the passage of a law in the State of New York prohibiting the printing of advertising matter on the flag, and when the first offender proved to be one of his warmest supporters he insisted, nevertheless, on the strict enforcement of the law. He worked for 10 years, though unsuccessfully, to secure the enactment of a similar Federal statute.

He introduced the first bill to raise the Maine in Habana

Harbor and worked for it until it became a law.

The Bronx, which he represented for so many years, had with its rapid growth and its miles of penetration by arms of the sea many and important problems of trade, transportation, and navigation. Col. Goulden made himself proficient in them all. This interest led him into the Rivers and Harbors Congress and the Atlantic Deep Waterways Association. He became an officer in both, and he rarely missed a meeting or a session of either from Maine to Florida. On these subjects he was one of the best-informed men in the House.

Though in no sense a bigot, he was ardently devoted to his Naturally he became a prominent member of the Knights of Columbus, and the beautiful statue of Columbus in front of the Union Station in Washington is the result of a

bill which he introduced and pressed to passage.

He was a loyal Democrat, believing in the principles of the party and supporting its policies and candidates. In 1913, at the age of 68, he ran for an office which he did not want, and suffered anticipated defeat, solely because the party leaders made the request and desired the strength of his unquestioned

personal popularity in a more than doubtful year.

Col. GOULDEN was a school commissioner, and although his term expired 20 years ago, his interest in the schools remained unabated. He was the friend of the children and of the postal employees, of the police, and of the firemen. He was diligent and successful in business. All of these qualities and his long residence in The Bronx made him an appreciated neighbor and gained him hosts of true friends. His personal following of every race, color, and creed was large.

A good and loyal man, a most respected citizen, true alike to home, to family, friends, and to country, he lived an unselfish, useful life, serving the city, State, and Nation, making felicitous the lives of others. The sum of his achievements was large,

and the good he did for others was great.

When life was the happiest, still full of the vigor of well-spent years, occupied to the last moment, his career of honor and of worth ended with no lingering, wasting illness dimming the memory of former usefulness, but with the instant passing from the life here to the life beyond, preparation for which was never absent for a day from either his thought or his actions.

The American Farmer.

EXTENSION OF REMARKS

HON. JOHN A. M. ADAIR, OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 14, 1916.

Mr. ADAIR. Mr. Speaker, for 10 years I have stood upon this floor advocating and voting for all legislation helpful to the American farmer. I was born and reared on the farm and have been more or less interested in farming all my life.

have always believed, and believe now, that the welfare of the country depends entirely upon the success of the farmer. When he succeeds the merchant, the business man, the manufacturer, the mechanic, and the professional man succeeds; but when the farmer fails, all lines of business are paralyzed.
You may burn down our splendid towns and cities, and the

wealth of the farm will rebuild them more beautiful than before; but destroy our farms, and our cities will decay and our people will starve. This being true, I have tried in every conceivable way during the past 10 years I have been a Member of Congress to secure for the benefit of the American farmer such legislation as would make his business more profitable and

life on the farm more pleasant.

When I first came to Congress the Government was only appropriating about \$10,000,000 annually for the use of the Agricultural Department. I immediately begun a fight for more liberal appropriations for this purpose and kept it up, session after session, until last year we appropriated over \$20,000,000 for the use of this department of Government. It will also be remembered that I made one of the first speeches on the floor of the House in favor of the Lever agricultural bill, which became a law and is now working untold benefit to agriculture.

In fact, Mr. Speaker, I feel that but few men, if any, either in my State or elsewhere, have done more for the agriculturists of the country than I have. Now, in a short time, we will be called upon to consider the Agricultural appropriation bill making appropriations for the use of the Agricultural Department for the fiscal year ending June 30, 1917. In all probability this will be the last Agricultural appropriation bill I will have the pleasure of voting for, as I am giving up my seat in Congress at the end of this term in order that I might become a candidate for governor of Indiana. It was with a great deal of reluctance that I decided to do this, as I have been treated with such uniform courtesy by all Members of this body that I regret to leave it, but I feel that as governor of my State I can be of even more valuable service to the farmers of Indiana and to the people generally than I can be here. Let me assure you, however, that whether here or elsewhere I shall always keep in mind the interest of the agriculturist and do what I can, and all I can, to further his interests and help his business. Let me remind you also that our farmers are not only intelligent, progressive, and successful, but they are keeping a close watch on the acts of Congress and will expect from us justice in the fullest degree. I would further remind you that they are not only watchful, but they are also appreciative. This is being demonstrated out in Indiana at the present time by the farmers of my State, who are organizing and getting together to push my candidacy for governor, in order that they may show their appreciation of the service I have rendered in their behalf. Their appreciation is further shown through a letter I received almost a year ago from Mr. J. H. Patten, first assistant secretary of the Farmers' National Congress, and for four years general counsel of the Farmers' Educational and Cooperative Union of America, which letter is as follows:

FARMERS' NATIONAL CONGRESS. Washington, D. C., March 11, 1915.

Hon. John A. M. Adair, M. C., Washington, D. C.

Washington, D. C.

Dear Mr. Adair: On behalf of the members of the Farmers' National Congress and also the Farmers' Educational and Cooperative Union of America, whom I represented for four years as their general counsel in legislative matters, as well as on behalf of myself, I want to thank you for the loyal and enthusiastic support you have given to all legislation helpful to the American farmer. Your fight to increase appropriations for the use of the Agricultural Department, your earnest support of the Lever agricultural bill, and all other legislation helpful to agriculture, has attracted the attention of the agriculturists in all parts of the country and has won for you their everlasting gratitude.

By reason of your service as a Member of Congress you are entitled to the support of every farmer in your district and State. Let me assure you that the agriculturists of the whole country appreciate the service you have rendered in their behalf.

Sincerely, yours,

J. H. Patten,

J. H. PATTEN,
First Assistant Secretary Farmers' National Congress,
and for four years General Counsel for the Farmers'
Educational and Cooperative Union of America.

Now, Mr. Speaker, I want to urge and insist upon liberal appropriations at this session of Congress for the use of the Agricultural Department. I know there is a tendency to reduce appropriations all along the line because of the proposed increase in appropriations for the Army and Navy, but let us economize somewhere else and not reduce in the slightest degree the appropriations for the use of agriculture. There are many other ways we can reduce appropriations without touching this department. Heretofore the amount carried in the bill for the printing of farmers' bulletins has not been sufficient. The demand for these bulletins is increasing all the time. They are of inestimable value, and should be supplied freely to every I farmer who wants them. Many of these bulletins are used in

the public schools, teaching agriculture to our boys and girls, and no teacher or pupil should be denied this valuable information. I believe the appropriation for the printing of these bulletins should be doubled. Then let us be liberal, too, in our appropriation for the extermination of hog cholera and all other disenses so annoying and so disastrous to the welfare of the farmer. In other words, let us remember that all prosperity starts from the farm and that when we legislate for the farmer we are legislating for all the people.

Honor to Whom Honor Is Due.

EXTENSION OF REMARKS

HON. WILLIAM J. CARY,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 9, 1916.

Mr. CARY. Mr. Speaker, I shall vote for this bill, because I believe it to be a just one. The subject-Medals of honor-is closely connected with the history of the world from the beginning of the Chinese dynasty. There is much history of thrilling interest connected with it, as set forth in many volumes. Omitting further reference to what has been considered as very interesting and important in military, literary, and historical importance, we find that the first of modern military decorations of honor was the badge of honor instituted by Gen. George Washington in the Revolutionary War, in which he ordered that any soldier who might perform an act of valor should be allowed to wear a piece of purple silk, in the shape of a heart, to be worn upon his coat over his own heart.

Gen. Washington ordered that every soldier thus decorated should be allowed special privileges and honors, among which was the right to pass and repass at will, without challenge or

countersign, all guards and pickets during the war.

On account of the exhausted financial condition of the country and the depreciation of the continental currency, Gen. Washington provided no special pension with this military decoration. But that this idea was in his mind appears from the following, which he wrote to the governors of the several States from his headquarters at Newburgh, N. Y., June 18, 1783:

States from his headquarters at Newburgh, N. Y., June 18, 1783:

In this state of absolute freedom and perfect security who will grudge to yield a very little of his property to support the common interests of society and insure the protection of government? Who does not remember the frequent declarations at the commencement of the war, that we should be completely satisfied if at the expense of one half we could defend the remainder of our possessions? Where is the man to be found who wishes to remain indebted for the defense of his own person and property to the exertions, the bravery, and the blood of others without making one generous effort to repay the debt of honor and of gratitude? In what part of the continent shall we find any man or body of men who would not blush to stand up and propose measures purposely calculated to rob the soldier of his stipend and the public creditor of his due? And were it possible that such a flagrant instance of injustice would ever happen, would it not excite the general indignation and tend to bring down upon the authors of such measures the aggravated vengeance of heaven?

In 1802 Napoleon Bonaparte followed the example of Wash-

In 1802 Napoleon Bonaparte followed the example of Washington and very much enlarged upon his ideas. He instituted the order of the Legion of Honor, and provided that there should be various grades and officers of the order. He provided that national lands producing large incomes should be appropriated for each cohort of the legion. Later the lands and property of King Louis Philippe were set apart as an endowment for the order, and it was further provided-

that there shall be appropriated for each grand officer 5,000 francs, for each commandant 2,000 francs, for each officer 1,000 francs, and for each legionaire 250 francs.

Hospitals and dwellings were established in each cohort. Schools and colleges were provided for their children, and it was further provided that no ignoble punishment should be inflicted upon a member of the order. On November 30, 1845, the pensions then paid were 5,975,000 francs. And the members and the pensions have been increasing ever since. In 1813 Germany, then in far more dire straits than now, instituted the Order of the Iron Cross. That nation was then so poor that it could not furnish any metal other than iron from which to make that great military decoration. It was then called "the iron times of Prussia." The recipients of the "Militaer-Ehrenzeichen" and the "Verdienst-Kreuz" receive under dif-ferent conditions (values in United States money) 71 cents, \$1.43, and \$2.14 monthly, in addition to other pensions." ter from the consul general, December 16, 1893.)

In Germany the iron cross is not continued from one war to another unless revived by order of the Emperor. It was revived during the Franco-Prussian War, which lasted only seven months, and in one year alone 40,000 soldiers were decorated with the iron cross and more later on. Then the order was revived again at the beginning of the present war, and by this time half a million of those decorations of honor have been granted and more are being granted almost every day.

It is no violation of neutrality to say that the iron cross has won for Germany innumerable acts of valor, sublime as any in the world's history, because the similar military decorations of the other warring nations have also won for them like innumerable acts of valor. History has proven, and is proving and will prove, the wonderful incentive which these decorations give toward the very greatest and most valuable service for the nation that gives them at the times when the nations need them the most.

At the conclusion of the Crimean war, Queen Victoria, by her royal warrant, instituted the Order of the Victoria Cross as a reward for gallant service for the British nation. By the fifteenth section of that royal warrant special pensions are pro-

vided for the heroes who gain that decoration.

Without going into further details, it may be sufficient to say that all other great nations with their similar military decorations give special pensions for the special acts of valor which Most of those nations date the special pensions gains them. back to the date of the special act of valor which gained these special decorations. The United States, by her Congress, instituted the Congressional Medal of Honor during the Civil War by an act which is still in force. If the awards of these medals of honor had always proceeded in conformity with that act and with uniformity there would be no necessity for the present Unfortunately the act of Congress which instituted the medal of honor failed to provide special pensions. Because there was no cost connected with the decoration, the administration of the law grew lax, and medals of honor, which were intended to be the very highest military decorations of the worldintended only to be given for having performed an act in actual conflict with an enemy, some act of gallantry and intrepidity at the risk of life above and beyond the call of duty-were given to men for services, however meritorious they may have been, which were not in all cases acts af gallantry or intrepidity, or which were not in action or in conflict with an enemy, or which, perhaps, did not distinguish the soldier conspicuously, or which, it may be, were not done at the risk of life, or which may not have been done above and beyond the call of duty.

Hundreds of these medals were given for standing guard where not a bullet was fired. Others of these medals were given by the score to soldiers for escorting the remains of President Lincoln from this city to Springfield, Ill., and still others of these medals were given to civilians who were not in the military service of the Nation. So that in a large degree the significance of this medal, which ought to be the proudest in

the world, has been lost in oblivion.

These facts make it necessary that the Government should protect its highest decoration by distinctly separatin; her illustrious soldiers, who have won this medal in strict compliance with the rigid requirements of the letter and the spirit of the law, from those to whom it has been given as a matter of compliment or for meritorious services, however great, which failed

to come within the purview of the law.

This bill, if enacted, will correct the errors of the past. The intention of the law in this country and in all other countries is to exalt into a class by themselves such soldiers as have been officially recognized as having performed valorous deeds above and beyond the call of duty in action in actual conflict with the enemy, who have distinguished themselves conspicuously by gallantry and intrepidity at the risk of life above and beyond the call of duty to such a degree that, if the commanding general had commanded these soldiers to perform the action, the soldier in the heat of battle and all its exigencies might have refused to obey without subjecting himself thereby to censure.

Men who have performed deeds of such sublimity, whether in the Civil War, the Indian wars, the Spanish War, the disturbances in Cuba, in the Philippines, in Korea, in the Boxer uprising or at Vera Cruz, or in any other war ought not to be deprived of such distinction, gratitude, and recompense as all other nations give to such men.

To do them justice will in no way detract from the luster of the medals of the men who have received their decorations for services which failed to come within the definition of the law. They will hold their medals just as they have them now, and they will not expect recognition outside of their own class.

Other speakers have shown the wonderfully comparative small number of the United States congressional medals of honor which have been issued and the small number still extant, and they have shown that the cost of this measure will be infinitesimal. So I will not go into those details further than to say that the population of the United States is estimated by the Census Bureau at about 101 millions and the increase of population per day at over 4,000. It is altogether probable that in the first year of the administration of this bill the costs would not exceed \$10,000, which would be less than one ten-thousandth part of 1 cent per capita, and this microscopical cost will diminish according to the inevitable rule of the death rate, and soon cease altogether.

The cost is not worth thinking of. We will do ourselves and this great Nation honor, great honor, by the prompt pas-sage of this bill and by giving our illustrious heroes of all our wars from all sections of the country the distinction, the gratitude, the justice they have so long deserved. We will hurt nobody on the face of the earth. We will show the soldiers of future wars, if such should unfortunately come, that the people of this country have hearts full of appreciation, gratitude, and justice for men who in the service of the Nation will voluntarily take their lives in their hands and offer them

as sacrifices for the welfare of all the people.

Ellen M. Stone Ransom Fund.

EXTENSION OF REMARKS

HON. CHARLES R. CRISP, OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 14. 1916.

Mr. CRISP. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD, I include a communication from the State Department relative to the bill to reimburse parties who contributed money to pay the ransom of Miss Ellen M. Stone, the American missionary.

The communication is as follows:

The communication is as follows:

LETTERS FROM PRESIDENTS AND SECRETARIES OF STATE RELATIVE TO THE ELLEN M STONE RANSOM FUND.

To the Senate and House of Representatives:

I transmit herewith for the consideration of the Congress a letter from the Secretary of State on the subject of the repayment to the contributors of the money raised to pay the ransom for the release of Miss Ellen M. Stone, an American missionary to Turkey, who was abducted by brigands on September 3, 1901, while traveling on the highway from Raslog to Djumabala in the Turkish Empire.

Theodore Roosevelt.

THE WHITE House, March 26, 1908.

DEPARTMENT OF STATE, Washington, March 24, 1908

THEODORE ROOSEVELT.

The PRESIDENT:

As will be remembered Miss Ellen M. Stone, an American missionary to Turkey, was abducted by brigands on September 3, 1901, while traveling on the highway from Raslog to Djumabala in the Turkish Empire. Our diplomatic and consular tepresentatives in Turkey, in correspondence with the Department of State, shortly after the capture, indicated their belief that the motive therefor was to obtain a ransom and stated that they had requested the Turkish officials to abstain from too close pursuit of the brigands, lest the death of the captured might result

too close pursuit of the brigands, lest the death of the captured might result.

From later correspondence with our representatives it appeared that the brigands had retired to the mountains with the captive, probably over the border into Bulgaria. The exact location of the party during the captivity, however, is not established by any evidence in the possession of the Department of State, nor does it appear clearly of what Government the bandits were subjects.

About October 1, 1901, the bandits opened negotiations for a ransom, demanding £25,000 and transmitting a letter from Miss Stone asking that the sum demanded be paid and that pursuit of the brigands by the Turkish troops be stopped.

Our diplomatic representatives were of the opininon that Miss Stone's release could only be obtained by the payment of the ransom, and the State Department shared this view. Miss Stone's friends, of course, entered into correspondence with the department regarding the payment of the ransom and were told that it must be raised by private means.

means.

On October 3, 1901, the State Department telegraphed to the Rev. Judson Smith, of the American Board of Commissioners for Foreign Missions (this dispatch was forwarded subsequently by Dr. Smith to Mr. Charles A. Stone as "the proper custodian of this"), Boston, Mass., as follows:

"It seems imperative that the amount (of the ransom) should be raised or pledged so as to be available by your treasurer at Constantinople in season to save Miss Stone. Statutory prohibitions make it impossible for this Government to advance the money or guarantee its payment. If paid by Miss Stone's friends, every effort will be made to obtain reimbursement from whichever Government may be found responsible under international law and precedent. In the event of its

proving impossible to hold any foreign Government responsible for the capture and to secure the repayment of the money, this Government is willing! in the last resort to urge upon Congress as strongly as possible to appropriate money to repay the contributors."

It is claimed that this assurance given by the department in its letter to Mr. Smith, to the effect that, as a last resort a recommendation would be made to Congress looking toward the appropriation of a sum sufficient to pay the donors was largely instrumental in enabling Miss Stone's friends to secure the sum of \$66,000, which was raised through public subscription in this country by October 23, 1901, for the purpose of effecting Miss Stone's release.

After negotiations of considerable length, the brigands finally consented to accept the amount raised, and arrangements were made by United States Minister Leishman for the payment of the money at a point near Bansko, Macedonia, the Turkish authorities consenting to withhold their troops from the vicinity of the place in order that the negotiations might have a successful issue.

The release of the captive was not obtained so soon as expected, but was finally reported by Minister Leishman on February 23, 1902.

After careful consideration of all the facts my predecessor, Mr. Hay, decided, on January 19, 1905, that it was not advisable to attempt to hold the Turkish Government responsible for the capture and to secure the repayment of the money. Upon the subsequent application for reconsideration of this decision Mr. Hay again, on April 11, 1905, reaffirmed the Judgment which he had originally expressed. Upon a further review of the same subject I have come to the conclusion that it is not advisable to reverse or change the conclusion which Mr. Hay reached.

It would seem, therefore, that the executive department is bound to make good its promise to recommend to Congress that money be appropriated to repay the ransom money, a promise which was probably relied upon by many of those who contributed of thei

Accordingly I have the honor to advise that Congress be recom-mended to appropriate an amount sufficient to repay the contributors. Respectfully submitted.

As a result of this renewed agitation, a bill providing an appropriation sufficient to reimburse all the contributors to Miss Stone's ransom fund, was passed by the Senate in the Sixtieth, Sixty-first, Sixty-second, and Sixty-third Congresses. More than this, a similar bill was favorably reported out by the House Committee on Claims by Chairman Prince, which set forth at some length the reasons that justified that committee in making the committee of the committe in making a favorable report. It reads, in part, as follows:

The committee has carefully gone over this case, and 'ind that Ellen M. Stone, an American missionary to Turkey, was abducted by brigands September 3, 1901, while traveling on the highway from Reazlog to Jumaya Bala. in the Turkish Empire. Friends contributed for her ransom and were led to believe by correspondence with the State Department that the ransom money so contributed would be returned, either by obtaining it from Turkey or from the Treasury of the United States.

Messrs, Kidder, Peabody & Co., bankers, Boston, Mass., became the custodians of this fund, and furnished to the committee a list of the names and addresses of the original givers or their accredited representatives. The committee finds that there were 2,264 givers to this fund.

Hereto attached and made a part of this report is a message from former President Roosevelt and former Secretary of State Elihu Root, and the list of contributors.

The committee insists that the amount favored by them—\$66,000—shall be in full of all claims of every kind and character, and so accepted by the contributors, who receive this money from the Secretary of the Treasury, under the provisions of this bill. The committee designs this appropriation of \$66,000 to make an end to all legislation desired by the contributors to the Ellen M. Stone ransom fund.

The White House.

THE WHITE HOUSE, Washington, October 7, 1914.

My Dear Mr. Pou: I am quite sure that it is not necessary to remind you of the bill before the Committee on Claims with regard to reimbursing those who contributed to the fund for the ransom of Miss Ellen M. Stone from the Turks, for I know that your committee has again and again approved the bill. I take the liberty, however, of sending you Miss Stone's letter to me. It gives me the opportunity to say how sincerely I hope that at the next session of Congress this bill may be passed.

Cordially and sincerely, yours,

Wooddow Wilson.

WOODROW WILSON.

Hon. Edward W. Pou,

House of Representatives.

Department of State, Washington, July 15, 1914.

Sir: At the request of Miss Ellen M. Stone, the American missionary who was abducted by Turkish brigands in 1901, the department desires to call attention to the message of President Roosevelt to the Congress March 26, 1908, transmitting the letter of Secretary Root on the subject of repayment by the Government to the contributors of the money raised to pay the ransom for the release of Miss Stone, amounting to \$66,000. It appears that the Department of State announced in 1901, while Miss Stone was in the hands of the brigands, that if the ransom was raised and paid by private persons every effort would be made to obtain reimbursement from the Government which might be found responsible under international law, and in the event of it proving impossible to hold any foreign Government responsible the department was willing to urge that Congress appropriate money to repay the contributors. Subsequent investigation appeared to show the irresponsibility of any foreign Government, and therefore the department takes this occasion again to recommend that Congress make such appropriation. I have the honor to be, sir.

Hon. Edward W. Pou,

EDWARD W. Pou, Chairman Committee on Claims, House of Representatives.

To this last letter Representative Pou sent the following

JULY 18, 1914.

The honorable the Secretary of State, Washington, D. C.

Sin: Acknowledging the receipt of yours of the 15th instant, I beg to say that S. 1864, for the relief of the contributors to the Ellen M. Stone ransom fund, is now before this committee for consideration. Personally I have always favored the return of this money, and this committee made a favorable report on the bill for the refunding of this money during the Sixty-second Congress.

Faithfully, yours,

Chairman.

DEPARTMENT OF STATE, Washington, January 29, 1916.

Hon. EDWARD W. Pou, Chairman Committee of Claims, House of Representatives.

Sin: I have the honor to acknowledge the receipt of your letter of the 22d instant, requesting my opinion as to the merits of the bill (H. R. 2238) to provide for the repayment of the ransom of Miss Ellen M. Stone, and to refer you in reply to the letter addressed to you by the department on July 15, 1914, as follows:

"DEPARTMENT OF STATE,
"Washington, July 15, 1914.

"Sir: At the request of Miss Ellen M. Stone, the American missionary who was abducted by Turkish brigands in 1901, the department desires to call attention to the message of President Roosevelt to the Congress March 26, 1908, transmitting the letter of Secretary Root on the subject of repayment by the Government to the constributors of the money raised to pay the ransom for the release of Miss Stone, amounting to \$66,000. It appears that the Department of State announced in 1901, while Miss Stone was in the hands of the brigands, that if the ransom were raised and paid by private persons every effort would be made to obtain reimbursement from the Government which might be found responsible under international law, and, in the event of it proving impossible to hold any foreign Government responsible, the department was willing to urge that Congress appropriate money to repay the contributors. Subsequent investigation appeared to show the irresponsibility of any foreign Government, and therefore the department takes this occasion again to recommend that Congress make such appropriation."

I have the honor to be, sir,

Your obedient servant,

ROBERT LANSING.

Restriction of Power of Congress to Declare War.

EXTENSION OF REMARKS

HON. DENVER S. CHURCH.

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 15, 1916.

Mr. CHURCH. Mr. Speaker, on January 31 of this year I introduced H. J. Res. 128, which provides for a change of Article I, section 8, division 11, of the Constitution of the United States, which section defines the powers of Congress to declare war. Congress has the power under this division and section of the Constitution to declare war whenever it sees fit. by this resolution to restrict this power and have provided in the proposed amendment that Congress shall have the power to declare war in cases of invasion or threatened invasion of the United States, or any of its insular possessions, by a foreign power; or in cases of insurrection or revolution within the United States, or any of its insular possessions; or in other cases where the matter of declaring war has been submitted to the people, and a majority of those voting have declared themselves in favor of the proposed war. In other words, Congress shall have the right to declare war only in cases of emergency. In all other cases it shall be left to the people.

Mr. Speaker, I consider this scheme the solution of the whole war proposition. The people of one nation seldom, if ever, want to fight the people of another nation. It is the rulers of nations that bring on war. President Wilson, in his Chicago speech the

other day, said:

Rulers, not public opinion, brought on the present war in Europe.

In my judgment nine-tenths of all the wars that have come in the past to blight and curse the earth have been brought on by the rulers instead of by the public sentiment of the people. The rulers of our country here in Washington, changing as they frequently do every two, four, and six years, are just as apt to mistake newspaper agitation for public sentiment and bring on war as are the rulers of other lands. Remove the power of the President and Congress to bring on war except in cases of invasion, threatened invasion, revolution, or threatened revolution. and nine-tenths of the danger of war at any time is past. Adopt this plan and practically all who are objecting to preparedness will at once be satisfied. Most of our people believe in such a degree of preparedness as will enable us to drive away any foe or combination of foes that may infringe upon our rights; but all wise people fear that to establish a great fighting force and make it possible for it to be set in action at the will of the President or the Members of Congress is simply inviting trouble of the most serious and far-reaching nature. I am in favor of preparedness, but I would like to see all the money that is to be used in carrying out the plan of additional preparedness raised from those who are selling munitions of war to the belligerents and by an additional income tax. The present scheme of pre-paredness is based upon the necessity of greater protection, and I would like to see those who have the most to be protected supply most of the necessary revenue.

We are the richest and most powerful Nation on earth; why not be prepared for emergencies that may arise? But by all means, in this Government "of the people, by the people, and for the people," let the people decide when it is time to exercise

our great strength.

Under the present plan the President, through his diplomatic communications and other constitutional powers, can bring on a war almost at will that the people will have to If the President happens to be a wise man and a man of peace, there is not so much danger; but if he is an impulsive man and a man of war, which is frequently the case, the country is in peril.

Congress, that now has the constitutional power to declare war, is composed of Senators and Representatives who are exempt from war. If they were not, they are generally too old and fat and well fed to fight. Most of them would be a hindrance on a battle field. In case of a charge they would hardly escape being run over by the Red Cross, the newspaper boys, and the Commissary Department; and yet on the most trivial provocation we find a large minority of them anxious to bring on a war that other men must fight.

Our present plan is neither safe nor fair. I hear much about the honor of our country, and I believe the honor of this country should be maintained; but I want to see the term "honor" defined by the men who have to maintain it.

I would not like to have some fat fellow define my honor, tell me when it had been assailed, and then force me into a fight.

No man should have to be a factor in his country's defense in time of war who was not a factor on election day in determining whether there should be war.

War so vitally affects every citizen that I think every citizen should have a right to express his views as to whether there should be war.

War is the most important of all subjects. Why should not the people decide it?

Why should not the interested parties decide the most inter-

esting, to them, of all subjects?

If we enlarge our Navy so it is fully adequate for our defense, and then let the people decide when it shall be placed in action, we will have national honor and national peace for at least a hundred years.

Why should we not let the people decide when they shall go to war? Do we not believe that the people should rule? Do we mean this is a Government wherein the people shall decide matters of minor importance, but when it comes to deciding whether we shall have war, the largest and most important of all questions, that the people are not qualified to decide? As human blood and human life are of more importance than all other considerations of humanity, so the question of war is of more importance than all other subjects.

Do not tell me the people now, through their representatives, decide the proposition and that they are the real ones who declare war. Such is not the case. War generally comes on declare war. Such is not the case. War generally comes on suddenly, in the midst of an administration, and the people never have an opportunity to indicate their will, much less to

All the wars in which this country has engaged were declared so long after the general election that it would be absurd to think the question of declaring war, or the views of the candidates for office in regard to it, could have had any effect whatever upon their election. The War of 1812 was declared on June 12, about 20 months after the general election; the War with Mexico was declared May 13, 1846, about 19 months after the general election; the Spanish-American War was declared by Congress April 25, 1898, about 18 months after the general election of 1896. Our other two wars, the Revolution and the Rebellion, would, of course, have fallen under the exceptions, as set forth in my amendment.

Leaving as partially considered the proposition that it is the business of the people who are subject to military duties to de-

clare war, let us consider some of the other reasons why the

plan that I have outlined is good.

First, it will give time to reflect, to reconsider, and to cool off, as it were. My father taught me when I was a child to out a hundred after I became angry before I acted or spoke. The idea was that if I counted a hundred first I would act and speak more wisely. The proposed plan gives us time, as a Nation, in which to reconsider and determine whether we want to fight or not.

John Sherman, Secretary of State, during the Spanish-American War, said, in a public address at his home in Mansfield, Ohio, at a reception given in his honor just before he retired as

Secretary of State:

Had not the war with Spain been declared when it was we could have secured by treaty with Spain all that we demanded.

What a shame to the American people that a war was unnecessarily declared which resulted in the death of 6,395 officers and enlisted men, and wherein hundreds of millions of dollars of property were lost, when the matter could have been settled by ink and pen on a scrap of paper.

Suppose this war had been declared with equal haste against one of the great powers of Europe and instead of the few thousand lives being lost it had resulted in the loss of several million. Let me tell you, men of the House, the only guarantee we have against the unnecessary horror of war is to place the power of declaring war in the hands of the people.

Tell me, if you can, why the people who are taxed to maintain a war should not have the full say in declaring war? Do you still subscribe to the old doctrine of "taxation without representation"? That theory was exploded more than a hundred years ago. That doctrine was fought, routed, and put to death

at Lexington, Yorktown, and Bunker Hill.

Mr. Speaker, for centuries men have dreamed of universal peace, of a time when swords and spears should be no more, and to that end noble men have dedicated their lives. But their efforts have been in vain, and now the saddest war that ever cursed the world is on, and war flames rise and tidal waves of misery and human woe sweep rural lands and cities fair that before were filled with sweet content.

All schemes adopted in the past to prevent war have failed, so we must adopt some other plan. I trust you will not shake your heads and say there is no hope. We have tried to stop it by treaties of peace, dealing only with ambitious men who profit by war. Let us treat with kings and rulers no more, for during the history of the world they have been declaring wars for the common people to fight.

The present war in Europe is an example of this vicious Scarcely any of the men now in the trenches know the causes which brought about the war. They know they are fighting for their king, their emperor, their czar.

far as their knowledge goes. Two million men have been killed in Europe in the last year and a half for a cause unknown. If the bodies of all these men were placed end to end 6 feet in length they would reach 2.272 miles, about the distance in a straight line from New York to San Francisco. Seven million men, the physical pride of Europe, have been killed and wounded in this war. It is estimated they have shed 233,000 barrels of human blood—blood spilled in vain—for a cause unknown. Had the good cause which I am advocating to-day been in operation in Europe, these lives would have been spared, these wounded would be whole, and this blood would not have been shed, for the people over there are no more in favor of war than are the people here.

Our country is the light of the world, and if we place in the hands of our people the right of declaring war other nations will in time follow our example, and then will dawn the age

of universal peace.

Mr. Speaker, I am in favor of preparedness for the very reason that I favor peace. I do not trust the rulers of the Old To them might is right. They would pounce down upon us if they could, and while the present system is in vogue I want us to have a great Navy. A Navy that will take ambition from the hearts of these war-like men across the sea. I want our shores protected against any probable attack. I want to know our submarines are able to explore the sea, and that our air crafts can sail high among the clouds. I want to see our seashores bristling with defense-girt roundabout as with bands of steel. I want to know that great guns, the most powerful in the world, are crouched like lions in concrete caves, guarding the inlets of the sea. I want our Government arsenals to be located far inland, to the north and west, with equipments modern and complete, where all powder, guns, and munitions of war are made by Government hands. I want it to be impossible for private interests to profit in the event of war. I want our ships to be made by the Government, and of l

the latest type. I want to see our fortifications strong and complete. I want to see our soldiers well equipped, but in numbers not too strong. I hope the day will soon come when all this great machinery of defense will be in the people's hands. When that day shall come war talk will cease and war clouds will pass away, and ships of commerce will spread their sails and bear our products to all foreign ports. I do not want to see these preparations for the purpose of waging war, but for the purpose of insuring peace.

want to know the ship of state is safe, protected from hostile storms. I want to see it keep its course and sail on,

humanity's great ship of peace.

Pensions to Widows and Minor Children of Officers and Enlisted Men Who Served During the War With Spain, Philippine Insurrection, or in China.

EXTENSION OF REMARKS

HON. W. FRANK JAMES. OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 16, 1916.

Mr. JAMES. Mr. Speaker, the gentleman from Massachusetts [Mr. GARDNER] the other day made some remarks that would have been better received in London than here. He aroused the ire of the gentleman from Wisconsin [Mr. Stafford], who replied in words that would have received far more applause in Berlin, or Milwaukee, than they did here.

The gentleman from Wisconsin made some harsh remarks about the Spanish-American War. As he said it was a "miserable little war," but the men who enlisted to fight in that war who were willing to be killed, if need be-were as much entitled

to credit as those who fought in greater wars.

When the War with Spain broke out one of the first regiments ordered to camp was the regiment to which I had the honor to belong, the Thirty-fourth Michigan, a majority of whose members were from the Upper Peninsula of Michigan. In company with the Thirty-third Michigan, we were brigaded with the Ninth Massachusetts, and I want to state, regardless of what the gentleman from Milwaukee and others have stated about the "effete East," that we from the West found the boys from the East real men, and we are proud to have been in the same brigade with them.

At Camp Alger we camped near some of the southern regiments, and we found that they, regardless of any sympathies they had in the past, were as loyal Americans as those from the effete East or the wild West.

In company with many of my regiment, I enlisted on a Saturday night and left on the following Monday for camp to train for whatever might happen. We were, to our great delight, one of the first regiments ordered to Cuba. My comrades, the same as myself, knew what it was to suffer day by day because your Uncle Samuel was not prepared to fight even the despised Spaniards. The same as many of the other boys, I know what it is to weigh 150 pounds one cay and 60 days later to weigh 90 pounds with my clothes on. We know what it is to suffer with malaria for 16 years or more afterwards. But we are entitled to no credit for any of this, and ask none. We did not enlist for the \$15.60 per month that we got; we did not enlist for the pension that we might get; we enlisted because we were red-blooded Americans, and if the time comes when we are needed again I believe that I speak for every one of them when I state we will all be there when it is necessary to fight for national defense.

In common with many of my comrades, I am a member of the Society of Santiago, and also a member of the Spanish War Veterans. Had the honor of being the first adjutant and a charter member of our post. We did not join the Spanish War Veterans to get political jobs, to obtain pensions, or to threaten with political death anyone who did not see fit to vote whatever way we desired. I am afraid, Mr. Speaker, that some of our present Spanish War leaders are more anxious to form a political machine than they are to maintain a society for the purpose of social intercourse.

I believe that I am no less patriotic than some of the distin-

guished gentlemen who talked for this bill the other day-even if I do say I am not going to vote for this bill unless very mate-

rial changes are made in it.

One of the members of my regiment was here the other day. After hearing of these patriotic speeches, and judging that, with the exception of the gentleman from Illinois [Mr. Mann], these gentlemen were all old enough or young enough to have been our comrades, we regretted the fact that their patriotism in ninety-eight was not as great as their zeal now to grant pensions. If it had been, we might have called them "comrades." The greatest sinners some time contribute far more liberally to the churches, they tell me, than the regular members, evidently having the theory that charity covers a multitude of sins. If voting pensions is a sign of patriotism, we will have ample opportunity to be patriotic (?) at the present session of Congress, judging from the several kinds of pension bills introduced.

In describing the slacker several years ago that distinguished American, Oliver Wendell Holmes, well said:

Now, then, three cheers for the stay-at-home ranger, Blow the great fish horn and beat the big pan, First in the field that is farthest from danger, Take your white-feather plume, sweet little man.

When I first heard of the Key bill, or as it was then known, the Crago bill, I presumed it was intended to pension the wives and children of those who either lost their lives in the Spanish-American War or died from wounds or disease contracted in the Army. There could be no possible objection to such a bill. But, Mr. Speaker, this is not the intent of the bill; the advocates of this bill claim that a bill of that kind is not good because wives and children of soldiers dying, as I have stated above, are already taken care of.

The bill would not be quite so objectionable if it covered the widows and children of those who "volunteered" to go to the front when the War with Spain broke out. But this bill, gen-

tlemen goes many miles farther than that.

The man who joined the Regular Army in 1894, when there was no war nor rumors of war, certainly did not enlist because of patriotic motives, and therefore should not be taken care of on the ground of "patriotism." He put in his 90 days' actual service in 1898 because his term of enlistment had not expired. But, according to the terms of this bill, his widow and his children go on the pay roll, whether or not he suffered injury or suffered by disease.

or suffered by disease.

The Civil War veteran who saw 89 days' service can not draw a pension. The Regular, under this bill, must have seen 90 days' actual service before his widow and children can draw pensions. In the case of the Volunteer, however, he needed to have seen not a day's actual service. In the case of the Volunteer his 90 days reads as follows: "Service to be computed

from date of enlistment to date of discharge."

In other words, he could have enlisted one day, been granted a furlough of 85 days the next day, and then spent 4 days at some inland camp, thus completing his 90 days. This is absolutely unfair to the veteran of the Civil War and to the Regular of the late war.

A year ago, when this same bill was up, the distinguished Member from Ohio said as follows:

We have before us now in the Committee on Invalid Pensions a large number of applications for private pensions of soldiers who served 89 days, 85 days. 87 days I have a soldier from my own district who went home before he had served 90 days, and he can not get a pension on that account. Now, if we give the soldiers of the Spanish War an advantage over the soldiers of the Civil War it is going to create great dissatisfaction among the veterans of the Civil War. Now, this bill, it occurs to me, although I intend to support it, should have those two provisions amended so as to place the soldiers of the Spanish War on an equality, but give them no advantage over the soldiers of the Civil War.

There was no such amendment, however, made then and has not been made in the present Key bill.

There were in 1914, according to the gentleman from Ohio, Gen. Sherwood, 307,842 widows—Civil War widows—drawing pensions.

In 1914 the distinguished gentleman from Ohio, Gen. Sherwood, also stated as follows:

Now, take this provision in this bill. I will read from the bill now before the House: "That said widow shall have married said officer or enlisted man previous to the passage of this act." It does not require even that he should be a soldier who served at the front during the war or that he was disabled, but it states "that said widow shall have married said officer or enlisted man previous to the passage of this act." I suggested last week that this provision ought to be amended to conform to the general law and to the practice of this Government, so far as I know, since its foundation, and certainly for over half a century.

A little further along he says:

I commanded a regiment of veterans for three years. We served at the front during that entire service. We were 122 days under fire. We were in 40 battles of the war. * * Now you are proposing in this bill to pension the widow of the soldier who served only 90 days when, it has already been stated, he might have been on furlough for nearly the whole time.

Also he states:

Now, the widow of every soldier who served 90 days, no matter where she may be located, if she marries before the passage of this act and the soldier dies, she would be put on the pension roll for life.

I have a letter from the Philippine Islands. Many of the soldiers who went over there first married Filipino girls, some of them doubtless on the European plan. But if any of these soldiers should die to-morrow the young Filipino girls who married them would be put upon the pension roll for life under the provisions of this bill should it be enacted into law. I think a provision should be put in the bill to correspond with the legislation for the widows of the Civil War.

But no provision was made to take care of the matters suggested by the gentleman from Ohio then, and none is made in the present bill.

No one can claim it is fair to refuse to pension the povertystricken widow of the Civil War veteran who saw 89 days' fighting and then pass legislation placing upon the pension roll widows of Spanish War soldiers who saw not a single day's actual service.

In a short time we will be called upon to vote on the Keating bill to pension veterans of our Indian wars. If you examine line 1, page 2, of that bill, you will note that the language is as follows—" and who served for 90 days in the campaign."

Widows of Civil War veterans are not entitled to pensions, I understand, unless they married those veterans previous to 1891. It takes care of Spanish War veterans who marry any

time previous to the passage of this act.

Take the case of a veteran who had seen actual fighting from the disaster at Bull Run to the surrender at Appomatox, who had been wounded on several occasions, and in addition had suffered for years with disease contracted in the Army, getting married in 1891. His wife, although she may have been nurse as well as wife, for 24 years, would not be eligible to a pension if her husband died to-day.

On the other hand, if to-day her younger sister married a Spanish War soldier who spent 75 days on a furlough and 15 days in camp, who never smelled powder, and he was to die,

she would be entitled to a pension immediately.

There were approximately 434,000 men engaged in the wars mentioned in the Key bill. It has been stated that it was estimated that approximately 10,000 widows—in addition to children—would be affected and that the cost would not be more than \$1.500,000 the first year.

Mr. Speaker, in my particular company about 75 men have married out of 93, or over 75 per cent. I presume that this average is about the same as that of any other company. If so, then there would be over 300,000 soldiers whose widows would be eligible to come under this act, in addition to thousands upon thousands of children. In a few years the cost is very apt to be over \$50,000,000 per year instead of the \$1,500,000 predicted by some members of the Pension Committee.

I believe in paying pensions to those who are deserving and who really need the pensions, but I would like to see legislation passed to take every undeserving and wealthy pensioner off of the roll. If we do not want to save this money, pay it to the needy and deserving.

As a member of the Pensions Committee I have voted for every pension that I thought was deserving, whether it affected the soldier or his widow, and expect to do so, but will not vote to give pensions to the wealthy and the undeserving.

It is not necessary to pass this bill in order to take care of the needy and deserving widows and children. If they can not get a pension from the Bureau of Pensions, it is not hard for them—if their case has any merit whatever—to get a pension

from the Pensions Committee.

I am not afraid that the deserving will not be looked after; that is one thing that Congressmen are for. If these widows do not know enough about pensions to apply for one, they need have no fear that their Congressman will not look after them, especially if they or their relatives have any political pull. The chances are that some of these widows—against their will—will have pensions forced upon them by a grateful and farseeing Congressman.

It has been said that the Spanish War veterans ask nothing

It has been said that the Spanish War veterans ask nothing for themselves. Pass this law and see. You will find if you pass this law that at the next session of Congress you will be called upon to pay a pension to every Spanish War veteran—rich and poor, regular and volunteer—these who saw service and those who did not, those who suffered from wounds and disease and those who did not, those who saw years of service, and those who saw 15 days of kitchen detail at some island

camp.

I realize it is hard to vote against some of the politicians among the Spanish War veterans. They do not deny that they have a political pull—they not only admit it, they boast of it. I read an article some time ago where some of these politicians took credit for defeating for the supreme bench of the State of New York one of the most respected Members of this House, Mr. Fitzgerald, because he had dared to vote against the Key bill. They did it all with their little hatchet. If any man

here is going to vote for this bill contrary to his own better judgment, I want to say to him that I believe the Spanish War veterans are the same in his district as they are in mine, they are not in politics-as Spanish War veterans.

This is quite a session for pensions, and the session is young

We have a bill to pension veterans of the Confederate Army

and their widows, and to pay a bonus as well.

We have another bill to pay the Treasury guards. These distingushed fighters, however, on account of their extreme bravery do not have to serve 90 days, as do the veterans of the Civil War-they only have to be on the pay roll of Uncle Sam, or some State or some Territory, 30 days in order to get on the pay roll. This bill also takes care of their widows, regardless of how much real estate and personal property they may own.

I have not been able as yet to get a copy of the bill to pension the survivors of the home guards-those worthy heroes who volunteered to stay at home and protect the home fireside, and so forth-but presume it is being drawn up. Neither have I seen as yet the bill to protect the peace-at-any-price men, or the survivors of the Knights of the Golden Circle, but presume these

bills will appear in the near future.

The House passed a bill the other day to pay an extra pension of \$10 per month to those who could by affidavit or otherwise get their names on a so-called roll of honor. As these men had already received medals for their bravery, what more honor did they want? But why ask; it was not the roll of honor, but the \$10 per month extra that they wanted.

I am not opposed to compensation for mothers and dependent children. I had the honor of introducing and helping to pass the Michigan mothers compensation act. If the fathers of this bill will "cut out the bunk" as the expression goes, that the bill should be passed on account of patriotism—when in many cases there was no patriotism, as the soldier had to serve out his time—and make it a bill to compensate all dependent widows and children who can prove to the judge of probate-as per our Michigan law-that they need help, I will vote for it.

Of course, I know that the bill reads that it only applies to widows whose incomes do not exceed \$250 per annum, but it will not be hard to get around a little thing like that, and the result will be in a few years, either by legislation or otherwise, that every widow will be under the act.

I base my belief in this assertion from the fact that I understand a soldier must be disabled in order to draw a pension, and that affidavits must be made to this effect. A man to be a Member of this House or of the Senate ought not to be a man who is disabled, and yet I am informed that pensions are paid to some of these statesmen. If it is "easy" to get around the "disabled" feature, it will also be easy to get around the \$250 provision.

As I have said, it is easy to get pensions from the committee, and always will be. The present Pensions Committee, on account of its former experience, I presume, has seen fit to adopt

this amendment:

In no case will a bill be considered by this committee in connection with which the records of the War or Navy Departments show medical treatment for syphilis or other venereal disease of an aggravated character, unless the Bureau of Pensions has specifically waived the same as a factor in present disabilities or cause of death.

I would not say that pensions have ever been granted for disability occasioned by venereal diseases, but it does mean that the committee believes they ought to be on the safe side.

Over a year ago I told the Spanish War veterans and other citizens of the twelfth district of Michigan exactly where I stood on the matter of pensions. Every Spanish War veteran with whon. I talked stated that I was right.

When the Key bill was introduced I sent copies of this bill to Michigan. Some of the papers printed the bill in full, with the statement that I would vote against it and why. I have not had a single resolution, telegram, or letter from any Spanish War veteran protesting against my attitude, neither have I had a single telegram, resolution, or letter from a single Spanish War veteran asking me to vote for the bill.

They evidently believe the same as I do-that if I die my widow and children will be taken care of by this Government if

they need it.

I believe, gentlemen, that the sentiment in my district is not

any different than it is in your districts.

We are not of the opinion that in order to get volunteers for the next war you have to spend millions of dollars each year for

We are more concerned that this country shall pay some attention to preparing for war so that the volunteers of the next war will have a better chance for their lives from disease than we are in pensions.

We are more concerned that the honor of this country shall be upheld, even at the price of war, than we are in pensions.

The other day the first man to answer the call of the martyred President Lincoln for 75,000 volunteers in 1861 was buried. delivering the funeral oration one of his best friends said, in part, as follows:

We hear much of peace-at-any-price sacrifice. Peace with honor, yes. Peace to the honor of our country, yes. But if it means that we are to be the prey of international ambition, if it means that we are to do the bidding of every nation on earth, and that our, flag must dip in disgrace, then we must not have peace. No nation can be weak to-day in preparedness and strong to-morrow in efficiency.

If sharing these sentiments gives a man the right to call himself a patriotic American citizen, then the Spanish War veterans in my district and myself are patriotic Americans. But if believing that patriotism consists in no personal sacrifice yourself, if it means that voting money for pensions to the worthy and unworthy alike, the rich and poor alike, and that this counts for more than answering your country's call, then we are not patriotic American citizens.

"A Comprehensive Immigration Policy and Program."

EXTENSION OF REMARKS

HON. JOHN A. ELSTON, OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, February 16, 1916.

Mr. ELSTON. Mr. Speaker, under the leave heretofore granted me to extend my remarks in the Record, I include an granted me to extend my remarks in the Record, I include an article entitled "A comprehensive immigration policy and program," by Dr. Sidney L. Gulick, of New York City. Dr. Gulick has resided in Japan for nearly 30 years, and is a member of the commission on relations with Japan, appointed by the Federal Council of the Churches of Christ in America. The purpose of this commission is to promote better relations between America and Japan. Other members of this commission are: Dr. John R. Mott, of international fame, who was recently offered the ambassadorship to China by President Wilson; Dr. Robert E. Speer, secretary of Presbyterian Foreign Board of Missions; Mr. Hamilton Holt, editor of the New York Independent; President Vincent, of the University of Minnesota; Bishop Frances J. Mc-Connell, bishop of the Methodist Episcopal Church, and others. A year ago Dr. Gulick, together with Dr. Shaller Mathews, president of the federal council, were sent to Japan as a Christian embassy. Representing, as they did, more than 17,000,000 members of Protestant churches connected with the federal council, they received not only marked attention from the Government but also from the educational, business, and newspaper world.

The purpose of the following article by Dr. Guiick is to set

forth a comprehensive plan for dealing with the entire immigration problem in such a way as to meet the just demands of Pacific coast States to be freed from all danger of large Asiatic immigration, and yet to accomplish this aid in such a way as to avoid race discrimination. The article is as follows:

OUTLINES OF A COMPREHENSIVE IMMIGRATION POLICY AND PROGRAM. IMMIGRATION-PAST AND PROSPECTIVE.

Immigration the past decade has been enormous (10,122,862 for the 10 years ending 1914) and will in all probability become so again after the war closes. For the poverty of Europe and the frightful taxes that will be inevitable, together with the horror of militarism which has deluged the nations with blood, sown the felds with human bones, and overwhelmed all working classes, will cause millions to fee to a land free from militarism and relatively prosperous.

INDUSTRIAL UNREST.

Although America has vast resources, two-thirds of our toilers are in serious poverty, receiving less than \$15 per week when they work. Even at that rate, however, they are not sure of steady employment. The Federal Commission on Industrial Relations has disclosed how serious are the problems of unemployment and industrial unrest. Is there no casual relation between these problems and our recent vast immigration?

IMMIGRATION AND CITIZENSHIP.

America's political institutions and social organizations are based on democracy. There is developing among us, however, a large adult mile alien population still owing allegiance to other Governments. The last census (1910) shows that out of 5,942,000 foreign-born males in America 21 years of age and over, 3,221,000 were still aliens. While 770,000 born in Great Britain had become citizens of the United States, 449,000 were still British; in the case of Germany 889,000 had become naturalized, while 389,000 were still Germans. Those, however, who come from south Europe seem less ready to become Americans. Austria, for instance, gave us 149,000 naturalized citizens to 460,000 aliens; Hungary, 36,000 citizens to 219,000 allens; and Russic, 192,000 citizens to 545,000 aliens; while Italy gave us only 126,000 citizens to 586,000 aliens.

How many of these aliens had been here less than five years and therefore were still ineligible for citizenship the table did not show. But, however that may be, it seems wholly undesirable that the proportion of aliens to naturalized citizens from any particular land should be so large as these figures show. Should not the rate of permissible immigration be such as to keep the naturalized citizens from any land always in a substantial majority?

These facts and considerations suggest the importance, on the one hand, of checking this inflow of vast numbers who maintain allegiance to foreign Governments and also, on the other hand, of promoting such education of aliens permanently residing in America as shall help them rapidly to acquire our ideas and ideals, and transform them speedily into true American citizens.

There is, however, another important set of factors bearing upon America's immigration problems, namely:

THE NEW ORIENT.

New Japan has already acquired the mechanical instruments, the political, economic, and industrial methods, and the science, education, ideas, and ideals of occidental civilization. New China is rapidly following in the footsteps of Japan. Both are increasingly self-conscious and insistent on courteous treatment and observance of treaties. They are asking, with growing earnestness, for recognition on a basis of equality with nations of the West.

The great world problem of the twentieth century is undoubtedly the problem of the contact of the East and the West. Whether it shall bring us weal or woe depends largely on the United States, Shall our oriental policy be based on race pride, disdain, and selfishness? Shall it be entirely devoid of sympathy? And shall we rely on brute force for carrying it through? Or shall we give justice, courtesy, and a square deal, refusing to be stamped by ignorance, ill-founded suspicion, and falsehood? Shall we "prepare" to maintain by our military might a policy of arrogant disregard of their needs and feelings, or shall we remove dangers of conflict by a policy of friendly consideration and genuine helpfulness?

THE NEW ORIENTAL POLICY.

THE NEW ORIENTAL POLICY.

The new Orient renders obsolete and dangerous our nineteenth century Asiatic policy. Let us now promptly adopt a new policy—one that will provide, on the one hand, for the just demands of the Pacific Coast States to be protected from a swamping Asiatic immigration; and yet that also provides, on the other hand, for full courtesy of treatment and for complete freedom from race discrimination, which is inevitably regarded as humiliating. The new policy should provide for observance of the spirit no less than of the wording of our treaties, and be thus in harmony with the principles of good neighborliness.

THE NEW IMMIGRATION POLICY.

All this means that we need comprehensive immigration legislation dealing with the entire question in such a way as to conserve American institutions, protect American labor from dangerous economic competition and promote intelligent and enduring friendliness between America and all the nations, East and West.

THE LITERACY TEST.

Restriction of immigration has been widely demanded in recent years. Three times Congress has passed a literacy-test immigration bill. Three times has it been vetoed. But even if it became law, would it suitably and adequately regulate immigration? Would it avail in maintaining a wholesome proportion between the allens and the naturalized? Moreover, a literacy-test law could not wisely be applied to Asiatics, for it would admit millions.

NUMERICAL LIMITATION.

Do we not now need legislation limiting immigration on a numerical basis? Should not the annual immigration be adapted to our economic conditions? And should not that limitation deal equally with all races? Should it not also provide for their rapid education and Americaniza-

IMMIGRATION LEGISLATION AND "PREPAREDNESS."

Such a policy and program constitutes one of the pressing needs of the times. Quite as important as military "preparedness" to resist attack is diplomatic and legislative "preparedness" to reduce tension and promote international friendship.

The following paragraphs present in barest outlines:

A CONSTRUCTIVE PROGRAM FOR COMPREHENSIVE IMMIGRATION LEGIS-LATION.

1. THE CONTROL OF IMMIGRATION.

Immigration from every land should be controlled, and, if excessive, it would be restricted. The principle of restriction should be applied equally to every land, and thus avoid differential race treatment.

2. AMERICANIZATION THE PRINCIPLE OF CONTROL.

2. AMERICANIZATION THE PRINCIPLE OF CONTROL.

The proven capacity for genuine Americanization on the part of those already here from any land should be the measure for the further immigration of that people. Newcomers make their first contact with America through those who speak their own language. The Americanization, therefore, of newcomers from any land depends largely on the influence of those already here from that land. The number of newcomers annually admissible from any land therefore should be closely dependent on the number of those from that land who, having been here five years or more, have actually become American citizens. These know the language, customs, and ideals of both peoples, ours and theirs.

America should admit as immigrants only so many aliens from any land as she can Americanize.

3. THE PROPOSED RESTRICTION LAW.

Let therefore an immigration law be passed which provides that the maximum permissible annual immigration from any land shall be a definite per cent (say 5) of those from that land who have already become naturalized citizens, together with their American-born children. The grandchildren as a rule do not know their ancestral language, and therefore do not aid particularly in the Americanization of new-

and therefore do not not not particularly accomers.

The permissible annual immigration from the respective countries, as calculated from the census of 1910, shows that in general there would be no restriction on immigration from North Europe. The reverse, however, would be the case for the countries of South Europe. The permissible immigration from China and Japan would be less than that which has been coming in recent years.

Provision should be also made for the protection of all newcomers from ruthless exploitation and for their distribution, employment, and rapid Americanization. To aid in the accomplishment of these ends the Federal Government should establish—

4. A BUREAU OF REGISTRATION.

All aliens should register annually until they become American citizens and should pay an annual registration fee of, say, \$10. We need to know who the aliens are and where they live, and they need to know that we know these facts about them. A system of registration could be worked out in connection with a national employment bureau, as suggested by the late Prof. Henderson, that would not involve police surveillance. This bureau should be regarded as a method for friendly aid, not of hostile and suspicious control. Also—

5. A BUREAU FOR THE EDUCATION OF ALIENS.

5. A BUREAU FOR THE EDUCATION OF ALIENS.

This burden should set standards, prepare textbooks, promote the establishment of night schools by States, cities, and towns—which might receive Federal subsidies—and hold examinations. The education and the examinations should be free. Provision should be made for the reduction of the registration fee by, say, \$1 for every examination passed. The education should be simple and practical, avoiding merely academic proficiency. Let there be six examinations, three in English and one each in the history of the American people, in the methods of our Government—local, State, and Federal—and in the ideals of democracy. When all the examinations have been passed there would still remain the annual registration fee of \$4 so long as the individual chooses to remain an alien. There should also be—

6. NEW REGULATIONS FOR THE BUREAU OF NATURALIZATION.

6. NEW REGULATIONS FOR THE BUREAU OF NATURALIZATION.

Citizenship should be granted only to those who have passed the required examinations provided by the bureau of alien education and have maintained good behavior during the five years of probationary residence. The naturalization ceremony might well take the form of a dignified welcome service—say on a single day in the year, the Fourth of July, with appropriate welcome orations, banners, badges, and banquets.

7. CITIZENSHIP FOR ALL WHO QUALIFY, REGARDLESS OF RACE.

Eligibility to naturalization should be based upon personal qualifications of intelligence, knowledge, and character. The mere fact of race should be neither a qualification nor a disqualification.

Such are the main outlines of the proposed comprehensive and constructive program here offered for the solution of the entire immigration problem. Asiatic as well as European. For a more adequate understanding, however, of this general proposal we should consider—

8. A FEW ADDITIONAL DETAILS.

structive program here offered for the solution of the entire immigration problem. Ashafte as well as European. For a more adequate understanding, however, of this general proposal we should consider—

(a) No change should be made in the schedule for maximum immigration between the census periods. With each new census a new schedule should be prepared, but it should not go into operation automatically. Congress should reconsider the whole matter once in 10 years upon receiving the figures based upon the new census and decide either to adopt the new schedule or some new percentage rate or possibly to continue the same schedule for some new percentage rate or possibly to continue the same schedule for another decade.

(b) Provision should be made for certain excepted classes. Government officials, travelers, and students would, of course, be admitted outside of the fixed schedule figures. Allens who have arready resided in America and taken out their first papers or who have passed all the less of the fixed schedule figures. Allens who have arready resided in America and taken out their first papers or who have passed all the less of the schedule. Wives coming to join their husbands and children 15 years of age or under coming to join their husbands and children 15 years of age or under coming to join a parent might also be included among the excepted classes. By providing for such exceptions the drastic feature of the proposed plan would be largely, perhaps wholly, relieved.

(c) Should the restriction required by the 5 per cent plan be regarded as excessively severe, either the per cent rate could be advanced or, what might perhaps be preferable, the 5 per cent restriction might be made that all allen women should have been advanced or, what might perhaps be preferable, the 5 per cent restriction might be for countries from which few have become American citizens, a minimum permissible annual immigration of, say, 500 or 1,000, might be analysed to the fee, might well be required only of male allens 21 years of

secure passage in the order of their purchase of tickets—first come first served.

(k) In order to alleviate hardship as far as possible, might not immigration-inspection offices be established in the principal cities of departure and provision be made that all immigration from specified regions should receive inspection at those offices alone, such inspection to be final?

tion to be final?

An exact and full statement of the numerical results of the application of these restrictive principles to each people would require comprehensive statistical tables. It may be enough to give merely a few illustrative figures. The permissible maximum annual immigration for the current decade (males 14 years of age and over) would be for Japan 1,220, for China 1,107, and for Italy 44,091. The following table shows what the actual immigration was of such males and what the result of the proposed restriction would have been:

Year.	Actual immigration of males 14 years of age and over.			Excess beyond the permissible annual maximum.		
	Japan.	China.	Italy.	Japan.	China.	Italy.
1911 1912 1913 1914 1914	1,264 1,721 2,877 3,001 3,429	1,030 1,200 1,530 1,934 2,084	126, 118 100, 867 192, 334 198, 008 24, 358	44 501 1,657 1,781 2,209	93 423 827 977	82,027 56,776 148,243 153,917

Would not the above proposals for a comprehensive and constructive immigration policy coordinate, systematize, and rationalize our entire procedure in dealing with immigration and solve in a fundamental way its most perplexing difficulties? Such a policy would protect American labor from danger of sudden and excessive immigration from any land. It would promote the wholesome and rapid assimilation of all newcomers; it would regulate the rate of the coming of immigrants from any land by the proven capacity of fitness of those from that land already here; it would keep the newcomers always in the minority; it would be free from every trace of differential race treatment. Our relations with Japan and China would thus be right. Such a policy, therefore, giving to every people the "most-favored-nation treatment." would maintain and deepen our international friendship on every side.

Criticism of this plan is invited. If the reader finds himself in harmony with this proposal, a letter of indorsement would be appreciated.

Pensions.

EXTENSION OF REMARKS

HON. THOMAS D. SCHALL. OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 10, 1916,

On the bill to pension widows and minor children of officers and enlisted men who served in the War with Spain, Philippine insurrection, or in China.

Mr. SCHALL. Mr. Speaker, I shall vote for this bill to pension the widows and orphans of soldiers who served in the War with Spain, the Philippine Insurrection, or in China. It is not just that the United Spanish War Veterans should carry this additional burden. Those opposed to this bill, in war, would be the very ones who are always found where the bullets are thickest—back under the ammunition wagon—or serving their country by staying at home selling their goods at wartime prices. They should be the last to object to sharing the burden of those who went to the front.

Economy should not be practiced at the expense of our volunteer soldiery. They did not haggle. They offered themselves freely, more men coming forward than the Nation could use. Asking no questions, dying without a whimper, they in-curred the danger willingly and without question. In the pride and strength of their young manhood they went out, many of them broken by the strain to which the tropical climate subjected them. It would be putting small encouragement upon patriotic duty if a man were to know that, after he had sacrificed his health, his strength, and life for his country, the claim of his widow and orphans would be regarded with cold disfavor—a graft. It has always been our pride and boast that we rely for our safety upon our volunteer soldiery; that here conscription is unnecessary; that patriotism is all the incentive our enlistment needs. If we begin to peep and botanize upon the claim of the widow and the orphan of these soldiers, it is a sad comment upon American gratitude.

In the fifteen years since the war these brave fellows have not asked any legislation for themselves. The bill before us is framed, at their unselfish request, only for the needy widows and orphans. Statistics available show that there is a real need. At a time when mutterings of discontent are in the air, when no one knows what a day may bring forth, when wars and rumors of war shock the mind and strain the nerve, when the friendly nation of to-day becomes the bitter enemy of to-mor-row, shall we call noisy attention to the fact that the volunteer soldier has no place in the heart of the Nation; that his death for his country is a slight incident, to be brushed aside as of no moment, and for his widow and his orphan there is no claim upon the gratitude of the country he served?

Pensions.

EXTENSION OF REMARKS

HON. WILLIAM A. AYRES, OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 16, 1916.

Mr. AYRES. Mr. Speaker, I do not want this occasion to pass without saying a few words in favor of this bill, which provides pensions for the widows of our soldier boys who suffered, endured, and fought in the War with Spain and helped to maintain the honor of the Stars and Stripes when that glorious

emblem was insulted and in peril.

I am not ashamed of the record my own State of Kansas made in that conflict. Kansas, before the call was cold upon our President's lips, furnished three of the best volunteer regiments that ever was recruited. Kansas was the first State to complete her muster and tender her quota of volunteers for service to our President, ready and anxious to go where duty called. Part of our volunteers were hurried across the sea and did loyal and effective service in the Philippines. Others waited patiently for the welcome call from Chickamauga and the Army posts in Virginia, which circumstances did not permit to come. Still others, a fourth regiment, was trained and equipped, awaiting orders from the War Department, ready to answer its country's call. Our men were efficient and brave, and there was developed in that short period of service military talent and skill that has found just recognition to promotion to the Regular Army. Men were developed in that conflict from the ranks of the Kansas volunteers who now have been promoted to high military positions, and who have but recently been recognized for their genius in handling the difficult and trying situation on our southern borders.

All patriotic citizens are willing to give their assent to the proposition that our Government provide adequate and liberal pensions to its defenders. We have come to the point where we recognize that we owe a debt of incalculable gratitude to the soldiers who offered their services and lives to the Nation in its needs, and also that we owe this same gratitude to the noble and self-sacrificing women because of the patriotism that bade their young husbands go to the front and battle for our Nation's honor and rights. Thoughts of privation and hardships during their husbands' absence were dismissed from their minds. A their husbands absence were dishinssed from their littles. A great many of these soldiers, being young and just starting in life, with but little of this world's goods, left their families almost without any resources. They did not volunteer for the little salary attached to their enlistment. There were but few of them but who were receiving more wages in their daily walk of life than they could hope to get for their service. It was not for this small allowance that they answered their country's call. They were patriots themselves, but they were no more patriotic than the wife who bade them go.

Can a nation ever hope to compensate these brave women for this self-sacrifice? Can a nation's gratitude be measured by the few dollars that it will cost our Government to provide relief for them now? We are just coming into the proper appre-ciation of the important part these good women had in bringing triumph to our cause.

The burden of our Nation's obligation to these widows, in a great many instances, has fallen upon our municipalities and private charitable institutions. They have been more sympathetic and liberal to this class of women and their orphan children than has our Nation. These local sources of charity have not reached all the deserving cases, and we all know of sad instances that are meritorious and deserving.

This Nation should come to believe that it owes much to these women for their patient self-sacrifice. We have allowed these widows and orphans to be accounted and looked upon as objects of charity. What a low estimate to place upon our obligation. They are not objects of charity, because we owe them a gratitude for which we have never paid them: When we give them that which we owe we will be but doing our full duty,

and should ask no commendation.

When this relief is given regularly in the way of a pension we will have a national conscience a little more void of offense, and the problem of our obligation will at least be partly solved. Appreciation will not be lacking on their part when we accomplish this. Why permit them to remain in necessitous circumstances, when this trifling relief, given regularly, will enable these widows to maintain their home and family? We are bound in the interest of good citizenship to give her this

I have always been in favor of liberal pensions to the widows of all soldiers who have had service in any of our country's wars, and I believe that this law will be a step in the right direction and will lead to the fulfillment of our kindred obligation to the widows of soldiers who fought in our various We have moved far enough along from the limi-Indian wars. tation placed upon the law relating to the marriage and granting of pensions to the widows of the veterans of our Civil War to adjust that limitation also, and I would like to give my support to an amendment to the present law raising the limit of marriage with these veterans to a date nearer our own time. It seems to me that it would be the proper thing for a grateful nation to give the same relief to the women who have married

soldiers of our Civil War since 1890. This bill provides for pensions to widows of soldiers of the Spanish War on the soldiers' death without asking any questions as to whether the cause of his death was due to injuries received by him in line of duty. While it is true that we did not come to the appreciation of our obligation to the widows of veterans of the Civil War in this particular until the year 1890, yet we corrected that error at that time, and thus seeing our neglect regarding them we should see that this same error does not fall upon the widows of soldiers who fought in our more not fall upon the widows of soldiers who fought in our more recent wars. I heartily approve of the provision in this bill, which does not carry with it the technical necessity for the widow to prove that her husband's death was due to injury received in line of duty. It seems to me that is a just and equitable provision. If she is a widow and is in need, her wants are just as pressing and our obligations are just as strong as if her husband had been taken while he was in the service.

Many instances of the wants and needs of widows of soldiers of this class have come to me from my own district. I know of the circumstances and conditions surrounding many of these cases, and a great many of them, and I might say practically all

of them, possess the greatest merit.

Our pension laws generally are hedged about by entirely too many technicalities. A great many of them who came from the Army with health broken have answered the last roll call. Many have lost their limbs, many have lost their health from hardships and exposure, incurred disease from insanitary camps, and these ailments will stick to them through life and grow worse as the years pass by. The wife who saw him march away and the zirl who married him on his return has just begun her burden of care. Heretofore the limited rule of our matter. her burden of care. Heretofore the limited rule of our grati-tude was so guarded that many deserving ones have been getting no pensions.

These widows and the widows of all soldiers can not be too promptly and generously accorded their dues out of our Nation's Treasury. Our Nation is abundantly able, and I believe that we are all willing to bestow upon them sufficient pensions to give them this much-needed relief.

I sincerely hope that this measure will become a law.

Pensions.

EXTENSION OF REMARKS

HON. EDWIN D. RICKETTS. OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 16, 1916.

Mr. RICKETTS. Mr. Speaker and gentlemen of the House, I am heartily in favor of this bill to pension widows and minor children of officers and enlisted men who served in the War with Spain, the Philippine insurrection, and in China. I have read the bill over, word by word and line by line, and have studied it thoroughly, and have reached the conclusion that it is a just and proper bill and should be passed by this House.

During these warfares 434,000 young men and citizens of the United States served their country in a most telling and emphatic way. This number is about 18 per cent of the number who served in the war between the States. It is proposed, by this bill, in its amended form, to grant the sum of \$12 per month to the widow of an honorably discharged soldier or sailor who served during the War with Spain or the Philippine insurrection during her widowhood and \$2 monthly for each child under 16 years of age. The pension is to be limited only to the widow who is without means of support other than her daily labor, and an actual net income not exceeding \$250 per year.

Under existing law this allowance to widows and orphans of men who served in other wars has been provided, whether the beneficiary be rich or poor. Under the report of the committee the number of widows and orphans to be benefited by the proposed measure can not be definitely ascertained. Inquiry among the camps of the United Spanish War Veterans indicates that there are about 4,000 widows of men who served during the Spanish War and the Philippine insurrection. No one can state definitely just what percentage of these widows come within the purview of the bill—that is, that have no means of support other than their daily labor, and so forth—and to so estimate it would only be a conjecture. According to the report of the committee, the destitute widows and their dependents are cared for in the main by the United Spanish War Veterans. It is inequitable to ask the men who offered their lives to their country in war service to make this additional financial sacrifice. when the burden should be carried by the mass of our population which did not serve with the colors. If you will but stop and think, it has been 15 years since the Spanish War broke out, and this is the first request for legislation ever made by the organization of United Spanish War Veterans. They certainly have been very unselfish, and their late request commends them for they are asking nothing for the production. mends them to us, for they are asking nothing for themselves absolutely nothing-but only a provision for the helpless widow and orphan.

Under the present pension laws the widow, or quite a majority of them, have a pensionable status if they can show that their husbands' death was directly due to disability incurred in the service. This always seemed to me to be unjust, and I most sincerely hope that this feature of the present law may by this Congress be eliminated, for the Government certainly has sufficient knowledge of the soldier's service to know whether or not he entered upon that service as a man in a healthy condition; and if he has been pensioned since his service, this Government knows that he incurred his disability while serving his Why, then, should his poor widow be required to furnish testimony that he died from the disease which he incurred

The presumption would be that he died because of that disease, or as a result of same. No person can testify truthfully that a soldier died as a result of a disease incurred in the service of his country, except an expert physician; and he, of necessity, would have been required to be with the soldier all during his service in order to give any accurate or correct testi-mony in relation thereto. This bill eliminates this feature of the law, and I most heartily concur in this elimination.

Now, the Spanish-American soldiers and the Philippine soldiers rendered invaluable service to this country. This was the first time in the history of our country that the American soldier and sallor served in the Tropics and the Orient, under climatic and hygienic conditions unusual to him. They were subjected to the climatic diseases prevalent in these territories or countries, which were numerous, and which struck down to death many of our American boys. They received no bounty or substitute money, and were not drafted for service. I am proud to say that they volunteered their service because of the patriotic spirit that dwelt in their hearts. They were loyal, true American citizens, who were willing to give up their lives in order to preserve the honor of their country and to uphold its institutions and preserve its rights. The mere nominal compensation that they received is nothing when compared with the most excellent service which they rendered.

The committee, in its report, says that of the 434,000 who served in these warfares, about one-fourth were in Regular service, and from 75,000 to 100.000 were assigned to duty in the Philippine Islands. In these warfares there were 826 battles and skirmishes, in 515 of which men were killed or wounded. The whole mortality of the campaigns was 12,000. Many of them left widows and families of children.

Now, if we were not to provide for these dependents of this latest type of our patriotic citizenship, while lavishly making provision for the widows and dependents of those who served in all the other wars of the Republic, this would mean to indict this Government on a charge of unjust discrimination.

In my judgment, if we expect to increase our Army and Navy we must show to the citizenship of this Nation in a clear and unambiguous manner that it is the policy and intention of this Government to take care of the widows and orphans of the volunteer soldiery who sacrifice their lives upon the field of battle in defense of the country which they love. The young men of this Nation to-day are far more intelligent than they ever were in the history of our people, and there is nothing that would make the young man lose his patriotism more quickly than to know that the Government under which he lives places a very low estimate upon the sacrifices that young men must, of neces-

sity, make when they enlist in either the Army or Navy.

Mr. Speaker, I most sincerely hope that this House may pass this bill, and that at the very earliest possible date the Committee on Pensions may order out the bill to remove from the present law the time limit to widows who have married veterans of the Civil War. Under the law as it now stands no widow can obtain a pension who may have married a soldier since June 27, 1890. This law, in my judgment, is grossly unfair. It is the duty of this Government to take care of its soldiers and their widows and orphans, and a great many of the widows to-day have married the old soldier and made him a good wife and cared for him and looked after his interests for a number of years or until the time of his death. She gave him the very best care of which she was capable, and now the Government, notwithstanding the fact that she has rendered this most splendid service to the man who served this Nation, says that she can not have a pension because she did not marry prior to June

In my judgment this is wrong, unfair, and unjust, and this feature of that law should be repealed, and repealed at once.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

HON. WILLIAM A. AYRES,

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 17, 1916.

Mr. AYRES. Mr. Speaker, a new Member of this body no doubt gets an erroneous impression of Congress the first few days, or I might say weeks, when his attention is devoted principally to listening to those who seem to have a grievance or a grouch, or, putting it in a milder form, to criticizing everything that has been done and is going to be done, especially by this administration. This spirit, as well as the exercise of it, was not confined to the minority either, for it seemed to be quite general on the part of some in both parties. This, of course, makes for the time being a rather peculiar impression on a novice; however, I am glad to say that my association with men upon this great committee of the Post Office and Post Roads has clearly demonstrated to me that it is much easier to criticize than it is to construct; it takes but little thought to prepare a stinging criticism of something or some act of another, but it takes a great deal of thought, plenty of hard work, to construct legislation for a great department like the Post Office Department; hence I can readily see why some prefer to devote themselves to criticism rather than to give their help to construct.

As a new Member of Congress, I consider it very fortunate that I should be placed on this very important committee, composed of men who are liberal and broad minded; men whose whole aim and effort is to legislate for the best interest of the

department and for the people as a whole.

In all the hearings before this committee, men from all parts of the country appeared before us and gave their ideas and best thoughts in presenting their claims; and during our deliberations as a committee I was most profoundly impressed with the fact that partisan politics was entirely lost sight of, and the bickerings indulged in on this floor by so many did not appear in this committee. It is true that some of us felt that other legislation should have been placed as riders upon this bill; as for one I felt that as a part of this bill we should have included a provision for the retirement of the superannuated employees of this department. This question has been before the executive department as well as before the Congress for many years. It seems to me that the present law is harsh and inhuman, as it prohibits the maintenance of a civil-service pension list, and makes it the imperative duty of the executive

office to drop from the service all employees who are permanently incapacitated from performing further service. This is true notwithstanding the fact that this unfortunate condition may have been brought about by the constant grind at his post of duty.

I remember very distinctly of a particular case in my own city, where a faithful old letter carrier had borne his pack day after day, through sunshine and storm, from September 1, 1886, until some time in May, 1909. Completely worn out Carey Davis staggered and fell under his load, and within 60 days thereafter his resignation was called for by the department; and ever since that date he has been, and is now, a complete physical wreck, with no income to sustain him, and must rely upon the help of others, not receiving the same degree of consideration as the faithful old horse, which, no longer fit for duty, in most instances is cared for and protected because of faithful services rendered. Hundreds of such cases, no doubt, can be cited similar to the one I have mentioned.

Mr. Speaker, I might add further that I understand now that there is a standing order to the effect that any letter carrier absenting himself from duty for a period of 150 days during any one year, because of sickness or otherwise, will be dismissed from the service, no matter how long he may have served.

When a man becomes a pack horse, such as these men are for a period of 25 or 30 years, through all kinds of weather, it would be strange, indeed, if they would not be more susceptible to accident and sickness than men more favorably situated. So I repeat it is a harsh and inhuman rule that now has been governing this department. It is not only inhuman but it is expensive to the department.

There are now many employees in the Postal Service who should be retired on account of their age and physical infirmities. Many of these men have spent their lives in the service. On account of the long hours and the exacting nature of their employment, they have not been able to engage in any other line of business nor to lay aside a competence for old age. In other words, to use the too often used common expression, "He has outlived his usefulness," Good administration and humanity alike demand that some provision be made to care for these veterans of a most valuable service rendered the people and the Government.

The First Assistant Postmaster General, in his report for 1910,

Nearly every country of importance makes some provision for pensioning its employees when they are overtaken by old age, and many of the large corporations of this country have advised a similar plan for the retirement of their aged employees. From the standpoint of economy alone it would seem that this Government should do likewise. In the Postal Service, on account of the long hours, the small salaries, the exacting nature of the duties performed, the employees are rarely able to lay up a competence for old age. It is hoped, therefore, that Congress will take action looking to the retirement in some suitable manner of its superannuated employees.

The Postmaster General, in his report for 1911, says:

Almost without exception foreign nations provide for the pensioning of civil-service employees when they become superannuated. Large corporations in this country are rapidly adopting the same principle in the retirement of their aged employees. On business grounds, if for no other reason, the Government should do likewise. While the compensation of postal employees has been considerably increased during the last few years, it is hardly more than is sufficient to meet necessary living expenses, and, consequently, does not permit the putting aside of any considerable savings against old age. It is believed that a civil pension based on length of employment should be granted by the Government. Benefits to the service far outwelghing the expense of such pensions would undoubtedly result.

The First Assistant Postmaster General, in his report for the same year, says:

same year, says:

Nearly every country of importance makes some provision for pensioning its civil employees when they are overtaken by old age, and many of the corporations of this country have devised a similar plan for the retirement of their aged employees. From the standpoint of economy alone it would seem that this Government should do likewise. In the Postal Service, on account of the long hours, the small salaries, and the exacting nature of the duties performed, the employees are rarely able to lay up a competence for old age.

At post offices of the first class the employees number about 50,000, and less than 1,200 of this number have reached the age of 65, many of whom are in nowise superannuated. It is believed, therefore, that less than 2 per cent of the employees of classified post offices would be retired under a pension system.

In the Post Office Service a large sum of money accrues annually from the lapsed salaries of employees absent without pay, where no substitute is employed or where the substitute receives less than the salary of the absent clerk or carrier, and also on account of failure to fill vacancies immediately, or where the force is reduced temporarily during the dull season when vacancies occur. The employees themselves, in a measure, contribute to this fund, since the absence of regular employees throws additional burdens on those remaining on duty. This fund is more than sufficient to cover the cost of pensions for the superannuated employees amongst the 60,000 clerks and carriers at first and second class post offices. There is another source of revenue that might be properly used to constitute a pension fund, and that is the money turned into the Treasury each year from money orders issued and never presented for payment. presented for payment.

The Postmaster General, in his report for 1912, says:

Civil pensions based on length of service should be granted to postal employees when they become superannuated. It is likely that the expense of such a system would be more than offset by gains in efficiency. Although the compensation of postal employees has been considerably increased during the past few years, it is still insufficient to permit adequate savings against old age. Foreign nations pension their aged employees, as do also many corporations; and on business grounds, if for no other reason, the Government should do likewise.

The First Assistant Postmaster General, in his report for 1912,

In the Postal Service the employees rarely are able to accumulate savings, and the injury of an employee in the line of duty, necessitating his absence without pay or resulting in death, is a serious hardship to his family. The Government should take the lead in dealing fairly with employees who are injured while in the performance of duty and those who, when burdened with years and worn out with faithful service, are forced to relinquish their positions because no longer able to work.

The First Assistant Postmaster General, in his report for 1914,

It is said that the loss sustained by the Government on account of superannuation aggregates many millions annually. A careful canvas of first and second class post offices seems to indicate that these losses are probably less proportionately in the Postal Service than elsewhere. Alertness, dexterity, quickness of hand and eye, and other qualities of youth are peculiarly required for the performance of post-office work, and tend of themselves to assist in reducing superannuation in the service. However, superannuation is an important problem in properly reorganizing the Post Office Service, and the increasing volume of parcel-post traffic accentuates the need for an early and definite solution.

Some postmasters refrain, for humanitarian reasons, from recommending demotions and removals in accordance with the declining efficiency of employees. The result to some extent is that tenure of office in the Government service does not now depend on the law nor on the uniform needs of the service, but upon the varying temperaments of the postmasters and their varying conception of their public duty. This condition is wrong, and works injustice to the employees and loss to the Government.

The First Assistant Postmaster General, on March 1, 1915, in

The First Assistant Postmaster General, on March 1, 1915, in a communication to Senator BANKHEAD, which was printed in the Congressional Record of March 4, said:

Superannuation, however; remains a pressing and urgent problem, as a practical plan for dealing with it effectually should be accepted and advocated.

Mr. Speaker, it can readily be seen that administration officers hesitate to recommend a dismissal or even a reduction in salary of superannuated employees. They have spent their lives in the service of the Government, and it is hard to say, "You have given us the best of your life; you are no longer capable of doing your duties that are incumbent upon you." Yet the drain upon the department by their retention at full pay is unquestionably for greater than would be the cost of a presentable retinance. far greater than would be the cost of a reasonable retirement pension.

This principle has been recognized by our municipalities; practically every large city in the United States has some form of pensioning their superannuated and disabled employees.

The only argument that can be made against this system is the question of expense. The claim has been made by some that the amount to be appropriated for the initial costs and future maintenance of such a system would be so large as to become a burden. To this I can not agree. Even should the Government be at an actual loss in dollars and cents for the time being, the amount of good that must find its source and origin in such legislation, both to the service and for the faithful employees of the service, will be far greater than all the cost.

In legislating for the country's welfare we can not take a too

narrow view of all these problems. We should not try to limit or measure the benefit solely by what appears to be the cost; all good legislation for the benefit of the laboring man has had to meet these objections of cost or expense. I can not conceive of meet these objections of cost or expense. I can not conceive of any beneficial legislation but what would at least involve some apparent outlay of money, especially if it is really intended to lighten the burden of the toiler, but without doubt will in the end prove to be economical. Therefore we must look beyond the mere question of expense in the first instance; we must consider along with the question of expense the good of the service, the good of the country, and the good of humanity.

The same arguments were made against the eight-hour law,

also against the child-labor law, and all laws for the protection of life and limb. There is no economy in having the old and superannuated endeavoring to work when suitable provision could be made for their retirement, besides the salutary effect it

would have on society generally.

While it was deemed best and wise by those older on the committee not to place this proposed legislation on this bill as a rider, I am confident that within a short time there will be presented to this body a bill the provisions of which will provide for these deserving men. I have no hesitancy in saying that such a measure will meet with the approval of a majority, and to us will be given the honor and credit of doing what should have been done long ago.

Traveling on Armed Merchant Vessels.

EXTENSION OF REMARKS

HON. JEFF: MCLEMORE.

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 18, 1916.

Mr. McLEMORE. Mr. Speaker, the resolution which I have offered for the consideration of this House was conceived in an earnest desire to contribute toward the clearing of the dark atmosphere which overhangs the foreign relations of this Nation, and was framed with painstaking consideration of the many features of the problem and the many points of view from which that problem can be considered.

This House pursues from day to day the healthy, normal course of attending to the proper and pressing business of this Nation, which, in the happy nature of events, is now at peace; and yet, from time to time, insistent echoes of the terrible tragedy being enacted by most of the other great nations of the world have intruded into this Chamber, and the most optimistic of us must feel a dread certainty that some day we may be called on to make a decision on some points that can not be

When the Lusitania, the pride of Britain's innumerable merchant marine, was destroyed by the torpedo fired by a German submarine Americans reacted in two distinct ways. Some held that the German act which had caused the loss, not only of the great ship and her cargo of war munitions but also of more than a thousand human lives, including more than a hundred Americans, was a crime and an outrage. Others felt at once that those who had lost their lives were themselves primarily to blame for having traveled on a ship which they knew to be in danger; and many felt, furthermore, that a nation struggling for its life against a ring of enemies could not in justice to its own soldiers and to the women and children whom those soldiers were protecting refrain from sinking any and every possible enemy ship which carried in its hold the weapons of This opinion was voiced by some of America's leading men and held by more of the plain, straight-thinking people than the newspapers will admit. However, the President and other executive officials of the Nation took the former view, and as the result of long and careful negotiations the German Government, obviously at the sacrifice of advantages very precious to a nation at war and as an evidence of most welcome friendship for this Republic, has agreed to accept the American view as to the impropriety of such use of the submarine. Long since Germany promised to modify her submarine warfare in accordance with the views set forth by this Government, and how well she has kept that promise may be appreciated if one reflects on the perfect ease with which she accomplished the destruction of the Lusitania and reflects that she could unquestionably have sunk many another liner in similar facile fashion had she not refrained solely out of respect to our ideas. Austria-Hungary, too, has accepted our rules at a sacrifice of some of her belligerent interests.

One of the German pleas in justification of the sinking of the Lusitania was that that vessel was armed. It was cited that in 1913 she had been reported, in the New York Tribune, as armed; it was proved that she was built largely with Eng-lish Government funds under a contract which specifically provided for her armament. Nevertheless the contention of the American Government that the Lusitania was not armed on her last trip seemed to be sustained, and upon this point the American Government insisted most strongly of all, in bringing the German Government to acknowledge that the fatal attack was not justified. In all the exchanges between the two Governments, it has been understood that the American Government stood for the immunity of unarmed ships from unwarned attacks, and the immunity of such ships, carrying non-belligerent passengers and crews, from attack where it would be impossible for the passengers and crews to reach safety.

Now, Mr. Speaker, I do not believe that the German race is

Now, Mr. Speaker, I do not believe that the German race is a bloodthirsty and cruel race. To believe that I should have to hold too low an opinion of American people. There are more than 8,000,000 American citizens of German birth or parentage; there are more than 20,000,000 Americans of predominant German stock. An average-sized number of the Congressional Record could easily be filled with the story of their contribution to the growth of America in prosperity and culture; but that story, from the days when the German farmers made a garden of Pennsylvania; from the days when

Herkimer held back the English and their savage Indian allies at Oriskany; from the days when Muchlenberg presided over the first assembly of this House, to the present day, when Germans are preeminent in every art and science and business that goes to make our American civilization—that story is well known. I could not be proud, as I am proud, of the great and splendid State of Texas, if I believed that the German race is cruel and treacherous, for the German brand of hyphenated American swarms in Texas, and the land which they compel to yield fruit and grain, and the cities they have builded, give praise to the Creator for them.

And I am convinced that the German people in Germany are mighty like the German-Americans whom we all know and honor. And so I see no deep and treacherous plot against innocent lives when the German Government solemnly states to the American Government that they have accumulated proof, through many months of warfare, that the English Government has played false in arming its merchant marine with guns under the name of "defensive armament," at the same time giving secret instructions that those presumably peaceful ships, with their "defensive armament," should take the offensive against German submarines. I do not condemn the English Government unheard; but I am anxious to examine that proof, and meanwhile I am anxious to judge the situation which has arisen in the light of American common sense, American fairness, and American neutrality.

The German Government has submitted to the American Government a memorandum, which has not yet been officially given out by the State Department, but which is reported by the newspapers as cabled through London, to be as follows, quoting from The Washington Evening Star of February 11:

TEXT OF THE GERMAN NOTE IN REGARD TO TREATMENT OF ARMED MERCHANTMEN.

BERLIN, February 11.

The text of the German memorandum is as follows: "Memorandum of the Imperial German Government regarding treat-ment of armed merchantmen.

ment of armed merchantmen.

"Section I. Already, before the outbreak of the present war, the British Government had given British shipping companies an opportunity to arm merchantmen with guns. Churchill, then First Lord of the Admiralty, on March 26, 1913, gave in the British Parliament a declaration (text in appendix) that the Admiralty required shipping companies to arm a number of first-class passenger ships and liners for protection against dangers threatening under certain circumstances from swift auxiliary cruisers of other powers. These liners, however, were not to assume thereby the character of auxiliary cruisers.

"The Government was willing to place at the disposal of the companies owning these ships necessary guns, adequate munitions and personnel suitable for training gun erews.

BASED ON ADMIRALTY STATEMENT.

"The English companies already acted on the requests of the Admiralty: The president of the Royal Mail Steam Packet Co., Sir Owen Philipps, could inform the stockholders of his company in May, 1913, that the company's larger steamers had been equipped with guns.

"The British Admiralty further published in January, 1914, a list showing that 29 steamers of various English lines carried stern guns.

"In fact, Germany established soon after the outbreak of the war that English liners were armed. For example, the steamer La Correntina, of the Houlder Line, of Liverpool, which was captured by the German auxiliary cruiser Kroaprinz Friedrich Wilhelm, carried two 4-pound, 7-inch stern guns. A German submarine also was fired upon in the Channel by an English yacht

THEIR LEGAL STATUS.

"H. Regarding the character of armed merchantmen, according to international law: The British Government for its own merchantmen has taken the standpoint that such ships maintain the character of peaceful mercantile vessels so long as they carry armament only for defensive purposes. The British ambassador at Washington, accordingly gave the American Government, in a communication dated August 25, 1914 (Exhibit 2), most sweeping assurances that British merchantmen were never armed for purposes of offense, only defense, and that they therefore would never fire unless fired upon first.

"The British Government, on the other hand, had in the case of armed ships under other flags adopted the principle that they were to be treated as warships and expressly ordered in the prize-court rules published in an order in council, August 5, 1914, under No. 1, Order 1, that 'a ship of war shall include an armed ship."

"The German Government has no doubt that merchantmen acquire a belilgerent character through arming with cannon, no matter whether the guns shall serve only for defense or for attack. It considers every warlike activity of enemy merchantmen as contrary to international law, although it also takes into consideration the opposing view through the fact that it treats the crews of such ships not as pirates, but as belligerents.

"Its standpoint is specified in detail in a memorandum communication."

the fact that it treats the crews of such ships not as pirates, but as belligerents.

"Its standpoint is specified in detail in a memorandum communicated October, 1914, to the American Government, and in content to other neutral powers, regarding the treatment of armed merchantmen in neutral harbors (Appendix 3).

"The neutral powers in part have adopted the British view, and, accordingly, have allowed armed merchantmen of belligerent powers to remain in their borders and roadsteads, not restricted to the limits which they have imposed on warships by their neutrality declaration. Some, however, have adopted the opposite standpoint, and subjected merchantmen of belligerents to the neutrality rules effective in the case of warships.

of warships.

"III. In the course of the war the arming of British merchantmen was carried out more and more generally. Numerous cases came to light from the reports of the German naval forces in which British merchantmen not only offered armed resistance to German warships,

but, on their own part, proceeded without further ado to attack them, in which attacks they frequently made use of false colors.

IMITATED BY ENGLISHMEN.

"A compendium of such cases is given in Appendix 4, which, from the nature of the case, can comprise only a part of the attacks actually made. The compendium also shows that the described procedure was not limited to English merchantmen, but was imitated by merchantmen of England's allies.

"The explanation of the described procedure of armed English merchantmen is contained in confidential instructions of the British Admiralty, which are photographically reproduced in Appendices 5 to 12, found by German naval forces upon a captured ship. These instructions regulate in detail artillery attacks of English merchantmen upon German submarines. They contain precise regulations concerning the reception, treatment, activity, and control of British gun crews taken over from merchant ships, who, for example, must not wear uniforms in neutral harbors, and hence obviously belong to the British war marine.

"Above ali, however, it is made manifest therefrom that armed ships do not wait for any action of German submarines under the laws of the sea, but are to attack them without further ado.

RULES FOR ARMED SHIPS.

RULES FOR ARMED SHIPS.

"In this regard the following regulations are especially instructive:

"(a) The 'rules for use of merchant ships which are armed for defense purposes' (Appendices 5 and 6) declare in article (battle) under section 4 that 'it is not advisable to open fire at a greater distance than 800 yards, unless the enemy has already opened fire.

"According to this, a merchant ship is in principle obligated to open fire without regard to the conduct of the submarine.

"(b) The 'advices concerning submarines, issued for ships that are armed for defense purposes' (Appendices 9 and 10) prescribe under section 3: 'If a submarine is obviously pursuing a ship by day, and it is evident to the ship's master that she has hostile intentions, the ship pursued shall open fire in self-defense, notwithstanding that she (submarine) may not have committed any definite hostile act, such as firing a gun or torpedo.'

"To this also the simple appearance of a submarine in the wake of a merchantman suffices as the occasion for an armed attack.

APPLICATION IS UNLIMITED.

APPLICATION IS UNLIMITED.

APPLICATION IS UNLIMITED.

"In all these orders, which do not simply confine themselves to the naval-warfare zone around England, but are unlimited in their sphere of application (compare for Mediterranean Appendix 12), the greatest emphasis is laid on keeping them secret, and obviously with the purpose of keeping hidden from the enemy as well as neutral the conduct of merchant ships, which is opposed to international law and the British assurances (Appendix 2).

"By this it is rendered clear that armed English merchant ships have official commission treacherously to attack German submarines everywhere when they come near them—that is, to wage war against them unscrupulously. Inasmuch as England's rules for naval warfare are taken over by her alies as a matter of course, it must be considered that proof has also been adduced with respect to armed merchant ships of the other enemy States.

"IV (1). Under the circumstances adduced above enemy merchant ships which are armed with guns have no right longer to be considered as peaceful merchant ships. The German sea forces will therefore, after a short period designed to protect the rights of neutrals, receive an order to treat such ship as warships.

"(2). The German Government informs the neutral powers of this state of affairs in order that they can warn their subjects from further intrusting their persons or property to armed merchant ships of the powers at war with the German Empire."

APPENDICES TO GERMAN NOTE INCLUDE THE ALLEGED SECRET ORDERS OF BRITISH ADMIRALTY.

BERLIN, February 10.

The appendices attached to the German memorandum notifying neutral nations that armed merchantmen belonging to countries at war with Germany will be considered warships include alleged secret instructions by the British Admiralty found on the British steamer Woodfield. The Woodfield was sunk November 3 last. A list of the crew abroad showed a gun captain and gun crew from the navy on board the vessel. The instructions opened by declaring:

"The ratings embarked as a gun crew will sign the ship's articles at the rate of pay communicated. * * Ratings are not required for duties not connected with armament except in case of emergency.

* * They are to keep watch at sea and also when the ship is anchored at any place where it is liable to attack by a submarine. They will not mess with the crew, but in one of the officers' messes. Uniforms will not be worn in neutral ports."

The next section, under the fitle, "Drill and maintenance of guns," gives instructions for supplementing the gun crew from the regular members of the crew, for the supply of ammunition, gun practice, and so forth.

The third section, which is headed "Action," opens as follows:

"The master is responsible for the handling of the ship and the opening and ceasing fire."

It then prescribes regulations for fighting submarines, among them being the following: "It is to be remembered that "over" shots are useless. A short shot, by causing a splash, confuses the enemy and may ricochet into the enemy. If the shell bursts on striking the water, as it usually does, some fragments are likely to hit the enemy. To get the best results at least half the shots should fall short. * * It is inadvisable to open fire at a range farther than 800 yards."

The final section of the instructions for firing practice prescribes that practice shall take place out of sight of land and of other ships.

Appendix No. 6 is a duplicate copy of the preceding, except that the provision regarding the gun crews messing with the officers is blocked out.

DRILL BOOKS ISSUED.

Appendix No. 7 contains an addenda to the preceding instructions.
Appendix No. 8 contains on its title page the following:
"Drill book for 12-pounder quick-firing guns. Issued to defensively armed merchant ships. Admiralty gunnery branch, May, 1915."
The contents of this book are only of military interest.
Appendix No. 9 is headed: "Confidential: In no circumstances is this paper to be allowed to fall into the hands of the enemy." It gives instructions regarding submarines, and is applicable to vessels carrying armament specified in the article of February 25, 1915. It was evi-

dently superseded by instructions similarly headed and issued in April, 1915, which are photographically reproduced in appendix 10, as fol-

1919, which are photographically reproduced in appendix 10, as follows:

"1. Defensively armed vessels should follow generally the instructions of ordinary merchant ships.

"2. In submarine waters guns should be kept in readiness for instant use.

SHIP SHOULD OPEN FIRE.

"3. If a submarine is obviously pursuing a ship by day and it is evident to the master that she has hostile intentions the ship pursued should open fire in self-defense, notwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or

may not have committed a definite hostile act, such as firing a gun or a torpedo.

"4. In view of the great difficulty in distinguishing friend or enemy at night, fire should not be opened after dark unless it is absolutely certain that the vessel fired at is hostile.

"5. Before opening fire, hoist British colors under neutral colors.

"6. If a defensively armed vessel is pursued by a submarine, the master has two alternatives: (a) To open fire at long range immediately it becomes certain that the submarine really is in pursuit, or (b) to restrain fire until submarine has come into range, say, 800 yards, at which the fire is likely to be effective. In view of the great difficulty of distinguishing between a friendly submarine at long range (one British submarine already has been fired at by a merchant vessel which erroneously supposed herself pursued by a submarine) it is strongly recommended that course (b) should be adopted by all defensively armed ships.

U-BOAT'S FLAG NO GUIDE.

U-BOAT'S FLAG NO GUIDE.

"7. A submarine's flag is no guide to her nationality, as German submarines frequently fly the British colors.

"8. Vessels carrying defensive armament and proceeding to neutral ports must not be painted with neutral colors or fly a neutral flag.

"9. It is recommended that in neutral ports, particularly those of Spain, armaments should be concealed, as far as possible. A canvas cover is recommended for this purpose,"

Masters are instructed to keep the above paper where it can be destroyed at a moment's notice.

The eleventh appendix gives a memorandum for masters of transports carrying troops on the use of rifle and machine-gun fire against enemy submarines or torpedo craft. The final appendix reproduces type-written instructions to British merchantmen in the Mediterranean. It was issued at Malta in June, 1915, and orders the merchantmen, among other things, "to carry out the procedure recommended by the Admiralty in the printed instructions if a hostile submarine is sighted."

On the basis of the allegations set forth in that memorandum as to the conduct recommended to English so-called nonbelligerent vessels by the English Admiralty, and followed by those English vessels, the German Government announces that after February 29 German submarines will sink on sight any enemy ship which displays guns. Now, let us see if this be a simple

matter or a complex one.

To me it seems a very simple matter. If such things as private feuds existed under the same ultimate sanctions as make war a last resort of nations, and if I were a party to such a feud, and if I met a member of the other faction, and he had feud, and if I met a member of the other faction, and he had a perfectly capable automatic gun in his hand, cocked and pointed at me, I would not place much faith in his assurance that he was armed "for defense only." Rather, I would reach for my own gun and endeavor to get the first shot. If I met a member of the other faction unarmed, and he said, "I am not one of the belligerent members of my clan, but only a fetcher and carrier of their food and raiment," I would spare that man; but if he said those words to me and at the same time unfor I would know very well that a shot from his "defensive gun" would kill me just as quick as a shot from an "offensive gun," and that I should be just as dead in the one case as in the other.

And I think that a shot from a "defensive gun" on the deck of an English, French, or Italian vessel will sink a German submarine and send its crew on their awful last journey as

quickly as a shot from an "offensive gun."

It seems to me that it is not the concern of the American Government or the American people whether an English mer-chant vessel, armed with a "defensive gun," manages to sink a German submarine or not. It seems to me equally none of our business whether or not a German submarine manages to sink the English vessel so armed. I would greatly admire the pluck of the English people in their insistence on fighting the submarine peril at every turn, by every means, if they would frankly avow that purpose as one of their ways of conducting this war and would frankly consider an encounter between a German submarine and an armed English vessel as a naval combat, with victory belonging to the bravest or the most skillful or the favorite of the awful and inscrutable god of battle. But the present English plea that an English ship is to be allowed to tote a gun and yet not be considered a fighting ship, is to be allowed all the advantages of armament but be exempt from all the penalties, does not impress my American mind. And if I suspect that England seeks to hide behind the coat tails of Uncle Sam, seeks to lure Americans on her armed ships as they sail out, hoping and praying that they may "pot" a submarine, and then expects America to step in and do her fighting for her if an American citizen loses his life, then I am quick to resent that conduct, and to resent it to the best of my ability.

The law of maritime warfare as it affects the rights of unarmed merchant ships is now undisputed by any nation. Such ships may not be sunk offhand nor without provision for their passengers and crews. But such ships must not refuse to halt if hailed by an enemy warship, and must not resist the exercise of the right of visit and search. Every nation is agreed perfectly that if a merchant ship so flees or so resists it may be sunk without pity. And now, Mr. Speaker, we come to a simple question, which, it seems to me, the English casalists are trying mightily to obscure. If England agrees to that law, as she does, and if England maintains that in arming her merchant ships she does not intend them to violate that law, and she does so maintain, then can any man tell me why England insists on arming such ships? Could Sir Edward Grey, with all his subtlety of mind and tongue, come upon this floor and convince anyone here that the safe, sane, plain procedure would not be to send such ships forth, like the merchant ships of any other nation, unarmed? If the object is to prevent the sinking of such ships as are not forfeit by reason of carrying contraband, if the object is to prevent the sinking of such ships without warning, then why not send them out unarmed and instructed to obey the rules of the sea and play the game fairly? The only answer the English seem to give, when cornered with this question, is that Germany can not be trusted to play fairly. Mr. Speaker, that sounds to me very much like an unmanly whine. I feel very fully convinced that the world is quite tired of the English device of blackguarding her enemies, of calling them names, and spreading about them stories which, for the credit of humanity, I am glad to note have been time after time disproved. England filled the world with similar 'leas about Americans in 1776 and 1812. Since the sinking of the Lusitania and the mistaken and repudiated attack on the Arabic, the German submarines have been continually active, but they have not violated the rules of the game as announced by America. The present administration can not be accused of slowness or reluctance to call Germany sharply to account upon any necessary occasion. The English plea that they can not trust Germany is almost an insult to the American people's intelligence. But if Germany can submit proofs that English ships carrying "defensive guns" can not be trusted, if Germany can prove that English merchant ships have violated the rules and have actually fired on and sunk German submarines, then it seems to me that what England wishes us to do is just this: England wishes us to say to Germany, "You must let the English have the first shot. Under penalty of our displeasure you must let the English ship always have the first shot. If you see a gun on an English ship pointing at you, you must not fire on that ship until after that ship has fired on you; then you may fire, if you are able." Mr. Speaker, if we tak that attitude, will it not justify the words spoken in this Chamber a few days ago that "we are one of the allies"?

And, Mr. Speaker, is there a Member here who would consent, in the event of our country being involved in a war, that the brave commanders and crews of our submarines should be sent into action, sent out to sea, under such orders, under such suicidal restrictions as that? Certainly not!

Mr. Speaker, for several days the reports in the newspapers indicated that this Government saw the justice, the inevitable logic, the plain common sense of the arguments underlying the announced intention of the German Government and Austro-Hungarian Government to sink armed enemy vessels at sight. Then, suddenly, there was a total and almost entire reversal of position. Are we to believe that the threats which the English representatives here have dared to make, that if we act according to truth and fact they will punish us by refusing us ships for our merchandise? Are we to believe that these threats have been potent? I can not believe this thing. Mr. Speaker, there are men in both Houses of Congress who have introduced bills to put an embargo on munitions of war, the food of death with which we are now feeding Europe. There are bills in Congress to retaliate against that proud nation which boasts that she rules the sea and whose manner of ruling it since this war began has inflicted on us a train of wrongs which would make the grievances set forth in the Declaration of Independence look like a mere selfish whine. There are men in the Congress who believe that we should forbid our citizens taking passage on any belligerent ship which carries contraband of war, whether armed or not, because the business of carryin; contraband is a dangerous business and war is bloody work, and no nation is to be greatly blamed if its naval vessels sink vessels of the enemy carrying contraband, carrying munitions of war to kill their fellow countrymen. I feel sure that American naval commanders would act so, with the approval of the American people, if we were at war. And I believe these are the sentiments of the great majority of plain Americans, Shall we then, when we merely propose to warn our citizens to stay off belligerent ships which are actually armed, which actually invite destruction, shall we be bullied out of that purpose by any nation or by any threats? Rather, I should say, answer such nation by a prohibition against all their ships and by an embargo on the munitions which alone

enable them to continue this bloody and cruel war.

But let us at least be firm in this matter of refusing to be a stalking horse for the game of shooting submarines with "defensive guns." Let us keep our people off such ships or let them go at their own peril, not involving us in any result. Let us compel the belligerents, both of them, to play fair and be men, do their best for their own cause, and not whine about the result or run to your Uncle Sam for protection. Let us remember that the note which Mr. Lansing sent to all the powers at war, suggesting a set of rules for submarine warfare-a note which, to my mind, was the most constructive, intelligent, and humane stroke of statesmanship that has yet been brought forth by this war—let us remember that this note is the very basis of the German and Austro-Hungarian position. Let us stand by that note and let us warn every American that he, too, individually, must stand by it in all its implications or take the consequences.

Mr. Speaker, I make a plea to the Committee on Foreign Affairs to consider this resolution earnestly and quickly. Time

and critical events will not wait.

And let me call the attention of this House also to a notable English proclamation which in other days and other circumstances, when the shoe was on the other foot, expressed clearly the English view of such matters. When the Russian-Japanese War broke out the English consulate at Shanghai issued the following warning to all British subjects in the Far East:

All subjects of the Crown are notified that the British Government will not undertake to be responsible for the safety of any British subject leaving this port on a ship of either of the belligerent nations.

That warning, Mr. Speaker, has been printed in numerous American papers, and its authenticity has not been seriously questioned. The State Department has tried in vain to obtain confirmation of it, but it has elicited nothing to disprove that it was issued as given, and such is the testimony of people familiar with affairs in the Far East. That to me sounds like a genuine English utterance, based on common sense, on proper caution, on justice, and on that unremitting vigilance with which England guards the interests of her subjects in every quarter of the globe. It is only now when the shoe is on the other foot and the John Bull is being gored that England would persuade us that such a rule is not sane and just, and would, moreover, impress us into her service to enforce the view which she has taken but which she herself is impotent to enforce. I do not believe that the American people care to be the mouthpieces or the hired fighters of either Kaiser or King.

Mr. Speaker, I make an earnest plea to the Committee on Foreign Affairs to give this resolution serious and speedy consideration. Time and critical events will not wait on us. is in every sense an emergency measure. Our duty to the very vital interests of the whole Nation demands attention to this problem and action on it before the end of this month. I ask the committee to report this resolution and let this House tell the American people whether I am right or wrong in believing

that both House and people approve it.

I give here what I believe is undisputedly an accurate summary of Mr. Lansing's note to the various powers suggesting the rules for submarine warfare from the Washington Evening Star of January 28, and, following that, the text of my resolution:

MR. LANSING'S PROPOSALS.

SUMMARY OF THE NOTE.

SUMMARY OF THE NOTE.

Such a proposal, now in the hands of the belligerent Governments, has been transmitted in a note which, while not in actual language, is substantially as follows:

It is assumed that all of the Governments addressed are equally desirous of protecting their own subjects and citizens who are noncombatants from the hazards of submarine warfare.

Realizing the appailing loss of life of noncombatants which results from the destruction of a merchant vessel without removing passengers and crews to places of safety, which is held to be violative of the principles of humanity and of international law, which should govern maritime warfare, the United States at the same time does not feel that a belligerent should be deprived of the right to use submarines, in view of the usefulness which they have developed since the outbreak of the present war.

PROPOSALS OF UNITED STATES.

That a formula may be found completely within the rules of international law and of humanity which will require in its adoption only a triffing change in the practices which have obtained in the past and before the war, which formula would be just and fair to all beligerents, it is proposed that:

First. A unoncombatant has the right to traverse the high seas in a merchant ship entitled to fly a beligerent flag and rely upon the rules of international law and the principles of humanity if the vessel is approached by a beligerent war vessel.

Second. A merchant vessel of any nationality should not be subject to attack until the belligerent warship has warned her to stop.

SHOULD HALT WHEN ORDERED.

Third. Any belligerent-owned merchant vessel should promptly obey any order from a belligerent warship to stop.

Fourth. No such merchant vessel should be fired upon unless she tries to fiee or to resist by force, and even in such case any attack upon her by the warship must stop as soon as the flight or resistance ceases.

Fifth. Only in case it should be impossible for military reasons for the warship to supply a prize crew or to convoy the merchant ship into port will she be justified in sinking such merchantman, and in that case passengers and crew must be removed to a place of safety.

DIFFICULTIES ARE APPRICATED.

DIFFICULTIES ARE APPRECIATED.

The State Department is fully appreciative of the obstacles which the adoption of these rules would place in the way of the operations of the submarines because of their structural weakness. Before the present war maritime warfare on the high seas always has been conducted by battleships or cruisers carrying heavy guns.

It is true that merchantmen were permitted to carry defensive armament, but these were light compared with the warships and did not change their nature as merchant vessels. This was based on the superior defensive strength of the warships, and the limitation upon their armaments was for the purpose of limiting their power of resistance to contact with pirates and privateers.

The introduction of the submarine into naval warfare has changed all of this. This craft is almost without powers of defense beyond the ability to submerge to escape an enemy.

LIGHT GUN EFFECTIVE.

A gun even of light caliber on a merchant ship successfully could defend her against a submarine. There are now no more pirates, and the practice of privateering has been abandoned by civilized nations

the practice of privateering has been abandoned by civilized nations by general agreement.

Therefore, there can now be no reason for the maintenance of even small-caliber guns on merchant ships unless it is designed to make them superior to submarines, and thereby deprive that class of warships of their undoubted right with safety to warn and search such merchantmen. In reality, therefore, any such armament of a merchant vessel now might be regarded as offensive armament.

If submarines should be required to stop and search merchant vessels before attacking them and to remove the passengers and crews to places of safety, it is not fair that the submarines should be compelled to expose themselves to destruction at the hands of merchantmen.

GENERAL AGREEMENT NECESSARY.

Therefore, by a general agreement among the belligerents, submarines should be required to adhere strictly to the present provision of international law to step and search merchant ships, to ascertain their belligerent character, and remove the passengers and crews to safety before sinking them.

On the other hand, merchant vessels should not be permitted to carry any armament at all.

There is grave doubt of the legal right to carry armament on merchant ships, and it is submitted that all nations should be animated by a desire to save the lives of innocent people, and therefore should not insist up in the exercise of any supposed technical right.

ANNE POWERS TO ASSENT.

ASKS POWERS TO ASSENT.

ASKS POWERS TO ASSENT.

Is your Government willing to make such a declaration conditioned on a similar declaration by its enemies?

The United States Government has been very much impressed with the arguments that have been advanced in certain quarters that any merchant vessel which carries guns in any position capable of use against warships has forfeited her noncombatant character and may be regarded as an auxiliary cruiser, and is seriously considering the announcement of a purpose to treat these vessels on that basis because of the changed conditions in maritime warfare resulting from the introduction of the submarine and its defenseless character.

The foregoing is substantially the note which Secretary Lansing yesterday announced he had transmitted to "a foreign power or powers." He refused to discuss the subject further.

House resolution 143.

House resolution 143.

Whereas the Governments of two of the powers at present in war in Europe and on the high seas have informed all neutral powers of their intention to instruct the commanders of their submarine naval vessels to attack upon sight after February 29 all armed vessels of their enemies, whether such armed vessels are admittedly mayal vessels or carry their armaments under the name and guise of "defensive armament for merchant ships"; and
Whereas the Government of Germany, one of the powers which have so informed the neutral powers, has submitted to the Government of the United States photographic facsimiles of alleged secret orders of the British Government, which secret orders direct that such so-called "defensive armament for merchant ships" shall be used offensiv-ly and shall be manned and directed by naval officers and men of the nave of Great Britiain, and that such so-called "defensive armament for merchant ships" and such naval officers and men shall be, as far as possible, concealed and disguised when in neutral waters and ports, with the evident intention to deceive; and
Whereas the only possible use for a "defensive gun" is the same as the use for an "offensive gun," namely, to shoot and, if possible, destroy or damage the enemy ship whether submarine or other naval craft; and
Whereas the Government of the United States has no desire and powers the Government of the United States has no desire and powers.

the use for an "offensive gull, mamely, to shoot and, it possible, destroy or damage the enemy ship whether submarine or other naval craft; and

Whereas the Government of the United States has no desire and no right to dictate to any of the powers whether they shall arm their merchant ships with guns or other armament or not, and has no interest in the success or failure of such ships so armed in using their armaments in the only way in which they could be effectively used, namely, in destroying or injuring enemy submarines or other naval vessels; and

Whereas the Government of the United States has no interest in the success or failure of the submarines or other naval vessels of any power in escaping or destroying such merchant ships so armed and has no desire or right to dictate to any of the powers what steps they shall take to protect their vital interests and pursue their legitimate belilgerent operations; and

Whereas the Government of the United States can not look upon any naval engagement between any armed ships of opposing belligerent powers, no matter how such ships, or any one of such ships, may be designated or disguised, as other than a naval engagement undertaken by each beligerent with the purpose of destroying the other belligerent ships and the lives of the people thereon; and

Whereas, while it is indifferent as to quibbles about such terms as "offensive" and "defensive" as applied to guns on ships of powers at war the Government of the United States is vitally concerned to offer its own citizens the best possible advice, counsel, and assistance in avoiding the hazards of war; and Whereas the Government of Germany and Austria-Hungary have given the Government of the United States positive assurances that unarmed ships carrying chiefly nonbelligerent passengers will not be sunk—unless while resisting the right of visit and search—unless it is certain that the nonbelligerent passengers can be removed to a place of safety; and Whereas the Government of the United States is vitally interested to preserve to its own warships, submarine and other war vessels, full necessary freedom of action against an enemy, whether avowed or disguised, in any possible future war: Therefore be it Resolved. That the House of Representatives of the Sixty-fourth Congress of the United States do, and it hereby solemnly does, request the President to warn all American citizens, within the borders of the United States or its possessions or elsewhere, to refrain from traveling on any and all ships of any and all of the powers now or in future at war, which ship or ships shall mount guns, whether such ship be frankly avowed a part of the naval forces of the power whose flag it flies or shall be called a merchant ship, or otherwise, and whether such gun or guns or other armament be called "offensive" or "defensive"; and in case American citizens do travel on such armed belligerent ships that they do so at their own risk.

That when the President of the United States or the Secretary of State shall come into possession of the actual memorandum of the German Government, containing photographic facsimiles of alleged secret instructions issued by the British Government, which alleged secret instructions direct that so-called "defensive armament for merchant ships" shall be used offensively, and that so-called "defensi

Pensions.

EXTENSION OF REMARKS

HON. JAMES J. BRITT. OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 16, 1916,

On the bill to pension widows and minor children of officers and enlisted men who served in the War with Spain, Philippine insurrection, or in China.

Mr. BRITT. Mr. Speaker, I am proud of the opportunity to say a word for a bill to pension the widows and orphans of the soldiers of the Spanish-American War. It is a just and meritorious proposal, and ought to pass this House without a dissenting voice. This is peculiarly the time when Congress should take the right attitude toward the defenders of our

country and their widows and orphans.

The great State of North Carolina, which I have the honor in part to represent, contributed to the War with Spain more than her relative quota of soldiers, and they were of the best manhood of that splendid Commonwealth. Three regiments, manhood of that spiendid Commonweard. Three regiments, comprising 164 officers and 3.802 enlisted men, from my State offered their lives for the freedom of Cuba. And near Cardenas, on May 11, 1898, on the torpedo boat Winslow, in the person of a gallant young knight, Ensign Worth Bagley, we laid upon the altar the first sacrifice for the liberties of that oppressed people. In the capitol park at Raleigh, under the sturdy and towering oaks, we have erected to his memory a beautiful marble shaft that his heroic sacrifices may not be forgotten, and that the world may know that North Carolina loves

Although the Spanish-American War was short and decisive, it nevertheless brought untold suffering and hardships to our soldiers. It broke upon us so suddenly that it was like a storm from a clear sky. We were not prepared. We could not properly equip our soldiers in a time so short and under conditions so new. The climate was hot and unhealthful and tropical disease lurked in every nook and corner. As a result thousands of our young men who went away in the vigor of manhood, in

the very heyday of life, came back either in broken health or carrying in their bodies the seeds of disease that brought them to an early grave. Their widows, who married them while the flush of youth was still upon their cheeks and when a long life seemed to lie out before them, now ask this Congress that they and their children shall not suffer for food and clothes and shelter. And we will not turn them away empty.

Mr. Speaker, we are about to enter upon a new and powerful military policy. This we can not escape. Present world conditions demand it. It will call for a great Army and Navy. There are two modes of raising armies—the one by enforced service, the other by voluntary enlistment. The first method will never prevail in this country. It is contrary to the genius of our institutions; it is inconsistent with a democracy. We shall, then, have to depend upon voluntary service; and if we act justly toward our soldiers and their widows and orphans, the brave sons of America will not fail us in our times of national peril. If we make the calling of the soldier an honorable one, if we equip him, feed him, clothe him, and pay him, and stand by his widow and orphans, our calls to the defense of the flag will not fail of generous response, even to the last man, and we shall show to the world the glorious example of a great volunteer soldiery willing to die that human liberty may endure and that democracy may not perish.

Preparedness.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS. OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 18, 1916.

Mr. DAVIS of Texas. Mr. Speaker, our times are out of joint and the world is out of tune, lost in a labyrinth of greed for gold and power. In 1896 John Clark Ridpath, the world-famed historian, told us there was an invisible government being linked together to rule the world. Every thinking man believes that now exists. This invisible power is so linked that all Governments work to their gain, whether in war or in peace. They have more than half the world in war now, and have a large and powerful element in this country frantic because we have not made a mad plunge into the conflict.

The members of this invisible government have been known by various names. They are now called war traffickers, because they are making millions out of the war in Europe (which was manufactured to their order), and are literally raging and raving in most of the great daily papers because Congress will not turn over the Treasury to them to be looted and ransacked while their papers and aid societies, cappers, and clackers call it "national defense and preparedness." Boss Tweed's raids on New York and Smidt's notesing and this result in the contraction of the contractio New York and Smidt's notorious and thieving grabs into the treasury of San Francisco would be mere petty larceny com-

pared to their designs on our country.

Their invisible power makes them able to allure and control many good, clean, innocent persons. They have used the press, billboards, picture shows, theaters, and even pulpits and preachers have been put to serve them often in a most innocent way. The women and children in a great glow of patriotism are in the very name of God giving dimes and nickles to further the damnable designs of these high-toned robbers. For two years they have had the press giving the American people knockout drops so they could sandbag Congress and make a \$4.000.000.000 raid on the Treasury, about two billion of which would be clear profits.

The country is told in glowing headlines that it is rank idiocy to appropriate money to build a bridge, support the Post Office, clean out a stream, or do any honest, honorable work for the public; they call that "pork-barrel" legislation. These political pelf dealers, these millionaire, high-toned highwaymen insist they they be allowed to scuttle the whole Treasury and take a mortgage on the unborn with a big bond issue, as they clamor for more loot. Go where you will and it is war, tax the people, issue bonds, get billions, get it quick and give it to the steel trusts, powder trusts. Morgan and the gang, so they can prepare us to whip the world, including the new country and race that Roosevelt discovered in South America.

And, sir, if it were not for the high-class good men that have caught this contagion, I would consider the matter of an im-

mediate invasion as so vapid and void of reason that it could not be considered as decent nonsense. I can hardly trust myself in the bed, lest some unknown, unseen, unthinkable, unavoidable army turn loose on us, demolish our country, obliterate our race, and sow our lands down in salt, as the Romans did to Jerusalem, and have it all down before I awake. And since these blood-curdling, soul-ravishing speeches of Mr. Gardner, Mr. Mann, Mr. Quin, and others, I want to thank these men for not uncapping the fountains of their eloquence all the same day. If they had, the Members of this House would have been weeping like widows at a husband's grave; the marble images of the patriots in Statuary Hall would have wept like a spanked baby over the impending obliteration and total extermination of this Republic, which is soon to take place by a ruthless invasion from God knows where.

Since the Hon. Percy Quin flopped and made that hair-raising, flesh-crawling, agonizing speech on last Saturday in which he raved and ranted, puffed and panted, moaned and groaned, had nightmares and jim jams over the impending massacres and murders, conflagrations, and calamities that were to be immediately inflicted on our country by an invading army from some unknown country, and confessed with great gusto and gesticulation that since he had read the President's speeches on the horrors that confronted us he had changed his mind and flopped, he convinced me that he had run his soul up into sanctified corners of his conscience, baptized his brain fiber in fountains of truth, and bathed in copious reservoirs of righteousness, and been soul sleeping in sweet communion with the metamorphosed transmigrated spirits of Cæsar, Hannibal, Napoleon, and Roosevelt, and had changed from a stern opponent of "preparedness" to a rich righteousness and resolute advocate of all sorts of "preparedness."

I, too, am in woeful distress over the dread of impending

I, too, am in woeful distress over the dread of impending invasion, knowing that England with the biggest army and navy on earth has been 15 months trying to move Germany back 15 inches, and that millions of her men and billions of her money have been blown in and she is powerless to whip Germany, much less us, yet she has millions of cats in her dominion and she might do like Persia of old—invade us with an army of 13 generations of "tomcats" to squall and caterwaul our people into insanity, and we would never be able to pay Morgan and the bunch the interest on what they have robbed us of through their invisible government. And notwithstanding Germany would have to whip half the world to get out of her trenches and start toward us, she might put her army upin "Zeppelin" airships and stand while the world turned over under them and then drop down on us some night, and America would awake the next morning in a conglomeration of blood and bones and men and women made into mincemeat and macaroni, while the German Army stood triumphantly over a ruined Republic.

And notwithstanding Italy with all her might and main has been nine months trying to invade Austria, her nearest neighbor, and has exhausted millions of her money and thousands of her men, she might send a countless number of her boys and maidens over here with Italian harps and "hand organs" and sing us, pluck us, and grind us into such phantasmagorial ecstacies over the music that we would swoon into a catalepsy, and they would capture us and take us away from Morgan and the other "war traffickers," and thereby win the country.

Sir, in contemplating in mournful despair all these direful,

Sir, in contemplating in mournful despair all these direful, dreadful horrors that might befall us, my heart sinks to the bottom of my stomach and my body quakes with frightful fear, because in the terrible frenzy of all our alarm—"not knowing what a day may bring forth"—the Navy Department has forgotten to put on an extra shift of labor to hurry up the 64 fine warships we have under construction in our navy yards and the many already appropriated fc1.

Therefore, the gentleman from Mississippi, Mr. Quin, Hon. James R. Mann, and Hon. Augustus Gardner should be appointed a committee of three, to be known as the council of "national safety," to go on double-quick time and carry with certainty, celerity, and security our message to the Navy Department and urge with unabating importunity that they put on an extra force and double the shifts and finish those ships before Mount Vesuvius burns the world up, the archways of infinitude fall, the domes of eternity topple over, and this world tumbles into rulus.

Then, Mr. Speaker, one of the most dreadful calamities that may ever overtake us we are wholly unprepared to meet. I speak of the fact that God Almighty once got tired of a lot of rich, haughty, insolent millionaires ruling and robbing all innocent people, and because of their infamy he literally filled their earth with lice, frogs, locusts, and flies, and killed their cattle with murrain, until all the land stunk with carrion. The foot-

and-mouth disease has already come, and who knows but what billions of lice, trillions of locusts, and quadrillions of frogs and flies may come on the next assignment; for, I say to you, sir, that there are a hundred Pharaohs in this country, either one of whom could buy the whole Egyptian Empire as it existed in that day, and whose oppressive, intolerant, arrogant, and unscrupulous treatment of labor has in a hundred strikes and conflicts between capital and labor shown itself to be far more aggressive, murderous, and rapacious than the Pharaohs were over the children of Israel. And for these flies we need to be immediately prepared with a hundred million swatters.

To exterminate the lice, we could have the Steel Trust make us a million oil-tank cars and fill them with high-life mercurial ointment, creosote, and carbolic acid. Then have them make 20.000.000 squirt guns and put out 20,000,000 men to squirt the earth over with high-life ointment and acid and save our country from utter ruin.

Then, Mr. Speaker, I know of no other sane and patriotic way to save ourselves from the frogs and locusts than to have the Steel Trust and the Armor Trust make us a million big boats, regular Noah's arks, and we could get into the boats and jamboree on the oceans to get away from the frogs. I had thought that while we were in the boats we might go on over and join the allies and help whip Germany, as Mr. Roosevelt and a lot of the tories want. But Morgan and the "war traffickers" would object to that, for then their war traffic would stop. To them it would be an unwarranted interference with international law and a total disregard for American rights to stop war or stop preparing for war.

Now, Mr. Speaker, this vision I have recited is senseless, void of fact, and without form in reason. And so it is with all this pipe dream and political prattle and piffle about an early or anticipated invasion of our country. It has been 100 years since any country on earth dared to undertake such hazard. Moderate, sane, and sensible preparation for national defense is a cardinal principle of the Democratic Party from its inception. Then let us proceed in a normal manner. But now, while the world lies prostrate, bleeding, broken, and bankrupt in bloody war, how sad it is, how un-Christlike, what a travesty on our glorious history to challenge the world to combat and to stupendous armaments.

Let us cut loose from the entangling alliances of the old world, stand for America and an ever glorious Union. Make our Mouroe doctrine a virtue by coming back to America and standing for it. The golden rule is a law of God that nations must obey the same as men, and they can not willfully disobey without entailing national dishonor. "Know ye, therefore, that God is not mocked." A nation that sows to the flesh must reap corruption.

Mr. Speaker, I know that during such selfish times as these, when a few sinister gluttonous war traffickers, whose mercenary lives are immersed in greed, whose mysterious power is swaying the land, it is considered weak and silly to trust in God. But, sir, when I lose my faith in God and the justice of his teachings the earth to me becomes a barren waste and eternity a blank. I want to get away from this raging epidemic of war hysteria. Into my mind comes a thousand thoughts from the law of God. "Depart from evil and do good—seek peace and pursue it." "There is no king saved by the multitude of an host—a mighty man is not delivered by much strength." To pay a man to open our sessions in prayer, and then mock the counsel of God, is to challenge his vengeance.

"The counsel of the Lord shall stand forever."

There can never be but one great world power, and that the overruling power of God. The staggering tragedies of Europe, transpiring in the name of war, but emphasize the fact that the rivalry and struggle of nations for supremacy of trade and dominion can not be settled by war.

Civilization has become so complex and interwoven in common destiny that war but adds confusion and embarrassment to international life and progress, while it settles nothing.

Boundary lines no longer separate the affairs of nations. Modern means of communication and transportation have conquered space and distance. Business partners 5,000 miles apart communicate across national lines the results of yesterday and the prospects of to-morrow. Continents are cut in twain and occans are laced together to facilitate the universal actions of man and the relationship of nations. This is an age of international life, in which the extremities of earth are drawn together in commerce, art, literature, science, and religion; hence the world has an equity, an interest, a God-given concern, and an inherent right to universal peace.

It is wrong to permit the incorrigible malice, hatred, rivalry, and resulting rows of nations, in which they spring at each other's throat, blockade the seas, stagnate the world's com-

merce, batter down and even burn the very temples of civiliza-tion, destroy the accumulations of ages of industry, decimate the land in death and the sea in despair, while peaceful nations stand in agony and dismay while the commercial avidity of a special few in so-called neutral nations coin the miseries of war into cash by selling supplies and munitions to every available side of the conflict.

To me this seems a travesty of civilization to provide by accepted codes that a truly neutral nation is one which stands stoically and indifferently by, consenting unto death, while guns, money, munitions, and murder machines are furnished both

sides, adding fury and force to the raging conflict.

Such conditions, in conjunction with the unparalleled terror and devastation of the present war, cry aloud to this great Re-public, which is yet under the control of a tranquil, peace-loving, God-trusting people, to move for peace—one of the greatest joys of earth and grandest attributes of heaven.

We must so act that our action will be notice to the world that the greatest part of our country is anxious for peace; that notwithstanding many of our trading companies and munition factories are making fabulous profits out of the war, the great Christian conscience of our country does not want to make money out of the misery, murder, and degradation of mankind; that we long for that communion, comity, fraternity, and friend-ship among nations of the earth that peace alone can give, Soon after I came to Washington I formed the firm conviction

that the great aggregation of millionaire minions of despotism in the Steel Trust, Powder Trust, and the Armor-Plate Trust had determined to prostitute the Democratic Party to their base desires through the propaganda of their overwhelming clamor

for "preparedness.

I felt that they had set out to imperialize our Government by taking it from the rule of the people and making a military oligarchy through which all Governments would emanate from a military council and an imperial cabinet, thus making war council supreme in power. After several years of such craven conduct the spirit of the masses would be crushed, farmers and workingmen would be ground into helpless poverty under the despotism of such a military machine, doing the bidding of the great combined conscienceless corporations.

Under such impressions I began in my humble way to help

patriotic, sound, sane Democrats like Bryan, Kitchin, and other leaders free the country from the possibility of such a

I now thank God that we have won the first victory by our refusal to adopt the nefarious, un-Democratic, un-American plan of Secretary Garrison, in view of which he tenders his resigna-

tion in utter disappointment.

The unscrupulous insults that the business buccaneers who control the armor-plate and munition trusts have offered this Government since that grand old commoner, BEN TILLMAN, in the Senate, and the glorious young patriot, CLYDE TAVENNER, in the House, introduced bills calling for Government ownership and manufacture of armaments, tends to show what these tyrants would do if they only had the Government in their hands and an army to enforce their orders.

I have just received the following from a ripe, righteous old lawyer of central Texas. He has seen the program forming in

Texas:

Texas:

All the antiprohibition leaders in Texas are committing themselves to President Wilson's program, and they will win the State convention to send delegates to the national convention. They will elect the national committeemen for Texas. Senator Sheppard has fallen into their trap. The Liquor Trust has spoken through Col. Jake Walters, and Onsley, R. M. Johnson are wishing the "Chickenlicken," Duckluck," and "Foxlock," frenzy that the sky is falling, with Woodrow Wilson playing "Chickenlicken" and Morgan and E. D. Gary and the "war traffickers" in the rôle of "Foxlock." The prohibition leaders represent the "Gooseloose" part.

The invisible power that can make our President change his mind and follow Roosevelt and stampede us into a monstrous Army and Navy, with conscription, can plunge us into a monstrous Army and Navy, with conscription, can plunge us into a monstrous Army and Navy, with conscription, can plunge us into a monstrous Army and Navy, with conscription, can plunge us into a war whenever they can make millions by so doing. The great pity of it all is that the "invisible government," whose premier is J. P. Morgan, representing the incarnate flends of hell, are feeding the fires of this war with every form of destruction that flends could conceive at the behest of the manufacturers who are making millions.

We, the people, will have to pay this vast expense the Morgans, the Garys, and their lik have made for us to the uttermost farthing; first, in money and taxes, then in carnage and all the horrors of foreign war, then civil revolution, and our Nation, like the nations of Europe, will be turned into hell of conflicts, because we have killed democracy and forgotten God.

Three great army and war messages have been delivered to three

be turned into hell of conflicts, because we have killed democracy and forgotten God.

Three great army and war messages have been delivered to three great Governments lately. Woodrow Wilson's message to the American Congress; Von Holweg's message to the German Reichstag; the message of Elbert E. Gary, chancellor of Morgan's invisible government, to the representatives of his general council, composed of Democrats and Republicans, assembled at the infamous great Gary dinner. This message at that feast was backed by over three billions of money to defeat Wilson after having committed the party so as to spike all Democratic

campaign guns—elect Roosevelt a greater Cæsar, prepare for war, and have the war.

This Gary meesage was given to indorse the Republican Party and crystalize the demands of the invisible government on behalf of big business. This invisible government, represented by Morgan, Gary, etc., owns or controls the press and is the ally and active aid of the entente Governments, and will force our Government into war to support England and keep alive their munition factories and feed the furnaces of bate, hell, and murder to build their mountain of wealth, if the people don't act and begin action before their hands are tied by law.

The following was written by me to the chairman of the Anti-Saloon League of Texas, in which I am a member of the State board:

The following was written by me to the chairman of the State board:

Mr. A. J. Barrow,

President Anti-Saloon League, Dellas, Tex.

Dean Mr. Barrow: The invisible government that rules this country from the headquarters of the money devil in New York has made a deal, through a group of its agents and satraps, the Steel Trust, and "war traffickers" generally to sell Texas (and perhaps the whole country) to that chief of abominations, that superlative aggregation of seoundrelism, known as the liquor traffic. Jake Walters and a delegation of the leading whisky bunch of Texas spent several days in Washington lately. The National Liquor Dealers and their council of States have also been here.

Big business, the "war traffickers," and the ilquor bunch formed a union over a year ago, in which the liquor traffic was to join the war crowd and fight under their banner for the sweet term "preparedness," which is now used to cover so much villainy that organized greed, the preparedness. This gives them a respectable tarpatili to spread over their dens of filth, and enables them to use a million good prohibition voters to support their infamous conspiracy.

Jake Walters is to be Wilson's floor manager in Texas, and her State convention. If the plan works out, the whole storm is to center round Wilson and preparedness.

A delegation, whooping, yelling, and guzzling drinks for Wilson and preparedness.

A delegation, whooping, the plan works out, the whole storm is to center round wilson and suffrage. Morgan's millions and brewery millions are united commit the Democratic Party, the ag honest farmers' credit system, commit the Democratic Party, the agreement in the South, against national prohibition.

Jake Walters, one of their smoothest, ablest, sober gentleman in Texas is to have charge of the program and can have a million dollars and more if he needs it to spend in "an honorable and legitimate way" for Wilson's preparedness and prohibition advocates of the Bresident and his "preparedness," has called a fount of the countr

"The other topic I shall take leave to mention goes deeper into the principles of our national life and policy. It is the subject of 'national preparedness."

"It is said in some quarters that we are not prepared for war. What is meant by being prepared? Is it meant that we are not ready upon brief notice to put a Nation in the field, a Nation of men well, trained to arms? Of course, we are not ready to do that, and we shall never be in time of peace, so long as we retain our present political principles and institutions. And what is it that it is suggested we should be prepared to do? To defend ourselves against attack? We have found always means to do that, and shall find them whenever it is necessary, without calling our people away from their necessary tasks to render compulsory military service in times of peace.

"Allow me to speak with great plainness and directness upon this great matter. I have tried to know what America is, what her people think, what they most cherish and hold dear. Some of the great conceptions and descree of this people is a voice of peace and hope and liberty among the people of the world. * * *

"We are at peace with all the world. No one who speaks counsel based on fact or drawn from a just and candid interpretation of realities can say that there is reason to fear that from any quarter our independence or the integrity of our territory is threatened. * *

Dread of power of any other nation we are incapable of. We are indeed a true friend to all the nations of the world, because we threaten none, cover the possessions of none, desire the overthrow of none. Our friendship can be accepted and is accepted without reservation.

* * We are the champions of peace and of concord. And we should be very fealous of this distinction which we have sought to earn. Just now we should be particularly fealous of it, because it is our dear-est present hope that this character and reputation may presently, in

God's providence, bring us an opportunity such as has been seldom youchsafed any nation, the opportunity to counsel and obtain peace in the world and reconciliation and a nealing settlement of many a matter that has cooled and interrupted the friendship of nations.

"From the first we have had a clear and settled policy with regard to military establishments. We never have had, and while we retain our present principles and ideals we never shail have, a large standing army. If asked, 'Are you ready to defend yourselves?' we reply, 'Most assuredly, to the utmost'; and yet we shall not turn America into a military camp we will not ask our young men to spend the best years of their lives making soldiers of them.

"We must depend in every time of national peril, in the future as in the past, not upon a standing army, nor yet upon a reserve army, but upon a citizenry trained and accustomed to arms. It will be right enough, right American policy, based upon our accustomed principles and practices, to provide a system by which every citizen who will volunteer for the training may be made familiar with the use of modern arms, the rudiments of drill and maneuver, and the maintenance and sanitation of camps."

The European countries were then in the flush of world power in wealth and vigor. If Mr. Wilson's declarations were sound then, how much more so now Europe's best men are dead by millions, and millions more weunded and maimed, their countries famished and bankrupt. It is now acknowledged by all thinking men that the allies, making up the greatest powers on earth, would literally fall asander in a few months if not for the overwhelming support they are able to control from this country

Gen. Miles and Admiral Blue testified this week before our Millitary Gen. Miles and Admiral Blue testified this week before our Millitary

trol from this country

Gen. Miles and Admiral Blue testified this week before our Military Affairs Committee that we could easily repel any invasion or exterminate any foe that might invade our country. We have 270 fighting ships now, including 17 dreadnaughts of the world's best patterns. We have 68 more under contract and construction, including 9 of the best, most modern dreadnaughts known to the science of war. In God's name, why should we take up the military mania of Napoleon, the Kaiser, and Roosevelt, tax our common people with stamps on the common affairs of life, and drag out half a million men in handcuffs, under conscription, simply to make ourselves the "military bully" of the earth?

earth?

I would rather tax our people to build a fine merchant marine to carry our crops and commerce to the world without being in the grip of the Steel Trust and Morgan's transportation trust. I am with the President on that; but the "melon cutters" and their conspirators and friends killed that bill last year, and now through leading Republicans and enemies of Democracy are seeking to drown that grand measure by contracting to spend millions for a ponderous Army and Navy we do not need, leaving us helpless to provide funds for the things we do need. In my first two speeches I used the following language showing my position:

"I would like to double or treble our Army and Navy schools, preparing an adequate number of young men for expert service in time of need; enlarge our Rock Island Arsenal; manufacture and keep on hand an ample supply of first-class guns, munitions, and like equipments; plant several aeronautic stations on our shores with submarine and mine equipments"

"A Navy adequate to the country's defense is an established policy of our party; to any necessary increase of that armament I would offer no opposition; but the incomes of the rich, inheritances, and "war profits" should bear a just share of the cost and the load be lightened for the industrious poor."

"Thus prepared and relying on a citizen soldiery, if we give the citizen freedom and fair play at home, we will be impervious to all attacks from any source."

"All these things I stand for as most of the leading Democrats here. We stand by the grand message the President gave us, as quoted herein, and as he said then we will be amply prepared to repel any assault from any source. I join a whole Nation in an outpouring of thanks to President Wilson for this splendid administration in a general way and in keeping this country out of war when we had so many provoking and serious conditions which, under a less patriotic and well-poised man, would have produced war.

The great daily papers have continually faisified or magnified the difference between the President and most Democratic leaders. There has never been a day that a perfect agreement could not have been made if the administration forces had been willing to abandon conscription and let Congress raise the money by an increase in tax on large incomes, large inheritances, and "war profits," and let the Government make its own armaments and get out of the clutches of that bunch of base tories and "war traffickers."

I stand by my life's record of 30 years, as explained herein. Have been ready to go into a Democratic caucus on the great question and be bound by what a majority of the Democratic Members said do. This the administration declined to accept, and placed the whole program on a nonpartisan basis, while the papers boasted that Republican votes under the rabid reactionary leaders Joe Cannon, Jim Mann, and Senator Pennose would carry the plan through.

Since Tillman and others in the Senate have pushed through a plan for Government-made armaments and our committee has practically agreed on the repeal of the stamp tax and to raise the revenue by a tax on large incomes, etc., these Republican leaders are now getting mad. They are routed.

House of Representatives, Washington, D. C., February 8, 1916.

Washington, D. C., February 8, 1916.

Mr. George D. Armistead,
Postmaster, San Antonio, Tex.

My Dear Friend Armistead: Many thanks for your letter of February 3 and clipping from the Light. There are none but who want adequate preparedness. It is only a question of what that is. The President last year stood where most of the Democratic leaders now stand. He changed his mind and has left Gen. Miles, Bryan, Kitchin, and scores of the best Democrats on earth, and in his last few speeches has gone clear on beyond Roosevelt. The very thing we all predicted was intended by the millionaire melon cutters in the Steel Trust, Powder Trust, etc., who started this propaganda in the press last year.

The facts came out here that some of these scoundrels, these pocket-book patriots, whose war stocks have doubled ten times in one year, who have made millions in multiple in preparing the allies, now have Hon. JAMES R. MANN, the leading Republican on our floor, and the leading castern papers telling us we must contract with the same bunch by billions to prepare us to fight England. Their infamy has been shown in the fact that some of them have a contract with their pals and partners in Europe to furnish them copies of all contracts they make in this country. These things we never see in the papers. Wilson has now committed the Democratic Party, in so far as he can, to the Roosevelt rabid Republican program of military methods executed from military headquarters by the sword and bayonet. He demands these conditions and the billions of expense while we have an empty Treasury and asks that the larger part of the funds be raised by an infamous stamp tax on the common affairs of our people. When you recall the stamp tax in 1776 that bred a revolution and produced a Republic you will understand by I call it an infamous tax. In my remarks Saturday I used the following language concerning that tax:

"The general stamp tax is odious and offensive to all principles of Democracy and traditions of the Democratic Party. It is the spawn of rank Republicanism, begotten of Mark Hanna, whose polic, was to tax the masses and feast the classes. It came through the womb of the Republican Party and was adopted during the War witt. Spain, sent the Republican Party and was adopted during the War witt. Spain, enact the Republicans are in great glee ower the President's position. They have rai-ed the clamor that you will have to lick stamps to raise all your revenue or else lick the Democraties in the leading Republicans are in great glee over the President's position. They have rai-ed the clamor that you will have to lick stamps to raise all your revenue or else lick the Democraties and put us in to restore a protective tariff and sup

and conscription program. Twenty-two letters came in the mail with yours—2 for it, 20 against it, including a list of 100 signers to one of them.

Friend Armistead, let us look squarely at our situation. The President tells us the sparks are flying and we are likely to be engulfed in a conflagration at any time. Immediately the Republican leaders begin to repeat the clamor and mourn over "an empty Trensury and no hope of revenue to prepare for adequate safety, because of an impotent Democratic administration." I am not willing to impeach the honor and patriotism of our President by saying he had knowledge of serious conditions which might result in war. If England is the immediate danger, then I would feel myself (if I were President) to be not only a traitor, but a consummate villain, if I sat supinely still and did not move at once to stop Morgan and the Steel Trust from making millions by preparing her with money and war machines to invade and slaughter us. I would consider myself an idio or gone stark crazy if I thought Germany could pass the whole of Europe in arms and make an immediate attack on us. I raly or France, to make an attack on us, would have to satisfy Germany and Austria with such an indemnity they would be impotent and helpless, and to say there is immediate danger is to pronounce myself so silly that there is no term in my English will express the condition of such a mind. The truth is that Chadda Kitchin, chairman of the Ways and Means Committee; Bon Henry, chairman of the Committee on Rules; Judge E. W. Saunders, show there is no immediate danger, else the President would call the heads of necessary committees together under the rules of the House and lay the facts before them, and every honest man in the House would rise to meet the occasion and supply the means necessary at any cost.

The President, having no platform to commit him to such a program. For if he really knew anything serious, it would be his duty to impart the same to the chairmen of the Committee on this day to his Rooseve

Pensions.

EXTENSION OF REMARKS

HON. JOHN H. STEPHENS, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 16, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, I desire, as part of my remarks, to print two acts of Congress providing for pensioning the Texas Rangers up to but not including the year 1860. This does not include the regiment of Col. M. T. Johnson, and, therefore, my bill, if it passes the Senate and becomes a law, will not only put this regiment on a pensionable status but will also include all the Rangers serving after the war, from 1866 and up to 1876, when Indian hostilities ceased in Texas. last man that was killed by hostile Indians, so far as I know, was a Mr. Earle, who was killed by the Comanches in the summer of that year on the ground where the thriving town of

Quanah, in my congressional district, stands.

Mr. Speaker, the term "Texas Rangers" was first used in the legislative provisions made by the Congress of the Republic of Texas for maintaining mounted companies to defend the frontier against Indians and Mexican marauders. became part of this Union, by annexation, one of the articles of annexation required the United States to defend its frontier. It was found necessary by the legislature of the State to continue the Ranger service on its frontier and the Mexican border. They were paid by the State for their services. The Congress of the United States has, with a few exceptions, from time to time refunded to the State the amounts thus paid. I have a bill pending in this Congress to cover the few cases where this refund has not heretofore been made to the State. Several years ago I introduced a bill to pay a pension to all duly enrolled Rangers who have not heretofore been placed on a pensionable status. I reintroduced it this term. It is as follows, namely, H. R. 341:

bill (H. R. 341) pensioning the surviving officers and enlisted men of the Texas Volunteers employed in the defense of the frontier of that State against Mexican marauders and Indian depredations from January 1, 1859, to January 1, 1861, and from 1866 to 1876, inclusive, and for other purposes.

from January 1, 1859, to January 1, 1861, and from 1866 to 1876, inclusive, and for other purposes.

Be it enacted, etc., That the provisions, limitations, and benefits of an act entitled "An act granting pensions to survivors of the Indian wars of 1832 to 1842, inclusive, known as the Black Hawk War, Creek War, Cherokee disturbances, and the Seminole War," approved July 27, 1892, be, and the same are hereby, extended from the date of the passage of this act to the surviving officers and enlisted men of the Texas Volunteers who served in defense of the frontier of that State against Mexican marauders and Indian depredations from January 1, 1859, to January 1, 1861, inclusive, and from the year 1866 to the year 1876, inclusive; and also to include the surviving widows of said officers and enlisted men: Provided, That such widows have not remarried: Provided further. That the record of enlistment or muster into the service of the State of Texas, as evidenced by the muster rolls and vouchers on file in the State archives at Austin, Tex., shall be accepted as full and satisfactory proof of such enlistment and service; and where it is shown that any such muster rolls or vouchers have been lost or destroyed, secondary evidence of their existence, contents, and loss may be made, and when so made shall have the same force and effect as the original rolls and shall be accepted as full and satisfactory proof of the originals: And provided further. That all contracts heretofore made between the beneficiaries under this act and pension attorneys and claim agents are hereby declared null and void.

The gentleman from Colorado [Mr. Keating] introduced a

The gentleman from Colorado [Mr. Keating] introduced a similar bill in this Congress, which was favorably reported by the Committee on Pensions. This bill did not include the Texas Rangers, and under its provisions these Texas troops would have received no pensions. This bill is as follows:

received no pensions. This bill is as follows:

A bill (H. R. 655) to pension the survivors of certain Indian wars from 1865 to January, 1891, Inclusive, and for other purposes.

Be it enacted, etc., That the provisions, limitations, and benefits of an act entitled "An act granting pensions to survivors of the Indian wars of 1832 to 1842, inclusive, known as the Black Hawk War, Creek War, Cherokee disturbances, and the Seminole War," approved July 27, 1892, as amended on February 19, 1913, be, and the same are hereby, extended from the date of the passage of this act to the surviving officers and enlisted men, including militia and volunteers of the military service of the United States. who have reached the age of 62 years, and who served for 90 days in the campaign in southern Oregon and Idaho and northern parts of Callfornia and Nevada from 1865 to 1868, inclusive; the campaign against the Cheyennes, Arapahoes, Klowas, and Comanches in Kansas, Colorado, and Indian Territory from 1867 to 1869, inclusive; the Modoc War of 1872 and 1873; the campaign against the Klowas, Comanches, and Cheyennes in Kansas, Colorado, Texas, Indian Territory, and New Mexico in 1874 and 1875; the campaign against the Northern Cheyennes and Sloux in 1876 and 1877; the Nez Perce War of 1877; the Bannock War of 1878; the campaign against the Northern Cheyennes in 1878 and 1875; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes in 1878 and 1879; the campaign against the Northern Cheyennes and 1879; the campaign against the Northern Cheyennes in 1879; the

from September, 1879, to November, 1880, inclusive: the campaign against the Apache Indians in Arizona in 1885 and 1886; and the campaign against the Sloux Indians in South Dakota, from November, 1890; to January, 1891, inclusive; and also to include the surviving widows of said officers and enlisted men who shall have married said survivor prior to the passage of this act: Provided, That such widows have not remarried: Provided further, That where there is no record of enlistment of muster into the service of the United States in any of the wars mentioned in this act the record of pay by the United States shall be accepted as full and satisfactory proof of such enlistment and service: And provided further. That all contracts heretofore made between the beneficiarles under this act and pension attorneys and claim agents are hereby declared null and void.

SEC. 2. That the period of service performed by beneficiarles under this act shall be determined by reports from the records of the Treasury Department, showing payment by the United States military service.

SEC. 3. That section 4716 of the Revised Statutes, relating to loyally during the Civil War, is hereby repealed so far as the same relates to this act or to pensioners under this act.

When this bill was under consideration in the House the

When this bill was under consideration in the House the main provision of my bill No. 341 was incorporated in this bill No. 655 as an amendment. It is now in the Senate for consideration, and I hope that it will soon become a law, so that the few remaining old, brave, battle-scarred Texas Rangers will receive pensions from a Government who has bestowed millions of dollars on soldiers of other wars who were never near enough an enemy to even smell gunpowder. In the war between the United States and Mexico—1846 to 1848—the Texas Mounted Volunteers, then in the service of the United States under such noted leaders as Walker, Hays, Gillespie, Truits, Duggett, and others, achieved world-wide fame and added adtional luster to the name of "Texas Ranger." Between the Mexican War and the Civil War of 1861 the Rangers under such chieftains as Burleson, Highsmith, the McCullochs, Ford, Hardeman, Ross, and others, by their valor, daring, efficiency, and generalship, displayed in the many campaigns against hostile Indians and marauding Mexicans, fully maintained the title of the Texas Rangers for intrepid skill in horsemanship, unerring aim with firearms, quickness in movement, coolness in danger, and dashing courage in action. I personally know three Montague County rangers who charged and defeated nine hostile Comanche Indians, killing several of them and wounding others. These Indians were on one of their many murderous raids in Texas, killing its inhabitants, stealing stock, burning their houses, and carrying off their women and children into a captivity worse than death. Two of these heroic men, W. A. Morris and Levi Perryam, are yet living in that county, and it is such heroic men as these that I desire, by the passage of this bill, to help in their declining years. However, only one of them will get any aid by this bill. of them will get any aid by this bill.

One of them has an income of over \$1 per day. One of the three, a Mr. Williams, has long since departed this life. It is my belief that three-fourths of the rangers coming under the relief given in this bill have already passed away, and many of them are not indigent persons, who under its terms could not receive a pension. I can not understand how any Texas Congressman could vote against this meritorious bill. Yet truth

compels me to say that several of them did so vote.

I want to thank my Texas friends and also Messrs. Murray, CARTER, FERRIS, and other Congressmen of Oklahoma for their votes and the valuable aid they gave me in the passage of this bill. May their shadows never grow less. The benefits of this bill extend to rangers who served from 1866 to 1876, inclusive, and from 1859 to 1861. This will also include M. T. Johnson's regiment of volunteer rangers, who served in 1860 on the frontier.

Mr. Speaker, I was raised on the Texas frontier, and personally know the history of the Indian raids—since the close of the Civil War in 1865. Many of my personal friends have been murdered by these savages, and now sleep in unmarked graves; many of them in my district. Mr. Speaker, when a very young man I volunteered my services—in the early seventies—and served as a scout without pay in Maj. John B. Jones's command. I therefore know something of the hardships and dangers of the ranger service. The name, fame, and incomparable record of the Texas Rangers should be near and dear to the hearts of every native American. Texas has a strange and singular history to her credit—in the last 80 years—first, as a part of Spain; second, as a part of Mexico; third, as an independent Republic; fourth, as a part of the American Union; fifth, as a part of the Southern Confederacy; sixth, again as a part of this Union. Recently Mr. Rainer, a Member of Congress, in eulogizing Louisiana, said she had the most unique history of any State in the Union. He should have excepted Texas from his statement.

The Rangers' organizations have existed as military organizations ever since the Anglo-Saxon race secured a foothold in its

territory, and to-day its members are still battling along the Rio Grande with Mexican marauders, and but recently our present President mentioned them in one of his recent speeches in a very complimentary way. In the winter of 1853-54 the office of the adjutant general of Texas was burned with everything it contained, and in November, 1881, the State capitol was burned. Many important military papers were then destroyed, so that it is now hard and in some cases impossible to reproduce these records except by secondary evidence, the records so necessary to sustain these claims of the State of Texas and its rangers against the United States for reimbursement of the amount of money paid by the State for the service, or to show the service of the Rangers, so as now to put them on a pensionable status.

Rural Mail Delivery.

EXTENSION OF REMARKS

OF

THOMAS SCHALL, HON. D. OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 19, 1916.

Mr. SCHALL. Mr. Speaker, I have written and talked myself black in the face in a vain attempt to have the rural mail routes in my district readjusted. And I realize from listening to other Congressmen upon this floor that they have had the same experience. The citizens of my district have written letters explaining the deplorable condition and sent petitions with hundreds of signers setting out the injustices done. Their petitions have been rejected, their entreaties disregarded, and their mouths gagged with the Democratic word "economy." The word "efficiency" seems to be nowhere found in the bright lexicon of Democracy. In short, constituents have come to believe that their Congressmen are impotent to secure relief for them, and they have, in desperation, turned to newspaper men for aid. This telegram was handed to me to-day:

FEBRUARY 16.

W. G. McMurchy, Correspondent Daily News, Washington, D. C .:

Will you assist us in restoring former R. F. D. services? Service now is rotten. Mail not delivered for three and four days. Farmers inconvenienced. Will you personally present affidavits to Blakslee sent you? He is taking away only direct benefit farmers get from Government. Wire answer collect.

AL. HECHTMAN.

In the Minneapolis Journal of November 18, 1915, an interview is published which is an answer of the Fourth Assistant Postmaster General to the flood of petitions that poured in upon him after his wholesale slaughter of the rural routes. He says in part:

No dismissed rural carriers and no fourth-class postmaster who has had his revenue interfered with is going to make any difference with me. The politicians may get after me if I they want to, and they may get me at that, but I have set a pace that will not be cut out by the politicians, no matter what happens to me. We propose to spend the people's money in this service for the benefit of the people, and not for the purpose of serving the ends of the politicians.

Such vaporings do not deceive anybody. The Democratic Party has proved itself mad on theory and short on practice. From the head of the party down they love fine phrases and avoid action. To dismiss the cry for relief that is rising all over the land from the farmer by calling it politics does not remedy the situation. Nothing is so essential to the modern farmer as his mail. He must have his newspaper and he must have his city mail and the market reports in order to carry on the business of the modern farm. The day has gone by when the monthold sheet will serve the purpose just as well. To cripple the service by removing routes works a hardship to the farmer that is not excused by the overworked word "economy."

The district which I represent is a rich and progressive farming tract. The farmers have up-to-date methods. Aside from being the prize dairy district of the world all through the district individual farmers have kept abreast of the wave and are specializing. As a result of the discontinuance and disorganiza-tion of their mail routes they are obliged to walk, some of them a mile and a mile and a half, for their mail. They get their mail out of an other town than the one in which they have been accustomed to market their produce.

At Osseo, where the conditions are particularly atrocious, their mail is routed out of Anoka. They must change the address on their mail. The identity of a thriving village of over

a thousand is destroyed. The community feeling that they have labored to build up is lost. They get their paper two and three days after it is printed and their mail is correspondingly delayed. The routes before the change were all a carrier could handle, especially when the weather was bad. Now they have been so lengthened that in stormy weather the carrier is obliged to skip a day or two or three. (It does not matter how the farmer is served so long as the Government is "saving money.") On November 12, 1915, after numerous deputations of rural patrons had visited me, I sent the following telegram:

MINNEAPOLIS, MINN., November 12, 1915.

Mr. Albert S. Burleson, Postmaster General, Washington, D. C.:

Will you hold up proposed changes in rural free-delivery service in Hennepin County until protest petitions reach you. Delegations with petitions have called on me from Osseo, Robbinsdale, St. Louis Park, Hopkins, Rogers, Wayzata. Petitions explanatory.

And received the following reply:

POST OFFICE, Washington, D. C., November 13, 1915.

Hon. THOMAS D. SCHALL,
Minneapolis, Minn.:

Answer to telegram impracticable to recall orders revising rural service in Hennepin County. Letter follows.

Fourth Assistant.

On the 11th of November I forwarded to the Fourth Assistant Postmaster an armful of petitions. One of these, signed by a hundred and four of the rural patrons out of Long Lake, Minn., I take at random:

LONG LAKE, MINN., November 11, 1915.

To the Hon. James I. Blakslee, Fourth Assistant Postmaster General, Washington, D. C.

To the Hon, James I. Blakeslee.

Fourth Assistant Postmaster General, Washington, D. C.

Dear Sir: The undersigned, who are patrons of the post office at Long Lake, Minn., and now receive their mail on the rural route, which originates at Long Lake, Minn., have been informed that said route, as heretofore existing, will be discontinued November 15, 1915, and thereafter they will be served by carriers coming from either Maple Plain or Wayzata or Hamel.

Ever since we have lived in this community, the greater number of us have had Long Lake for our railway, telegraph, telephone, and post office, and our interests are centered in and about Long Lake, and we have become identified with that post office, and we wish hereby to protest against any such change as is proposed by your department as being destructive of our neighborhood individuality and detrimental to our general interests.

It seems to us that the department before making such changes should take into consideration the inconvenience it will make to the patrons and the damage that will be done to our community by diverting from the Long Lake post office the mail business naturally tributary thereto and attaching to distant post offices patrons who should be served from the Long Lake post office.

Your obliteration of the Long Lake route and redistribution of its yatrons will result in such a mix-up of the locations and addresses of the undersigned as to destroy the individuality of our community, and we sincerely hope that you will reconsider this matter and decide to continue the rural route from Long Lake as heretofore, and thus furnish us with service which has been very satisfactory.

Respectfully, yours,

The changes at Osseo, Long Lake, Maple Plain, St. Louis Park, Loretto, and St. Bonifacius were made without inspection. So at Brook Park. So at Princeton, where a route was changed "to accommodate more patrons" and put on a road that has not been used because it was impassable. The routes were laid out from a map without consulting local conditions and without visiting the localities.

I am in receipt of a letter from George P. Zachritz, of Excelsior, in which he relates that, in answer to protests that service on the country road was poor, the department's only response was to make the service triweekly instead of daily. And this road is the main thoroughfare from the city of Minneapolis to Lake Minnetonka, and the garden and truck and apple farms are almost as closely located as in a village street.

If these changes were a part of a consistent campaign for economy, there might be less objection. But the reductions are only on the outside. There is an attempt on foot to raise the salary of the fourth assistants to \$7,500 from \$5,000—a lack of sincerity that can only be received with bitterness by the mass of the badly served rural communities.

The case of St. Louis Park is well set forth in the two following communications:

ST. LOUIS PARK, MINN., November 6, 1915.

St. Louis Park, Minn., November 6, 1915.

Dear Sir: From the information that I have received from the Fourth Assistant Postmaster General's office, rural route No. 1, that originates from this office, will be discontinued November 16. Mr. Whipple, one of the oldest carriers in service in the county, and a very dependable man, will be let out same date.

During my incumbency I have rearranged the schedule and moved the post office to a sanitary location in our new bank building, at a saving of \$12 per month (mail-messenger pay) to the department; and if the new route No. 2 were started at this office it would give our people excellent service. I do not lose any revenue under this arrangement; but in the interest of good service I am writing you.

Under the new schedule mall matter for this village will be diverted

as follows (causing considerable confusion and delay): A small portion of route No. 1 will be changed to route No. 3, which will originate at Hopkins, Minn., while the largest portion of route No. 1 will be changed to route No. 2 and originate at Linden Hills Station, of your city. It will be necessary for the public to address this route in two ways, namely, that part of the route which lies south and southeast of this office—Minneapolis, Linden Hills Station, route No. 2; and that part of the route which is north and east of this office—St. Louis Park, Minn., route No. 2; which means that the patrons living on that part of the route that is addressed "St. Louis Park" will receive their mail a day before the portion living in the other part that is addressed "Minneapolis, Linden Hills Station, route No. 2."

Mail for that part of the route that will be known as Minneapolis, Linden Hills Station at 8 a, m. Mail due to arrive on the following-named trains can not be connected:

Chicago & Minneapolis, train 10, due at 8.05 a, m. Chicago & Minneapolis, train 57, due at 8.12 a, m. Elroy & Minneapolis, train 15, due at 8.45 a, m. Minneapolis & Omaha, train 10, due at 8.10 a, m.

St. Paul & Des Moines, train 3, due at 8.10 a, m.

St. Paul & Hayre, train 2, due at 7.40 a, m.

The principal portion of the incoming mail for Minneapolis and vicinity is brought in by the above-named trains and will be delayed a whole day.

No doubt it is clear to you that it will be impossible to receive the

The principal portion of the incoming mail for Minneapolis and vicinity is brought in by the above-named trains and will be delayed a whole day.

No doubt it is clear to you that it will be impossible to receive the letter mail, paper mail, and parcel post which arrives in Minneapolis on any of the morning trains because of the great quantity and because it will be addressed Minneapolis, Linden Hills Station, route No. 2, and combined with other Minneapolis mail. If this route started from the St. Louis Park post office the mail would be addressed to St. Louis Park Minn., route No. 2, and the primary separation would be made on the train. Practically all trains arriving in Minneapolis in the morning connect St. Paul and Aberdeen train No. 1, which arrives here at 8.25 a. m., and the mail would be delivered on the day of its receipt.

This new arrangement makes it practically prohibitive for our business men to send their goods to their patrons by parcel post. For instance, our storekeepers send goods by parcel post or notices to their customers on Friday p. m.; the rural carrier must take this on Saturday to Linden Hills Station, Minn., and bring it back again on Monday to St. Louis Park for delivery. That part of the village whose mail will go to Hopkins, Minn., will be affected in practically the same way.

Trusting my regard for Mr. Whipple will appeal to you and that your interest in good service will prompt you to take this matter up with the department and urge them to adopt my suggestion concerning him and route No. 2.

Most earnestly, yours,

L. V. Langdon.

NOVEMBER 11, 1915.

MY DEAR SIR: I write to you in regard to a proposed change in the delivery of mails at St. Louis Park.

In some respects our town is unfortunately constituted. We cover 3 square miles and have men of all sorts of occupations residing

In some respects our town is unfortunately constituted. We cover 9 square miles and have men of all sorts of occupations residing therein.

There are people living as many as four families on one block, and there are many truck gardens ranging from 5 to 40 acres, dairies with farms of 100 acres and upward.

We have a most progressive village council that is doing everything in its power to give to its inhabitants everything that is up-to-date.

We have a school board of which the same can be said, for they gave us one of the most modern high-school structures in the State, with a normal department, domestic science and art, agriculture and horticulture, and manual training. This building, besides four outlying buildings, all modern and up-to-date.

In the four outlying sections we have very progressive improvement leagues—the Oak Hill, the Brookside, the Lake Street, the Farmer's Club (on the north side), and the St. Louis Park Commercial Club, at the center, open to all.

With all of these elements pulling in the direction of modernism and all things essential to the comfort of life, it seems most deplorable that we should be thrown back into the Middle Ages in the matter of postal service.

As we have been served in recent years, only part of the St. Louis Park people have received their mail through the St. Louis Park, office, part being served through Linden Hills office. As you must know, this arrangement has caused great delay, as often mail addressed to Jno. Doe, St. Louis Park, because he lived in St. Louis Park, has been returned to Minneapolis post office, thence to Linden Hills substation, and finally to Jno. Doe.

As 1 understand, the route having been rearranged a part of the inhabitants of St. Louis Park being served from the Linden Hills substation, or from a Hopkins post office have his mail addressed to him at St. Louis Park, as would naturally be the case, it would go to St. Louis Park, but would have to be forwarded to either one of these offices before finally reaching him.

To make a long a

(Signed) T. H. COLWELL.

I could multiply instances of petition after petition, letter after letter, from the counties of Chisago, Isanti, Hennepin, Mille Lacs, and Pine that have passed through my hands almost daily to the Fourth Assistant Postmaster General. The only satisfaction I can get is that an inspector will visit the locallty and see what steps are necessary. And then they further add insult to injury by inviting suggestions as to extension of service. In a letter dated November 15 the Fourth Assistant writes as follows:

It is the purpose of the department to utilize the funds made available by the revision of routes in Hennepin County in the extension or establishment of service in the State of Minnesota at any point where reasonable necessity therefor can be shown to exist, and I shall be pleased to have you cooperate with the department in this matter.

This "robbing Peter to pay Paul" is not good business. It is not justice, and the farmers are not going to stand for it. They know their rights, and they are going to have them. They are not asking for extension of routes, they are asking to be let alone. They want their old routes back, their old carriers, and they do not want to wait till a new administration makes the change.

Postal Employees Legislation.

EXTENSION OF REMARKS

CARL C. VAN HON. DYKE,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 19, 1916.

Mr. VAN DYKE. Mr. Speaker, I herewith submit for the information of Congress a copy of the memorial of the National Federation of Post Office Clerks, in which are enumerated the various service problems intimately affecting the welfare of the employees. The memorial is as follows:

FEDERATION MEMORIAL SENT TO DEPARTMENT.

VIEWS OF MEMBERS TRANSMITTED IN WRITTEN MESSAGE.

Following its usual custom, the executive committee of the National Federation of Postal Clerks has forwarded to the Postmaster General for the attention and the consideration of the department officials the following memorial, in which are outlined the views of the members of the organization upon service problems discussed at the ninth convention in San Francisco, September 6 to 10:

REDUCTION OF NIGHT WORK.

We earnestly urge the department's acceptance of the principle embodied in the Paimer-Lewis bills, introduced in the Sixty-third Con-gress, which provide for the computation of post-office work performed between the hours of 6 p. m. and 6 a. m. upon the basis of 45 minutes

gress, which provide for the computation of post-office work performed between the hours of 6 p. m. and 6 a. m. upon the basis of 45 minutes to the hour.

This proposed time differential in favor of the night workers is merely long delayed recognition in the Postal Service of the hardships of toiling at night. The British postal service has long recognized seven hours of nightwork as equivalent to eight hours of daywork. The United States Government, in the Government Printing Office at Washington, D. C., pays 20 per cent additional for night work, which is construct to mean work performed between the hours of 5 p. m. and 8 a. m., when it is considered that almost all night work in post offices is confined to the distribution of mail, which must be done by men who devote many hours of their time when off duty to studying distribution schemes, the need for a shorter tour of hours for night workers is apparent and imperative.

Stricter regulative measures and closer cooperation between the post offices and the large mallers would minimize the present practice of dumping tons of third and fourth class matter into offices during the early evening rush hours, retarding the distribution of first-class mail and making necessary the presence of a large force of distributors. If bulk maillings of the less important mail matter were better regulated, the employees and the service would be benefited. Less labor during the unnatural hours of night and correspondingly more work during the day would be an economical arrangement, and operate to expedite the dispatch of all classes of mail.

We promise a continuation of our educational campaign to induce the public to deposit mail as early in the day as possible.

PROTEST AGAINST TIMING DEVICES.

PROTEST AGAINST TIMING DEVICES.

We voice our emphatic objection to the use of timing or clock devices to determine the speed at which a postal employee must work. The installation of such a system is a gratuitous afront to the supervisory officials, who have heretofore managed the forces under them sufficiently well to insure the expeditions dispatch of the mails.

A clerk's record on scheme examination, together with the manner in which he performs daily the duties to which he is assigned, should suffice to determine his fitness for promotion or retention in the service. To harass him to maintain abnormal speed by timing his movements is not conductve toward increasing his efficiency. On the contrary, such methods tend to impair efficiency.

We ask the department's advocacy of legislation to prohibit the use of timing devices in ascertaining the amount of work performed or to be performed by postal employees.

COMPENSATION-FOR-INJURY LEGISLATION.

COMPENSATION-FOR-INJURY LEGISLATION.

We sincerely appreciate the department's effective advocacy of the legislation enacted by the Sixty-third Congress to provide relief for certain postal employees injured in the performance of duty.

We feel, however, that this legislation should be amplified to include employees not now coming within its purview, and we therefore ask the department's aid in securing the enactment of the legislation sought in the Kern-McGillicuddy bill, a comprehensive and scientific compensation-for-injury measure, which will afford proper protection to all Government employees in the classified civil service.

SALARIES.

SALARIES.

We respectfully urge the department's indorsement of legislation to provide a higher salary classification for clerks and carriers. We feel that clerks and carriers should be promoted successively from the initial grade of \$800 per annua to a mandatory maximum grade of \$1,400 per annum in first-class offices, and that clerks and carriers in second-class offices be promoted to a \$1,300 mandatory grade. All promotions to be made after the completion of one year of efficient service in each grade. We view with appreciation the department's recognition of the necessity for a higher wage scale for the skilled, experienced clerks of the service in the number of promotions that have from year to year been recommended into the \$1,300 and the \$1,400 grades; but we think this

recognition has been too limited and should be widened to include all efficient, deserving employees in the present \$1,200 and \$1,300 grades.

The Postal Service of to-day exacts from its employees a higher standard of efficiency and intelligence than ever before. To become a proficient post-office clerk requires constant study and application along specialized lines. Men making the service their life work unfit themselves for employment in other occupations. To encourage the upbuilding and the maintenance of an expert corps of postal workers, higher remuneration than the present maximum grade should prevail. The admittedly high cost of living has reduced the wage of the men to a point where the service can no longer be expected to attract and retain the element it requires—intelligent, ambitious, efficient workers.

LEAVE OF ABSENCE.

We seek that the present promistion limiting the leave of absence of

We ask that the present regulation limiting the leave of absence of an employee to 150 days in one calendar year be abrogated entirely in so far as it applies to sickness. We think that at least a year's leave of absence should be granted in cases of prolonged sickness, with the further opportunity of returning to the service within the following year at the former salary.

We suggest, furthermore, that the department grant 15 days' sick leave yearly to clerks and carriers without loss of pay, this leave to be exclusive of the present vacation period with pay.

BETITEMMENT FOR SUPPRANNUATED EMPLOYEES.

RETIREMENT FOR SUPERANNUATED EMPLOYEES

We call attention to the urgent need of retirement legislation, and ask the department's cooperation in placing upon the statutes, in the interest of humanity and an improved postal service, a retirement measure which will protect the employees against summary dismissal when incapacitated after long years of service, and render unnecessary the retention of men in the service who have passed their period of active usefulness.

To dismiss men who have given the best years of their life to the service, to cast them upon the world's mercy in their declining years, is not in keeping with the ideals of the Nation or the spirit of the times. Yet to retain men in the service when they are noticeably unfit to perform their allotted tasks is not consistent with a business administration. Civil-service retirement is a natural concomitant of civil-service employment. The need of a system of retirement for aged postal workers is apparent, and we seek the cooperation of the department in arriving at an early solution of this most vexing problem, to the end that justice be accorded to both the employees and the public. SCHEME STUDY.

We respectfully urge the department to take early action toward the standardization of scheme study. In the absence of definite rules, undue hardships are inflicted upon clerks by unnecessary scheme study, the mastering of schemes for which no practical need exists, thus interfering and interrupting the clerks' study of schemes used in the daily duties. As all scheme study must be done upon the clerk's own time, either before or after office hours, it is aggravating and unjust to exact from them such unnecessary sacrifices.

Time off, pro rated upon the amount of time spent in study, would be given clerks who have qualified on scheme or who are expected to qualify. It has been suggested that at least an hour daily be allowed clerks who must learn schemes to enable them to attain at all times the highest point of proficiency in dispatching mail speedily and accurately.

the highest point of proficiency in dispetching man specially due to rately.

Scheme examination should also be considered as part of the day's tour of duty, instead of compelling the distributors, especially the night workers, to report for examination upon their own time.

The attention of the department is invited to the practice in the Railway Mail Service of exempting competent cierks who have been 20 years in the service from scheme examination. A similar recognition of the past valued work of the post-office distributors might well be made with profit to the service and justice to the men.

SANITATION.

SANITATION.

We urge the department to insist upon a rigid compliance by all postmasters with the sanitary rules promulgated some years ago in the interest of the health and safety of the employees. The insanitary, unhealthful, crowded condition of some of the post offices is a menace to those compelled to work amid such surroundings. The use of vacuum cleaners instead of dry sweeping should be made universal; likewise the use of sanitary towels, drinking receptacles, and cups.

The continued use of flithy tlesacks and pouches is undoubtedly the cause of the spread of tuberculosis in the service and a constant menace to the health of all postal employees, as well as the public. We urge the proper and thorough cleansing of all equipment by the use of disinfectants and the issuance of an order to carry rather than drag pouches and sacks.

VACATION LAW.

VACATION LAW.

We suggest that the department adopt a uniform system of allotting vacations to the clerks, so that sufficient advance notice be given to permit of proper preparation. In some offices the clerk does not know the date of his vacation in advance, which seriously interferes with the making of arrangements or plans. New clerks are also complaining, because they are sometimes compelled to wait 16, 18, or 20 months for a vacation. A standard rule, liberal in its scope, covering the selection and allotment of vacations would be advisable.

The amending of the clerks' vacation law to conform with that governing the carriers would be an improvement.

PROTEST AGAINST PERMY POSTAGE.

The reduction of first-class postage from 2 to 1 cent, which is advocated by many who have not apparently given the question deep consideration or who are actuated by selfish interest, we deem inadvisable and unwise. A lower rate of first-class postage would curtail the revenues of the service, and thus greatly hamper the department in its efforts to extend the parcel post and other postal reforms of great value to the public in general. A deficit resulting from reduced postage would affect our working conditions, tending to increase hours and decrease wages, and therefore it would be harmful to the service by impairing the efficiency of the postal workers.

We commend the department for its attitude in discouraging this stimulated agitation for 1-cent letter postage and pledge our continued efforts to ward off legislation of this character.

TRANSFER TO RAILWAY POST OFFICE.

Inasmuch as the knowledge and training of the post-office distributor fits him for Railway Mail Service duties, we suggest that in the interest of greater efficiency clerks be permitted to transfer into the Railway Mail Service without loss of salary. We ask a continuation of the department's efforts to secure from Congress the necessary legislation to make these transfers possible, and we pledge our active cooperation.

ADDRESS ON WRAPPERS

The department is again urged to request publishers to print on the wrappers of single copies of publications the name and office of entry and to have addresses uniform in size of printing and position upon the

REBATE OF HOLIDAY TIME.

We suggest that postmasters be given specific instructions to rebate to clerks all time worked on holidays. The present inequality, whereby some employees are very properly given time off on holidays, wills others, who must work, are denied compensatory time for this service, causes much complaint and dissatisfaction.

METHOD OF PROMOTION TO SUPERVISORY POSITION.

We commend the department's efforts to classify supervisory positions according to the responsibilities devolving upon the employee and to fix the remuneration in a like manner, thus making it an incentive for competent men in the ranks to strive for promotion. We suggest that when a vacancy occurs in the supervisory force it be filled by examination from the clerks in the \$1,200 and higher grades. Experience, ability, knowledge of duties, and postal regulations should be the factors in determining the fitness of the applicants, the appointment to be awarded to the applicant making the highest average.

Minor lapses or occasional failures to register on time clock or throwing a piece of waste on the floor should not be permitted to annul an otherwise perfect efficiency record, and that hereafter the department, in granting promotions, eliminate from consideration any demerits imposed for trivial offenses which do not in the least impair a clerk's efficiency.

CORRECTION OF ABUSE OF DIRECTORY SERVICE.

In order to correct abuses that have tended to make the directory service of the department the instrument of careless patrons, we suggest that mail matter insufficiently or incorrectly addressed, and which does not bear the return address of the sender, be denied directory service and disposed of as undeliverable matter.

OVERTIME.

We earnestly urge the department to minimize overtime for clerks by the employment of an adequate auxiliary force. At present regular clerks are frequently worked in excess of eight hours in the performance of duties that could be assigned to substitute and auxiliary employees at a lower rate of compensation. Inasmuch as clerks must devote time after working hours to scheme study, it necessarily follows that excessive overtime works to the disadvantage of the service in interfering with the study of the clerks, and also operates to the disadvantage of the clerks in subjecting them to penalties for failure to qualify on scheme examination when there are no opportunities for preparation. It is the practice of supervisory employees in many instances to compel clerks to work lengthy hours of duty without opportunity for rest or for meals. This is particularly true when overtime is being worked. We hereby appeal to the department to correct this condition by the issuance of an order to the effect that no employee be compelled to work more than six consecutive hours without opportunity for rest and meals.

CHANGE IN FORM OF MONEY ORDER.

CHANGE IN FORM OF MONEY ORDER.

We suggest to the department that the present money order forms be altered by adding 50 cents in the margin above the \$1 designation to minimize opportunities for raising money orders from small amounts up to \$1.

FILLING VACANCIES.

We vigorously protest against the practice of many postmasters in failing to fili vacancies created by deaths, removals, and resignations in the force of regular clerks when the need of keeping the force recruited to its full strength is apparent. In lieu of appointing the eligible substitute to a vacancy, the practice has developed to assign a substitute to perform the duties for an indefinite period, compelling him to qualify on scheme examination and otherwise meet all the requirements of a regular clerk without, however, giving him the benefits of fixed hours of employment, a weekly rest day, annual vacation, and yearly salary increase. We view this practice as most unjust to the substitute employees and a violation of the spirit of the laws governing the salaries and hours of employment of the clerks.

PARCEL-POST SPECIAL.

We call the extention of the department to the fact that the public

We call the attention of the department to the fact that the public is given first-class service on fourth-class mall by the mere payment of a special-delivery fee, and we think that an increase in the cost of special-delivery service, under these circumstances, is justifiable.

SUBSTITUTE SERVICE.

Substitute clerks are now required to learn distribution schemes and to study the Postal Laws and Regulations when awaiting opportunities for daily assignments to duty; and we therefore suggest that substitutes be compensated for the time that they are required to be at the call of the department. We further recommend that the time spent in substitution be reckoned as regular service, and substitutes receive appointment directly into the salary grade to which their time of actual service entitles them.

RESPONSIBILITY OF MISCARRIAGE OF PACKAGES.

Under the present rules of the department the clerk receiving parcels is responsible for their contents and c. o. d. charges, and also any damage the package may later sustain in transit. Receiving clerks have been penalized under this ruling for damages to parcels that had apparently been properly dispatched. We urge that the department protect receiving clerks against the possibility of losses by ordering a fair and full investigation of every case before fixing the responsibility for damage or miscarriage of packages.

TRANSFER IN CASE OF REDUCTION TO SUBSTITUTE LIST

We urge that when the department is forced to the expediency of dropping regular clerks to the substitute list, that these clerks be given an opportunity to fill vacancies occuring in near-by offices of the same class if they so desire.

ADVANCE NOTICE OF EXAMINATION.

In justice to the distributor, whose promotion or retention in the service depends upon his scheme examination to a great extent, we suggest that an advance notice of 30 days be given for examinations, and at least 90 days' time be given for studying a new scheme.

ASSIGNMENT OF VACATIONS.

We call attention to the lack of uniformity governing the assignment of vacations to clerks. In some offices these vacations are spread out over the entire year; in others, the vacations are confined to the

summer months. We deem the latter arrangement more satisfactory to the cierks and more feasible to the department, insuring, as it does, the presence of an augmented force of workers during the winter months in the office, and enabling the cierks to have the obvious benefit of sur-cease from toil during the summer months when the mails are lighter.

PREFERENCE IN ASSIGNMENT OF TOURS

We believe that the mooted question of seniority in the assignment of tours of duty should be settled by the department's recognition of the right of the clerks who have worked nights and undesirable hours to perference in the assignment to desirable tours over transferees from other branches of the Government service and other branches of the Postal Service. We think it unfair to deprive men who have toiled for years at night work of their opportunity to a rightfully earned promotion to better hours.

FIRST AID TO INJURED.

We suggest to the department that first-aid-to-the-injured medicine cabinets be installed in first and second class post offices for the immediate treatment of injuries sustained by employees when on duty.

Respectfully submitted.

ARTHUR L. HONEYWELL, President. President.

MAURICE M. SIMON,
First Vice President.
GILBERT E. HYATT,
Second Vice President.
LUTHER S. BUTLER,
Third Vice President.
THOS. F. FLAHRETY,
Secretary-Treasurer.

NATIONAL FEDERATION OF POST OFFICE CLERKS, Washington, D. C., February 17, 1916.

Mr. CARL C. VAN DYKE,
House of Representatives, Washington, D. C.

Dear Sir: Permit'me to thank you in behalf of the National Federa-tion of Post Office Clerks for having introduced H. R. 8677, a measure to prevent t' use of the stop-watch or time-measuring device or sys-tem in the Postal Service, reading as follows:

tem in the Postal Service, reading as follows:

"Be it enacted etc., That it shall be unlawful for any officer, superintendent, foreman, or other person having charge of the work of any
employee of the Postal Service to make or cause to be made with a
stop-watch or other itlme-measuring device or system a time study of
the movements of any such employee.

"Sec. 2. That it shall be unlawful for any officer, superintendent,
foreman, or other person having charge of the work of any employee
of the Postal Service to use the results or records obtained by a stopwatch or other time-measuring device or system in determining what
amount of work or labor is to be done in a given time by such employee.

watch or other time-measuring device or system in determining what amount of work or labor is to be done in a given time by such employee.

"SEC. 3. That any person violating any of the provisions of this act shall be deemed guilty of a misdemeanor, and shall be punished by a fine of not more than \$500 or by imprisonment for not more than six months, or by both such fine and imprisonment.

"SEC. 4. That this act shall take effect upon its passage."

The use of the stop watch in timing postal workers at their tasks has long been a source of complaint for the railway mail clerks, post-office clerks, and letter carriers. Some measure of rellef has come to the railway mail clerks since the elimination of the so-called "speed test" instituted by former General Superintendent A. H. Stephens, but the clerks and carriers are still subjected to the obnoxious practice of having a supervisory official time their mevements at work. Legislation is therefore sought to have this inhumane system abated entirely in the Postal Service.

Organizations of postal employees have repeatedly passed resolutions at their conventions protesting against the timing systems and speeding-up methods in operation in the service. The department has frequently been memorialized by the service workers to stop the practice of timing them to determine their speed, yet this unjust method of harrassing the employees is still in vogue in the post offices.

The National Federation of Post Office Clerks, assembled in convention in San Francisco September 6 to 10, 1915, unanimously adopted these resolutions:

"Whereas a system of timing clerks to determine their speed at dis-

these resolutions:

"Whereas a system of timing clerks to determine their speed at distributing mail is in effect in many post offices; and

"Whereas this system is unjust and unfair and detrimental to the workers' welfare and the efficiency of the service: Therefore be it "Resolved, That we, the National Federation of Post Office Clerks, in convention assembled, protest against this inhumane method of determining an employee's fitness and capabilities; and be it further "Resolved, That our officers present this protest to the department in the strongest possible manner."

Under date of October 16, 1915, the executive committee of the National Federation of Post Office Clerks transmitted to the Postmaster General this protest:

PROTEST AGAINST TIMING DEVICES.

"We voice our emphatic objection to the use of timing or clock devices to determine the speed at which a postal employee must work. The installation of such a system is a gratuitous afront to the supervisory officials, who have heretofore managed the forces under them sufficiently well to insure the expeditious dispatch of the mails.

"A clerk's record on scheme examination, together with the manner in which he performs daily the duties to which he is assigned, should suffice to determine his fitness for promotion or retention in the service. To harass him to maintain abnormal speed by timing his movements is not conducive toward increasing his efficiency. On the contrary, such methods tend to impair efficiency.

"We ask the department's advocacy of legislation to prohibit the use of timing devices in ascertaining the amount of work performed, or to be performed, by postal employees."

The National Association of Letter Carriers, in convention at Omaha, Nebr., September 6 to 11, 1915, adopted without a dissenting vote this "Whereas the Post Office Department has during the next fiscal year."

"Whereas the speeding-up plan is frowned upon and has been ordered discontinued to some departments by the Congress of the United States of America: Therefore he if "Resolvede, That our national officers are instructed to use all means in their power to secure the abolition of the speeding-up system." Despite the appeals of the employees the department sanctions the Despite the appeals of the employees the department sanctions the analysis of the comployees of the sanction of a minute a carrier her wasted in casing his mail or whether the clerks engaged in distribution are maintaining the standard of speed—a standard frequently set by the fastest man.

"The officials of the Chicago post office have arranged and instituted a speeding-up system absolutely on a par with the so-called Taylor appealing-up system absolutely on a par with the so-called Taylor chaustive hearings. Holding a watch to ascertain how many letters per minute a clerk or carrier is distributing is an unpracticable and unjust method: First, because the penmanship on various letters and postal cards varies to such an extent that it is impossible to standardizar that contains a typewritten letter addressed to every person in the block, and distribution of them can be made speedily. Second, the effect of a speeding system on the human being is the same no matter that contains a typewritten letter addressed to every person in the block, and distribution of them can be made speedily. Second, the effect of a speeding system on the human being is the same no matter that contains a typewritten letter addressed to every person in the block, and distribution of them can be made speedily. Second, the effect of a speeding system on the human being is the same no matter that the distribution of the stop wasternoon of the stop what industry it is attempted. It results quickly in a nervous high

THOS. F. FLAHERTY, Secretary-Treasurer.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

HON. A. B. ROUSE, OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 17, 1916.

Mr. ROUSE. Mr. Speaker, this bill, as usual, appropriates the largest amount of money of any of the appropriation bills. In 1897 there was appropriated and it required a little over \$92,000,000 to run the Post Office Department for that year. This amount has been increased each year since that time, until to-day we are preparing to set aside about \$320,000,000

to pay the expenses of the greatest department of this great Government. The increase in amount of appropriation over last year is due largely to the normal growth of the service and also to provide for the salaries fixed by statute heretofore enacted. However, we have included in this bill an increase for certain clerks who are employed in first and second class offices by promoting, in addition to the 75 per cent clause heretoonices by promoting, in addition to the 15 per cent clause neteo-fore enacted, 5 per cent of the clerks in the sixth grade to \$1,300, to be designated as "special clerks," and we promote 5 per cent of the \$1,300 grade to \$1,400, and these to be designated as "special clerks." This is a small percentage, but will grow with future Congresses.

The laborers are cared for, the substitutes for the clerks and carriers are provided for, in fact all the employees of the great Postal Service, the people's department of the Government, are provided for either in this bill or in other bills which have been enacted into laws since our party has had control of the House of Representatives, and we will continue to look after those who administer the duties of the department which serves all the people of the United States as long as we have control of this

branch of the Government.

I will insert in my remarks an itemized account of the expenditures of the Post Office Department as contained in this bill, and opposite each item I will give the amount that was appropriated in the last bill and under which we are now working:

> Expenditures in the Post Office Department. IN THE OFFICE OF THE POSTMASTER GENERAL.

Mr. Speaker, under the able management of our present Postmaster General, Hon. Albert S. Burleson, we have had two years in which the Post Office Department has returned a surplus. In 1913 we had a surplus of over \$4,500,000; in 1914 we had a surplus of over \$4,300,000. The year 1915, as we all know, was an abnormal one, and every business suffered. The Post Office Department is the best barometer, and when its business is slack we can safely say that all lines of business is depressed. Last year the deficit was about \$11,300,000.

The reports from all the large offices of the country during the past few months show a tremendous increase over the same months of last year, and we can safely predict that we will have a balance on the right side of the books at the end of this fiscal year.

Now, Mr. Speaker, I propose to tell you and this House what to do with that surplus. I have introduced a bill, which was referred to the Committee on the Post Office and Post Roads, of which I have the honor to be a member, a copy of which I will insert in my remarks:

A bill (H. R. 9672) for the purpose of expending the unexpended balances and surplus postal revenues on rural post roads.

A bill (II. R. 9672) for the purpose of expending the unexpended balances and surplus postal revenues on rural post roads.

Be it enacted, etc., That any unexpended balances in the appropriations for the Rural Delivery Service and all surplus postal revenues for the fiscal year 1916 and for subsequent fiscal years may be expended by the Secretary of Agriculture in cooperation with the Postmaster General in improving the condition of roads to be selected by the Postmaster General over which rural or star route service is or may hereafter be established, such roads to be known as rural post roads; Provided further, That the State or the local subdivision thereof in which such improvement is made under this provision shall furnish for the improvement of the road or roads so selected double the amount of money allotted by the Government.

Sec. 2. That sums expended under the provisions of this paragraph shall be apportioned among the various States on the basis of one-third in the ratio which the area of each State bears to the total area of all the States, one-third in the ratio which the population of each State bears to the total population of all the States according to the latest decennial census, and one-third in the ratio which the mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each State bears to the total mileage of rural post road of each state bears to the total mileage of rural post road of each state bears to the total ost of a road inprovi of the amount available therefor shall forfeit its right to same and such sum shall be again apportioned amon

This bill has received a favorable report from the Post Office Committee and should be made a part of this appropriation bill. It will in no way interfere with the Shackleford bill, which passed the House the latter part of last month and for which I had the honor to vote, but can be administered in about the same manner as is contemplated for the Shackleford bill. The manner of administration and distribution is not so important; that can be worked out later. The question now is to get an appropriation for roads and road building and to do the greatest good with the least taxation. I think my plan should be accepted by every Member of the House. I know it will be gladly welcomed by the people whom we represent.

Mr. Speaker, my bill first provides for the appropriation of the unexpended balances, and, second, for the total profits of the department. At the end of the last fiscal year there was an unexpended balance in the rural-delivery item of over \$3,000,000. This year the department asks for \$48,500,000 for rural service, and the committee, fearing the amount was not sufficient, increased the appropriation to \$53,000,000, the same as last year. We all know that the department never underestimates the amount needed, but usually asks for more than is expended. If the present service and the service that is contemplated by extending the rural service to every point possible can be administered for \$48,000,000 and the Congress appropriates \$53,000,000, under my bill the Postmaster General and the Secretary of Agriculture will have \$5,000,000 to apply to road purposes, and this amount does not come out of the pockets

Another source of revenue, Mr. Speaker: The Postal Savings System, under the able management of Gov. Dockery, the Third Assistant Postmaster General, is now on a paying basis. During the first month of this session our committee reported and passed in the House a bill which removes certain restrictions in the postal-savings act, which limits the amount that may be accepted from a depositor in any month to \$100, and raises the total amount to \$2,000, but limits the amount on which interest is paid to \$1,000. The Postal Savings System was inaugurated in 1911, and during the first six months of its existence there was deposited \$677,145. At the end of the fiscal year 1915 there was on deposit \$65,684,708, and it was estimated by the department that on the 1st day of last December there was on deposit \$73,000,000. I cite these figures to show how the system is growing.

If the amendment to the postal savings bill becomes a law. the business will be greatly increased and at the same time not interfere with the banking business of the country, but will work an advantage, because 71.8 per cent of the deposits of the savings system belong to foreign-born wage earners, people who do no business with our banks and who have heretofore kept their savings in hiding or have bought foreign money orders and sent the money to foreign countries. The deposit, of the savings system are placed in the banks and the money again goes into circulation. This system will increase more rapidly under the proposed legislation than under the present law and a large profit will be derived from this source.

Mr. Speaker, I desire to say a few words about the parcel post, which is increasing day by day and, notwithstanding the statements of some of our critics, is a great revenue producer. The statistics indicate that nearly a billion packages are handled yearly, and when we consider that prior to the establishment of the service not more than one-fourth that amount was handled we have some idea of the growth of the service.

I desire to insert in the Record a letter which I have received from the Postmaster General which gives the exact facts relating to this service:

OFFICE OF THE POSTMASTER GENERAL, February 10, 1916.

OFFICE OF THE POSTMASTER GENERAL, February 10, 1916.

Hon. Arthur B. Rouse, House of Representatives.

My Dear Mr. Rouse: Referring to your personal call at the department to-day relative to the Parcel Post Service, I wish to state that in order to enable the department to ascerta in the growth of the service, as well as the revenues and cost, periodical counts have been made and statistics in the minutest detail compiled from the data obtained in these counts at the 50 largest post offices, which handle approximately three-fourths of the entire parcel-post business of the country. The last such count covered the period from October 1 to 15, 1915, inclusive, which is believed to be a period of the year when an average amount of mail is handled. This count showed that in the entire Postal Service during that period 40,889,595 parcels were handled, or an aggregate of 981,350,280 for one year. As the average weight of these parcels is 1 pound and 11 ounces, the total weight for the year was 1,640,943,240 pounds, and the postage, at an average rate of 6.6 cents per parcel, was \$64,769,118.48.

During the hearings before the subcommittee on parcel post of the Senate Committee on Post Offices and Post Roads in 1911, it was estimated by officers of the department that the average cost of handling parcels, exclusive of transportation, would be approximately 2.35 cents. It has been found, however, upon experience that this was greater than the actual cost, due no doubt to the increased number of

parcels handled, the adoption of better methods, and higher efficiency of the Postal Service generally. Based upon statistics which are believed to be absolutely reliable, it would appear that the average cost of handling parcels at this time, exclusive of transportation, does not exceed 2 cents, or 1.185 cents per pound. The average distance which a pound of parcel-post matter is transported is 416 miles and the average rate of transportation per pound for the United States is 2.08 cents, making a total cost of 3.265 cents per pound. The average postage per parcel is 6.6 cents, or 3.911 cents per pound, leaving a net profit of 6.46 mills per pound. As 1.640.943,240 pounds are handled in a year, the profit at this rate would be \$10.600.493.33.

Officers of the department have made a most careful study of the entire parcel-post subject and the statistics which have been compiled are based on records made at the time parcels were actually mailed and are believed to be absolutely reliable. It will therefore be seen that instead of a deficit in this service the revenue derived thereform is sufficient not only to meet the cost thereof but result in considerable profit to the department.

Sincerely, yours,

A. S. Burleson.

The Post Office Department should have a surplus in normal times of from ten to twenty million dollars a year, and with the \$5,000,000 of unexpended balances in the rural service, we will have a sum in the neighborhood of \$25,000,000. It was never thought that the Post Office Department could be administered with a profit at the end of each fiscal year; our fondest hopes would have been realized if this great department was selfsustaining. But if we have normal years and the business is conducted as under the successful administration of Gen. Burleson, and we have a surplus at the end of each fiscal year, where can we place it to a better purpose than in the roads of our country?

This surplus and unexpended balance is not taken out of the Treasury of the United States, it is not taken from the people, it is the results derived from a good administration. ple get value received when they send a letter across the country for 2 cents, this surplus is the profit on that 2 cents and is a part of an appropriation which was not used for the purpose which it was appropriated, and the result will be if this bill becomes a law, that we will have good roads over which our people will travel, over which our mail will be carried, and which will not cost the people a cent. Let us spend the unexpended balances and the profits of the Post Office Department on the roads of our country and thereby benefit all the people.

Unpreparedness to Preparedness.

EXTENSION OF REMARKS

HON. HOMER P. SNYDER,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 19, 1916.

Mr. SNYDER. Mr. Speaker, a novel situation has been created, not only in Washington but throughout the country, by the President in his recent anticampaign tour. He was strikingly sensational in his talk of our being on the verge of war, but did not tell us where the danger lies nor with whom. To those who are in Washington, on the outside, or who are trying to get on the inside, the situation does not seem more acute or critical than it has for some time past, when we were told that the President was keeping and would keep us out of war. Now, so recently after his complete somersault from unpreparedness to preparedness, he is the most ardent forecaster of trouble in the country and begs for means to meet it.

Is it possible he realizes his Treasury is empty and that only a campaign of the kind he has been waging is merely a method of preparedness for a bond issue to refill the treasure vaults of the country? No President has ever found a bond issue popular, especially on the eve of a campaign in which he expected to be a candidate. More than this, the President acknowledges that everybody with whom he conferred regarding Mexico are liars, and that he ascertained the truth of that situation through the mouths of liars. However, having ascertained the truth he has taken no step to better conditions there or to protect American lives and property, but he has gone a step further in his formation of his Ananias Club than any other man—he has initiated them in bunches.

That the present session of Congress will, in the end, adopt some plan for preparedness is beyond question. Just what that policy will be only the future can tell.

I have my own ideas regarding this matter, but they are not so fixed and definite that I am unwilling to yield to any plan which will solve the problem and finally place this country into fit condition to resist invasion, in the first place, and to back its just demands to the limit if necessary. My firm belief is that the

better we are prepared in all directions the less liability there will be of our becoming involved to any degree with any nation

of the world, large or small.

First of all, however, as a business man, I would like to see the matter of preparedness placed and go forward on a business basis. Modern warfare, both military and naval, is an exact science, and efficiency in dealing with an enemy, both in offense and defense, has increased by leaps and bounds. In this struggle for efficiency nations have combined in their armies and navies all of the great improvements, all of the great inventions that the peaceful industries of this and other countries have developed: the manufacture of modern munitions, problems of transportation, the supply of clothing, administration, aviation, mathematics, and many more that could be men-I maintain that unless a man has made a most careful tioned and exhaustive study of these things in their relation to modern war he is not competent to recommend a policy to be pur-sued in improving a condition which is acknowledged to be deficient. When you are ill you consult a physician, when in legal trouble a lawyer. Where shall we, then, turn in this trouble?

We have boards of officers in the departments at Washington whose business it is to know our weaknesses in this direction and to suggest plans to overcome them. There are thousands of officers of different grades now (and they are being turned out of our schools yearly at much expense to the Government) whose education is along the lines of defense and offense, and who will in the course of time take their places as advisers and directors of affairs military and naval.

In the end not only Congress, but the administration, must be guided by their knowledge, and on them in the last analysis the

responsibility must rest.

Now, at this particular time it is well that we should know in detail just what we need, and, having ascertained this, the next step will be to appropriate funds to cure these defects as rapidly as possible. This accomplished, my theory would be that we apply business methods to the situation and make contracts for our needs extending over the shortest possible periods of time to cover these needs, with the single restriction that the developments and improvements which science and skill may reveal and perfect during that time shall be utilized as rapidly and as promptly as their practicability is demonstrated. I care not so much where we begin, so long as the end is attained, so long as the cost is right, and so long as modern methods of

business are applied in all directions.

While means of offense are needed, it may be that means of defense should be first considered. Certainly they are not sec-We are told that as far as we have gone our system of coast defense is the most formidable in the world. statement sounds well until it is contradicted by one who is in a position to know what he is talking about. Maj. Gen. Leonard Wood, in his testimony before the Senate Military Committee on January 19, stated that although the present coast-defense guns had a maximum range of 34,000 yards, yet, due to the construction of their mounts, their fire was limited to 14,000 yards, whereas European navy craft were sinking ships at more than 17,000 yards. In addition to this, we all know that there are miles and miles of American coasts unguarded by anything save mosquitoes; but all the defenses we have can not be relied upon, because we are short 800 officers and 25,000 men to man them. We are, therefore, deficient in that regard, and, admitting that we have a large number of heavy guns, it is not admitted that we have sufficient ammunition available for a long and sustained attack at any point.

Our submarine and aeroplane systems for scouting, or for such defense as they could render, are unprovided for in the lowest degree; yet in this country we possess all the necessary plants and material to provide ample fleets of both undersea and overland protection of this character, an advantage of which foreign nations have not been slow to avail themselves.

In the other branches of both our sea and land services like discrepancies exist, and the problem remains for us to solve how shall we meet these various situations in the best possible

manner and in the shortest possible time.

All this brings with it the question of ways and means, and that is a question which is just now more vital to the dominant party than to any other portion of the country. They admit a deficiency; they admit they have not the funds for the needs which must be met. They have, by lowering the tariff, by ex-travagance in every direction, placed themselves in a position where the income will hardly meet the running expenses of the Government, and the balance in the Treasury is being daily encroached upon. Indeed, it is so low at the present time that Senator Smoot, one of the most able of our financiers, can find but a balance of \$3,000,000, while Secretary McAdoo, who seems in America.

also, in one sense at least, an able financier, after the use of a microscope and the use of what he terms a "new and scientific method of bookkeeping," concludes we have about 20,000,000

Last year from these following sources alone the Democratic administration derived the following revenues: From the emergency war-revenue bill, \$52,000,000; from the corporation tax, \$39,000,000; from the individual income tax, \$41,000,000; from tariff collections, \$209,000,000; from the internal revenue, \$283,-

When a Republican Congress reached the billion-dollar mark in appropriations the Democracy of the country was emphatic in its charge of extravagance, yet without an income tax or an alleged war-revenue tax the balance then of one hundred and forty or one hundred and fifty millions in the Treasury was looked upon as small. A just and equitable tariff law not only insured our prosperity as a Nation, but the prosperity of the people individually as well. In 1913, before the present bill went into effect, our tariff collections were netting us over 17 cents on the dollar of all imports received; in 1915 those receipts had fallen to about 10 cents for each dollar of imports received, because of the increase in the free list.

In 1913, 56 per cent of our imports were free; in 1915, 71.30 per cent were free. In other words, in 1913 we collected duty on 44 per cent of the goods imported to this country, while in 1915 we are collecting only 28.70 per cent.

Under the present circumstances, therefore, it is not to be wondered at that the Democratic majority is at its wits' end what to do when the preparedness question is on the carpet for settlement. However, this situation need bother us but little. If the Democratic majority will fix upon some definite and satisfactory preparedness policy, the Republican Party and a Republican President, after the 4th of March, 1917, will find a way to pay the bills and restore the balance in the Treasury, without resorting to the levying of a tax misnamed and uncalled for, with proper management.

That the Democratic Party is wedded to ideals is certain. That it will go almost any length rather than admit that the policy of protection is proper and the only method by which this country can continue prosperous in all industries is also true.

One of the best exponents in originality, so far as tariff mat-ters are concerned, is our present genial Secretary of the De-partment of Commerce. He is bright enough to see that with the ending of the foreign war America will be made a dumping ground for the cheap manufacturers of Europe. He also sees that for some time the markets of Europe and the consequent financial stringency of the belligerent countries will create a situation heretofore unheard of, and that America will be considered as the only desirable market in the world. Instead of making ready to prevent this dumping by adequate tariffs and thus assisting in the building up of a surplus in the Treasury, Secretary Redfield admits:

I should prefer to deal with it by a method other than tariffs, classing it rather as an offense similar to the unfair domestic competition we now forbid.

Illustrating his theory and his views, he goes even further than this and recommends legislation supplemental to the Sherman antitrust law, making it unlawful to sell or purchase articles of foreign origin or manufacture where the prices to be paid are below the current rates for such articles in the country of production.

In other words, if an American dealer should purchase in a foreign country any articles of manufacture at a lower rate than that for which they are sold in that country and be able, because of the low tariff now existing or because they may be on the free list, to import them to America and sell them at a profit, he should be imprisoned and fined for his business acumen. Of course, if the fines were large enough and numerous enough, Secretary Redfield's rather alarming proposition might add to the revenue receipts. To even suggest such a method seems to

me un-American, unwise, and unfortunate.

A practical tariff bill which would prevent the importation into this country of any class of goods in great quantities is the only solution of the problem which the honorable Secretary believes we will have to face in the near future. bill in force, there would be no need to seek to make criminals of American business men, and there would be no alarm as to the financial benefit which would accrue to the country. tary Redfield has invented a unique method of "whipping the devil around the stump."

Such, however, are the methods, unexpected as they may be, by which the Democrats seek to evade the responsibility which they must assume sooner or later, for conditions now prevailing

Thomas Indian School.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 19, 1916.

Mr. BENNET. Mr. Speaker, the other day, when the Indian appropriation bill was before the House, I asked some questions about the education of the Indians of New York State.

I got some information from the committee, but more from the following letters which I insert in the RECORD for the information of the House.

There are nearly 200 Indian students at this school from seven different Indian reservations in New York State.

Inoquois, N. Y., February 9, 1916.

Hon. Mr. BENNET.

Hon. Mr. Bennet.

My Dear Friend: I read in the Record Friday February 4, page 2318, your question about New York Indians. In a day or two I will send you annual report of the Thomas Indian School, a State institution, and do not throw them aside until you have looked through them. Beside this Indian school, with 200 pupils, we have 10 day schools, manned or womaned with efficient teachers. So with other reservations, Alleghany, Tuscarora. Onondaga, Tonawanda, St. Regis.

Every Indian child in State has education at his door, so to speak. And at the Thomas Indian School, with a plant that cost \$250,000, could not be replaced for twice that amount, and annual cost of maintenance \$50,000. That is what New York State is doing for her Indians. The State takes them when but children and keeps them through eighth grade; keeps and maintains their room, board, clothes, everything. Yours, truly,

MISSION HOUSE, Iroquois, N. Y., February 15, 1916.

DEAR MR. BENNET: Under separate covers I send you photographs and catalogues of the Thomas Indian School.

It was first an orphan asylum.

The summer of 1854 was one of pestilence and famine. Mrs. Wright, the wife of the missionary, one afternoon found 10 little starving children and brought them home and housed them here in the Mission

House.

Mr. Wright appealed for aid, and Philip Thomas, a wealthy Quaker of Philadelphia, replied, "You take care of the children and I will furnish the money." Hence the name.

Then afterwhile the educational feature was introduced, and it was the "Thomas Orphan Asylum and School." Recently the legislature changed the name to "The Thomas Indian School."

I send you three or four annual reports which you can look through and then to the wastebasket. The picture will tell you something.

The report of 1907 contains Mr. Howlan's historical sketch of the school, page 31, and Hon. Mr. Bissell's, of Buffalo, address to the graduating class of that year.

Report of 1912. Our daughter Mary Lucy is a member of the graduating class (1912), the only white child who ever attended (p. 21). She went from kindergarten to diploma.

The other reports show progress in building, etc.

Come and see our—your—work for the New York Indians, 27 miles southwest of Buffalo.

Yours, sincerely,

J. Emory Fisher.

Neutral Rights on the Sea.

EXTENSION OF REMARKS

HON. S. D. FESS, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 21, 1916.

Mr. FESS. Mr. Speaker, through the kindness of my colleague W. B. McKinley I was permitted to read the speech of his friend Dr. Zeballos, of the Argentine Congress, on the subject of neutral rights on the sea.

The address was delivered in the Congress following the capture by the British Government of the steamship Presidente Mitre, a memorandum of which I here insert:

MEMORANDUM.

Steamship Presidente Mitre captured by British cruiser Orama November 28, 1915, 12 miles northeast of Punta Medanos, while the steamer was on her way to Puerto San Antonio, flying the Argentine flag, which flag she had the right to use. The British cruiser Orama ordered her to stop, and when the order was obeyed two officers, with nine armed men, took possession of the steamer, lowered the flag, and started their voyage toward the rorth, and they went to anchor at 15 miles from the lighthouse Ponton Recalada. On the following day the steamer had to follow the Orama and went with her to her new place, viz. 15 miles southwest of Montevideo Bay. There all the passengers and luggage were transshipped to the cruiser in order to be taken to Montevideo, where they were eventually landed. The cruiser Orama

then went alongside Mitre (the Mitre lifted the anchor), and both went to anchor at 23 miles, more or less, southeast of the island of Flores. After spending a day there the Orama took the crew that still was on the Mitre and also took them to Montevideo, in which bay they were shipped on the steam tug Ondina in order to have them sent to land. This is according to the declaration made by the commander of the steamer before the Argentine consul general in the Republic of Uruguay. As soon as the circumstances of the referred event reached the executive power they studied the means for obtaining what justice they could expect. First they examined the special circumstances of the case related with the current rules of international rights, which determined the reciprocal duties of beligerent and neutrals in their rights of the seizure. After studying all the facts concerning the conference at London in the year 1909, the steamers belonging to the Hamburg South American Co., who for 15 years have been in charge of the service of navigation on the southern coast, were able to continue their passage without being molested. This being guaranteed by their nutral character by the legitimate use of the Argentine flag. On the conference of the Atlantic misapplying leads to indicate that the English fleet of the Atlantic misapplying leads to indicate that the English fleet of the Atlantic misapplying leads to indicate that the English fleet of the Atlantic misapplying leads to indicate that the English fleet of the Atlantic misapplying leads to indicate that the English fleet of the Atlantic misapplying leads to indicate that the English fleet of the Atlantic fleet mational steamer Presidente Mitre. In mentioning the select the executive power does not mean to justify the capture nor to acknowledge the rights or seizure. It is only his duty to state loyally the circumstances relating to the case and to explain their views on the incident, considering it as a judicial and diplomatic problem, susceptible to be submitted to a

DR. ZEBALLOS'S SPEECH.

the seat of war.

DR. ZEBALLOS'S SPEECH.

The document is vague and avoids answering the most serious questions, judging it not by the words but from its juridical viewpoint.

The first error is that the executive power does not consider with sufficient attention the matter to safeguard the national dignity.

The second mistake is that the executive power should have sent its ministers and all the cabinet to answer questions, as it used to be done in the olden days. Article 63 of the constitution says that 'Congress can call all ministers of the executive power to give explanation and information whenever they think necessary." All the ministers should be here present to participate with the congress in the responsibility of the defense of the right of the nation. The third mistake is that the executive power does not seem to find the necessity to have a perfect union between the executive power and the congress. At the time of Dr. Pellegrini's presidency, when we were about to break relations with the Republic of Chile, I was minister of foreign affairs. On a certain day I was asked at 3 o'clock that afternoon to inform the congress regarding the state of affairs. President Pellegrini asked me to take two or three days to answer, but mstead of that a quarter of an hour after I was at the congress ready to answer the question. I impressed everybody then with the necessity for a perfect union, and it was unanimously accepted in the following words: "Chile must know that behind the executive power stands all the congress of the nation." I would have liked at the present moment to have something like that happening, so that England may not think that the country and the congress of this Republic consider the pending question lightly and to be settled with the diplomatic routine of any customhous affair. The executive power shows the conceit of thinking itself sufficient and not needing the help of the congress.

The fifth mistake is that the executive power does not think that England has had the intention of doin

precedent which is equal to authorizing anybody to tell us in the next 20 or 30 years that in a very serious question the Argentine Republic closed their eyes to the jurisdiction effected by the British Navy in

precedent which is equal to authorizing anybody to tell us in the next 20 or 30 years that in a very serious question the Argentine Republic cases that the purisdiction effected by the British Navy in Argentine waters, the jurisdiction effected by the British Navy in Argentine waters, the purisdiction of the present of the present generation and in the international life it is necessary to govern with a very high soul, looking far ahead, so that the actions of the present generation may not be misinterpreted in the future.

The document speaks about dipionatic negotiation. Such negotiation does not exist, as the only thing that may be the present generation may not be misinterpreted in the future.

The document speaks about dipionatic negotiation. Such negotiation does not exist, as the only thing that may be a such at the papers) making an elementary reclamation. This was a case for an energetic protest as done by the United States. What is happening is the consequence of the historical diplomatic and military policy founded in England by the glorious Queen Elizabeth in the sixteenth century, when she sent out all her sea dogs to selze the discoveries of the Spanish Navy. Which was the program of the great Queen? To dominate the commerce of the world dominate the navigation of all the countries. England wanted to see the seas free of the navigation of all the countries. England wanted to see the seas free of the navigation of all the countries. England does not grasp that whenever a German house falls 10 commercial firms spring up under the United States name, and that the German rival will be duplicated in future by the American rival in all the markets and in all the seas. England suspected that through the neutral countries of Sweden, Norway, Demark, and Holiaud on one side of the Ariactic and the produce could reach the subject of international policy, declared null the treaty of Parls of 1856, and proclaimed a new law with the object of intervention of 1856, and proclaimed a new law with the object of ine

Review of the Government Shipping Bill.

EXTENSION OF REMARKS

HON. JOHN H. CAPSTICK. OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 21, 1916.

Mr. CAPSTICK. Mr. Speaker, the principal features of this bill are the following:

The creation of a shipping board, made up of the Secretary of the Navy, the Secretary of Commerce, and three shipping

Authority is given to this board to construct in American shipyards and navy yards or elsewhere or to purchase or charter vessels for commerce which shall be suitable for use as naval and military auxiliaries and to take over the existing vessels of the United States suitable for commerce which are not required by the naval and military departments in time of peace as well as the vessels now being operated by the Panama Railroad Co. not required in the business of that company.

The board is to have the power to charter, lease, or sell these vessels to an American company for operation under the American flag, unless otherwise authorized, between American ports and foreign countries or in trade with Alaska, the Panama Canal Zone, the Philippine Islands, Hawaii, and Porto Rico, and in regard to such of the vessels as are built in American shipyards, in the general coastwise trade of the United States.

The board is given authority to form a corporation with a capital stock of \$50,000,000, of which the United States shall subscribe and purchase not less than a majority, though the

board may sell this controlling interest.

The board is given authority to requisition these vessels when

necessary for the use of the Government.

The board is given authority to regulate the operation, rates, classification, and so forth, of all common carriers by water trading between American ports and between United States ports and foreign ports, and, jointly with the Interstate Com-merce Commission, to regulate through rates, through routes, classifications, and so forth, of rail and water traffic, with power to prescribe preferential rates in both cases.

The board is authorized to investigate the navigation laws, the affairs of all water carriers of the United States, and to recommend to Congress legislation which shall promote the develop-

ment of the American merchant marine.

All common carriers by water entering American ports are to be licensed by the United States Government, this license to be revoked for failure to comply with the provisions of the act.

It is made a criminal offense to sell an American vessel to

foreigners without the permission of the board.

The bill provides for the creation of a naval auxiliary reserve, with a small monetary allowance, comprising seamen and officers of American ships listed as naval auxiliaries.

There is unanimity of agreement throughout the Nation of the necessity for legislation which shall tend to restore our merchant marine to a status commensurate with our agricultural, industrial, and commercial necessities. Recent international crises have vividly demonstrated that it is essential for this country to be self-sufficient in the instrumentalities of transportation on the high seas. Just how best to accomplish this is the problem confronting us.

The bill under review attempts to remedy the situation by means of the purchase of ships by Government funds in the hope that private individuals will be induced to lease and operate the

vessels so purchased.

The world's aggregate shipping comprises about 50,000,000 gross tons, fully two-thirds of which are tramp steamers, and of these latter British companies operate about 70 per cent. At the present moment, with the German and Austrian shipping, totaling about 6,000,000 gross tons, eliminated, the withdrawal by Great Britain of about 3,000,000 gross tons for Government service, and the loss of about the same amount as a result of the war, there is in all probability a shortage of about 11,000.000

gross tons to perform the overseas carrying trade of the world.

The shippards of the United States are at present taxed to their fullest capacity, having under construction or contracted for over 100 steamers, of 3,000 gross tons or over, 40 of which are steamers for cargo and passenger traffic, the majority of which are intended for the trade between our eastern and western coasts, through the Panama Canal, or for the West Indian and Mexican trade. Of the others, a large number are tankers for the carriage of oil and cargo steamers for the oveaseas trade. This represents a larger tonnage than has ever before been in process of construction at any one time in the history of the country, and the ships are better and larger than American companies have ordered in the past.

At the current prices for construction in our shipyards the \$50,000,000 appropriation would not provide more than 40 to 50 freighters of, say, 15,000 gross tons each, or a total of about 600,000 to 700,000 gross tons. This would be but from 6 per cent to 7 per cent of what is required to replace the stupendous shortage now existing. This would afford no appreciable relief if the ships were immediately available; besides, even if the ships were in existence, their presence would simply encourage many of the foreign vessels now coming to our ports to proceed elsewhere where there is an equal demand for shipping tonnage.

The unprecedented demand for new ships is now so great that it would probably be a year before the Government could have a single ship launched and several years before the entire fleet would be ready for business. By that time the war would be over, and with the German and Austrian and British ships now in Government service released, there would be no great dearth of shipping to perform the world's commerce. Furthermore, for each ship that the Government would construct one ship less would be constructed by individual American companies, so that the Government would be displacing what private owners are constructing or would construct. The Government can not expedite shipbuilding and acquire vessels which private enterprises can not obtain. Besides, as the scarcity of tonnage is due to the scarcity of ships themselves, it is impossible today to purchase an existing ship at less than about 150 per cent greater than her original cost of construction. As an emergency measure, therefore, to feed this ship famine the bill can not be seriously considered. That the Government by the proposition embodied in this bill could appreciably add to the world's tonnage or to the tonnage serving American ports is ridiculous. As to the great increase in the rates of freight now ruling, it

As to the great increase in the rates of freight now ruling, it should be remembered that freight on our exports is paid by the consumer, and is covered in the higher prices at which American products are sold abroad. Freights on imports, which the American consumer pays, have not been so greatly advanced, for the reason that our exports being so much larger than our imports, ships coming here for our larger volume of exports are more actively in competition for the lesser volume of imports offering, so that they can have some paying freight in the west-bound direction.

An American merchant marine is a necessary adjunct to the naval and military departments in national defense, and especially so to this country, with its enormous extent of seaboard and its outlying possessions. It is interesting to note, however, in this connection that Great Britain previous to the war did not possess a single transport or vessel adapted for the conveyance of munitions or stores or horses, or a single hospital ship; but the British Government had the plans and knew the dimensions, the capacity, the equipment, and the speed of every British ship afloat, and knew her whereabouts, recognizing that the most economical, in fact, the only practicable plan was to have shipowners go on building vessels on their own account, running them in their ordinary trades, without expense to the country, and knowing that when the hour struck and the Admiralty required their services the ships would be ready at the disposal of the nation. Many years ago the India office of the British Government decided to run its own troopships in order to be independent of chartered vessels, but they soon learned that it was economically more profitable to charter outside tonnage. The terms of the bill under review relating to these auxiliary craft, however, proceeds on the assumption that American ships are not only nonexistent but always will The fact that at present so many ships are being built by American shipowners as to exhaust the capacity of our shipyards is conclusive evidence that private enterprise is doing its part to meet present abnormal conditions.

The small proportion of American vessels engaged in foreign commerce has led to an underestimate of American resources as auxiliaries for the Navy. The large fleets on our coastwise trades would supply many vessels for use as transports, colliers, The large fleets on our coastwise and other auxiliary purposes in case of necessity, nor would the withdrawal of the best part of these coastwise vessels mean a stoppage of domestic trade as railway transportation in this country is so complete that traffic unable to go by water could be forwarded in most cases by rail. The large number of highpowered screw tugs in American harbors would overcome the apparent deficiency caused by the absence of the ubiquitous steam trawler of England. The great extent of our seaboard has so influenced the size of our so-called coasting vessels that the principal steamship enterprises engaged in domestic commerce are operating vessels of a size and type equal to the requirements of ocean navigation, which a voyage from New York to Galveston and San Francisco is in fact. So that the number of tonnage of American vessels engaged in foreign commerce is no criterion of the relative position of the United States as a shipping Nation.

There can be no pretense that the ships the bill under review contemplates are required for our domestic trades. There is nothing to prevent an American citizen to-day from competing on even terms with any other American citizen in these trades. If these Government-owned ships, however, are to be hired out to any body of our citizens under more favorable terms than can be secured in the open market for a like investment by the general citizen body, this surely would be a discrimination which it is not the province of any Government to function.

It is a libel upon the intelligence of our citizens, bearing in mind their past performances in this line of effort, to allege that they are incapable of successfully grappling with this shipping problem. The factors involved in its solution are not inscrutable, notwithstanding its magnitude and complexity, embracing the possibilities and limitations of the construction, management, and operation of modern sea craft. It is only necessary to look the facts squarely in the face. The manner in which we have developed our coastwise shipping is convincing

of what we can accomplish when there are no natural or artificial handicaps surrounding the problem. All that the American asks is a fair field, and the removal of discriminations to which his competitor is not subjected. The Government of the United States has not exhausted its energies in any effort to make shipping attractive to private capital, but on the contrary has been guilty of acts of omission and commission otherwise, and until the Government has done the former it is not entitled to score our shipowners for its failure to accomplish the impossible. The United States Congress should first address itself to the proposition of placing its citizens on a parity with the citizens of other countries in active competition with them if we may hope to fulfill the desires of the country and cease its search for a nostrum that will by magic produce a healthy condition. Whatever legislation is projected should have no regard to the traditional dogmas of political parties adapted to economic conditions which pertained to a dead era. Subserviency to old principles merely because they are old is moldy superstition and a clear index of a nation living in the past and clinging to the idols of its ancestors. Our chief solicitude should be, not a paltry temporizing policy with this important problem in the life of the Nation, but a statesman-like constructive attempt to develop a merchant marine that, with well-defined, carefully thought out safeguards which will stimulate it and protect it from unnecessary legislative burdens, will lay the foundation of an evolution that will insure its survival under normal international relations. should scrap all untenable ideals and adopt a feasible ambition.

This bill virtually embodies an attempt by the Government to control competition and check and regulate natural conditions. International carriage is a bargain in which no one nation can assume successfully to dictate all the terms. It is open to all nations, and can not be looked at locally. It is a world question. In the absence of international agreement to equalize conditions, where the American shipowner has to encounter disabilities imposed upon him by the United States Congress which it is unwilling to remove, or from established economic conditions prevailing in this country over which he can have no control, the Government should extend relief to the extent of equalizing this difference after thoroughly and scientifically ascertaining, ship by ship and voyage by voyage, its precise sum. All that is necessary is to put the American shipowner on exactly the same basis as his foreign competitor. No more is necessary; no less will do. On an even basis American ingenuity and resourcefulness will enable us to hold our own against all comers

The accumulated experience of the nations which have been successful in shipping is that a merchant marine is a distincively private enterprise. In so far as it is needed by the State, the State owes it assistance, and so far as the State imposes burdens upon it not imposed by other nations on their citizens, those burdens should be removed, or, remaining, be at the Whatever assistance is given to shipping should be not for the benefit of the shipowner nor for the benefit of the shipper, but for the benefit of the commerce of the country There is abundant evidence throughout the country that an American merchant marine is a necessity, and it will be supplied by private capital just as soon as our lawmakers permit the investment to be reasonably profitable. Before the war American citizens owned and operated successfully under foreign flags about 2,000,000 gross tons of shipping, proves that if by doing this under a foreign flag, with less restrictive laws and more favorable economic conditions than our own, they could surely do the same under their own flag with these restrictions removed and the economic disabilities overcome.

This bill proposed to lease the vessels contemplated to private companies, but they can not be thus leased unless private companies can operate them profitably, and if private companies could do this in the international trades they would now be doing so without Government connection, if successful operation under existing conditions were possible. The final outcome of any such measure as this is bound to be a deficit which will far surpass in amount the figures considered by Congress in subsidy bill ever before it. That the remedy submitted in this bill can be designated as a substitute for a subsidy, bounty, subvention, or whatever other term euphemism can suggest, is not entitled to serious refutation. It amounts to a subsidy, pure and simple, in a most subtle form in that there is no direct means of ascertaining the amount to be eventually appropriated to meet a deficit. This the taxpayers will fully realize if ever a true bill of expense is exhibited.

The general opinion of the shipping community and our important commercial associations is that the practical effect of this scheme will inevitably be to retard and not promote the restoration of our American mercantile marine.

Tariff and Taxes.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 21, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, under the privi-lege just granted to me by the House I desire to extend my remarks briefly on the subject of tariff and taxes—one a legisla-tive expedient for the protection of American industry and the other a dead sure recourse under political conditions that ignore an economic truth.

I speak of the tariff because, if wisely enacted and fairly administered, it provides the Government with revenue and encourages American industries to compete with each other to the direct advantage of the working people and consumers of our own country. It gives us a square deal in foreign competition and places the burden of paying the duties upon foreign producers, who would compete with us on unequal terms.

We have suffered from so much mistaken philosophy upon tariff questions in recent years that a recital of the foregoing simple truths can not be amiss, now that existing tariffs are unfair to American industries and direct taxes have been substituted by the party in power for the so-called indirect taxes—protective tariffs-which the Republican Party formerly levied upon foreign productions before they were admitted to competition with American productions.

NO HARM TO REPEAT THE TRUTH.

I say it can do no harm to repeat these truths. Opinions with regard to economics change frequently and sometimes the people themselves are misled into doing themselves injury. The workingman, in particular, realizes this when the work he once had under a protective tariff system is taken away as the result of some fine-spun theory about the efficacy of free trade.

We saw how it worked in the transition period before the outbreak of the European war, and we are justified in believing that unless steps are soon taken to restore a reasonable tariff protection to the industries of America the close of the European war may be equally disastrous to those of our own country who must compete with the cheaper labor of foreign countries.

It is because the plain people are thinking about the tariff and because most of them are worrying about their taxes that this discussion is timely. Of course there will be more of it as this Congress proceeds to meet the great problems that confront it. There may be distress in Mexico and war in Europe, but the tariff as an American issue will not down. The difference between Republican protection and Democratic taxes is too painfully significant to be ignored.

THE VIEWPOINT OF A PLAIN CITIZEN.

Let us see how it appeals to the ordinary American home. Making allowances for the enthusiasm of Mr. H. Martin, of Detroit, who evidently derives some pleasure from reading the speeches of my colleagues in the Congressional Record, let me introduce him as a man who thinks.

Here is Mr. Martin's letter:

Hon. J. HAMPTON MOORE.

Dear Sir: By the courtesy of our Member, I receive the Congressional Record and very much enjoy reading the debates of Congress.

I especially enjoy those of yourself, Humphrey of Washington, Mondell of Wyoming, and lastly the one just delivered by Congressman Ricketts of Ohio, which I finished reading to-day.

Our Democratic friends make a great point in discussing tariff matters in their statements that by this system of revenue tariff the Underwood tariff is conducted on that it is the "wealth of the country that is obliged to pay the expenses of Government instead of the working classes."

as obliged to pay the expenses of Government instead of the working classes."

My idea is that under this system the poorer classes, the working people, pay the taxes if they pay anything. The consumer pays more of the expenses of the Government than under the protective tariff.

My idea is that manufacturers and corporations interested in manufacturing take into account all expenses connected with the operation of their plants, the cost of material, wages, overhead charges, depreciation, insurance, taxes on products before they make their prices for the goods they manufacture. Then they put on a percentage that will allow a profit, and their products are thus sold. Thus the consumer pays the cost of the present corporation tax, the income tax, and all taxes levied that first come out of the capitalist.

Our capitalists nearly all are stockholders in these industries and must have a profit or think they see a return in dividends for the capital they invest in business.

So, indirectly, as on this tariff for revenue only, as well as on the protective policy, if cost is added on this account, the final consumer pays the cost.

Perhaps this is the reason of the greater cost shown in the living expenses of the working classes, as well as all other classes, which we

are now experiencing. The express companies put on the extra cent on their packages, as I well know, when giving a receipt, as I have personal knowledge of this fact, and I presume that all who are taxed by the new system manage to pass it on down to the ultimate consumer. You can enlarge on this and show it up much better than I can, and I am surprised that in no speech by our side that some one of them all have not shown this way.

You can enlarge on this and show it up much better than I can, and I am surprised that in no speech by our side that some one of them all have not shown this up.

I will hope, if I am correct in this view, that you will elaborate this point for the benefit of our free-trade brethren and drive the fact home to them, and not only to them but the people also.

I am quite an old man—voted for Fremont in 1856—so you can calculate my age pretty closely. Was out with the "boys" in 1861, and am short a leg on account of that experience, and the United States is looking out for me some for my services in the old days.

Another fact in my experience: I was a mechanic for 30 years. My tools were made of imported steel. They cost me more under the tariff laws of Buchanan's time than when the tariff was increased upon all makes of steel. My experience is that everything that I had to buy for my family actually decreased in cost as tariffs increased. Same on steel rails, plate glass, tin plate, cotton and woolen goods, tableware, etc., and never in any instance have I been able to purchase articles for any less price after the tariff has been lowered.

I shall hope that you will elaborate this phase of the subject and thrust another thorn through the thick hide of our free-trade friends. Only think, in 50 years they have only had control of the country twice, one term satisfying to the voters, and it is only when a new crop of voters become of age, without the experience of we older ones, that they get into power.

Respectfully,

H. Parker.

DETROIT, 512 FOURTH AVENUE, January 2, 1916. LABOR PINCHED BY TAXES.

From many sources, too, we hear about the war (?) taxes which the Democratic Congress has been imposing upon us. As a rule, these taxes have been supposed to affect only the rich. The new proposition from the White House and the Treasury Department suggests an increase of these taxes "on the rich." We are not to issue bonds; no. We are not to return to the protective tariff of the Republican Party; not yet. We are to impose more direct taxes upon ourselves. That is the idea. Put it on the record on building assertions on tach provider on it on the people, on building associations, on tooth powder, on gasoline, on billiard tables, on theaters.

Let us see how labor feels about that. I have here a letter from the Musicians' Protective Association of Philadelphia, a body of workmen affiliated with the American Federation of Labor. The musicians understand how "taxing the rich" gradually percolates through from the theater magnate to the boys in the orchestra. I commend their letter to the careful reading of those who would understand better our present unsatisfactory system

of low tariff and taxes:

PHILADELPHIA, PA., February 14, 1916.

Hon. J. HAMPTON MOORE.

Hon. J. Hampton Moore.

Dear Sir: In view of the fact that under the war-tax act of the last session of Congress, heavy and unequal burdens were placed upon the one enterprise that could least afford to stand them, we ask you to use your good offices in securing a more equitable distribution of any tax the present Congress may levy.

This plea is made in behalf of the theaters of the United States, which, under more prosperous conditions, directly and indirectly, in the way of actors, stage hands, musicians, billposters, and employees generally gave employment to approximately 300,000 people, at present less than half that number are at work in theatrical enterprises for the reason that many theaters and traveling road attractions have been forced to wholly close, and others are operating but a fraction of the time and with the lowest possible number of employees needed for occasional openings.

A theater building is like a school or a church; it can be devoted to nothing else but the single purpose for which it was built; it is as nearly allied to a school as to the ordinary commercial enterprise in that through the theater the child of to-day knows more of the history, customs, and spirit of ancient times and of the scenery and people of other lands than did the adult before the theater became a fixed institution.

customs, and spirit of ancient times and of the scenery and people of other lands than did the adult before the theater became a fixed institution.

Never in the history of the theater have its houses suffered so heavy from financial depression; not one theater proper throughout the United States pald expenses during the past year. We ask you to think of it. Ninety per cent or more of the hundreds of theaters in America were operated last year at a loss, and the prospects this year are no better; there has been no cessation of depression in theatrical circles.

The natural inquiry is: Then, why operate the theaters at all? Why not close them? The answer is plain: The theater building is not like the store, the warehouse, etc.; if a grocer moves from a store building, it may be rented to a dry goods concern, a druggist, a butcher, or any of the other hundred enterprises demanding a store building for their business; a theater building can only be used for theatrical purposes; and if there are not enough traveling attractions out to make the house pay expenses, a change in tenant can not help the situation.

As to why operate the theater at all: There are certain fixed charges which must go on whether the house is open or closed; the rent must be paid; the house must stay open to retain its patrons; the equipment must be kept in safe and usable condition; any money earned helps reduce the gross loss, and it is for this and not in expectation of profit that a majority of the theaters are kept open to-day.

During the past year about 10 per cent of the one-night stand houses could not even get returns sufficient to pay for the help employed and the light, heat, etc., without taking rents and fixed charges into consideration. These houses have had to close, as it was cheaper to forfeit the rent and fixed charges than to keep them open; yet, under the effort to keep going. Congress have had to close, as it was cheaper to forfeit the rent and fixed charges than to keep them open; yet, under the effort to keep going. C

point of a grim joke that owning or operating a losing enterprise is viewed as a luxury.

As before stated, about 10 per cent of the one-night-stand houses have had to close and more than double that amount had to turn to renting for church or local purposes, motion pictures, etc., to keep open at all. The average theater is not by any means as well adapted for use by motion pictures as are the houses directly constructed for their exploitation.

The average theater is not by any means as well adapted for their exploitation.

Even New York City, with its inflow of out-of-town visitors, is no exception. Although the theatrical season is far advanced, such theaters as the Little Theater and Weber's have not obtained attractions to permit their opening; the Knickerbocker, the George M. Cohan, the Liberty, the New York, the Criterion, the Broadway, the Park, the Circle, the Fulton, and others among the best-known, most costly, and completely equipped, and highest type of theaters in the United States have been forced to turn to motion pictures and waste the valuable equipment and the costly properties purchased for general dramatic purposes. The Wallack and the Herald Square have been wholly abandoned as theaters and dismantled. In addition to all this during the past year the finest theaters of the city have been closed for many weeks, at great expense, simply because they either could not get proper attractions or sufficient patronage to afford to stay open.

The situation throughout the country is much worse than in New York, for practically all traveling theatrical productions have their birth in New York City

Theatrical attractions to keep the theaters open can not be had because the producer of traveling attractions will not put them out. Last season the losses of traveling attractions will not put them out. Last season the losses of traveling attractions will not put them out. Last season the losses of traveling attractions will not put them out. Last season the losses of traveling attractions will not put them out. Last season the losses of traveling attractions will not put them out. Last season the losses of traveling attractions at the production of plays. For such internationally known organizations as the Boston Opera Co., the French Opera Co. of New Orleans disaster or dissolution has resulted.

Loss than one-fifth of the attractions necessary to keep constantly

the Century Opera Co., the French Opera Co. of New Orleans disaster or dissolution has resulted.

Less than one-fifth of the attractions necessary to keep constantly open one-night-stand theaters, the theaters throughout the country generally, are now on the road. Whole theatrical circuits, particularly those housing popular attractions, have closed their doors as theaters

those housing popular attractions, have closed their doors as theaters proper.

Any tax on theaters is a direct tax on the owner of a losing business, and is a burden in addition to all other taxes assessed on property and enterprises generally.

The tax on whiskys and wines, on tobacco, on telephone messages, and so on down the list, is passed on to the ultimate consumer. The owner of the business, even though prosperous, is not the one who actually pays the tax; the theater alone, the one enterprise least able to stand it, is singled out.

Not merely hundreds, but thousands, of members of organized labor connected with theatrical enterprises have already been thrown out of employment by existing theatrical conditions. Any further Federal tax will prove the preverbial straw under existing burdens and close further theaters, with further loss of employment and further increase the non-productive property of the country.

Your own district is directly concerned, and what is stated in this letter applies directly to the managers of the theaters there and to the members of organized labor working with theatrical enterprises in your own locality.

Will you not investigate conditions and use your influence to secure fairer adjustments of the tax burdens than were required under the war tax of last year and, if reports be true, are contemplated this year? Will you not use your efforts to see that a burdensome tax is not again assessed against a losing enterprise, one operated only because the original investment was so made that it can be operated only in one way, and must be operated even at a loss in order to reduce the loss to the lowest possible figure?

If a theater should by any chance make a profit, it pays all the taxes assessed against other enterprises or persons and an income tax, too, if the idea of Congress is to tax luxuries, let the tax be on the luxury or the luxury seeker and not on the manager of a losing enterprise.

Very truly, yours,

W. C. Shepherd, President, Chas. J. McConnell, Secretary, Local No. 77, American Federation of Musicians.

Naturalized Hungarians-Their Rights and Duties.

EXTENSION OF REMARKS

OB

HON. CHARLES POPE CALDWELL. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 19, 1916.

Mr. CALDWELL. Mr. Speaker, much has been said here reflecting upon the loyalty of the foreign-born American citizen, and many have been the speeches in defense of the particular nationality attacked. Numerous speeches delivered by leading representatives of the various societies, organized among our adopted people, have been put into the RECORD of this Congress to guide us in our deliberation.

My attention, however, has not been called to anything in the RECORD particularly defining the position of the naturalized Hungarian, and appended hereto and for the information of the House, I have set forth the address of Alexander Konta, delivered under the auspices of the Hungarian Relief Society, at the public library, Yorkville branch, New York, December 7, 1915. I do not indorse all Mr. Konta has said, but submit the same as showing the point of view of a large number of the naturalized Americans of his race.

I believe the great body of naturalized citizens of the central and of the allied powers can be depended upon in our hour of need. It is true that the naturalized citizen and his child, even unto the third and fourth generation, have a sympathy for the home of their fathers. It is good that it is so, for one so devoid of human sympathy that his heart does not yearn to give aid and comfort to his kin in this their greatest hour of trial, or whose manhood fails to respond with a feeling of pride over the feats of arms of those who are fighting for the country from which sprung his race, is too cold and callous to be an American. Things which call for only a protest when done by our fathers are unjust in the case of an uncle and a gross outrage when committed by a step-parent. So, therefore, it is but natural that everyone in America should view the conduct of the European powers from the point of view of his particular blood relative.

Thank God the American institution of government does not destroy the love of country even to the third and fourth generation. America is great because she has attracted to her shores the men of every clime, of every nationality, and of every creed. They have come because their minds were filled with ambition, their hearts with hope, and their bodies with energy. Our form of government has given their individuality an opportunity to expand. We have sapped the good of every nation and the melting pot of a common ambition and understanding has fused these sturdy hosts into a new nation that fears no other, that is jealous of none, that is kin to the whole world, and is proud of that kinship. Our national sympathy therefore goes out to each of the warring nations.

We find ourselves to-day as a sister hoping to settle the quarrel of a younger and older brother, for each of whom she has the warmest love, the greatest respect, and a complete sympathy. It is the earnest prayer of every man who holds dear the American ideal, that before many days an opportunity will present itself by which this Government may in the exercise of its good offices restore peace in the old home and good will among the

nations that are our kin.

APPENDIX.

The following is the address delivered by Alexander Konta, under the auspices of the Hungarian Relief Society, at the public library, Yorkville branch, New York, December 7, 1915:

under the auspices of the Hungarian Relief Society, at the public library, Yorkville branch, New York, December 7, 1915:

Ladies and gentlemen, these are serious times. The future lies dark before us. For more than a year we have watched a war that, far from moving toward either one of its opposing initial purposes, is ever progressing toward greater perplexities. Hungary and Austria on the defensive against intriguing Russia, determined once for all to put an end to her aggressions in the Balkans, to her venomous efforts to prevent the peaceful settlement of racial questions in the dual monarchy. That monarchy's ally, Germany, was forced by unscruphlous diplomacy to fight the trade jealousy of England, the implacable hatred of France, and the determination of Russia to dominate all Europe. Defeated in the east, Russia turned upon the west, upon civilization, to take Galicia from Austria, a part of Hungarian territory, nominally for Servia, her unscrupulous servant and tool: Constantinople from Turkey, and east Prussia from the German Empire.

That is one view of the struggle. The other side claims that it is fighting for civilization and democracy, with savages from India and Africa in the west, with savages from inner Asia on the east, with Calabrians against Tyrolese and Sicilians against Hungarians in the south. The benefit to civilization is unmistakable. Every Senegalese carries in his knapsack a copy of the Rights of Man. Every Sepoy knows the Declaration of Independence by heart. Italy, at least, is straightforward about her reasons for fighting. She frankly admits that she has gone into the struggle to annex that Italia Irredenta which protests as loudly against being made Italian as Alsace protests against being taken tack by France. Ask any merchant, any workingman, any business man in Trieste who or what has made his city prosperous. He will tell you the Austrian Government. Italy can not support the seaports she already has. She lacks the industry and trade. Trieste in her hands would become merely

prosperous. The winter you the Australa with the property and trade. Trieste in her hands would become merely another dead city of the Adriatic.

England claims that she went into this war for the sake of the neutrality of Belgium. But she has been threatening Holland since its beginning because that country has declared its determination to remain neutral. And to-day virtuous England and her French ally not only break the neutrality of Greece, but threatens her with annihilation if she does not join them. This is militarism of the most brutal type.

Let us look for a moment at the small countries that have put their faith in England and her allies. Belgium, left to her fate from the very first day of the war. Servia, relying upon Russian promises and the Russian steam roller that was to crush its way to Berlin in three months, taking in Budapest and Vienna by the way. What has become of that steam roller? Ask the heroes of the Carpathian Mountains, ask the sons of our mother Austria. And what is left of Servia?

And so, looking at the fate of Belgium and Servia, Greece has wisely decided to keep out of it. But will those noble defenders of small nations permit it? Oh, no! Fight or be ruined, says liberal England!

So much ignorance has been aired, so much nonsense has been written about this war by people incapable of judging or deliberately bent on misrepresentation that it would be comical if it were not tragic. Atroettles in Belgium and Servia have been invented by the English press bureaus and obligingly printed far and wide in this country. But never a word about the real atroettles in Galicia, East Prussia, and the Hungarian plain during the months when our heroes prepared to expel the barbarians. Never a word about Senegalese and Turkos and Gurkhas, who are sent out upon the battle fields to gouge out the eyes of the wounded, cut off their ears, and slit their throats. And yet we are toid that Hungary, Austria, and Germany are the savages; that Servia, Portugal,

Russia, Sicily, Calabria, French Africa, and British India are fine flowers of the Control of th

mass of Americans had become indifferent to this "mother country" of theirs. But now all that is changed.

If I have talked so much to you of England, it has not been without a purpose. For, of all the factors of this war, it is only England that counts here in America. If you are pro-English you are a good citizen or a desirable immigrant, even though you are a "Blackhander." Pardon the word. It really does not apply to us. But if you are pro-Hungarian, which means also pro-German, if you even maintain that England's ally, Russia, is a blot on the mantle of European civilization, you are an undesirable. The majority has decided it so.

Now, let us look at the other side; let us take into consideration the provocation which the American spirit has endured with really admirable patience. Public opinion is an uncertain quantity, because one can never tell which side it will take. In the present case American public opinion had been carefully prepared by an English press campaign lasting 20 years. No story published by the English papers against Germany was too silly, too patently untrue, to be reprinted here and commented upon in all seriousness. All America ever heard in a general way about Germany or Austria or Hungary were tales of militarism, abuse of power, and of tyranny over other races. Then came the war and the first installment of British war lies, the stories of the ill-treatment of American tourists in Germany. These lies were disproved by the returning tourists themselves, but, somehow or other, their denials did not receive much attention from the American press. The Belgian atrocities stories followed, charges recklessly made, never substantiated. Denials were vain. Public opinion here was now thoroughly inflamed. Twenty years of British diplomacy, of Russian plotting were forgotten, if they had ever been known. England began to reap the fruits of 20 years of calumny. And to this was added historic sympathy for France.

Finally came the blow that killed Germany's cause in this country, and with it

Arguments that a British steamer in British waters under the British flag should have been protected by British destroyers; that she should not have carried ammunitions; that American citizens were being used to protect with their lives British war supplies—all this had nothing to do with the matter. It was a question of American lives, of sentiment, and so the case of the central powers was irretrievably lost in this country. That one tragedy has remained the only fact with which American public opinion will concern itself. Whatever had gone before, whatever followed, only served to strengthen, to increase the nation-wide resentment. An injudicious propagand, diplomatic plots, the supreme stupidity of being found out—all this has been new fue! to the country and the country and the supplement of the country and an unnaturalized, Germans, Austrians, and Hungarians first of all.

We are face to face with a situation whose ultimate developments none can foresee. It is not a new fact in American history, We have not an experience of the last century the Irish was always existed. There has been Know Nothingism. Its revival has been threatened. In the middle of the last century the Irish was always and the country of their ancestry. Shall they love England Instead, historic enemy of their fatherland in the Old World as in the new? Must an American of Hungarian ancestry side with Russia because Russia is England's ally? Must an American Jew become the champion of the Car of Kishenev for the same reason? America first, always first! But if some of us place England second on their hearts.

Now, as to our rights. They are the same reason? America first, always first! Shu first is not dual nationality; it is not divided allegiance. It is the right exercised by many native Americans who place England second in their hearts.

Now, as to our rights. They are the same as those of native Americans. W

cation. Public opinion is public opinion even when it is wrong. It is even strong enough to turn the wrong into the right, for a time at least. My personal opinion is that the end of this war will bring such an overwhelming exposure of English and Russian intrigue, of the tricks by which this caiamity was deliberately brought on, in pursuance of the policy of King Edward VII and of the Panslavistic agents behind the Servian secret society which plotted the murder at Sarajevo, that there will be a reversal of public opinion in this country, and that it will see how near it came to being the dupe of English perfidy along with France.

And now a few words in conclusion. Never give up your pride in your mother country. Never forget what she has done through a thousand years of glorious history. Always remember that in the days when European civilization was in danger Hungary stood alone and stemmed the flood. Remember that the rich soil of the Alföld has been drenched with the blood of your ancestors, that they, too, won their constitution and maintained it. Remember that your ancestors have always stood for civilization; that to-day, still on the place where west meets cast, their children stand to turn back once more the Asiatic bordes of an unspeakable autocracy. Remember that they are worthy to essentially seed the greatest of their sires. Remember that the indomitable spirit of Hunyadi János and his heroes still lives and conquers in the Hungary of to-day.

Shall we not be proud of these our brethren who fung the Tartarback across the mountains through the snows of a cruel winter, the hardships of an inclement spring? Shall we deny our blood, our race, our fathers—the most gorfous heritage in the world?

It is not our duty to forget them here; it is our right to glory in them. Shall we not celebrate the fortitude of our women—their self-sacrifice, their service, their devotion, the high courage of the mothers of a race of heroes? Three cheers for the break seven and they made across the mountains through the s

The So-Called Philippine Bill-A Protest Against the Clarke Amendment.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN, OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 21, 1916.

Mr. AUSTIN. Mr. Speaker, one of the most important measures to be submitted to this House during the present session will be the so-called Philippine bill, which recently passed the Senate and is now before the Committee on Insular Affairs of this The Clarke amendment to the Senate bill has been House. justly condemned by the American daily press—Democratic, Republican, and Independent. It was this unwise and un-American amendment which called forth the unanswerable statement of Secretary Garrison in his letter to President Wilson in which he bravely said it meant the abandonment of our duty and the betrayal of a trust.

In this connection I could not quote a more eloquent or patriotic sentiment than that voiced by our loved Speaker in his recent speech at Fort Myer when he truthfully declared: "No country will endure, and no country is worthy to endure, that will not protect all of its citizens, wherever they may be.

A stronger, a more convincing or unanswerable argument against the Clarke amendment can not be made than that con-tained in the protest filed by Mr. Charles M. Swift, president of the Philippine Railway Co., with the chairman of the House Committee on Insular Affairs. It is as follows:

WASHINGTON, February 18, 1916.

The drastic Clarke amendment proposes a complete severance of relations between the Philippine Islands and the United States Government.

If the President so wills, it may become effective in two years. When the amendment becomes law the Philippine Islands will be a foreign country, so far as America is concerned. An American doing business in Mexico. The Philippine government may develop into a monarchy or the most tyrannical despotism, the laboring classes become serfs or six was, for all America is concerned. The Philippine government may the most tyrannical despotism, the laboring classes become serfs or six was, for all America is concerned. The Philippine government may the state, may declare all foreigners, including America conserned it to holding property, and it will be none of our business. If 7,000,000 Ftd holding property, and it will be none of our business, if the system of public education is abolished, if the present efficient health department is swept away and the Islands given over to plague, cholera, and smallpox, America will not interfere. We are through with it. The Philippine Islands, even if he went there at America's invitation, must take his loes.

Under these circumstances if would not seem inappropriate to consider the status of the two victims of this extraordinary legislation, the Filipino and the American investor.

And first the Filipino.

And dirst the Filipino was a Spanish subject. The Spanish Government was his sovereign, to whom he owed allegiance and from whom he was entitled to protection. By the treaty of Paris he became a subject of the United States, which, so far as it could be accomplished by treaty, became his sovereign. He was not satisfied, rehelied, submitted als cause to the arbitrament of arms, and was beaten, and thus parity by treaty and partly by force of arms became in the properties of the Constitution. Specifically he is not entitled to a trial by jury when accused of crime. He is certainly a citizen within the broad definition found in the Century Dictionary:

The Supreme Court has decided that he is not so fully a citizen of the United States and the provides that his political status sh

has been the constant study and care of the American Congress.

I suppose it is claimed that the power that has given may also take away.

I venture to deny it. American sovereignty may free the slave, but until American ideals perish from off the earth American sovereignty can not turn a free man into a slave. It may enlarge a citizen's status, but it may not diminish it. It may rescue the victim of anarchy and misgovernment, but as long a: a vestige of American patriotism remains it may not turn him back into the miserable state from which it rescued him. American freedom is not temporary. American liberty is not the gift of a whimsical sovereign to be bestowed to-day and withdrawn to morrow. Having given the Filipino an American status he can not be robbed of that status except by most shameful tyranny. If the true, loyal, freedom-loving heart of America speaks in Congress, no Filipino will be driven from the protection of the Stars and Stripes. Until every Filipino with complete capacity to understand and with full understanding has expressed his desire to withdraw from American protection, the Philippine Islands are and ought to be American territory, and this I submit is self-evident.

Now let us consider the American business man who has invested his capital in the Philippine Islands.

I suppose no one will deny that for 15 years the Philippine Islands have been American territory. Americans doing business there have been operating under the American fiag on American soil and under the protection of a Government to which they owed allegiance, to whom they were proud to belong, and whose customs and ideals they understood and loved. They have committed no crime, unless it is a crime to be business men. They are enterprising, daring, and determined, the stuff of which American pioneers are made. They have given unswerving loyalty to the Stars and Stripes. And now, with startling precipitancy, they are to be forcibly expatriated, made aliens in a far-off country, with possible anarchy, revolution, and polit

to launch them on any but American soil. American enterprises on American soil are entitled to recognition and protection by the American Government. American enterprises on foreign soil have no such protection. If the Clarke amendment becomes law, our investments will be rulned. Our securities will not be worth 10 cents on the dollar. The result will be tantamouat to confiscation of nine-tenths of their value.

Such legislation is in the highest degree arbitrary and tyrannical. If its justification rests on some overwhelming national need not disclosed, full compensation should precede confiscation. There is no adequate provision in the Clarke amendment for ascertaining the damage it will inflict on American enterprise. The vague suggestion that the President may negotiate with the Philippine government on the subject is illusory and meaningless. American citizens may rightfully protest against a debtor of yet more doubtful responsibility.

In conclusion, it seems incredible that an American Congress can be persuaded to agree to this precipitate, ill-considered, and tyrannical measure, and at one stroke legislate the Filipino out of his American citizenship, his security, liberty, and individual independence, and expatriate American citizens. American capital, and American enterprise.

Commenting editorially on this protest, the Washington Post

Commenting editorially on this protest, the Washington Post on last Sunday, under the caption, "Stability of contracts," says:

on last Sunday, under the caption, "Stability of contracts," says:

Charles M. Swift, president of the Philippine Railway Co. and financially interested in the Manila Electric Railway & Light Co., has written a letter to the chairman of the Committee on Insular Affairs of the House, directing attention to the fact that the Clarke amendment adopted by the Senate virtually constituted a violation of contract.

There is no doub, as Mr. Swift points out, that American capital was invited by the Government to invest in the Philippines. Bryan had made his campaign against imperialism, and the people themselves had approved of the policy of the United States Government in holding the Philippine Islands. That was the only time the question had ever been brought before the people directly and made a predominant issue in a campaign. At the last election, although there was a plank in the Democratic platform providing for the ultimate independence of the Philippines, the issue was blanketed by the split in the Republican Party and by the greater prominence given to other issues by the Democratic presidential candidate. Congress has received no mandate from the people to cast the Philippines overboard. The only mandate was for the retention of the Philippines.

Although capital was asked to invest in the Philippines and so aid in their upbuilding, the islands will become a foreign country, so far as America is concerned, if the Clarke amendment becomes law. An American doing business there will stand exactly on a par with an American doing business in Mexico. The Philippine government may tax away the entire value of American investment; may confiscate it to the state; may declare all foreigners, including Americans, incapable of holding property, and yet under the Clarke amendment it will be none of the business of the United States Government to interfere.

Preparedness.

For defense every dollar needed; not one dollar for aggression or

EXTENSION OF REMARKS

HON. RUFUS HARDY. OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 21, 1916.

Mr. HARDY. Mr. Speaker, frankly I state that I have taken leave to extend my remarks in the Record in order to send to my constituents a fairly full statement of the facts and conditions bearing upon the present agitation for a big Navy and a big standing Army in time of peace and my own views in opposition to such policy and in favor of a preparedness for defense only and not for aggression, which statement is contained in a letter written by me to a number of my constituents and incorporated herewith.

Washington, D. C., February 19, 1916.

Mr. Clarence Ousley, Chairman, Bryan; Mr. D. D. Peevy and others, Teague; Maj. Charles H. Mills, Chairman, Corsicana; Messrs. P. L. Brady, Mayor, and others, Hearne.

GENTLEMEN: I beg to acknowledge the receipt of your recent communication touching the subject of national preparedness. I realize that of your number a great many are my warm, true, and long-time friends.

About the same date with your letters to me representatives of the grange in Eastern States and the president of the Texas Farmers' Union, claiming to represent the sentiments of the organized farmers of 22 States, including all Southern States, were testifying before a congressional committee that their organizations were opposed to great increases in our Army and Navy expenditures.

Without claiming to know in detail or to present the plans of the President specifically you, in effect, ask me to follow him blindly, because you trust him, and ask me to do so.

Pardon me if I express the belief and hope that you did not fully understand my views or the President's plans at that time. He was then urging on Congress the continental army plan of Mr. Garrison, his Secretary of War, and though it was not approximately called for in the report to Congress of the Secretary of the Navy, he was declaring, according to daily papers, for the greatest navy in the world. Your petitions and resolutions are vague, but one of your resolutions commends "a citizen soldiery, well trained and well equipped, as the safest assurance against dangers from without and against the sinister peril of militarism that might develop from within." It is the sinister peril of militarism that would develop if Mr. Garrison's continental army plan were adopted more than the expense that made me oppose it. Nearly all military men believe that that plan must involve ultimately, if not immediately, compulsory military training and conscription. Without doubt it would establish a centralized military system, five hundred thousand strong at first, perhaps a million or two million strong later. A system even more vicious and dangerous million strong later. A system even more victors and dangerous in a Republic than in a monarchy, a system easily mobolized and used by powerful interests with a friendly administration to crush or oppress the people. Happily, the President has very lately abandoned that plan, and, fortunately for the country, Mr. Garrison is no longer Secretary of War. I believe the President will accept the National Guard or State militia plan of Chairman Hax, of Virginia, on which the Democratic members of the House Military Affairs Committee have agreed. Had Mr. HAYS'S constituents demanded that he follow the President blindly and had they been obeyed, the great centralized standing army plan would have been fixed on us. I venture to say the President is not sorry that it is not so. Certainly I shall be delighted to support the committee National Guard bill and the small increase they make in the standing Army, as I understand that bill will be written.

The big "continental army" would have given us a vast army of soldiers officered and directed and stationed from Washing ton, soldiers first, citizens last, whose citizen sympathies would have shrunk as their numbers increased. The National Guard, on the other hand, will live, move, and owe their being in and to the States and have their officers elected by themselves or appointed by the States and, like our present militia, be a source of pride and pleasure to the local communities whose people they love and of whom they are. These will be "citizen soldiery," and we will owe them to the fact that Congressmen may differ from and counsel with the President. Our fathers stood for the National Guard and against large standing armies. May I not do so without offense? Having read the full account of the interesting meetings at Bryan and Corsicana on February 9, may I tell you some things you were not told there?

TESTIMONY FACTS AND FIGURES.

The very day of your meeting Gen. Nelson A. Miles, a Democrat, and Admiral Victor Blue, Chief of the Bureau of Navigation, were testifying before the Military Affairs Committee that the United States is prepared to resist successfully, both on land and sea, invasion by any possible enemy. Gen. Miles condemned the "continental army," upheld the National Guard, declared our coast fortifications equal to those of any in the world, and said, further:

If 500,000 men were landed on either of our coasts and we were not able to raise enough men to drive them out, I would want to move to another country.

That kind of testimony does not get much space these days. Some further facts: We have to-day 50 land-grant colleges like our agricultural and mechanical and 51 other colleges where military training is given by officers detailed from the Army and Navy. They turn out annually many thousands of fairly well trained officers and soldiers. They have nearly all been operating 20 years, and in that time have sent out over all the States stalwart, trained soldiers and officers under whom enough patriotic, liberty-loving sons of America could and would muster to justify Gen. Miles's faith if our land was invaded. In the next five years these colleges will turn out an additional 100,000 young soldiers. There are militia companies in nearly every fair-sized town who would not flunk. Our Regular Army would join in. Some of the old boys that wore the gray and the blue would yet fire a gun for home and fireside. With all the strength of my soul I do believe we could repel the invader-any possible invader-of our shores even to-day.

And yet, on the receipt of a letter some time ago from President Biszel, of our Agricultural and Mechanical College, I urged the Committee on Military Affairs to provide a greater number of detailed officers to such colleges, so that their military training might be more efficient. Mr. Hay assures me that that will be done. I favor it, because I believe every instrumentality we have for defense ought to be of the best.

The finest brief defense of our Navy and Army and our National Guard as ample protection against invasion, in the face of charges of general inefficiency and insufficiency, I have ever read was contained in the President's message to Congress December a year ago. It was so grand in its poise, its patriotism, and its statesmanship that it profoundly impressed me.

Will not you read it?

Then he believed we had always found means to defend ourselves when necessary and would always do so without compulsory military service in time of peace. Then we were incapable of the dread of the power of any other nation. Then he declared, "We never have had, and while we retain our present principles and ideals we never shall have, a large standing Army. Then he declared the country had been misinformed and that we had not been negligent of our national defense or unmindful of the great responsibility resting upon us and that to do more than we were then doing would carry with it "a reversal of the whole history and character of our polity." Even in the message of December 7, 1915, he said: "We will not maintain a standing army except for uses which are as necessary in times of peace as in times of war," and "our confidence has been that our safety in times of danger would lie in the rising of the Nation to take care of itself as the farmers rose at Lexington." I do not quote the President to criticize. I quote him because of the unquestioned truth of the quotation. have stood with the President in all his great policies because I have agreed with him, but if he now stands for a great standing Army in time of peace and for the greatest Navy in the world, I can not agree with him. I have been and am his I have defended him on the floor of the House against attack from our own governor and have his letter of thanks I know he is my friend and that he is one man, at least, who does not wish me to be a puppet. I believe the time will come when he will thank some of us for saving him and our country from a "reversal of the whole history and character of

As to our Navy. Let me give you some facts not told in your meetings. When the present war broke out it was warmly disputed whether the Navy of the United States or that of Germany ranked second, England's being admittedly first; in fact, about equal to that of the United States and Germany combined. In December, 1914, Admiral Fletcher testified before the House

Naval Committee, as follows:

Mr. BUTLER (member of committee). Where do we stand, Admiral?
Admiral Fletcher (our highest naval officer). I have not personally
gone into that, but I have estimates that place us about third at the present time.

Then, after being much questioned about the navies of Germany, France, Russia, Japan, and Italy, in comparison with ours, Judge Witherspoon of the committee asked these questions and received these answers:

Mr. Witherspoon. Then what nation is there we are not prepared to resist; there is not one on earth, is there, Admiral?

Admiral Fletcher. I should say that England has a navy so much more powerful than that of any other nation in the world that she could easily keep control of the seas?

Mr. Witherspoon. England. Well, what other one?

Admiral Fletcher. I do not think we need greatly fear any other single nation.

Mr. Witherspoon. Then, there is no other nation except England, in your judgment, we could not successfully defend ourselves against?

Admiral Fletcher. I think that is correct; yes.

After almost a page of further examination-

Mr. WITHERSPOON. Then, understanding your testimony, after reviewing it, do you want us to understand that England is the only nation on earth that las a navy we could not successfully resist?

Admiral FLETCHER. I think that is the fair conclusion, yes, sir, at the present time.

Perhaps it should be stated that experts agree that no nation can afford to send all its navy, or very much more than 50 per cent of it, away from its own borders to attack a foreign nation because of the necessity of protecting its own shores. This testimony, and much more like it, is not often seen in public print to-day.

It is printed and can be read, however, in the Military and Naval Affairs Committee hearings. Let me add only, that at this session Gen. Weaver, chief of our Coast Artillery, testified that "our coast defenses are the best in the world"; and Admiral Winterhalter, who is in charge of our Atlantic Fleet, testified that our Navy is second in size to England's only, and in thorough trim.

pare it with any other navy save Germany's, because hers is admittedly by far the largest of all the others except ours. Here, then, are the figures of expenditure on the respective navies of the United States and Germany annually from 1901 to 1915, inclusive:

Naval appropriations of the United States and Germany from 1900 to 1914,

	the Common Common for the common 10	

I do not give the German figures for the year 1915-16, because I have not them. Our naval bill for 1915-16 was right at \$150,000,000. I do not go back beyond 1900-1901, because vessels older than that are relegated to scrap heap generally.

You can see that in those 15 years we spent on our Navy every single year more than did Germany. How much more, look at the figures, add them up, and see. Now, Germany since this war begun has lost at least six or seven battleships and has built perhaps only submarines, aircraft, and the like, while we have been expending the biggest appropriation of our history in time of peace on our Navy. Our Navy has been a progressive spender, increasing its amount every year but 2 of the 15 shown. Again, take the last 5 years before this war broke out. Germany spent and authorized \$546,454,803, we \$653,869,371-that

is, over one hundred millions more.

Our Secretary of the Navy proposes this year to spend \$217,658,173, or about sixty-eight millions more than last year, and a large part of this to go to more battleships and cruisers when we have not the men to man or the auxiliary vessels to make effective the fighting ships we already have and have authorized. Bear in mind ours is a progressive country with a progressive Navy. If we make this increase this year, it will be made greater next year. We can not hope to spend less than \$1,200,000,000 in the next 5 years or less than three and one-quarter billions on our Navy in the next period of 15 years. That, I think, is about three times our national bonded debt, and young men now will not be old men when the 15 years are ended. But that does not equal the President's platform proposal which you ask me to support and defend-that is, to build the greatest Navy in the world. Then, gentlemen, please bear in mind I have not yet figured the proposed 500,000 "continental army," which, I think, would cost at least as much, very likely far more, than the Navy. Together they would cost seven billions or more in the next 15 years or \$70 for every man, woman, and child in the United States, estimating our population at 100,000,000. In the name of the poor and needy, in the name of labor which must earn all that is spent, ought you not to permit and even welcome somebody to put a check on this terrific speed, somebody to pull back on the breast yoke. But, taking and considering only the passing years, each year must find us spending four to five hundred million on Army and Navy instead of two hundred and fifty millions as now. Who will pay it? Not the big dailies or the munition factories or the armor-plate makers or the railroads or the money lords generally. These will, perhaps, fatten on it. I tell you the unorganized farmer and the hard-working laborer will ultimately have most of it sifted down on his shoulder.

" WHAT I FAVOR."

But, leaving opinion only, let us have some cost figures.

I will not compare our Navy with England's, because that is admittedly twice the strength of any other navy, nor do I compared on by our Military Affairs Committee and which will be

reported. As to the Navy, I believe in making what we have efficient. I have worked as hard as any man in Congress for the President's greatest measure of preparedness for our Navy—that is his ship-purchasing bill which is now before our Merchant Marine Committee, on which I am the ranking Democrat. England's great navy would be crippled without her great merchant marine and her naval reserve. Our Navy is crippled first, for want of a naval reserve—that is, trained forces to fight the ships we have, being about 20,000 men short. I have supported every measure calculated to supply this deficiency. Second, it is crippled for want of an ample supply of transports, colliers, and ships of every kind known as naval auxiliaries. Admiral Benson and Secretary McAdoo have just testified before our committee that we are more than 500,000 tons short on naval auxiliaries and that our pitiful merchant marine can not supply them, but that the administration ship-purchasing bill will practically supply that shortage and will largely furnish a supply of trained men for the naval reserve under the section providing for the enlistment of members of the crews of these vessels in that service. The fight for and against this bill has been long and bitter; the fight on it by selfish interests is unceasing. It is on now. If I do say it myself, the chairman of our committee and I are leading and have lead the fight for the bill for more than a year. We want a balanced Navy. This bill will give it to us, but it will give a balanced Navy. This bill will give it to us, but it will give us more; it will give us transportation badly needed by our industries, by our farmers, our factories, our merchants, our producers, and consumers, because in time of peace it can be used in commerce and it will give that transportation at reasonable rates, and that, too, as I believe, without burden to the Government. It will be a service that, tike the Postal Service, can and will be made self-sustaining or even profitable to the Government, and yet check the rapacity of private transportation companies.

This bill carries no war menace but will add more to the fight-ing power of our Navy in case of war than would the addition of a dozen battleships, and in time of peace would serve us well. But the armor-plate people, the powder and munitions factories have nothing to sell under this bill, which, in my judgment, is not only the greatest preparedness measure of the President, but one of his very greatest peace measures. It will rank with the Un-derwood tariff law, with the banking and currency act, and with this latter act it will do more to facilitate and increase our commerce with foreign nations than any and all other legislation of the last 50 years. It is the initial step in the creation anew of an over-seas American merchant marine. I wonder that some public meetings have not been called to urge its passage. Public meetings have only been heard from in opposition. Perhaps the reason is, its purpose is the general good without any favor to any special interest. It provides for the expenditure by the Government of only \$50,000,000 altogether, not \$50,000,000 per annum, in the purchase or building or leasing of ships to be re-leased or sold by the Government to parties to be operated on lines and terms and at rates controlled by the Government or if not so leased or sold then to be operated by a corporation, a majority of whose stock is owned by the Government. The ships will be built with special reference to naval needs, but also suited for commerce. I have had my heart in this measure and in building up our foreign-going merchant marine. Rightly or wrongly, I have gained some reputation for knowledge of the subject. Last year upon invitation I addressed important bodies upon the subject at different points in New York. This year I have made one address at Baltimore, whose mayor wrote me an appreciative letter of thanks, and I am now invited to address the National Economic League at Boston on next Wednesday upon the subject of our merchant marine and this ship-purchasing bill.

Again, I am and have been in favor of the greatest possible number of submarines, especially coast submarines. They are preeminently defensive weapons. With 30 of them New York City would be absolutely safe, even from the whole navy of England, and yet 30 submarines would cost about 1 battleship.

If our coast-fortification guns are worthless, I would throw them away and get the best, and I would provide ample material for laying mines. In plain words, I favor strengthening our present Navy where it is weak and providing ample coast defenses before we authorize more battleships, especially since we now have nine of them authorized but not yet completed, some of them now being built, some not yet begun. Additional battleships now authorized could not possible be launched earlier than three to five years hence.

Of the two battleships authorized a year ago neither has been started yet; one of them is to be built at the Brooklyn Navy Yard, the other at Mare Island. There are other vessels at this

time on the ways at both these yards, neither of which will be launched before fall, and after they are launched the ways must be extended before the keels of these authorized battleships can be laid. After that it will take two and a half years to complete them, and the big battleships we authorize now must come later.

Last Congress authorized 18 submarines, now nearly a year ago; 16 of them coast-defense submarines and 2 of them seagoing submarines. The contract for the latter has not yet been let, and that for the former has just been let, giving the contractors 22 months in which to build them. Have we not already on our hands a pretty extensive and lengthy building program?

A vast battleship program savors of aggression and not defense, and will be looked upon by other nations as a menace, and certainly prompt and promote rivalry and emulation in building, to the great delight of armor-plate and munitions makers. Submarines, particularly coast submarines, are different. I went before the Naval Committee last session and earnestly urged more submarines. The committee increased their number, but not to the extent I urged. They are this year greatly increasing them. The naval program I favor I believe can be brought within or certainly very nearly within the sum we spent last year. I have no ambition for us to police the seas or play the swaggering bully of the ocean. I have voted and expect to vote against a great number of battleships.

It is urged sometimes that a big navy, a big battleship fleet, will compel acceptance of our Government's demands by Germany and England; that without it they ignore us and mock us. I deny both claims. Both sides in the present war want our friendship; both sides will yield more to preserve it than they would to any menace from us. If we begin to threaten we may expect to engage in war. The President has said that neither side will willingly offend us, but that both sides, in a life-anddeath struggle, in endeavoring to hurt their enemy and not us, may yet inflict an injury on us. The question of submarine warfare and of the rights of belligerent merchant vessels and neutrais bristles with difficult and dangerous questions. With a Roosevelt or a jingo in the White House and a big Navy, what might not happen? Should an English merchant ship carrying munitions of war and guns for defense only be sunk by a German submarine without warning and with American citizens on board, Germany would offer to arbitrate the question, as she did in the Lusitania case. Roosevelt would go to war about it. I would not, even if we had the greatest Navy in the world. What would you do? We send a cargo of cotton on a neutral vessel to Sweden, a neutral Nation. The English Navy seizes it. Ve demand its release and England refuses, because she says it is destined ultimately for Germany. Rooseveit would perhaps go to war about it, though England offers arbitration: I would not, even if we had the best Navy in the world. navy in the world could hardly get at Germany, and certainly an embargo on the export of munitions by us would be more terrifying to England than a naval fleet trying to run the gantlet of her submarined and well-mined shores.

I know alarmists tell us that if Germany wins this war she will proceed at once to make war on us, but who can believe that having barely pulled through with life in the present war, debt burdened and crippled in resources and men, she would desire or dare to make war on us, with England, France, and Russia thirsting for revenge and ready to build a fire in her rear? Turn it around. If the allies win, would England dare assail us, with the central powers thirsting for revenge and ready to rekindle the war with our assistance? And besides this, from England we have a hostage of peace in Canada at our doors.

Now, gentlemen, I have given you my views and my position and my record in detail, and I hope clearly. I am for preparedness, for defense, but not for aggression. I tell you frankly that I regard every war, except one of self-defense, as a crime and the greatest of all crimes. The question of expense is secondary, great as the burden is of criminal wars produced through all the ages by a thousand sinister agents and hard as it is going to be to raise revenue to pay our expenses. The poor and helpless individual soldier, who imbrues his hands in the blood of another whom he would gladly call brother, is for the most part an innocent victim along with the other victims whom his physical act pillages, plunders, or murders, but if there is a hell or lake of burning fire, its lowest deeps are reserved for those who fan the flames of excitement, of greed for gain, or lust for power, or of fury and terror, and thus bring on war. When in my imaginings only, I see its horrors, see the stricken father, the starving mother, the mangled boy, the bleeding babe, I pray that hell may open wide her jaws for me ere I be one, by any means, by preparing for it or declaring for it, to provoke or engage in war,

save in defense of my native land.

It is needless for me to say it has been painful to me to write this letter. It has been hard to be true. I have written it under a sense of my obligations and duty to you, to our common country, to unborn generations yet to come, and in the fear of God. My hands are clean. Let my people do with my political fortune what they will.

Very truly, yours,

RUFUS HARDY.

Motorization of the Rural Mail Service.

EXTENSION OF REMARKS

HON.S.D.FESS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 19, 1916.

Mr. FESS. Mr. Speaker, country life has become an absorbing theme. It has long ago ceased to be a word of local meaning. It is to-day national. Perhaps more thought is being devoted to the question of rural life and all that goes with it than upon any other topic. The "back to the farm" movement is one expression of this phase of our national life. It involves better roads, better schools, better community life, better farms and farmers, and a socialized life on the farm closely articulated with the town. The farmer is no longer an isolated being but he is an integral part of the State. His thought is not confined to his farm but becomes a part of the general intelligence of the country. He thinks as much in terms of the State as any man in it. This is made possible by the modern farm converiences, such as the telephone, the rural mail service, the good roads, the automobile, and the various neighborly associations resulting from these various conveniences. Of all these none is so important as the rural mail service which enables the remote farmer to live abreast of his time. Instead of his having to depend for his mail upon the fugitive passer-by or at the evening hour after a tired day's work, a trip to town when he ought to be at home at rest, he finds his daily mail awaiting his evening's repose, when while resting from the day's task he informs his mind by perusal of the latest news.

This boon, hard to estimate, renders country life superior in some ways to city life. It is one of the most valuable rewards of an enlightened Government. This service started small, but has constantly increased, until to-day it makes the Nation but a country neighborhood. This service employs at least 44,000 carriers, and this present bill appropriates \$53,000,000 for the

service.

The administration now in power, fretting under a financial embarrassment, is proposing to cut down expenses by lessening the number of routes, thereby cutting in two the number of carriers. It proposes to do this by supplanting the horse with an automobile, by doubling the length of the route. We have pressed upon the authorities the utter futility of this change. There is, perhaps, no district in Ohio that has so many good roads as my own; yet but few of them could be used in all kinds of weather for auto service. Indeed, it is the rule of most farmers who own automobiles to place their cars in for the winter, from the last of November until the last of March. It is a physical impossibility to make the trips on these roads. the plan is to use the auto part of the year and horses the other part, it will not need a prophet to see what will happen, both in the way of expenditure and regularity of mail delivery. admission by the Fourth Assistant Postmaster General that he does not expect to use the motor throughout the year lifts all doubt of its failure, both in economy and efficiency. I am op-posing this tearing up of this service as unwise and totally un-warranted. If there is any change, it should be to extend the service, not retard it. Every step that has been taken up to this time has been to increase the service. Here is a step-the first of its kind—to lessen it; and it is put on the basis of economy. Any economy at the expense of mail service is false. If there is needed retrenchment of expenses in the Government—and we all agree there should be—it must not be started with the service that places the rural community in direct touch with the Government. This is especially true because here is the one service the Government renders the people for which the

people directly pay. Here is a case where we pay as we go. Even though it is not entirely self-supporting, yet it is the only service that pretends to pay as we go.

In my own county I find the proposed change contemplates an addition of 31 families. Upon investigation, I find 118 families inconvenienced by being compelled to go some of them over a mile for their mail. This renders the parcel post for them totally impracticable. Likewise the registered letter or money order. I would extend the service to those not yet served, but it should be done without depriving those already served.

The discontinuance of the various centers, such as will occur in my county, will confuse the mail hopelessly. Residents of neighbors in my own immediate vicinity will have their mail delivered from distant points, which will necessitate not only irregular times for delivery but will also deprive the farmer of his mail the very days he most desires it. Anyone who has ever lived on a farm will appreciate the desire for the daily mail the shut-in days when you are confined to the house. One legitimate objection little pressed is the desire for mail delivery from the town in which the farmer has his business relations, where he does his selling, his buying; where he goes to church, or with which he has telephone connection. Whatever else is his interest, the center of that interest is his mail and the post office from whence his carrier is sent.

It will take a long time for the people of Yellow Springs, or Cedarville, or Spring Valley to become accustomed to receiving their mail from the county seat, very infrequently visited, as compared with their home town. In the real sense this is a legitimate objection to the plan of reorganization. The one great desire of mail is regularity, certainty of delivery. So many features of daily life depend upon this item. This change will confuse, delay, and derange the service to no one's benefit,

but to the detriment of many.

Mr. Speaker, I have been literally flooded with letters and resolutions from patrons of all parties urging me to use my good offices to induce a reconsideration. This activity is not mischief-making. It is not from panicky people. It is from our very best citizens. After failing to secure any light as to the purpose of the change, I took the matter before the Post Office Committee and made a charge that the change had some political significance and gave my grounds for the charge. Were it not so I am sure the Democratic membership of the House would join us in our fight. But Senator POMERENE instead has become the defender of the change, which in the light of the undisputed facts smacks mightily of the politician.

The committee urged me to lay the matter before the Fourth Assistant, which I did. He argued his case on the usual basis of economy and efficiency. When I told him his routing in Greene County would not succeed, owing to the character of the roads, he called for a map which he placed before me. Mr. Speaker, of course, if a department official proceeds to route a county by aid of a colored map, and refuses to listen to men who know the road situation, it is not difficult to understand

the errors of this scheme.

I do not only oppose this scheme for reasons already stated, but I certainly object to the treatment accorded to the men who are to be turned out of the service without regard to the character of their devotion to the mail service. It has been the effort in the past to recognize faithful service of mail employees. But this entire scheme is so formulated and all of its details so manipulated that efficient service is to be penalized by refusing to promote from horse to motor carrier. This scheme is so bald on its very face that there is small wonder that it has caused not only a storm of protest but a universal condemnation, save a few higher ups, who shall become patronage dispensers.

The mail service is the one Government activity that should honor efficient service. In every extension those who have proved faithful employees should be promoted or at least honored for what they had done. But here is a scheme which, far from respecting men for their faithful service, at one severe swoop, those who are known in the service must make way for persons unknown, simply because the rules will not permit promotion from horse carrier to motor carrier. If these rules are to be put into force, here are 44,000 men handling a service for which \$50,000,000 are appropriated to make place for others. It would be incredible were it not so palpable.

The mockery of the present civil-service observance demands indignant repudiation. If I am any judge, from the rumbling heard throughout the country, if the administration of this department does not change its course, the people will change the administration at the earliest opportunity. Economy is to be encouraged, but this is not economy, and here is not the place to begin it. Let no step be taken to reduce the intelligence, retard the mutual communication of our rural people.

Let every step be taken to augment this most desirable ambition of our country. Wise statesmanship will throw no stumbling block in the way of the progress of country life, but it will strive to multiply the comforts of such communities. Let the Government and the States in building better roads, and then from time to time, as conditions will permit, extend the service, but never retard it.

The Colombian Treaty.

EXTENSION OF REMARKS

HON. GUY T. HELVERING. OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 22, 1916.

Mr. HELVERING. Mr. Speaker, on July 13, 1914, an extension of remarks was printed in the Congressional Record by Representative J. Hampton Moore, relative to the independence of the Panama Republic from Colombia. On Monday this pamphlet containing Mr. Moore's remarks, which also included a letter from Mr. Wilfred H. Schoff, secretary of the Commercial Museum of Philadelphia, was transmitted to the Members of Congress. Mr. Schoff has also sent out a pamphlet containing his views on this subject.

Mr. Moore in his discussion shows but slight familiarity with the subject and depends almost wholly on the letter from Mr. Schoff for his argument. It shall be my purpose to briefly explain the inconsistency of Mr. Schoff's contentions, and at the

same time reach the argument made by Mr. Moore.

Briefly speaking, Mr. Schoff insists upon the justice of our course in dealing with Colombia for two reasons: First, he contends that the Marroquin Government, with whom we negotiated the Hay-Herran treaty, was not a constitutional government and did not hold power in accordance with the laws and the constitution of Colombia.

Let us consider this for a moment. When we continued diplomatic relations with Colombia, after President Sanciemente was overthrown and Marroquin came into power, we recognized the Government of Marroquin as the Government de facto. When we consented to negotiate a treaty, and did negotiate such a treaty with the representative of Marroquin, we recognized his Government as the Government both de facto and de jure, and were thereby estopped from setting up any contention as to its constitutionality. Let this suffice for my first point I wish to make.

The next contention of Mr. Schoff is that Panama had the right to secede and could not be kept under subjection by Colombia after her people decided to form an independent

Whether or not the people of Panama wished to form an independent government we have no means of knowing. We admit that such appears to be the fact, but an uprising fostered by the French canal ring, aided by men in the United States, and brought to completion by the fire department of the city of Panama, resulted in the setting up of a paper republic which we recognized in 2 days, and in 14 days we had made a treaty with this shadow republic by which we guaranteed to use all of the power of the United States to maintain its independence. There never was an expression of opinion from the people of Panama, and as to their desire to secede from Colombia we have nothing but assumption on which to base conclusions.

But let us admit for the moment that Panama had the right to secede and that Colombia had no power to take away from Panama any of its rights, and then let us see where it brings us.

If Colombia had no right to dispose of Panama as a part of her possession, then she had no right to arrange the Hay-Herran treaty which gave control of a portion of Panama to the United States. You can not evade that conclusion. We negotiated with Colombia, and in so doing we recognized her absolute right to dispose of Panama as she saw fit. Secretary Hay was wise in diplomacy, and it is not to be believed that he would be willing to pay American gold for something that Colombia did not possess. To affirm that such was the case would be equivalent to asserting that he was deliberately negotiating for property which he knew had been stolen.

Likewise, if Panama had the right to secede from Colombia at will, she could not be dispossessed of that right by any treaty of sale made by Colombia to the United States. In that

event the Hay-Herran treaty, negotiated by the Administration of Mr. Roosevelt, could not be binding on Panama. If Colombia did not have the power to sell to us control over the Canal Zone, then the ratification of the Hay-Herran treaty would not bind Panama, for we would have been in the attitude of buying from one who was not the owner.

When we negotiated for the Hay-Herran treaty we disposed absolutely of the two objections which Mr. Schoff has used so many words to establish and which are indorsed by Mr. Moore. We then admitted by our acts that the Marroquin Government was a legal one, and a Government with which we could make treaties. Likewise, we admitted that Colombia owned Panama, for we were endeavoring to make a purchase of part of that property and thus admitted ownership. By our very acts we admitted the rights which Mr. Schoff now denies, and by those acts we are debarred from setting up such a defense at this late

The argument of Mr. Schoff is like the argument of the lawyer who ignores ethics, equity, and justice, in order to find a flaw by which his guilty client may escape merited punish-

The true situation and the status of the Colombian and

Panaman Governments were as follows:

On the morning of November 3, 1903, the State of Panama was an unquestioned portion of the United States of Colombia. The relationship of the United States of America to Colombia and its possessions was governed by a treaty arranged in 1846. and in order to get a clear view of our relationship to the then existing conditions we must look to see what that treaty pro-

In the thirty-fifth article of the treaty to which I refer we learn that

The Government of New Granada guarantees to the Government of the United States that the right of way or transit across the Isthmus of Panama upon any modes of communication that now exist or that may be hereafter constructed shall be free and open to the Government and citizens of the United States.

Thus we learn just what Colombia was to give us under the provisions of that treaty. It was not a right which we possessed, but was a grant, and for that grant we, on our part, paid a certain price. What price we were to pay we learn in the same article of the treaty, which reads:

The United States guarantees positively and efficaciously to New Granada * * the perfect neutrality of the before-mentioned Isthmus, with the view that the free transit from the one to the other sea may not be interrupted or embarrassed.

In consequence the United States also guarantees, in the same manner, the rights of sovereignty and property which New Granada has and possesses over the said territors.

In my opinion the last paragraph is of extreme importance. This country by that treaty guaranteed the rights of sovereignty and property of Colombia over the Isthmus of Panama. What are the rights of property and of sovereignty? Are they not the rights of enjoyment of the property owned and of the right to enforce order and compel obeyance of the laws of Colombia in all of the property referred to? Can any reasonable person deny this?

While interpreting the spirit of article 35 in 1865, Secretary of State William H. Seward wrote:

State William H. Seward wrote:

The question which has recently arisen under the thirty-fifth article of the treaty with New Granada as to the obligation of this Government to comply with a requisition of the President of the United States of Colombia for a force to protect the Isthmus of Panama from invasion by a body of insurgents of that country has been submitted to the consideration of the Attorney General. His opinion is that neither the text nor the spirit of the stipulation in that article, by which the United States engages to preserve the neutrality of the Isthmus of Panama, imposes an obligation on this Government to comply with a requisition like that referred to.

The purpose of the stipulation was to guarantee the Isthmus of Panama against invasions or seizure by a foreign power only. It could not have been contemplated that we were to become a party to any civil war in that country by defending the Isthmus against another party. As it may be presumed, however, that our object in entering into such a stipulation was to secure the freedom of transit across the Isthmus, if that freedom should be endangered or obstructed, the employment of force on our part to prevent this would be a question of grave expediency to be determined by circumstances. This department is not aware that there is yet occasion for a decision upon this point.

With the logic of Mr. Seward's reasoning there is little room

With the logic of Mr. Seward's reasoning there is little room for dissent. His interpretation of the treaty was that we were to defend Panama for Colombia against the nations of the earth, but in case of internal dissension in Colombia, we were not to take sides. We expected and conceded the right of the people with whom we made this treaty to govern themselves in their own way and whether they elected to live under a monarchy, a republic, or as separate and independent States was no concern But when the inhabitants of the Isthmus, or any mob of ours. on the Isthmus, should rise in opposition to the parent Government, if we should interfere to prevent that parent Government from moving troops to suppress the opposition, or sending its police to subdue the mob, then we would be doing the very thing that Seward said we should not do; we would be aiding one party in that country by defending it against another party. The contingency referred to by Mr. Seward was undoubtedly one in which the parent Government had demonstrated its inability to enforce law and order. In that case we would have the right to intervene in order to protect our interests under the treaty. As will be shown, no such contingency existed, and our course in Panama after November 2, 1903, demonstrates that we violated the treaty of 1846, broke faith with Colombia, and acted in opposition to the interpretation of the treaty made by Seward in 1865 and quoted above.

Coming down to the year 1903, we find that early in that year a treaty known as the Hay-Herran treaty was negotiated between Colombia and the United States of America. The purpose of that treaty was to provide the means by which the United States could take over the French interests in the Panama Canal and safeguard the rights of the United States by giving possession and control to us of the territory needed for canal

That treaty was arranged between responsible representatives of the two Governments, but it could not go into effect until ratified by the proper legislative bodies in the two countries affected. Such ratification was given by the Senate of the United States. The Government of Colombia did not exactly show good faith, for while it was in honor bound to defend and strive for the ratification of the treaty arranged by its chosen representatives it did not work for its ratification; dissatisfaction was aroused in Colombia, the public mind was inflamed, and as a result the Senate of Colombia refused to ratify the treaty.

As to the motives underlying the action of Colombia we have no concern, as far as safeguarding our own honor lies. can be but little doubt that Colombia was trying to make a better bargain. She felt that she had something which we must secure, and consequently was in position to demand exorbitant terms to which we must assent. However, that was her privilege. We could accede to preposterous terms or else reject them. The way through Nicaragua still remained open to us if we were determined to build an interoceanic canal, and it must be borne in mind that the way through Nicaragua had been favorably looked upon until the time came when we had the opportunity to secure the French rights in Pamana at what was considered bargain-counter prices. Still, Colombia was perfectly within her rights in asking for more than we were willing to give, and it is no defense of anything wrong that we may have done to say that she had not treated us fairly. We might feel outraged at her treatment of us, but that gives us no valid reasons for acting toward her as to outrage the feelings of all Americans, to whom honor is something more than an empty

Following the failure of Colombia to ratify the Hay-Herran treaty the French investors, who would have profited if the treaty had been ratified by reason of the fact that the sale of their property to the United States hung in the balance until a treaty was arranged, evidently sought to accomplish by illegal action that which they could not gain legally. As proof of this we find one P. Bunau Varilla, who had figured somewhat in French canal affairs, and who was made envoy extraordinary and minister plenipotentiary from Panama to the United States before the paper Republic was fairly organized. We find many threads leading from this Varilla to the starting of the revolution in Panama, many suspicious circumstances showing knowledge in the United States of the revolution to be carried on in Panama.

The preceding statement gives the status of affairs in the relations between the United States and Colombia on the morning of November 3, 1903. At 3.40 p. m. on the same date Mr. Loomis, Acting Secretary of State of the United States, sent the following cablegram to the United States consulate general at Panama:

Uprising on Isthmus reported. Keep department promptly and fully informed.

To which cablegram Mr. Ehrman, consulate general, replied:
No uprising yet. Reported will be in the night. Situation is critical.

That cablegram should be labeled "not yet, but soon." The wires had been laid. The United States was made ready to be a party to the raping of a country to whom we were bound by a solemn treaty and one, moreover, whose integrity we were pledged to safeguard. Let us follow the history of the revolution as disclosed by the cablegrams. But before doing so I wish to show further proof that the intent was known to the Govern-

ment of the United States before the day on which the revolution was inaugurated.

On November 2, at the wish of the President, Mr. Roosevelt, the commanders of the Boston, Nashville, and Dixie warships were cabled:

Maintain free and uninterrupted transit. Prevent landing of any armed force, either Government or insurgent, within 50 miles of Panama.

Think over that act and apply it to our solemn pledge as given in the treaty of 1846. Was that the way to guarantee the "rights of sovereignty and property" to Colombia? It was self-evident that the revolutionists were confined to the territory embraced in Panama. It was needless to issue an order to our commanders to prevent their landing, for they were already on the spot. Was it not a duty we owed to Colombia, not merely because of our plighted word, but because the rights of a sister nation made it imperative that the parent be given the opportunity to win back the wayward child, by force if necessary, before we could even consider the advisability of taking part in a family quarrel.

Proceeding with the review of the acts which led up to the culmination of the revolution, we find that on the date, November 3, on which Mr. Ehrman had sent the cablegram which I labeled "not yet but soon," he sent this supplementary cablegram to Secretary of State Hay:

Uprising occurred tonight, 6; no bloodshed. Army and Navy officials taken prisoners. Government will be organized to-night consisting three consuls, also cabinet. Soldiers changed. Supposed same movement will be effected in Colon. Order prevails so far. Situation serious. Four hundred soldiers landed Colon to-day Baranquilla.

At 8.20 p. m., same date, Mr. Loomis, Acting Secretary of State, cabled to Mr. Malmos, United States consul at Colon:

The troops which landed from the Cartagena should not proceed to Panama.

And again at 11.18, on the same date, he and Mr. Darling cabled to Mr. Ehrman:

Message sent to Nashville to Colon may not have been delivered, Accordingly see that following message is sent to Nashville immediately: Nashville, Colon: In the interests of peace make every effort to prevent Government troops at Colon from proceeding to Panama. The transit of the Isthmus must be kept open and order maintained. Acknowledge,

Up to that time Colombia had not been given the opportunity to take steps to preserve order and to keep the transit of the Isthmus open. The revolution was but a couple of hours old, and it took some time to get troops by sea from Colombia to the Panama ports, no railroad route being in existence. To a friendly nation we undoubtedly owed the duty of giving it opportunity to take care of its internal affairs. We had no quarrel with Colombia for not keeping order in the Isthmus and for not keeping transit open. It was our simple duty, first, to give to her the opportunity to police Panama, and, failing in that, then we would have been facing the contingency referred to by Secretary of State Seward in 1865, when he said:

If that freedom should be endangered or obstructed, the employment of force on our part to prevent this would be a question of grave expediency to be determined by circumstances.

In the event of such contingency is it not evident that in determining the use to which we must put the force at our command we would be morally and legally bound to use that force in accordance with the treaty of 1846:

The United States guarantees positively and efficaciously to New Granada • • • the perfect neutrality of the before-mentioned Isthmus, with the view that the free transit from the one to the other sea may not be interrupted or embarrassed.

Did we act in accordance with that treaty? Did we not do the very thing Secretary of State Seward urged us not to do when in 1865 he wrote:

It could not have been contemplated that we were to become a party to any civil war in that country by defending the Isthmus against another party.

Read the Loomis cablegram-

The troops which landed from the Cartagena should not proceed to Panama—

and reconcile it, if you can, with our pledges, the interpretation made by Secretary Seward, and our duty to a sister Republic, with whose people we were at peace.

Following what has been described the railway company refused to transport Colombian troops across the Isthmus; the commander of the American naval forces on November 4 forbade the transit of troops from Colon across the Isthmus, and on the same date American troops were landed at Colon. We continued to march further and further away from the road which pointed to the honorable regard for our treaties and to-the preservation of American honor as well as the respect due to a sister nation.

A little later Colombia sent troops to Panama under command of Gen. Reyes, and the naval forces of the United States prevented these troops from landing in Panama and preserving the

rights of Colombia in the territory.
On November 6, when less than three days had elapsed since the inception of the revolution, Secretary Hay cabled to Mr. Ehrman as follows:

I send for your information and guidance in the execution of the instructions cabled to you to-day the text of a telegram dispatched this day to the United States minister at Bogota. The people of Panama having by an apparently unanimous movement dissolved their political connection with the Republic of Colombia and resumed their independence, and having adopted a government of their own, republican in form, with whom the Government of the United States of America, has entered into relations, the President of the United States of America, in accordance with the ties of friendship which have so long and so happily existed between the respective nations, most earnestly commends to the governments of Colombia and of Panama the peaceful and equitable settlement of all questions at issue between them.

"Ties of friendship which have so long and so happily existed between the respective nations" is certainly ludicrous, particu-larly when you bear in mind that by force we had prevented Colombia from protecting its own interests and had violated a solemn treaty in order that Colombia might be despoiled.

On November 6 this Government sent a message to the consul at Panama which concludes:

When you are satisfied that a de facto government, republican in form and without substantial opposition from its own peole, has been established in the State of Panama, you will enter into relations with it as the responsible government of the territory.

Thus a mere consul was given authority to pass judgment and bind this Nation to a policy which might invalidate existing treaty rights. On November 5 Phillipe Bunau Varilla was made envoy extraordinary and minister plenipotentiary to the United States. On November 11 he was received in his official capacity by President Roosevelt, and the latter in reply to Mr. Varilla's address referred to "seeing in the recent events on the Isthmus

an unopposed expression of the will of the people of Panama."
"Unopposed" is amusing, at least, and not even Josh Billings or Artemus Ward could have added to its humor. A few men in Panama had revolted against the parent government in order to carry out the plans of some whose interest in Panama were wholly financial and some in this country whose interest lay in the desire to secure the things needed to allow the construction of an interoceanic canal.

When Colombia sought to regain authority over its wayward child we used force and ordered to "keep hands off." We forbade her landing troops or to use the troops she had on the Isthmus to enforce order and maintain authority. To refer to the Panama revolution as "unopposed" is either humor or hypocrisy, but in either event the situation in which the people of the United States have been placed is a humiliating one and which reflects upon the honor and dignity of the Nation.

Two days after the revolution broke out in Panama the paper government there was recognized by the Government of the United States, and 14 days later a treaty was made between the United States and Panama, a treaty by which this Government guaranteed to defend the independence of Panama and maintain it against the word, and the real meaning of that treaty was that we should protect Panama against the wrath of Colombia, with whom we were already bound to maintain in the rights of sovereignty and property in Panama. We had to violate one treaty in order to hastily arrange another one; but that seems to be of little consequence to those who had violated ethics and ignored honor in order to rape Colombia.

In passing judgment on the hasty action of our Government in recognizing an independent Government in Panama, we must take into consideration what were the precedents for such a course and what had been the declared policy of this Government. In this instance we find that Mr. Seward, Secretary of State in 1861, had gone into this subject exhaustively in a note to Mr. Adams, minister to England. Mr. Seward wrote:

We freely admit that a nation may, and even ought, to recognize a new State which has absolutely and beyond question effected its independence and permanently established its sovereignty, and that a recognition in such a case affords no just cause of offense to the government of the country from which the new State has so detached itself. On the other hand we insist that a nation that recognizes a revolutionary State with a view to aid its effecting its sovereignty and independence commits a great wrong against the nation whose integrity is thus invaded and makes itself responsible for a just and ample redress.

Again in this same note Mr. Seward states:

To recognize the independence of a new State and so favor, possibly determine, its admission into the family of nations, is the highest possible exercise of sovereign power, because it affects in any case the welfare of two nations and often the peace of the world.

In the European system this power is now seldom attempted to be exercised without invoking a consultation or congress of nations. That system has not been extended to this continent. But there is even a greater necessity for prudence in such cases in regard to American States than in regard to the nations of Europe.

And jet this exercise of sovereign power, which Secretary Seward declared was "the highest possible one," was in the in-stance of Panama delegated to a minor official of our Govern-

ment, to be used when in his judgment a de facto government had been established. (See cablegram to the consul at Panama of November 6, 1903.)

Further on in the same note Mr. Seward wrote:

Seen in the light of this principle the several nations of the carth constitute one great federal republic. When one of them casts its suffrages for the admission of a new member into that republic it ought to act under a profound sense of moral obligation and be governed by considerations as pure, disinterested, and elevated as the general interest of society and the advancement of human nature.

Apply this logic of Secretary Seward to our relations with Colombia and our course of action in connection with the revolution. Under that acid test can any unbiased student say that we were "governed by considerations as pure, disinterested, and elevated as the general interest of society and the advancement of human nature"?

At the time when Secretary Seward wrote to Mr. Adams the integrity of this Nation was threatened, civil war reigned in the land, and there was danger that the Confederate States might be recognized as a belligerent nation by some of the European Governments. At that time England was financially injured by the war. The staple product of the South must be secured or the cotton-mill operatives of England would face starvation and her immense foreign trade in the manufacture of fabrics would be ruined. In fact, the interests of England were in greater danger than the interests of the United States were at any time in Panama. If England had brought her fleet to the coast towns of the Southland, had recognized the belligerency of the Confederacy, and had guaranteed to guard the independence of the seceding States, if she had used force to prevent the landing of the troops of the United States and had forbidden the Union troops then in the South from moving against the enemy, the people of the North would know that England had taken advantage of their hour of distress, and the bitterness engendered would never have passed away. We did exactly the same thing in order to gain a selfish end in Panama. We violated a solemn treaty and used the power of a mighty nation to oppress and rob a weaker sister, whom we were pledged to protect, and if out of our acts, out of the seed sown, we have raised the crop of suspicion and hatred in the minds of the people of other Latin-American countries, it was but the inevitable result. we have done is what we are expected to again do, and it is but natural that our brethren in the south, knowing their weakness and our strength, should fear and tremble and wonder if their turn is not soon to come.

It is said that our Nation will be humiliated in the eyes of the world if we confess to the wronging of Colombia and make atonement. That does not alter the justice of our acts. It is of far greater importance that our honor shall be rehabili-tated in our own sight, and when convinced that my country has committed a wrong I know of nothing nobler, nothing more essential, and, speaking in a more material sense, nothing that will redound to the greater advantage of the United States than to make antonement when convinced that we have done a wanton injury.

Government Regulation and Our Transportation System.

EXTENSION OF REMARKS

OF

HON. EDWARD B. ALMON, OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 21, 1916.

Mr. ALMON. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a speech made by Senator OSCAR W. UNDERWOOD recently in Chicago on the subject of an adequate transportation system.

The speech is as follows:

SPEECH OF SENATOR UNDERWOOD, RECENTLY DELIVERED IN CHICAGO, ON THE SUBJECT OF AN ADEQUATE TRANSPORTATION SYSTEM.

There are many problems that confront the American people of to-day that must be solved justly to all concerned in order that the solution determined upon may be accepted by the country as

The history of the North American Continent indicates that we have settled the problems that have confronted our people in eras that were measured by the centuries. The first century after Columbus discovered America was devoted to exploration and adventure; the next century to the clearing away of the wilderness, the settlement of the country. Then came a century devoted to the determination as to which of the European civilizations should dominate the North American Continent.

The work of the next century was that of building and development. It saw a fringe of civilization along the Atlantic and Pacific coasts spread and develop until we had builded a Nation and developed our civilization in every part of continental United States.

The destiny of our country is not yet accomplished. work ahead of us for the century in which we live must be the solving of the great governmental and economic problems under which our people will grow into a homogeneous race, with fixed principles and policies that will guide our destiny in the centuries vet to come.

We can not decide and determine all of these problems rightly in a day, in a year, or even in a decade, but we must approach them with a fair and unbiased mind, with the earnest desire to seek after the truth, with a determination to stand only for the right, and with a fixed purpose to reach a conclusion that will be of lasting benefit not only to the people of to-day but to the generations that come after us.

There is no more important question now pending before the American people that awaits proper solution than the settle-ment along just and economic lines of the vexed problems of transportation.

We have recently solved the banking and currency problems of the country by passing legislation that seems to have met with almost universal approbation. This legislation was only accomplished after full and careful investigation by a commission appointed by the President of the United States.

The President of the United States, in his recent message to Congress, has recommended that a commission should be appointed to give a thorough investigation to all the problems that confront us in the field of transportation.

As I understand the purpose of this investigation, it is not to hold an inquest on what has happened in the past. If errors have been committed or injuries have been done, that is a question for the courts and not a question of legislation. The real purpose to be accomplished by the investigation is to give an opportunity for all concerned-the farmer, the merchant, those directly engaged in transportation, the Interstate Commerce Commission, and the railroad managers-to appear before a committee of Congress and state their views in reference to the solution of this great problem with the view in mind that in the counsel of many we shall find wisdom to guide our legislative

You may ask me, Why the need of an investigation at all? There may be those present who believe that the transportation companies of the United States are engaged in private business, and that they should not be interfered with by Government regulation. To them I can only say that the transportation of the commerce of this country by the carriers is so closely allied to the healthy growth and the economic business development of the Nation that its regulation was inevitable from the begin-

More than that, revolutions do not move backward, and if we are unable to successfully and fairly regulate the transportation systems of America, the country will demand that we go forward, and the next step ahead is the Government ownership of the railroad lines. I think a step in that direction would be most unfortunate. It would probably lead to many evils that we dream not of to-day, to avoid which we must work out a satisfactory system of Government regulation, both for those engaged in the shipment of freights and those who have their money invested in the means of transportation. It is therefore a matter of great importance that we should earnestly endeavor to reach a fair and reasonable solution of the problem of regulation at as early a date as possible.

It has been said a nation is an organism, not unlike a living individual, wherein the channels of transportation are arteries and veins; if the flow in these be sluggish, industrial disorders are indicated; if it be clogged, industrial diseases follow; if it be stopped, national disaster results.

Something long has been, is, and will apparently continue to be wrong in the relation between the people and those who are engaged in the transportation business-something so wrong as at times it borders on open hostilities. Drastic remedies spasmodically applied and ill-considered and misapplied laws have not reached but rather more deeply rooted the essential wrong.

The capital invested in transportation is about one-sixth of all the wealth of the country, and about one-twelfth of all our people depend for their livelihood on the wages paid by transportation corporations.

Seventeen thousand million dollars of the people's savings are invested in transportation securities.

In almost all countries the railroad question is one of first importance and has been met in foreign lands either by government regulation or government ownership. In other counown, due primarily to two causes. Our large population and vast natural resources located far inland and at great distances from water transportation makes railroad carriage indispensable and industrial freedom could be guaranteed only by just regu-lation. The most serious difficulty that has in the past prevented the solution of the problem here and is not met abroad is a political one. Our system of government, under which the States possess certain inherent governmental rights and the Federal Government the great powers that were delegated to it in the beginning by the States, increase the difficulties and uncertainties that surround the problem before us.

It has been said that "No man can serve two masters," and under the regulation of to-day the transportation companies of America must obey the mandate of the Federal Government and at the same time the orders of each State through which the railroad line makes its way. All of the important railroad lines run through two or more States and are subject to different laws and regulations whenever a train crosses a State line. Go into the baggage car of an express train leaving Chicago, and you will find a package that will reach its destina-tion within the State of Illinois resting against a package whose destination is beyond the State line. Consider for a moment that the one package is subject to the rule of one master and the other must obey the mandate of at least three masters. Our courts have held that under the protection of the Federal Constitution the right of the railroads to charge rates that will produce a reasonable income on invested capital must be held inviolable; then how can we successfully determine what is a reasonable charge to be allowed for invested capital when you leave the determination to three or more sovereignties, each acting in its individual sphere?

Low rates and adequate facilities are demanded by the public, but the granting of one is often the denial of the other. Adequate facilities very often require the expenditure of surplus capital and lessen the borrowing power of the roads.

Without new railroad facilities our commerce can not be expanded beyond our present limitation, and trade has met a permanent barrier to its future development.

Two decades ago the great trunk lines of the country were able to borrow, in this country and abroad, the money necessary to increase their facilities at 4 and 4½ per cent interest. Railroad bonds were considered by the investing public a first-class investment. How is it to-day? It is often with great difficulty that the best transportation systems in the United States are able to renew their old loans or place new ones. Practically none of these loans can now be placed at 4 per cent interest. A large majority of the bonds or notes sold in the last year earn above 5½ per cent interest, and some are placed at rates as high as 7½ per cent. What is the effect of this condition on the shipping public? It must be borne in mind that on every dollar that is earned by the transportation companies of America 88 cents must go to pay wages, upkeep, and operating expenses, and only 12 cents goes to the capital account. It must also be borne in mind that there is no speculative enhancement in the value of the railroads that can be converted to the coffers of the company, because the property of the railroad is needed for its operation, and when the lines are once built the operation must continue in the interest of the public, and whatever their relative value may be does not affect the earning capacity of the company.

The sole source of revenue for the maintenance, development, and expansion of our railroad systems must come from the men who ride on the trains as passengers and from the men who ship their goods over the railroad lines.

If you increase the interest rates the transportation companies must pay, in the end you must get the money to meet the increase either by the reduction of wages, the curtailment of facilities, or by an additional charge on the passengers and shippers of freight.

Practically speaking, the last alternative is the one we must adopt. Where a transportation company placed its bonds at 4 per cent 20 years ago and renews them to-day at 6 per cent, so far as the public is concerned, it is identically the same as if the company had increased its bonded indebtedness by one-half at the old rate of interest. And yet the public derives no benefit whatever from the increased charge.

It is therefore necessary in the solution of the problem before us, in the interest of the public even more than in the interest of invested capital, that the credit of our transportation companies should be so good that they can secure the capital for their present maintenance and future development at the lowest possible charge.

There may be many good reasons to account for the changed status of railroad securities as investments in recent years. You may say that it is due to adverse legislation that has tries the problem has not been as difficult of solution as in our lalarmed the investing public. Whether the legislation has been unwise and ill considered or whether it has been just and fair, there can be no question that the investing public has become alarmed as to the solvency of railroad securities. It is also true that recent legislation of the Congress exempting State and municipal bonds from national taxation has invited capital into that field of investment. Again, it is true that the past genera-tion regarded industrial securities as a more or less speculative investment, but the development of the great industries of our country to-day along safe and conservative lines has opened a field for the use of capital at higher rates of interest than the transportation companies of America can afford to pay, because there is no governmental limitation on the profits that can be made in industry and there is a hard and fast limitation fixed by law on the earning capacity of railroad securities.

The opening of new fields for investment has taken away from the transportation lines much of the market they enjoyed

for their securities in the past.

The rates of taxation have increased in every State of the Union. Wages have gone up. The cost of equipment and supplies has greatly increased. If it had not been for economic management, many of the railroads that are running to-day would have been forced into the hands of receivers.

There is yet another problem that we must consider, and that is the safety of the employees, passengers, and freights that are

carried over our transportation lines.

Statistics show that there are at least 10 employees killed of injured on American lines to 1 on the railroads of Great Britain. It can not be truthfully said that the engineers who constructed these roads have builded them with less ability than the engineers who constructed the English roads. It can not be said that our iron and steel, our timber and rock, are not as good building material as that which is found in the British Isles. It can not be said that the men who sit at the throttle or watch the signal tower are less capable, sober, and alcrt than the men who occupy similar positions in a foreign land. Then why should we face conditions in this country that endanger human life and make a serious charge on transportation that in the end the public must bear, if it is not due to the causes I have named? To my mind, it is clear that the dangers involved in our transportation system are almost entirely due to the lack of proper transportation facilities.

We endeavor to run trains over a single track where the needs of business require double tracks. We load our freight on weak and defective cars where new cars should long ago have taken their place. We rely on antiquated methods for the movement of our trains when our tracks should be provided with the

latest and best signal devices.

In fact, it can not be denied that to adopt modern methods and provide proper facilities for transportation would be true econ-

Then why has it not been done? Largely because the transportation companies of America have been unable to earn sufficient capital to enable them to meet their operating expenses, interest charges, and accumulate a surplus with which to provide for betterments and improved facilities, and that their credit has been so seriously disturbed that they are unable to borrow money for the new improvements at reasonable rates of interest.

In fact, I think it can be said without expectation of contradiction that, taken as a whole, the transportation system of the United States, so far as performing its proper functions of the transportation of our freights to their ultimate markets and the carriage of passengers to their destination with safety and

economy, is breaking down.

What, then, must we do to solve the problem? To restore confidence in the minds of the investing public as to railroad securi-To insure rapid transportation of passengers and freights to their ultimate destination at reasonable rates, and to provide for the safety of transportation and the increased facilities that are necessary to transport the growing business of the Nation? These results can not be accomplished by moving backward or divorcing our transportation system from Government control. Nor can it be accomplished without great danger and great cost to the people by progressing to the ultimate step in advance and accepting Government ownership of the transportation lines.

In my judgment we must find the golden mean, We must solve the problem along lines of private ownership and Government regulation. We must consider the wisdom of substituting 1 master for the 49 masters that regulate our commerce to-day. We must consider the wisdom of Government supervision of the issuance of all securities by our transporta-We must consider the wisdom of Government supervision of the issuance of all securities by our transportation companies with the assurance to the public that new capital will be invested to secure proper facilities and used for legitimate purposes—not for speculation. We must assure the public that when they invest money in railroad securities which are supervised by Government regulation we stand for a system

of regulation which will allow the transportation companies to charge such rates for carriage as will enable them to promptly meet their interest account as well as their operating expenses. We must perfect a system of regulation that will recognize that the transportation lines of America are great public highways in which the people are as much interested as those who have invested their capital in them; that every shipper in America must have equal rights in the transportation of his goods along these highways; that rebates and discriminations of all kinds must be of the past and prohibited in the future; and we must recognize that the man who is willing to invest his money at a moderate rate of interest in railroad securities is not exploiting the public but is a public benefactor.

In my opinion, an adequate transportation system means-First. Roadbeds must be made more secure and more per-

Second. Trackage must be enormously increased and many roads double-tracked.

Third. Safe equipment must be sufficient to satisfy requirements at any and all times

Fourth Terminal facilities must be greatly improved and

largely increased.

Stated briefly, then, our question is whether the American people are willing to put up with an unsafe, inferior, and inadequate transportation system or have the intelligence to pay for one that will supply their needs and protect the lives of the

The main trouble with the regulation of the railway system is that corporate law has been destructive, not constructive;

has been piecemeal, not comprehensive.

To solve these problems it is proposed that a committee of Congress shall give a thorough and complete hearing to all who desire to present their views. Let us hope that the result of the investigation will be productive of wise legislation-legislation which will be helpful and not hurtful, legislation which will build up and not destroy, legislation which will bring lasting and complete prosperity to the people of America.

Rural Credits.

EXTENSION OF REMARKS

HON. SAMUEL M. TAYLOR,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 23, 1916.

Mr. TAYLOR of Arkansas. Mr. Speaker, the Democratic platform, upon which President Wilson was elected, said:

Of equal importance with the question of currency reform is the question of rural credits, or agricultural finance. We favor legislation permitting national banks to loan a reasonable portion of their funds on rea estate security.

The Democratic Party promised the farmer that if elected and our party given power to legislate this law should be passed. The farmer, among others, did help to put the Democratic Party They thought they were going to get some genuine rural-credits legislation, and they have not forgotten this prom-The President says he favors such legislation. He said on December 2, 1913, in his message to Congress:

December 2, 1913, in his message to Congress:

I present to you, in addition, the urgent necessity that special provision be made also for facilitating the credits needed by the farmers of the country; what they need and should obtain is legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves. We must add the means by which the farmer may make his credit constantly and easily available and command when he will the capital by which to support and expand his business. We lag behind many other great countries of the modern world in attempting to do this. Systems of rural credit have been studied and developed on the other side of the water while we left our farmers to shift for themselves in the ordinary money market. You have but to look about you in any rural district to see the result—the handleap and embarrassment which have been put upon those who produce our food.

The time to keep our pledge to the farmers of the country is

The time to keep our pledge to the farmers of the country is now. From the throbbing heart and the trumpet tongue of the people comes the mandate "Onward!"

A few days ago I sent a printed statement to the people whom I have the honor to represent in this Chamber, and, among other things, I said:

but some do. The farmer is largely the producer of the wealth of this country. He feeds and clothes not only this country but other countries as well, to a large extent. The census of 1910 showed that only about 32 per cent of our population were engaged in agricultural pursuits. It may be larger now, but think of it. Are not our farmers and those who would like to become such entitled to help in their struggles? I have hopes that this Congress will pass a rural-credits law. Indeed, such a bill will be reported to the House in a few days, and before you read these words I hope you will hear that we have passed it; and you may be sure that your humble representative will do his utmost to secure a result that will give to the producer a cheap farm loan, and that, too, with little cost to obtain it. The farmer offers the best security in the world—first, the integrity of the farmer; second, the industry of the farmer; and, third, the productive capacity of the land. If I had the power, I would blight and wither the grasping hand of the usurer that takes for his toll all products of the farmer—the toll spared by pest, drought, and flood. It is easy to finance the farmer who owns unencumbered land. The difficult problem is to help the small farmer in debt, the farmer boy growing up, and the workingmen in the towns and cities who want to go to the farm. These classes ought to have a chance to own land, to get a foothold in the soil. The prosperity of our Nation has its taproot in home ownership. A system of rura: credits, in my judgment, will solve this problem.

Agriculture is not a State institution, but it is a national affair, and if we are to have a farm credit which will benefit agriculture, the agriculture of the whole country and not of a few States must be considered. Therefore it is plain that a national farm-credit measure must deal with this question of the price of farm credit, and it is evident that the National Government only can make it uniform and equitable.

It may be difficult to define concretely what the rate of in-terest should be, but we know now that it is too high for agriculture, and that it is a national question of the utmost importance to every man, woman, and child in the country, and I believe it should not be in excess of 4 per cent. When the farmer does not succeed none prosper. He is the most sensitive nerve in the whole national system. Prick this nerve and the whole Nation suffers. You can not Shylock a farmer on a 40-

acre patch without bringing hurt to the body politic.

acre patch without bringing hurt to the body politic.

The man who stands upon his own soil, who feels that by the law of civilized nations he is the rightful owner of the land he tills, is by the constitution of our nature under a wholesome influence not casily imbibed from any other source. Perhaps the farm of this man has come down to him from his fathers; they have gone to their last home, but he can trace their footsteps over the daily scenes of his labors; the roof which shelters him was reared by those to whom he owes his being; the favorite fruit tree was planted by his father's hand; he sported in his boyhood by the side of the brook, which still winds through his meadow; through the field lies the path to the village school of his earliest days; he still hears from his window the voice of the Sabbath bell which called his fathers and his forefathers to the house of God; and near at hand is the spot where he laid his parents down to rest, and where he trus's, when his hour is come, he shall be dutifully laid by his children. These are the feelings of the owner of the soil; words can not paint them; gold can not buy them; they flow out of the deepest feelings of the heart; they are the lifespring of a fresh, healthy, generous, national character.

Why should not this great Government help to aid the building

Why should not this great Government help to aid the building of farms and homes and add thereby to the joy, contentment, and happiness of this great class of our grand people who have embraced agriculture as an occupation? Why not encourage and help the young man who desires and would like to follow in the footsteps of his father and gain a home, where he may depend only upon the blessings of God upon his honest industry

Who can estimate the importance of agriculture, in a national point of view, as controlling the character, the prosperity, and independence of our country? It is the most certain source of strength, wealth, and independence; commerce may well be termed the younger sister, for in emergencies she looks to agriculture, both for defense and for supply. We have passed in the House a good-roads bill, the twin sister of agricultural aid.

Agriculture was the first occupation of man, and as it embraces the whole earth, it is the foundation of all other industries.

Newman Hall says:

Labor clears the forest, drains the morass, and makes the wilderness blossom as the rose. Labor drives the plow, scatters the seed, reaps the harvest, grinds the corn, and converts it into bread. Labor, tending the pastures, as well as cultivating the soil, provides with daily sustenance the one thousand millions of the family of man.

Aid to enable farmers to procure money to purchase homes and to carry on agricultural pursuits has been extended by every enlightened Government save our own. We have extended governmental aid in one form or another to every line of business except agriculture. Millions of acres of public lands were given away to corporations to induce them to build railroads. In the past this Government has subsidized shipping lines to carry mail; guaranteed the contract of the bankers in order to enable them to realize on their paper; we have agents in every part of the world developing business for our merchants and manufacturers, but we have left our farmers to the tender mercies of great mortgage and loan companies, who charge ruinous interest rates. We have disregarded the fact that the cost of production necessarily must enter into the cost of the product to the consumer, and therefore have contended that any aid extended to the farmer was class legislation. Yet we must

realize with emphasis that every thing that is eaten and worn must be the product of his toil, and its cost to the consumer necessarily influenced by the cost of production. This being granted, direct Federal aid to the farmer will be as helpful to all other classes as to him, because to the consumer the cost of living would be cheapened and all classes would benefit by the legislation equally, and there would be, therefore, no class legislation. However, the sharp line of division between those who really want to enact helpful legislation that is really helpful to corporations and groups of men of great wealth and hurtful to the farmer divide upon this one question of Government aid. With it the farmer will be emancipated. Without it, he will have to begin over again his fight for justice.

If legislation is enacted at this Congress, as proposed by some, without any aid being extended by the Government, the farmer will reject it. He will realize it was not intended to help him, but merely to silence him; that instead of lifting his burdens, it will grant a respite to those who are oppressing him. It will postpone the day of justice, because, when he complains, he will be answered that "we have legislated in your behalf, and you have not as yet had time to determine whether it will be helpful or not and you must wait."

It is strange that the idea is advanced always that the Government must not come to the relief of one class when the farmer is being considered, yet all other classes are embraced in legislation directly intended to benefit that class. objected to Government aid as applied to commerce and manufacturing enterprises. No one protested when appropriations were made to search out markets. No one now seriously questions the wisdom of purchasing ships to transport commercial com-modities to markets where they may be profitably disposed of. No one seriously objects when millions of dollars are expended to deepen harbors as places of refuge that commerce might be safely and cheaply handled; but the instant that legislation is proposed that will unshackle the farmers and make it possible for the tenants to become owners of farms, we are met with a protest that the proposed legislation is class legislation, is unconstitutional, and is contrary to the genius of our Government. I take it that not for long will-this great and deserving class of citizens submit to this unjust and unpatriotic treatment at the hands of its legislative body. The farmer demands less at the hands of his Government and receives infinitely less than any other class of citizens. His occupation in a measure isolates him. It teaches him to rely upon his own resources; to meet and solve his own difficulties; to fight his own battles, and to do that single handed and alone. Therefore he has never banded himself together, as other classes in this Republic have, and beseeched in one voice in the halls of legislation that justice might be done, and accordingly he has received nothing but faint praise and much exploitation.

In the Sixty-third Congress there was an opportunity to have lifted from the farmers the burden they should not have borne in the way of exorbitant interest rates. I supported this bill but the efforts of those who should have been the friends of the farmers were fritted away in support of measures, some of which were good and some wholly vicious, and each man wedded to his own idol, while those opposed to legislation by lining up first with one group and then the other to fight all measures defeated all measures. Whether the same methods are to be pursued in this Congress is not yet apparent. There are measures pending in Congress, some of those the same bills that were introduced in the Sixty-third Congress, that if enacted into law, or the principles engrafted upon the committee bill, would procure for the farmer the full measure of relief that he is entitled to receive, and we who are his friends in Congress are pledged that no legislation not bearing these provisions shall be enacted into law by a vote of ours, nor shall they be

enacted into law without our protest,

The present Congress and our great President are about to redeem the promise made at Baltimore in the new declaration of human rights. Under the provisions of the present committee bill as it is being redrafted, and amendments added thereto, farmers will be enabled to borrow money on a long-time repayment plan at a rate of interest not in excess of 6 per cent, and possibly not greater than 5 per cent. There are many provisions in this bill that my judgment does not approve; however, in the main it stands for those things for which the friends of rural credits have contended, and I stand with them. It commits the Government in a measure to aid this system. When we have enacted it into law, and I believe we will, great relief will come to the farmer-no such sufficient relief, however, as in my judgment he is entitled to receive, but the best that can be had under existing circumstances. In fighting for this measure, as I shall do, and in advocating its passage, as I will do, I do not mean thereby to say that the farmers have received

under this bill all they are entitled to receive at the hands of this Government. I do not mean thereby to say that I shall accept it as a just and adequate relief. On the other hand, I intend that this shall be merely a stepping stone, a beginning, a new starting point, in the fight that we are now waging to give justice to this most deserving class of our citizenry.

A perfect rural credits bill would be a measure that would enable the farmer to borrow money at a rate of interest not in excess of that which the Government itself pays. It does not necessarily mean that the Government shall advance a dollar toward its establishment. It merely means the Government should extend to the farmer that which it extended to the business world-its credit. There are millions of dollars hidden away by people who are willing to accept a low rate of interest, and loan their money for a long time, provided they can feel assured that it will be returned. This assurance can be given them only by the Government, and when the Government shall have performed that service for the farmers, those engaged in agriculture in this country will borrow money not in excess of 4 or 5 per cent, and under that plan there would be no disarrangement of commercial banking, and no interference with manufacturing enterprises. It would call out of its hiding the money that is not now engaged in active enterprise of any kind, the untold millions of dollars that are practically buried, and at the same time it would give relief to the greatest of all industries, agriculture. It would make possible the improvement by those who already own lands. It would make possible also the purchase of land by those who do not now own a home. It should also have written into it a provision to prevent the building of large estates by alien corporations. That country best where the land holdings are small; its provisions should be available only to those who actively and actually engage in agricultural pursuits. The law should be framed so that it would not be possible for men to take advantage of its provisions to borrow money and acquire lands with no intention of farming or building or maintaining a home, but in turn to rent them to people who are landless

During the Sixty-third Congress and in the present, the Sixty-fourth Congress, my colleague, Mr. Caraway, of Arkansas, introduced a bill, which I approved, looking to such relief as I have indicated. A rural credit bill should have written in it a provision that no man should borrow in excess of, say, \$10,000, and should borrow only on those lands on which he actually makes his home; that if they became alienated for any reason the loan would become due and payable, because, to reiterate, the object of a rural credits bill is to enable the people to own lands who live upon the land, and not to enable the absentee landlord to build up great estates and thereby exploit these producers of our national wealth, the agricultural classes. I have no fault to find with men who own large land properties, are, as a rule, excellent men; they bought their lands; they are entitled to them, and no process of law could take them from them, nor would I be a party to an endeavor to do so. And yet I have great sympathy for tenants. A man is just as good a man who never owned the roof that sheltered his family, but we all realize that that country is happiest and the people most contented where each shall own the acres that he tills, the house in which dwell his wife and babies, and this condition will be brought about when this Government realizes its full duty toward our farmers. The present bill with its low rate of interest and provision for a long-time repayment plan will facilitate and hasten the coming of that day when the dreams of our farmers shall be realized. Then will a shout of joy go up, and the fulfillment of the promised "new freedom" will be at hand.

Rural Mail Delivery.

EXTENSION OF REMARKS

THOMAS D. SCHALL. HON. OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 23, 1916.

Mr. SCHALL. Mr. Speaker, I received this morning a letter from the Postmaster General, A. S. Burleson, in response to some remarks made by me, together with data, in the Con-GRESSIONAL RECORD of the 19th instant.

sweeping change which went into effect November 15, 1915; and in fairness to him and in order that his views upon the situation may be put plainly before my district, I ask that his letter to me be set out in full:

OFFICE OF THE POSTMASTER GENERAL, Washington D. C., February 21, 1916.

Hon. Thomas D. Schall,

House of Representatives.

Hon. Thomas D. Schall.

My Dram Mr. Schall.

My Dram Mr. Schall.

My attention has been called to your remarks a setuded in the Concersional Recomb of February 19.

A. S. Burleson, Postmaster General.

I note the above letter refers to some of the data in my remarks of the 19th, being dated before the change took place. These letters were in protest of the contemplated change, and should have served in avoiding the disastrous muddle.

In response to the above letter, I wish to set out an article published in the Osseo Review, February 16, 1916:

AFTER BETTER MAIL SERVICE.

About 20 patrons on the east end of what is supposed to be Anoka auto route A were in Osseo yesterday and made affidavit to the mall service they are not getting. One man made affidavit that he is forced to go 2 miles to his mail box. Some people can be misused occasionally, but all the people can't be neglected the greater part of the time without resentment—and this resentment is taking form in legal complaints. The Osseo Review, the local paper, which should reach everybody not later than Friday of any week, is seldom delivered before Saturday, and as late as Monday following. To-day's bundle for that route will leave this office as a registered package, and so continue until the spot that falls can be positively located, when some artion will be taken to see if destruction is the object of the mail-route changes. Subscribers should get their Review every Thursday, and if you don't, notify this paper.

I am this morning in receipt of 11 affidavits from citizens in and about Osseo, which I wish to set out in full. These affidavits are all addressed to James L. Blakslee, Fourth Assistant Postmaster General, Washington, D. C.:

SERVICE OF MAIL ROUTE A, ANOKA, FORMERLY ROUTE 2, OSSEO.

I am glad to have discovered the means of attracting the attention of the Postmaster General to the deplorable conditions of the rural-mail delivery in my district, brought about by the

for parcel-post delivery without delay on account of carrier not having scales. That the service has been very irregular."

Before me, Charles Hechtman, a notary public in and for the county of Hennepin, State of Minnesota, came W. A. Ferguson, who, being by me duly sworn according to law, deposes and says that his mail is delivered every other day; that he lives on route A, and has to go 2 miles every other day to a neighbor where carrier feeds his horse and has dinner and leaves mail to be called for.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came Ray Mattson, who, being duly sworn according to law, deposes and says that he received his mail 48 hours late; that mail for his neighbors is left in his box for him to deliver.

hours late; that mail for his heighbors is left in his box for him to deliver.

Biefore me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came John Pletcher, who, being by me duly sworn, deposes and says, that he is a patron of the Osseo post office, Hennepin County, Minn., and formerly received his mail on route No. 2, and that all mail was received regular and in good condition. Deponent states he is compelled to walk 1½ miles for his mail. Attached is a letter marked "Exhibit No. 1," which was mailed in Minneapolis December 21 and received December 24, 1915, a distance of 12 miles. Exhibit No. 2 was mailed December 24, 1915, a distance of 12 miles. Exhibit No. 2 was mailed December 27, 1915, a distance of 12 miles. Exhibit No. 2 was mailed December 26, 1915, a distance of 12 miles. Exhibit No. 2 he received his mail from these points as shown in the exhibit the day after the mailing; now mail is received from three to four days late. Deponent states that all his first class and the greater part of his second class mail is always 24 hours late and deliveries are irregular.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came J. A. Theorin and I. Dahl, who, being be me duly sworn according to law, depose and say that their mail is delivered to them very irregular and is always 24 hours late.

late.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came A. P. Mattson, who, being by me duly sworn according to law, deposes and says that first-class mall delivered to him about November 25, 1915, was delivered to Ray Mattson and in turn delivered to him four days late; that it caused him a great deal of inconvenience; that the attached postal card marked "Exhibit A" was mailed at Anoka, Minn., December 12, 1915, and received December 15, 1915, too late to attend the funeral of a relative, which caused him much sorrow, and, with the previous service, would have been received the following day; that the distance from Anoka to his home is 9 miles

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came Fred Schreiber, who, being by me duly sworn according to law, deposes and says that he receives his mail 24 hours late, and since February 7, 1916, receives his mail every other day, and that his service has been very unsatisfactory and irregular.

mail 24 hours late, and since February 7, 1916, receives his mail every other day, and that his service has been very unsatisfactory and irregular.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came J. W. Johnson, who, being by me duly sworn according to law, deposes and says that he received his mail very irregular; that the Osseo Review, home paper, delivered to the post office in Osseo Wednesday is not delivered to him until Saturday or Monday and is from three to four days late.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came Feter Zimmerman, who, being by me duly sworn according to law, deposes and says that he received his mail every other day; that his mail was delivered February 12, 1916, by Almeda Finch, schoolgirl, given to her by carrier on route A, Anoka, Minn. Service has been very irregular.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came Guy Mattson, who, being by me duly sworn according to law, deposes and says that instead of receiving mail daily he is served three times a week. Roads have been open and mail is received 48 hours late.

Before me, Charles Hechtman, a notary public in and for the county of Hennepin and State of Minnesota, came Herman Goetze, who, being by me duly sworn according to law, deposes and says that he is compelled to walk one-half mile each day for his mail; that on February 13, 1916, no mail was delivered to his mail box. The roads were passable and weather conditions were favorable. Mail has been received 24 hours late since change in routes has been effected, and in a good many instances 48 hours late.

The mail brings me a number of letters every day protesting,

The mail brings me a number of letters every day protesting, some of which I will insert:

LONG LAKE, February 8, 1916.

* * Our mail service is still bad. Sometimes we receive it every other day and it is always one to three days late. "Economy" to the Government against the interest of the farmers and rural residents in order that the Government may have a few more millions to squander on some pork-barrel scheme.

ROLLA STUBES.

Minneapolis, Minn., December 23, 1915.

Minncapolis, Minn., December 23, 1915.

Dean Sir: I wish to explain that our mail route has been changed. We were on route No. 3 and had both our carrier and route changed. We used to get our mail at 10.30 a. m. and now we get it about 4 or 4.30 p. m., and if he doesn't get there at that time we don't get our mail until the next day. So we would like to have our route and carrier changed back the way it was at first or always had been. So many are complaining about the route and the mail man being changed; they all want things changed back the way they were. So if you would be so kind and have it arranged the way we want it we would be very glad.

Your friend,

J. GERHARDT

EXCELSIOR, MINN., February 7, 1916.

EXCELSIOR, MINN., February 7, 1916.

Dear Sir: I want to enter a protest against our rural free delivery at Vine Hill.

Last fall they changed our rural delivery along the Minneapolis-Excelsior road, and instead of delivering our mall at our houses they required us to bunch our mail boxes at the intersection of Vine Hill and Excelsior roads, and then they put on the rottenest service they could figure out. Instead of giving us daily service we get it three times a week. Instead of giving us our mail at a given time the time varies as much as six hours, so that If we have any important mail to send we must either take it to Excelsior post office or stand out in the cold and wait for the carrier. The route west of us could deliver our mail without any extra bother, as the carrier comes within one-eighth of a mile of us and turns

west. Our route No. 3 delivers mail in Deephaven, an incorporated village, and that is the reason, I think, that we can not get service. The question is, Should incorporated villages be served to the detriment of the rural district? You understand the Minneapolis-Excelsior road is the old territorial road and is now a main county road, and I can not understand why the service was taken from us without any rhyme or reason. Last fall I complained to the Fourth Assistant Postmaster General, and the only result we got was to have our service reduced to triweekly from daily. Our entire community is complaining about the service, and I understand many people have written from the rural service. If you can do anything for us in this matter you will place our entire community under lasting obligation.

Yours, truly,

GEO. P. ZACHRITZ.

St. Bonifacius, Minn., January 28, 1916.

St. Bonifacius, Minn., January 28, 1916.

Dear Sir: I expected you would have done something about our rural mail route ere this. To-day makes the sixth time this month the carrier has failed to make a trip on his route. There were five days in the week of the 8th that he did not deliver me my morning Tribune. He tried to run an automobile in the snow and got hung up three times. For three days he did not come at all. One horse can not make the trip. * * *
The department, under plea of "economy," has told us our post office is to be Excelsior, 9 miles off. If the department can not afford to deliver our mail it had better discontinue the route, then all our mail would come to 8t. Bonifacius, 3 miles from us, which has been our post office for 30 years, and we would at least know where it was. I subscribe to four farm papers, and not one has been delivered to me since the "economy" change. Every man from Woodend Farm to Victoria is very much dissatisfied with this service. Get our old route back.

Yours,

WILLIAM SMITH.

WILLIAM SMITH.

RURAL FREE DELIVERY ROUTE No. 3,

Minneapolis, December 11, 1915.

Dean: Friend: There is one question before Congress in which I am interested and that is relating to rural free delivery. Changes have been made recently which have proved a failure rather than an improvement to our service. The mail does not reach the farmer as early in the day as before this change. Outgoing mail is delayed in reaching the station in the afternoon. Many patrons have to go a long way after their mail. If the Post Office Department wants to economize don't start on the farmers. They get little enough now in mail service. I hope you will see that the former routes are reestablished, if possible.

Yours, truly,

LORETTO, MINN., January 30, 1916.

Loretto, Minn., January 30, 1916.

Dear Sir: The rural mail service through our district is very, very poor. Some of our best customers with whom we have a great deal of correspondence and who live only 2 miles and less from our post office do not receive our letters sometimes for more than three days after we mail them. This condition is due to the fact that our territory is covered by carriers from other neighboring post offices. The service in cases like ours has lost all of its efficiency and is worse than none. We have only one route out of here and there is ample work for another mail carrier here. What is needed is to have our territory covered from our own post office. Can you not see that we get this much consideration?

Very truly, yours,

FRANK H. SEXAUER.

LORETTO, MINN., January 29, 1916.

LORETTO, MINN., January 29, 1916.

Dear Sir: Can you help us to get another mall route out of Loretto to cover this territory? It takes us two days, and sometimes more than that, to get our mall to our customers who live only 2 miles out of town. It is because the carriers come right through town from Hamel, Minn., and also very close to town from Maple Plain, Minn. All we want is to have our own territory covered from our 'wn post office. Then, there are other customers only a mile or two from town who have no service past their homes at all. For example, when we wish to send Mr. Smith a letter it must lie in this office until the evening train, which takes it to Minneapolis, where it is sent out to Maple Plain and delivered from there on the following afternoon if the connections are made in Minneapolis, and provided also that the mail carrier does not leave Maple Plain until the afternoon train has arrived in Maple Plain. This service is one thing that we really need. And we need it badly.

Alebert Gaspar,

Assistant Cashier State Bank of Loretto.

ALBERT GASPAR, Assistant Cashier State Bank of Loretto.

St. Louis Park, Minn., January 25, 1916.

Dear Sir: At the last meeting of the Farmers' Club of St. Louis Park a resolution was passed to instruct the secretary to write our Representative at Washington and our postmaster of Minneapolis in regard to our present mall service. It has been very irregular and the mail has been badly mixed. There has been a big complaint among the farmers of the mal. service, and hope you will be able to give us a little better service than we now have.

Yours, very respectfully,

L. M. LARSEN, Secretary,

MAPLE PLAIN, MINN., January 18, 1916.

Maple Plain, Minn., January 18, 1916.

Dear Sir: I desire to express my feeble voice in a protest against the Post Office Department reversing the routes of the rural carriers. It seems too bad that every time an economical wave strikes the officials at Washington the farmer is always the "goat" for it to be practiced on. This doub!mg the routes of the carriers has in a large measure robbed the parcel post of its benefit to farmers, as it is impossible to send butter and eggs by parcel post owing to the uncertainty of the arrival of the carriers, and, with the long routes they now have, produce would freeze before reaching the local post office. While millions are being expended by the Government in all directions, it strikes one as a "penny wise pound foolish" method to commence at the rural free delivery for cutting down. It will not popularize the administration any with the farmers or rural dwellers. I hope you will do all in your power to restore the rural delivery of mails to its former efficiency. Thanking you in advance, I am,

Yours, very truly,

Frank H. Ford.

These petitions, with many others, signed by 197 and 56 citizens, respectively, have been forwarded to the department, and that is the last I have heard of them:

SUNRISE, MINN., January 3, 1916.

SURISE, MINN., January 8, 1916.

SIR: We, the undersigned petitioners, do hereby respectfully petition
you that you use your best efforts toward the reinstatement of rural
route No. 1, Sunrise, Minn., which was, by action of the Postal Department, discontinued November 15, 1915, and partitioned between
the following routes: North Branch, Minn., route No. 4; Lindstrom,
Minn., route No. 2; and Center City, Minn., route No. 1, which is
proving very inconvenient and is causing delays in delivery of mails
from one to two days. Also that rural route No. 4, from North
Branch, Minn., be changed so that it will cover its old territory used
prior to November 15, 1915.

Sin:: We, the undersigned taxpayers, voters and United States citizens, and residents of Maple Plain and the surrounding country, do hereby protest to the changes made in the mail routes going out from Maple Plain, Minn. The service given us previous to the change was good, and we were well pleased; since then some of us are compelled to go from a quarter of a mile to a mile for our mail or else drive all the way to the post office for it. In the change one carrier is compelled to drive 4 miles where he does not pick up or deliver one piece of mail, and that is over roads which are never worked, making them almost utterly impassable most of the year. On the other hand, seven families living on the State road within a half mile of each other have no mail service and have to walk a mile or more or to drive to the post office. One of the other carriers is forced by the recent change to drive 5 miles to serve one family that does not even get a daily paper, and that over roads which are impassable over a good deal of the year. Others are not getting their mail at all or else one or two days latenever less than one day late. Others having been in the habit of doing quite a little of their busness by parcel post, are now compelled to make a drive of several miles or wait several days for the articles. It also causes some of use to drive from 3 to 4 miles in order to do our banking or having to send our deposits a long way around, causing them to go through many hands, with several days delay. Since we pay for conveniences, we feel that we are entitled to them and should not be inconvenienced as we now are. We deem it a gross injustice to have a system which gives one man the power to make such radical changes as have been made here, as well as elsewhere, without having any knowledge of knowing what he is doing. Therefore we carnestly request that you do all in your power to bring back our former service and stop the unnecessary expense of driving over roads such as described above, without having as you do in the you

If I were to insert all the complaints filed with me, I could fill the RECORD. From conversation with other Congressmen I find the same conditions prevail in their districts. Where there is so much smoke there must be some fire.

Rural Credits.

EXTENSION OF REMARKS

HON. FRANK PARK, OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 23, 1916.

Mr. PARK. Mr. Speaker, taking advantage of the leave granted me to extend my remarks on rural credits, I wish to call attention to the fact that the Democratic Party has pledged its aid to the debt-oppressed farmers of our country to give to them a system of rural credits which will in a measure relieve their distressed situation.

I have critically examined the various methods offered to stablish a system of rural credits for the country. these bills present excellent features calculated to advance the None of them interests of those who lend money to farmers. present as many good features solely for the benefit of the agricultural class as bill H. R. 595, which, I understand from the author, embodies in its plan and scope the ideas and ideals of the National Farmers' Union, the organization which has done so much and cherishes so deeply the interests of the farmers of our country. After a careful study of this bill, I have decided that if it represents what the Farmers' Union, the Grange, and Alliance of Farmers desire and have requested, that I shall adopt it with a few amendments that seem good to me as the bill which I shall endeavor to see enacted into law.

I see no good legislative reason, Mr. Speaker, why the comparatively small expense of organizing and operating this system shall not be borne by the Treasury of the United States. The bill asks for no appropriation of money to be loaned the farmer direct, and the expense of operating will necessarily be little when compared to expense of operating other departments and bureaus of the Government.

If the Government can foster and aid the manufacturer, why not equally further and aid the business of the farmer?

For the purpose of organization and establishment of a system of rural credits my bill provides the appropriation of half a million dollars, this to pay for the services of the commission and the minor officials in direct control of the operation of the system. The farmer applying for a loan should not be compelled to pay any commission to any middleman or agent, and shall not be saddled at the outset with unlimited agent's fees.

There are some 12,000,000 farmers in this country, whose aggregate wealth amounts to over \$40,000,000,000. They owe on this about \$6,000,000,000, and their farms are mortgaged for over \$7.000,000,000. They pay out annually as interest over \$500,000,000 on an average rate of interest of $8\frac{1}{2}$ per cent. The computation of experts shows that they can pay but 5½ per cent and thrive. These figures are obtained from those who have made careful computations and should be familiar with what they speak and write, and 1 accept them for their full value. The farmers of this country are paying out annually over \$180,000,000 as interest more than they can pay and succeed at the husiness of farming

The farmer should get his money at 5 per cent, and under a well-managed system of rural credits this interest rate should be reduced gradually to less than 4 per cent.

The objects of the bill introduced by me are obvious. It needs no detailed explanation; any farmer can understand it.

Farmers alone who live on their farms and are actually engaged in agriculture are entitled to the benefit of this act.

Mr. Speaker, we must enact a rural credits law at this ses-The farmer may forget the iniquitous stamp act, which should be repealed as soon as it can be written into law, the failure to put sugar on the free list, and other legislation to which he may be opposed, but he will never forget a failure to enact the only legislation that the 12,000,000 farmers unitedly stand for.

The rates of interest in the bill reported to the House by the Banking and Currency Committee are too high. This is doubt-less the only bill that will be reported to Congress; it is the only bill bearing the approval of that great committee.

The farmer now has to pay 6 to 8 per cent interest on his long-time loans, with unlimited loan agents' fees, besides constantly running dangerous risks of foreclosure because of present impossibility of securing loans on long time at a low rate of interest.

Our entire financial system needs material change and reform, and our farmer constituents say to us to get for them at this session the very best rural-credits bill possible, and let it be amended and improved year after year until we can get it on a good, practical, workable basis, as we have done and are doing with the parcel-post system.

Of course, if we could get an ideal rural-credits system at once we should certainly do so, but we should not adopt the policy of refusing to legislate at all because we can not get the best at this time. Let us strive for the ideal, but take that which we can get that will most nearly approach it.

If the rural-credits bill now before Congress can be made

workable and give farmers money at 5 to 6 per cent on periods up to 36 years, as some believe it can be, it will be a veritable godsend to farmers who now are burdened with extortionate rates of interest.

The idea that money can be obtained by farmers at 5 to 6 per cent under the proposed rural-credits law springs from these facts: Money has always been offered for safe, nontaxable bonds bearing 4 per cent. The bonds proposed in the bill before Congress would be nontaxable and just as good security as State bonds, therefore they should sell in market on basis of paying

If the bonds bear 4 per cent, the farmer will get money at 5 per cent, as the bill provides that he shall get the money at not exceeding 1 per cent of the rate of interest on the bonds. Wherefore if the bill can be so amended, he can secure money at 5 per cent or less.

By making rural-credits bonds nontaxable the buyer will take them at 1 per cent less in the market than if taxed. One per cent added to the interest on the bonds fixes the rate to the farmer, as the bill provides that the money must be loaned within 1 per cent of the bond rate of interest. If the bonds bring 4 per cent, the borrower gets it at 5 per cent, and if they bring 5 per cent, he gets it for 6 per cent.

Commercial banking is no more deserving of aid than rural

America should do for her farmers what Europe did for hers. The tenant farmer needs help more than any other class, and the bill should provide more help for him.

In the Southern States, where cotton is the main money crop, the interest on loans should be payable annually and not every six months, so that the southern farmer can meet it.

The Government has fostered and aided manufacturers of raw materials into finished products by a high protective tariff for many years; why not give some aid to those who create the raw materials?

The farmer will never be contented with the present opportunities afforded him of getting money at exorbitant rates. He is knocking at the door of Congress and crying to us for help. Let us help him.

A Soldier's Talk on War.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 23, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, once a year, on Washington's birthday, at the Union League in Philadelphia, the surviving veterans of the George G. Meade Post, No. 1, Department of Pennsylvania, Grand Army of the Republic, gather together to memorialize the services of those who fought and died to preserve the Union. Amidst these patriotic surroundings, the Union League of Philadelphia being the first of its kind to raise regiments in response to the call of the illustrious Lincoln, the Grand Army boys again assembled last night to renew their pledges to the Constitution and the laws of the land. The speakers included two distinguished Members of the House of Representatives, Gen. ISAAC R. Sherwood and the Hon. D. A. HOLLINGSWORTH, both of Ohio. I trust the speech of Gen. Sherwood may be incorporated in the Record, since there are few of our National Representatives now living who took so interesting and important a part in the Civil War. The speech delivered by my colleague, Gen. Hollinsworth, has been forwarded to me, and, with the permission of the House, I herewith extend it in the RECORD:

ADDRESS OF HON. D. A. HOLLINGSWORTH, REPRESENTATIVE FROM OHIO, AT THE ANNUAL BANQUET OF THE GEORGE G. MEADE POST, NO. 1, DEPARTMENT OF PENNSYLVANIA, GRAND ARMY OF THE REPUBLIC, AT THE UNION LEAGUE, PHILADELPHIA, WASHINGTON'S BIRTHDAY, FEBRUARY 22, 1916.

Comrades of the Grand Army of the Republic, I greet you tonight, as of o.d, simply as "boys in blue," believing that it is the proudest title ever held by an American citizen. I do not like the term "old soldier," now universally and on all occasions applied to the survivors of the Civil War. It is too suggestive of muster out, too much like we were done for, whereas if there is anyone on God's green footstool entitled to perennial youth it is the soldier boy of 1861–1865, who, in the morning of his days, voluntarily offered his young life a sacrifice for our beloved country.

Only a few of either the blue or the gray remain on the active rolls of life and leadership, but it is not pleasant for them to be constantly reminded of the fact by those who were babes in their mothers' arms when the greatest tragedy of the ages reached its climax at Appomattox.

Precious memories of the sixties, they must and will live forever in song and story, although the muffled drum and bugle shall soon sound a requiem for the last comrade of either army.

But, my comrades of the blue, new conditions surround us in 1916, and we are expected to keep step with the music of modern ideas whether we like them or not. We must face to the front and at least seem to forget that fifty-odd years ago at the call of duty we went forth to battle, wholly unprepared in the modern, scientific, red-tape sense of the term, and that, notwith-standing this handicap, we did some pretty good fighting for God and country, fighting which the present wordy advocates of preparedness might find it difficult to duplicate should one or all of the war-wrecked nations of Europe attack us after the peace of exhaustion and a drawn battle, as now seems probable, shall have quenched the fires and flying sparks of the world's conflagration. Let us hope, however, that hese prophets of evil may be mistaken and that the hysteria of the hour may pass without any war sparks reaching our shore line on either ocean.

A JUST AND FAIR-DEALING GOVERNMENT.

A Nation of 100,000,000 of freemen, with unlimited resources, situated between two ocean barriers, and these barriers equipped

as they are, or should be, with adequate coast fortifications, mines, submarines and submarine destroyers, air craft, good roads, as in Germany, connecting such ocean barriers and thus furnishing ready means of transportation for an army from one point of danger to another, on inside lines, need not, in a just cause, fear a combined world in arms, even if our Nation does not have a Navy "the strongest and most powerful in the world," as suggested by an eminent but somewhat belated militarist.

We are not an aggressive people; our real permanent defense must always be in the justice, sincerity, and fair dealing of our Government with all the world.

We do not need any great increase in our already efficient fleet of dreadnaughts and superdreadnaughts, unless we intend to sail into foreign waters in a defiant attitude and make of Uncle Sam a veritable jingo of the seas.

This is the day of all days in the patriotic calendar of America, the birthday anniversary of George Washington, Father of his Country, first in war, first in peace, and first in the hearts of his countrymen. Earliest of American statesmen, his example and unselfish patriotism should to-day be object lessons in patriotism to the alarmists and modern leaders who seem to have forgotten the day when, at Yorktown, the proud legions of England, redcoated, drilled, and equipped, surrendered to the volunteer armies of Washington, who were prepared for Army life only by the actualities of real war. Washington's life and character were of epoch-making type. He was one of the divinely appointed leaders, developed in every great crisis in the world's history. The hour and the man with him came together. So it was with Lincoln of a later period. Towering. like Washington, above all his associates in the Civil War, his wisdom and foresight seemed inspired. The hand of destiny pointed to him as the greatest of all leaders in the incomparable epoch-making days of the early sixties. I count it as the proudest distinction possible to any living American to-day to have had a part, however humble, in the great work of administration. Small as was my own service, a private soldier only at the age of 16, I would not exchange the honor for any distinction within the gift of the present Chief Executive or his official advisers at Washington. I greet you, therefore, my comrades, survivors of the Civil War, at this your annual reunion, as the very salt of the earth, knowing that more and more as the years go by and the shadows lengthen, you must become sacred object lessons of loyalty to the best Government God ever permitted on earth, the one of whose future an inspired American poet has written:

Behind the dim unknown, Standeth God within the shadow, Keeping watch above his own.

But for your victory at Appomattox this Nation would have been dismembered and could never have become, as it now is, the one great power on earth capable of leading the war-mad nations back to sanity and sense, back to civilization and a just recognition of the international obligations which Divine Providence has imposed upon all nations and upon all mankind, and without which, if we are to judge from the lessons of history, no nation can long endure.

A patriotic, God-fearing, level-headed, just citizenship is needed at this hour in America in both official and private life. The teachings of history, instead of hysteria, should guide the Nation, uniformly successful as it has been in all its wars, two with Great Britain, one with Spain, and another with Mexico.

WARNINGS OF WASHINGTON.

Out of the wreck and carnage of the present war, as out of the tragedies and exhaustion of our own desperate struggle of the sixties, there must come, instead of a desire for future conquests, a higher and holier condition, world-wide and universal, heralding possibly the millenlal period when, we are told, satan shall be bound here upon earth and peace and righteousness reign triumphant throughout all the land. One flag it may be, and that the starry flag of the Republic, but whether so or not the goal of permanent peace must be reached. Human nature, naturally patriotic in all lands, must and will

Human nature, naturally patriotic in all lands, must and will rise to higher ideals. Meantime the United States and its citizens, at peace among themselves and with all nations, owe duties to the world, to the belligerents, and to mankind; duties as positive and imperative and as delicate as those which confronted Abraham Lincoln in 1861, when Fort Sumter was fired upon and the smoldering fires of rebellion broke forth in all their fury. The warning of Washington against foreign entanglements must not be forgotten. Absolute neutrality with honor must be the American watchword. American citizenship at home or on the high seas, or anywhere else on earth where they have a right to live, must be respected. International rights and the broad claims of humanity must not be jeopardized

or brushed aside lightly by any of the belligerent powers, and the Washington Government, in contending for these safeguards, must be backed to the limit so long as it in good faith tries to deal fairly, justly, and impartially with all the warring nations. Political scheming in an hour like this, in high or low places, is little less than treason to the Republic.

MIXTURE OF THE BEST RACES.

Let us be Americans, pure and simple, and then if war shall be forced upon us by the machinations of secret or open enemies, and it shall again become necessary to defend American honor or resent insult to "Old Glory" from any source, boys in blue of the real fighting type will come again, come as they came in the sixties, in countless numbers, ready for any sacrifice for home or country. They will answer the first bugle call to duty, prepared or unprepared in the modern military red-tape sense of the term, and will, as in past wars, be found brave and true and effective in the crash of battle along our far-flung coast lines or anywhere else on earth where American honor may be at stake. A just and brave people can never be permanently conquered in this world, and, in my judgment, those who from timid fear or from honest judgment, or, worse, a contractor's ugly greed, seek in advance to turn this country into a vast continental military camp, and our harbors into mere ports of entry for big battleships, on the theory only of preparing for war possibilities, are making a mistake.

Europe is not blinded and oriental eyes are keen. They know and realize the possibility of new destructive inventions in the air and under the seas, which may at any time render useless present-day war preparations, such as that on which Thomas A. Edison, the electric wizard, is now said to be working and by which a wireless electric current is expected to be sent with accuracy any reasonable distance and, striking a warship approaching our shores, will, like a thunderbolt, ignite its magazine and destroy the most powerful dreadnaught afloat, or, passing under the water, destroy any venturous submarine that may be sent to prey upon American commerce. By the mere touching of a button, Mr. Edison is reported to have said, we shall soon be able "to mow men down by the thousands; yea, and both Europe and the Orient must realize that without such new inventions a nation situated as we are, inland between two great oceans, with limitless resources and a patriotic, God-fearing, just citizenship, composite mixture of the best races of mankind, can in defensive warfare defy the world in arms.

EFFECTS OF WAR IN EUROPE.

Crippled and exhausted also as the warring nations must be at the close of the war, it is folly for the great Republic and its citizens to anticipate or get unduly excited over illy-defined possibilities of future attacks from any of them. They are much more likely to have bankrupt treasuries and be offering their big guns and battleships for sale. Fifty years will not suffice to restore the wastes of the war, and meantime Brother Jonathan, if he keeps out of the fight, will have plenty of time to fortify and get ready, if, in fact, his big, charitable heart does not at the close of the war find more need for food ships than warships to send to Europe.

The dreadnaughts of to-day are likely to be in the junk heap and new ones built in the usual course of construction before any nation bigger than Mexico shall dare to murder American citizens or deliberately insult Old Glory; and we are certainly already prepared to take care of American honor, if we will, against the Carranzas, the Villas, and other bandits of the

border.

If there is real danger of attack from any of the great powers, and those in high authority have secret information of the fact, as might be inferred from public acts and speeches, why does not the Government instantly commandeer and seize, as it should, the ammunition plants and factories of the country and keep their products at home safely stored for the emergency? Why the shipment of immense quantities of arms and ammunition to Canada and out of the country by every outgoing steamer? Such an embargo would at least attest the sincerity of the extreme preparedists.

The sudden outcry for hasty war preparation is suspicious. The scent of big Government contracts is in the air. It is not craven or unpatriotic, as suggested by some fleree advocates of militarism, for a Nation of 100,000,000 free-L rn citizens, 10,000,000 of whom are subject to military duty in emergency, to feel secure against foreign invasion without keeping itself constantly on a war footing in time of peace.

A MATCH DROPPED IN A TINDER BOX.

Such a nation is invincible unless it becomes the aggressor, and who is there among us, big or little, willing to admit such contingency? It was war-mad preparedness, without reason or sense, that plunged Europe into the frightful struggle of to-day.

A match carelessly dropped into a tinder box may cause instant explosion, but a dozen such lighted and thrown into cold storage only cause a little spluttering, a fizz, a flare-up, and then gradual burning out without harm. The suggested war parallel is perfect. Calm thought and coolness are of more value than hasty action. A lot of sturdy young men working industriously at home, thoughtful, patriotic, and ready, are a safer reliance in case of war than a like number of aristocratic gentlemen of leisure seeking recreation and sport on the shooting range and drill grounds of Plattsburg. Encroachments on the liberties of a free people come from military, not from civic, leaders. The man on horseback is always well groomed, booted, and spurred. He comes as Napoleon came, after the people have grown weary and exhausted from the maintenance of big standing armies in time of peace.

At the same time, faith without works is dangerous. I am not of the number of those who oppose reasonable preparedness

for war.

NO PEACE-AT-ANY-PRICE MAN.

I do not believe in Bryan's peace-at-any-price patriotism, nor do I believe in the blood-and-thunder, chip-on-your-shoulder attitude of a few very big men in this country, some of whom were old enough to have taken part in the Civil War, but were at that time strangely docile. Eventualities are uncertain, and it may be the un-Godly forces of European malice or the so-called yellow peril shall unexpectedly break loose upon our fair land, notwithstanding its justice and absolute neutrality, but if so it will be an instant call to arms, and soon the war cry of the sixties, "we are coming Father Abraham," changed only to apply to the present Executive, will be heard in stern resolve throughout the length and breadth of the Republic, and the quick response will be an army so overwhelming in numbers as to crush and destroy any possible invading force. It is a misnomer to call such intelligent citizenship a mob, as has been done by some self-opinionated military critics. The undrilled riflemen of Lexington and Concord were effective against trained British redcoats, and later, at New Orleans, a small force of irregular raw recruits, hastily called together under Gen. Jackson, were more than a 10-to-1 match for the trained veterans of England. So it has ever been and ever will be with the American volunteer when nerved to duty by an intelligent conviction of the righteousness of his cause. Nor will it add to his effectiveness, as some militarists propose, to make military duty compulsory in time of peace. Such aping of monarchy is repugnant to the genius of our institutions.

One further thought. It has been suggested, and, being of both English and German descent, I believe it, that both the allies and the central powers are better disposed, more considerate, and less brutish in warfare than they are depicted in partisan publications. A good test of this is their treatment of prisoners of war. In some countries they are lined up and shot without mercy, put out of the way as quickly as possible, but as yet in this war no serious complaints have been made of the general treatment of prisoners by either side. Two millions and more of captives must be somewhere in detention camps, and yet the world has not heard of any prison horrors comparable to those of our own Civil War. I mention this only to show that the future of the world is not hopeless; that the rescue of humanity and civilization from the wreckage of the

war is not impossible.

THE TASK OF READJUSTMENT.

The task may be colossal. The problems of the future are world-wide; they touch every phase of humanity and reach far beyond the present generation. Any mere temporary truce will fail; peace, permanent as the ages, is the only hope of mankind, the only hope of Christian civilization.

A solid basis of readjustment must be found which shall forever make war impossible. It is the one great task of Christendom, and failure on its part will be a reflection on the religious teaching of the ages. But it will not fail.

Truth crushed to earth shall rise again— The eternal years of God are hers; But Error wounded, writhes in pain, And dies among his worshipers.

And when the day of rebuilding and uplift shall come and the wrecked nations begin to look up and lift up, then will be America's opportunity and duty. It must lead in all upward movements having for their object the permanent peace of the world.

The frightfully destructive forces of the war can not last much longer. Appearances are kept up, but the barometer of fast-moving events shows the tightening coils of distress and that both sides are strained to the point of breaking.

The collapse may come at any time, and with it new and unexpected international problems greater than any which have disturbed the world since the crucifixion, vital problems of humanity, the just and permanent solution of which may well cause the stars to again sing together as at the dawn of creation.

In conclusion, my comrades of the Grand Army, as we go hence to-night let us take renewed courage from this reunion, and in life's future battles bravely face again to the front, buckle our belts a little tighter as we did on the eve of battle, rededicate and reconsecrate ourselves anew to our country and to liberty, and resolve to go forward for the few remaining years of our active lives, doing our whole duty as God gives us to see our duty, conscientiously and as independent citizens, as did Washington and Lincoln, and to the same end they sought, the real object of all patriotic endeavor that "Government of the people, by the people, and for the people shall not perish from the earth."

The "common people," as Lincoln loved to call them, still rule in this country, and they can not be deceived or cajoled into leaving the plain beaten paths of the Republic; they prefer the safe landmarks of the fathers.

As Lincoln advised in his first great war message to Congress, July 4, 1861, they in every great crisis simply "trust in God and go forward without fear and with manly hearts."

It is truly a time for all good citizens, without regard to party, race, or creed, to remember the motto of Stephen Decatur:

Our country! In her intercourse with foreign nations, may she always be in the right; but our country, right or wrong.

Pensions to Widows and Orphans of Spanish War Veterans— Tender Care of the Living Better Than Building Monuments to the Dead.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 23, 1916.

Mr. CARY. Mr. Speaker, the bill to pension the widows and orphans of Spanish War veterans has been pending for a long time, far too long a time for a measure so just, equitable, and necessary.

All sorts of appropriations have been made in the last few years, ϵ great many of them for comparatively useless purposes. We have had bills to protect cattle and swine, trees and plants, birds and bugs; bills to erect post offices at little wayside stations; bills to improve little rivers and creeks; and in all this time, while the Treasury was being depleted for everything else, the widows of the boys who rushed to the colors in 1898 were struggling for a bare existence and their orphans were, in thousands of cases, crying for bread.

Mr. Speaker, I am never opposed to the necessary expenditure of public money for worthy purposes. I believe in conservation, in public improvements, and in the careful use of governmental funds and agencies to develop and maintain our national resources, but—and I can not place too much emphasis—I maintain that an American boy or girl is of far more importance than a tree, and an American mother is a more vitally important object of governmental care than any public improvement.

We are hearing much of preparedness in these days, and I think most of us agree that while we hope and pray for peace we all know that there may come a time when we will have to fight to preserve the liberties our fathers fought and died for. If that day should ever come, the battle will be won or lost by the quality of our soldiers. In every past crisis hundreds of thousands of virile, red-blooded Americans have rushed to arms at the first drum beat, and we know that if to-morrow the call to arms were sounded a million men would be ready to fight and die for their country.

We can all remember how quick the response was in 1898. In the first week hundreds of thousands more men volunteered than were necessary.

All sectional feeling was wiped out overnight at the bugle call of duty.

Southerners and northerners, eastern men and western men, knew but one country in that supreme bour. There were no sneers in those days at Americans of foreign birth or descent. From every class the ready volunteers came. German-American, Irish-American, Swedish, Danish, and Norwegian American, Italian-American, Polish-American, and Hebrew-American, foreign born and native born, sons of the oldest stock and sons

of the latest immigrant, all—all with but one pulsating thought—that "this is my country, this is my fight."

There was no other thought, no other aspiration, than to fight and, if necessary, die for—

Your flag and our flag.
And how it floats to-day,
O'er your land and my land
And half the world away.
Blood red and rose red.
Its stripes forever gleam;
Snow white and soul white,
The good forefathers' dream.
Sky blue and true blue,
With stars that beam aright,
A gloried guldon of the day,
A shelter through the night.
Your flag and my flag,
Oh, how much it holds,
Your heart and my heart
Secure within its folds.
Your heart and my heart
Beat quicker at the sight,
Sun-kissed and wind-tossed,
The red and blue and white.
The one flag, the great flag,
The tag for me and you,
Glorified, at'! clse beside,
The red the white, and blue.

In this spirit the "boys of '98" left home and occupation, just as the "boys of '76" and the "boys of '61" had done.

Some left lucrative positions behind them; all left the comforts and joys of home and country. They endured the feverladen heat of the tropic sun; they suffered hunger and thirst and exposure; they went into battle as bravely as any troops in any war; and hundreds—yes, thousands—who were not wounded by shot or shell came back wrecked in health, with vital energies supped by hardship and exposure.

To-day, ah, so many lie at rest in every churchyard through-

To-day, ah, so many lie at rest in every churchyard throughout this land. They have fought their last battle; nevermore will they march beneath the starry banner; nevermore will their hearts bea. rythmic time to the battle cry of freedom. But their sons are left to follow their footsteps and fight the

But their sons are left to follow their footsteps and fight the battles of to-morrow, their daughters are left to be the mothers of another generation of patriotic Americans, their widows are left to keep their memory alive and train the generation now growing to emulate the courage and sacrifices of their fathers and it is these widows and little ones we are in duty bound to cherish and care for, to see that not a single one of them shall suffer is not only our sacred duty but our high privilege.

Mr. Speaker, we often make appropriations to erect monuments to the heroes of our various wars who have gone to their last rest. All over this country such monuments rise, triumphs of artistic skill and calling for the expenditure of large sums of money. I have nothing specially to say against this, but I can not help remarking that while we have years and years to come in which to build these monuments, every soldier's widow that dies in want, every soldier's child that grows up in poverty and ignorance, represents an opportunity lost forever.

Let us remember this for surely, most surely, we must agree and certainly every veteran would thank us the most if we bore constantly in mind that tender care of the living is better than building monuments to the dead.

Establishment by Private Capital of High Explosive Plants in the United States.

EXTENSION OF REMARKS

OF

HON. EBENEZER J. HILL,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 23, 1916.

Mr. HILL. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include official letters written by the War Department to me on the question of the establishment by private capital of high explosive plants in the United States.

The letters are as follows:

WAR DEPARTMENT, Washington, February 16, 1916.

Hon. E. J. Hill, House of Representatives.

My Dear Mr. Hill: 1. In reply to your letter of February 9, 1916, addressed to the Hon. Lindley M. Garrison, Secretary of War, and requesting the opinion of the War Department of the value to the United

States Government of plants producing dyestuffs in time of peace and capable of producing explosives in time of war, I may state that such plants would be of unquestionable value to any government, and that their maintenance in time of peace, with the complete equipment which would enable their output to be changed from dyestuffs to explosives in a week's time, as claimed by Dr. Schoellkopf, would remove to a great extent the necessity for the erection and maintenance of special large plants for explosives for war purposes.

2. The War Department is not sufficiently familiar with the dyestuff industry to form an opinion as to the terms under which a private manufacturer of dyestuffs would be willing to equip and maintain his plant as outlined above. It is understood, however, that many of these plants have all the apparatus necessary for the manufacture of explosives. In addition, their existence in time of peace would create a demand for practically all the raw materials required for the manufacture of the standard explosives, thereby insuring greater supplies of such raw materials in time of war

3. The War Department has appreciated the value of private plants producing, or capable of producing, war munitions, or the essential materials therefor, and is of the opinion that the coordination of these plants with the Government in such manner as to insure their use for its purposes in case of necessity, upon reasonable terms, without waiting for special legislation after development of the necessity, would be advantageous.

Very respectfully.

advantageous. Very respectfully,

H. L. Scott, Secretary of War ad interim.

FEBRUARY 9, 1916.

Hon. Lindley M. Garrison,

Scoretary of War.

My Dear Mr. Secretary: I notice in the hearing before the Committee on Military Affairs, Gen. William Crozier present, a question was asked by my colleague, Mr. Tilson, concerning the manufacture of explosives in dyestuff plants, as is now being done in Germany.

I happen to have definite information with regard to one of the great chemical plants in Germany, that it is being run night and day and has been since the beginning of the war in making high explosives under an arrangement with the Government that it shall continue so to run during the continuance of this war and for five years thereafter.

In view of the statement of Gen. Crozier, on page 80 of the Military Committee hearings, I transmit to you herewith a copy of the hearings on H. R. 702 before the Ways and Means Committee, together with a copy of the bill now pending, and respectfully ask of the War Department its opinion of the advantage which would accrue to the United States Government if a number of plants, such as are now furnishing explosives to the German Government in time of war and dyestuffs to the world in time of peace, would not be of great advantage to this country and obviate the necessity of large expenditures on the part of the Government in establishing similar plants for war purposes, which, of course, would be practically useless except in war time.

I have turned down some of the pages which refer to this matter, and have marked on page 38 the numbers of the pages so that you can make a quick review of the subject. You will note in one of the references that Dr. Schoelikopf, the head of the largest and oldest establishment in the country, expresses an opinion as to whether the Government should not assume some sort of supervision over the entire industry.

My thought in regard to it was that there should be some coordination between these establishments and the War Department in the way of a license to all parties in the United States making explosives or dyestuffs, and that such li

the belligerents abroad are now paying to many of our manufactures in this country.

May I ask the opinion of the War Department on this general topic, as to the wisdom of the establishment of these plants here so far as it relates to the question of explosives? It is not my purpose to ask the department to commit itself on the general policy of protection of the dyestuff industry. I think that that has been established to the full satisfaction of the committee.

Dr. Hesse said in his remarks that, as a matter of national equipment, the establishment of this industry would wipe out all other considerations with reference to it; and he said it after having previously told me that he was a free trader in principle.

Awaiting a reply, which I trust you will be able to give me as promptly as possible, I am,

Very respectfully, yours,

E. J. Hill, M. C.

Rural Delivery.

EXTENSION OF REMARKS

HON. J. M. C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Weenesday, February 23, 1916.

Mr. SMITH of Michigan. Mr. Speaker, under leave granted by the House, I desire to extend my remarks by incorporating a petition received a few days ago, which is addressed to myself and Senator Townsend, of Michigan. It states a not infre-quent result of the hardships and inconveniences to the patrons caused by the recent rerouting and changes of the rural routes. The complaints enumerated are not uncommon have been and are the backbone of our Republic. They have The complaints enumerated are not uncommon. The farmers built the country highways, schoolhouses, and churches. Their interest and welfare is of the utmost concern to the prosperity

and progress of the Nation. One of the chief benefits of national legislation to them was the free delivery of their mail. It brings their mail to their door; it keeps them in ready touch with public affairs; gives them the news and the markets; it helps them in the activities of the parcel post. Before the changes they were contented and pleased with the system. Little has been said about why the changes were made, and little can be said of the reasons for the changes. Many farmers are now compelled to walk from a quarter to half a mile to get their mail who always had it delivered at their door, and the farmer knows as well as anybody when he is used right and when he is not. The following are fair samples of complaints received by nearly, if not all, Congressmen:

BATTLE CREEK, MICH., January 27, 1916.

To the Hon. J. M. C. Smith, Member of Congress; Hon. Charles Town-send, United States Senator; and your colleagues:

We, residents of Calhoun County, Mich., and patrons of the post office at Battle Creek. Mich., previous to June 1, 1915, feeling ourselves aggreeved and our rights sorely trespassed upon by the change made in the Rural Free Delivery Service from Battle Creek at that time, beg leave to petition you as follows, viz:

Whereas previous to June 1, 1915, we received our mail from the rural free delivery routes from Battle Creek, Mich., and such service was entirely satisfactory; and Whereas the changes made then have worked serious inconveniences, and we, therefore, beg to have the former routes restored:

and we, therefore, beg to have the former routes restored:

"First. The post-office address of many of those represented here has been "Battle Creek, Mich.," ever since they or their ancestors had a post-office address; it was the post-office address of those from whom property has been purchased, and it is onerous to have the address changed to a flag station—R. F. D. No. 3, Ceresco, Mich.

"Second. One of those mentioned here implicated in this change is the Wolverine Stock Farm, an important corporation, of 400 acres of land, carrying an extensive line of high-bred stock.

"When the change was made they had out a line of advertisements giving their address as Battle Creek Mich., R. F. D. No. 1. Changing their post-office address to Ceresco, Mich., has cost them valuable time and prestige.

"When the change was made they had out a line of adverusements giving their address as Battle Creek Mich., R. F. D. No. 1. Changing their post-office address to Ceresco, Mich., has cost them valuable time and prestige.

"Third Charles Hutchinson, supervisor of Emmett Township, had on hand a quantity of stamped envelopes with printed return address. The change rendered them practically useless and otherwise interfered with his business, both public and private. He most emphatically condemns the change and asks to have the old routes reestablished.

"Fourth. Very many patrons of the post office who live upon a maintraveled road are practically deprived of the Rural Free Delivery Service. They are obliged to place their post-office boxes from 40 to 120 rods from their houses at the crossings of unimportant highways.

"An instance of this kind can be pointed out where four mailies within three-fourths of a mile upon a main highway are thus afflicted.

"Fifth. Rural free delivery No. 3, from Ceresco, Mich., traverses 3 miles of road that was previously untraveled. It is largely overgrown with grass. There has never been any road work done upon this road, nor has there been any call for such work. No one would ever think of asking to have it opened in winter if it was full of snow, as is often the case. In fact, the township board has seriously contemplated the discontinuance of a portion of this road in order to avoid its obligation to keep an United States mail route open.

"Sixth. The mail routes as adopted June 1, 1915, were made by clerks in Washington who never saw a country mail route except upon paper, and the service since then had been bad.

"These things being so, and feeling ourselves wronged by having our rural free delivery routes changed, as they were, we do most earnestly petition you, who have represented us so well and so very satisfactorily, to use your utmost influence to have the rural free delivery mall routes out of Battle Creek, Mich., restored, and made the same as they were previous to June

The following is a resolution passed by the Jefferson Grange, of Jefferson Township, Hillsdale County, Mich., and forwarded

Whereas he present Postmaster General has seen fit to change the rural-mail service of Hillsdale County, which had been established for many years and was giving universal satisfaction; and Whereas such change has been a great detriment and inconvenience to the rural mail patrons in said county, and the saving made by said change is in no manner commensurate with the hardship and inconvenience entailed on said rural patrons: Therefore be it

Resolved, That we, the members of South Jefferson Grange, No. 182, of said county, in regular session assembled, do most earnestly protest against said change and demand that the service be restored to its former efficiency or better, and to this end we ask that all routes abolished be reinstated; and be it further

Resolved, That a copy of these resolutions be forwarded to our Representative in Congress, with the request that he do all in his power to have the county service restored.

[SEAL.]

M. W. TILLMAN, Secretary.

In a letter accompanying the resolution the writer has this friendly and considerate remark to say about his neighbors, showing an unselfishness that is most commendable, and certainly it must be apparent to all that no changes ought to be made without great care and consideration:

A number of years ago a man was sent into the county who went over the roads and laid out the routes that were in operation when the

present change was made. It gave universal satisfaction, although some slight changes could have been made; but the changes made last spring have put this all "up in the air" and are causing a great inconvenience to many people. While I could sit down and map a route that would benefit me, I would be apt, under the existing conditions, to do some one else an injustice What should be done is to have some capable person go over the county and thoroughly reorganize it.

Public Building at Sedalia, Mo.

EXTENSION OF REMARKS

HON. COURTNEY W. HAMLIN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, February 24, 1916.

Mr. HAMLIN. Mr. Speaker, under the leave granted me to extend my remarks on H. R. 3662, a bill to provide for the purchase of a site and the erection of a public building at Sedalia, Mo., I want to insert the following:

First. A copy of a letter written me by Hon. Byron R. Newton,

then Assistant Secretary of the Treasury

Second. Copy of a report made in this case by Ernest G.

Schurig, special agent of the Treasury Department.

Third. Copy of letter from the First Assistant Postmaster General showing the postal receipts of this office for the last six and one-half years.

Fourth. A letter written to me by the Postmaster General.

The exhibits are as follows:

MARCH 17, 1914.

Hon. W. C. Hamlin,

House of Representatives United States, Washington, D. C.

House of Representatives United States, Washington, D. C.

Sir: I have the honor to inclose herewith a copy of a report, dated February 21, submitted by Superintendent Schurig, as a result of an examination of the post-office building at Sedalia, Mo., for the purpose of ascertaining if it is feasible to make alterations in this building with a view to relieving the present congested condition. Such examination was made in compliance with your request.

It will be noted from the report of the inspector that the present is too small to permit of an adequate extension and that the present building can not be remodeled to provide a satisfactory arrangement, Should his recommendation as to the purchase of a new site and the erection of a new building receive favorable consideration, you are advised that in order to provide the necessary space it is estimated that a two-story and basement building of 10,000 square feet ground area will be required, and that such a building would cost, stone-faced and using freproof construction throughout, \$350,000, and the cost of an adequate site would be \$50,000.

Upon completion of the new building the present site and building could be sold and the proceeds turned into the Treasury as a miscellaneous receipt.

Respectfully,

BYRON R. NEWTON, Assistant Secretary.

MARSHALL, Mo., February 21, 1914.

Supervising Architect, Treasury Department, Washington, D. C.

Sir: Pursuant with instructions contained in your letter SA-CN under date of 11th instant, I visited the post-office building at Sedalla, Mo., and beg to submit herewith report pertaining to permanent improvement in the nature of an extension to the present building or in the nature of a new building and site that are required for the purpose of providing more adequate facilities for conducting the postal business. CONDITIONS IN PRESENT BUILDING.

CONDITIONS IN PRESENT BUILDING.

For the past seven years this building has been repeatedly remodeled and the interior arrangements rearranged with a view to obtaining the most useful disposal of the floor space to avoid congestion and delay in dispatching the postal business, with the result that at the present time I am unable, after a careful examination of the premises and conference with the custodian, to suggest any interior changes that would tend to relieve the present congestion.

The postmaster has succeeded in relieving some of the congestion by requiring certain patrons of the office who have been delivering mall in large quantities to make deliveries of mail in smaller quantities and at more frequent intervals.

The present structural arrangement of the building is such that 27 out of a total number of 38 employees are compelled to use artificial light continually during the period of the day when natural light should be available.

The necessity for the urgent consideration at this time of new construction in the nature of an extension to the present building or a new building have hesitated in the past to recommend substantial improvements to provide for future needs. The remodeling that has been done to the building in the past has been piecemeal and only such as to provide immediate relief until at the present time it is impossible to make any further changes in the interior of the building that will result in relieving the congestion.

Data submitted for use in estimating floor space needed.

FLOOR SPACE.

FLOOR SPACE.

Column (a) space now in use in present post office.
Column (b) space required for present needs.
Column (c) space required for 10 years hence.
Figures below are square feet of floor space.

	a.	b.	c.
Floor space money order and registry. Floor space postmaster and assist nt Floor space stamp sales. Floor space general delivery. Floor space post-office work room Floor space lobby. Floor space postmaster's and women's toilet. Floor space vaults.	250 320 70 170 2,013 826 62 194	580 640 140 340 2,600 1,100 70 390	876 966 216 516 3, 906 2, 006 60
Total.	3,905	5,860	9, 110

Inside dimensions of first floor, 71 by 55 feet, or 3,905 square feet.
For present needs it is necessary to add about 100 per cent to all items except workroom, to which is added 30 per cent.
For future needs, 50 per cent is added to all items except lobby, which conditions will require somewhat larger.
The table above does not include floor space in second story of present building, which includes three ordinary office rooms and one toilet room for the Railway Mail Service, revenue collector, and post-office inspector. The table below gives date and corresponding receipts of post office, number of employees, and total number of employees. Number of employees includes postmaster and assistants.

Date.	Receipts.	Clerks.	Carriers.	Rural carriers.	Total.
1900	\$25, 314. 52 36, 992. 77 67, 027. 03	5 7 12	7 11 16	6 8	14 25 38

The increase in employees in 13 years has been 171 per cent.
The increase in postal receipts has been about 169 per cent.
The population of Sedalia as recorded by the United States census in 1900 was 15,231. The estimated population as estimated by the custodian is now from 22,500 to 25,000. In view of the fact that the railroad shops employ an average of 2,500 men here, and as this is a large farming center, I believe the custodian's estimate very conservative, and that it is reasonable to assume that the population increase has been 50 per cent in the last 10 years.

The floor space of 9,110 square feet has been estimated, as before noted under the schedule on page 2, by assuming that the postal business will not increase in a larger proportion than the population, which from the above estimate has been assumed will increase 50 per cent 10 years hence.

from the above estimate has been assumed will increase 50 per cent 10 years hence.

The Parcel Post System will undoubtedly in the future be instrumenta, in largely increasing the present postal business, but as I am unable to obtain any statistics in this branch of the postal business all that can be done at this time is to invite attention to the fact that the Government by instituting this system has entered into an important means of our national transportation system, which will require the use of a large amount of floor space in every post-office building.

Attention is invited to the fact that 9.110 square feet does not include space in second story. The second story should provide two offices for the Railway Mail Service, two for various revenue collectors, one for post-office inspector, and a civil-service examination room, with examiner's office, to seat 50. In addition to the offices mentioned there should be at least four offices for future assignment, making a total of nine offices. By providing each of the offices with not less than 200 square feet of floor space there will be more than sufficient room remaining for the civil-service examination room in second story of such a building as may be ultimately projected.

INDUSTRIES, ETC.

Two trunk lines and three subsidiary branch lines of standard steam railroad pass through and terminate in Sedalia. The railroad companies have two large car and repair shops here, which employ on an average of twenty-five hundred men. One shop is covered by an investment of \$1,500,000 in land and improvements and the other shop is covered by an investment of about \$600,000. The railroad owning the latter named stores supplies in the yards here to the amount of \$1,000,000.

Both of the trunk lines of railroad have been in the past and are at present properties which have been obliged to be operated on a most economical basis, owing to poor financial standing; however, these roads must sooner or later be maintained and equipped on a more substantial basis, which will require a considerable outlay of funds, which funds will be obtainable notwithstanding the fact that the property may be put through receivership process. When this outlay of funds occurs it will result in a permanent increase in the force of the present shops and possibly an increase of floor space of the shops.

Two clothing factories employ about 550 hands.

The town is the center of a large and fertile agricultural district, which supports various small manufacturing concerns and numerous commercial business houses.

STATE FAIR, ETC.

The State of Missouri has invested in a permanent fair ground association, located adjoining the boundaries of the city, \$100,000 in land and \$475,000 in permanent improvements. This organization is maintained primarily for educational purposes, a short summer school being conducted in connection therewith.

The fact that the headquarters for the State Fair Association is located here has developed this place into a center for the propagation of agricultural instruction, which is attested by the fact that the United States Department of Agriculture has a force here working in connection with the Bureau of Animal Industry and Pure Food Research Laboratory. The former-named bureau employs two men and the latter from two to eight, according to the seasonable demands.

EXTENSION TO PRESENT BUILDING.

It is the practice in the construction of the Federal buildings to have a site of sufficient size to permit the maintenance of a minimum space of 40 feet between the building line and the lot line for the purpose of fire protection.

The present building is located on a corner lot 120 by 105.4 feet in such manner that there is a space of 36 feet between the south building line and south tot line and a space of 44 feet between east building line and east lot line. To the south is located a 14-foot alicy, which with 36 feet provide the complement necessary to obtain the 40-foot margin. (In all computations of old building one-eighth has been deducted for exterior wall to obtain floor space.)

By disregarding the margin 40 feet east and south the floor space of first floor can only be increased 25 per cent over that now required (5.860 sq. ft., p. 2) for the needs of the present business.

The figures for an extension and the resulting floor space is as follows:

Present floor space, 71 by 55_______ Extension south to lot line, 34.3 by 55______ Extension east to lot line, 34\(\frac{1}{2}\) by 42.3_____ 3, 905 1, 888. 3 1, 453

7, 246, 3

This in rease is only one-half the increase needed to provide for the conditions 10 years hence, and it is quite probable that the business here will increase sufficiently by the time an extension can be completed to fully demand a floor space of 7,200 square feet.

An extension as above cited will require a demolition of at least one-third of the present building, an entire new heating plant; sanitary and lighting system, and sufficient changes to aggregate a total expenditure of \$60,000, and would probably result in the necessity of abandoning the property before the present decade had expired.

It is impossible to devise any method of extending and remedeling the present building, even by the acquisition of additional land adjoining the present site, whereby better lighting conditions in the post-office workroom can be provided. (See p. 1.)

NEW BUILDING.

In view of the inadequacy of an extension to obtain the desired improvements the matter of providing for a new building will now be considered.

A building 84 feet by 120 feet will realize, after deducting for wall, an interior floor space of 9,280 square feet (allowing 2 feet for walls). Providing a second story to the building on three sides with court in center of rear will give all the office space in second story that may be required.

The cubical contents and the same and the

The cubical contents and estimate of such a building are computed follows:

84 x 120 x 46.5	468, 720 51, 200
Tota	417, 520
417,520, at 35 cents cubic foot	\$146, 132 3, 868
The table of pulling not including site	150,000

NEW SITES.

Schedule of property available for building sites, all of which is improved property, the total value of which is covered by the appraised rates given:

Appraised value.	Location.	Dimen- sions.
(1) \$28,500, size 138 x 240	Fifth Street. Osage Street Sixth Street. Improved property in rear. Third Street Osage Street Alley Rear Osage Street Sesond Street Kentucky Street	Feet. 138 244 138 246 138 126 139 120 120 121 121 121 121
(4) \$24,000 to \$40,000; increase to present post-office site, total 120 x 171-5; total 120 x 265.	Alley	120

Assuming that a corner lot could be obtained for a site, of which there are several available, and allowing 50 feet plus 120 feet for one dimension and 84 feet plus 50 feet for the other dimension, the 50 feet added to size of building being obtained by assuming a 40-foot fire limit plus 10 feet for distance from lot line to building, the minimum size of lot should be 170 by 134 feet. Most of the lots are 120 feet deep to a 12 or 14 foot alley, and a 134-foot lot can be obtained by the purchase of a 120-foot lot.

PRESENT SITE (4).

At an estimated cost of \$24,000, 66 x 120 feet can be obtained east of and in the rear of the present building (present site 105-5 x 120), obtaining a site 171-5 x 120. While a site of this size is large enough for the proposed building, it would not, considering its location, be in keeping with the building that would ultimately be placed upon it. In order to obtain a satisfactory site it would be necessary to acquire sufficient land in the rear of the present site to obtain possession of the entire one-half block—that is, 160 x 120 feet additional—resulting in a total site of 205 x 120, bounded by three streets and an alley. Estimated cost of the additional 160 x 120 feet is \$40,000.

SITE (2).

This site is too small, and no further comment will be made on this site. SITE (1).

This site is satisfactory, but is only submitted for consideration in an event site (3) is not obtainable. SITE (3).

This site is the most conveniently located and probably best site now available. It is the property of the municipality and upon it is located the city hall, a structure of little or no value.

While I have estimated the value of the property at \$35,000, it is quite probable it can be obtained in exchange for the present post-office building and site, the exchange being made with the stipulation that

the city government will remove the present city hall and that the city-hall site shall be considered equal in value to the post-office building and site.

If the Federai Government can obtain the city-hall site for a cost equivalent to the value of the old post-office building and site, it will save the expense of purchasing a new site and the demolition or disposal of the present building.

In the event the city does not acquire the present post-office building, it will only be worth its junk value, which is insignificant as compared with what will obtain from allowing the city to acquire the property on the terms named.

The majority of the city council and the mayor have expressed themselves as in favor of disposing of the city-hall property to the Federal Government, and the custodian has been advised that official action will be taken immediately in the matter.

The custodian will advise you of the action of the council in order that the matter of providing the necessary appropriations may be provided for in accordance with the needs of the situation.

In the event that the city property is not available for a site or the city is unable to acquire possession of the present post-office building, it will be necessary to increase the estimate for the new building from \$150.000 to \$190.000, so much of the additional \$40,000 to be used for purchase of new site as the exigencies of the case may require, the remainder to be used for the building.

RESUMÉ.

Present site too small to permit an extension of satisfactory size to be constructed, and building can not be remodeled to provide satisfactory arrangements.

New site can probably be obtained at less cost to Government than the acquisition of additional land adjoining the present site.

The construction of a suitable building will require \$190,000, including cost of suitable site. The acquisition of the city-hall property on terms named by city will practically result in the Government obtaining a site in exchange for the present post-office building.

It is recommended that such steps be taken as may be required to obtain a minimum appropriation of \$190,000 for the acquisition of site and construction of new building.

Ennest G. Schurig.

ERNEST G. SCHURIG. Superintendent Inspecting.

POST OFFICE DEPARTMENT, FIRST ASSISTANT POSTMASTER GENERAL, Washington, February 23, 19.16.

Washington, February 23, 1916.

House of Representatives.

MY DEAR MR. HAMLIN: With reference to your personal call at the department, relative to the post office at Sedalia, Mo., I have to inform you that the postal receipts at the Sedalia office for the past five fiscal years and for the quarters ended September 30 and December 31, 1915, have been as follows:

Fiscal year ended June 30, 1911	\$65, 508, 70
Fiscal year ended June 30, 1912	69, 994, 63
Piscal year ended June 30, 1913	68, 468, 08
Fiscal year ended June 30, 1914	56, 788, 28
Fiscal year ended June 30, 1915	61, 842, 42
Quarter ended Sept. 30, 1915	14, 364, 73
Quarter ended Dec. 31, 1915	16, 884, 66

DANIEL C. ROPER, First Assistant Postmaster General.

OFFICE OF THE POSTMASTER GENERAL, Washington, D. C., January 16, 1915.

Very truly, yours,

Washington, D. C., January 16, 1915.

House of Representatives.

My Dear Mr. Hamlin; I am in receipt of your letter of the 12th instant, in regard to the post office at Sedalla, Mo.

In reply I wish to state that no recent special investigation has been made for the purpose of determining the amount of additional space that should be provided to meet the needs of the service, but from data available it appears that the workroom of the present quarters contains 1,844 square feet of floor space, while 4,800 square feet are required at the present time. The force now employed consists of 14 clerks, 16 city and 8 rural carriers, and experience indicates that not less than 100 square feet of floor space should be provided for each clerk and carrier and the equipment assigned to his use. The receipts of the post office for the three adjustment years ended March 31 were as follows:

1904

\$30,915.67

1904___ 1909___ 1914___ 50, 018, 03 60, 842, 20

From the foregoing it is apparent that the Sedalia office is growing rapidly, and as it is the policy of the department in reporting on prospective buildings to suggest that space be secured to meet the needs of the service 10 years hence, it would seem that if a new building is authorized for Sedalia, the workroom should contain approximately 7,000 square feet of floor space.

A. S. Burleson,

A. S. Burleson, Postmaster General.

P. S.—I was in Sedalia recently and from personal investigation am able to state that additional space is surely needed.

I submit, Mr. Speaker, that a careful perusal of these exhibits will, I think, convince everyone that this is a case where speedy action should be taken by Congress to relieve an intolerable

There is an apparent discrepancy between the estimated cost of the building and site as given in the letter of the Assistant

Secretary and that in the report of the inspector.

The Secretary speaks of the estimated cost as \$350,000, but the inspector estimates it at \$190,000, including building and site. I presume this can be accounted for on the difference in the kind of material which may be used in the construction of the building.

My bill asks for the authorization of only \$200,000. This sum was based both on the report of the inspector and on the suggestion of the local citizens who had some knowledge as to the

cost of construction in that part of the country.

I beg to call your special attention to the postscript to the letter of the Postmaster General, which is written in "long-hand." In explanation of that I may say that it was our good fortune to have the Postmaster General visit this city in the fall of 1914. He very carefully inspected this building, and he speaks from knowledge obtained "first-hand."

I have frequently visited this office, and I do not hesitate to say that the conditions under which the employees are compelled to work in the present building are intolerable. This is not an ordinary case of an ambitious town wanting a Government building, but is one in which a new building is required in which the business of the Government may be properly and efficiently transacted in a growing and up-to-date city.

Letter from the Secretary of the Navy.

EXTENSION OF REMARKS

HON. LEMUEL P. PADGETT.

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 25, 1916.

Mr. PADGETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from the Secretary of the Navy, Mr. Josephus Daniels, in response to a resolution of inquiry introduced by the gentleman from Massachusetts [Mr. Gardner]. Instead of formally reporting the resolution of the House I requested the Secretary just to furnish the information:

NAVY DEPARTMENT,

Washington, February 23, 1916.

MY DEAR MR. Padgett: Referring to your letter of the 18th instant, inclosing a copy of House resolution 144, submitted to the House on the 17th instant, inquiring as to the length of time allowed for completion by the contract for the construction of fleet submarine No. 1, the Schley (submarine torpedo boat No. 52), authorized by the act of June 30, 1914, I have the honor to advise you that, replying to the inquiry in the resolution, the contract for the Schley was made with the Electric Boat Co., the same bearing date March 19, 1915, and that the time prescribed for finishing the vessel is 36 months from said date, or March 19, 1918, and to say, in answer to your own inquiry, that there is no reason why the facts should not be made public.

This vessel is designed for a displacement on the surface of about 1,100 tons, as compared with displacement of about 450 tons of the largest submarines previously contracted for, and at the time proposals for her construction were invited no other Government had built so large a submarine, so far as the department was aware. It was known that submarines of about the size of the Schley were contemplated abroad, but the particulars of their design and requirements were not definitely known and there was not obtainable any data that could be of assistance in determining problems to be encountered in the construction and the operation of such a vessel.

Owing to such lack of experience with a vessel of this type it was realized that considerable time would be required for experimental work necessary on the part of the contractors before the mechanical part of the work of construction could be begun, and for that reason 36 months were allowed for finishing the vessel. The experiments made by the completion of the vessel, have in reality saved time as compared with any other method of procedure. The information thus gained, together with the resultant changes and improvements in the vessel, have been secured without additional co

changes and improvements in the vessel, have been secured without additional cost to the Government.

The contractors state they will now proceed rapidly with the construction work, and in response to notification that the department would require the completion of the vessel within the specified time limit I have been assured by them that the vessel will be finished and delivered to the Government by the date fixed in the contract.

For your further information I quote below a report by the chief constructor on the more technical phases of the subject, viz:

"The act of June 30, 1914, appropriated for the construction of the Schley. A quotation from this act is as follows:

"Eight or more submarines, one to be of seagoing type, to have a surface speed of not less than 20 knots."

"Data for the purpose was sent out to the bidders on August 15, 1914. As one of the bidders had previously requested that additional time be given in the preparation of bids, this extra time was allowed, and bids were actually opened on December 15, 1914. After some controversy over various points in the design submitted, the contract was signed for the Schley on March 19, 1915. Owing to this being a large vessel, and of a new type, 36 months were allowed for her construction, making the contract date of completion March 19, 1918.

"On June 23, 1915, a letter dated June 12, 1915, was received from the Electric Boat Co. covering the whole subject of the Schley. In this letter the company stated that at the time the contract was signed it was the intention to use two-cycle, double-acting engines. These engines were a new type for this work, and, after a thorough investigation, they stated that they had come to the conclusion that these engines would be undesirable, and a much better result would be obtained by substituting four-cycle, single-acting engines, with which type they were familiar. This change would give engines of con-

siderably greater length, which involved lengthening the vessel itself, and practically a redesign.

"This proposition of the Electric Boat Co. was approved, and the new contract plans approved by the Secretary on July 23, 1915. The contractors then spent a considerable amount of time completely going over all the calculations in connection with the lengthening of the vessel.

"By the letter rest. of the contractors are considerable as the contractors are considerable amount of time completely going over all the calculations in connection with the lengthening of the

contractors then spent a considerable amount of time completely going over all the calculations in connection with the lengthening of the vessel.

"By the latter part of 1915 the contractors commenced submitting working plans for this vessel, and these plans have been coming in rapidly. During that time a large part of the material for constructing the vessel was also ordered. The last reports received show that a considerable number of the plans necessary for the proceeding with the construction of the vessel have been submitted, and a large quantity of the structural material has been received.

"The work of actually erecting the vessel has not been begun, and no percentage of completion has appeared in the reports for this reason. However, it is expected that material progress will be made during this present month and that this progress will be evidenced by the next report. The contractors state that it is their expectation to complete the vessel within the contract period, and the burcau sees no reason why this should not be done."

The following statement relating to the 16 coast submarines provided for by the act of March 3, 1915, is quoted also from the chief constructor's report for your general information, though not called for by the resolution, viz:

"These vessels were authorized by the act of March 3, 1915. An unusual amount of time was allowed bidders for these vessels as some new firms were to submit designs. Bids were opened on September 30, but due to various controverstal points the contract was not entered into until December 28, 1915, for some of the vessels, December 31 for others, and January 3, 1916, for the last eight. The work has been proceeding in good order since the contracts were awarded, and, though no progress appears on the reports for some of these vessels, plans are being rapidly submitted and progress is actually being made."

Proposals for the two fleet submarines authorized by the act of March 3, 1915, to which reference is made in the second "Whereas" of the resolution,

Sincerely, yours,

JOSEPHUS DANIELS, Secretary.

Hon. Lemuel P. Padgett. Member of Congress, Chairman Committee on Naval Affairs, House of Representatives, Washington, D. C.

The European Situation.

EXTENSION OF REMARKS

HON. DENVER S. CHURCH. OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 24, 1916.

Mr. CHURCH. Mr. Speaker, there is no honor in getting into a free-for-all fight, but there is a whole basketful of honor in

staying out.

If a score of men were fighting in front of my house, fighting furiously with knives, clubs, and guns, striking wildly, and all fighting madly for their lives, I would not think of standing around continuously prodding the fighters about my rights. If I did, I would expect to get a broken nose or a nasty lick over my eye. Even if they staggered onto my radish patch I would not at once challenge the whole bunch for a fight. No; I would slip away and come back and see them at their homes when the fight was over and they were reasonable and cool; and I would ask them if they did not think they owed me something for tearing up my garden at the time they had the scrap, and \$5 against a coon skin they would pay all I asked, and I would go away without even a broken nose or battered eye.

If I had the power, I would tell Congress to stop talking about war, and I would tell the traveling public to stay at home; but if they must go abroad, to travel on ships that bear our flag, and I would let them know if they did not honor my request and met with an accident or got killed I would pay no attention to the incident. I would further give everybody to understand that all disputes in regard to commerce would be settled after the war when the heads of men, now hot with anger and wild

with rage, are cool.

It is no time to be exacting when a fight or war is on. I once knew a milch cow to run her master up a tree when he interfered with her fight, and at one time I was bitten through the hand by my own watchdog while I was trying to referee his scrap. That, however, was a long time ago when I was young and foolish. Since then I have made it a universal practice to do my talking the day after the fight, when the air was no longer filled with dust, foam, hide, and hair. America is said to be the light of the world. We are the only great power that is not now engaged in this great and disgraceful war. If we have any honor, let us stay out of it. The poor, exhausted, bleeding, and dying nations will need the help of a strong, just, and impartial friend when the war is over. [Applause.]

Letter from the Postmaster General Relative to the Guaranty Fund.

EXTENSION OF REMARKS

HON. DANIEL F. LAFEAN, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES.

Friday, February 25, 1916.

Mr. LAFEAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter of the Postmaster General in correspondence relative to the guaranty fund, with my remarks on same:

OFFICE OF THE POSTMASTER GENERAL, Washington, D. C., February 15, 1916.

Hon. Daniel F. Laffan,
House of Representatives.

Hon. Daniel F. Lafean,

House of Representatives.

My Dear Mr. Lafean; The Congressional Record of February 12, 1910, reports you as criticizing the action of the department in issuing on November 19 last an order defining the city-delivery service to be accorded by postmasters on holidays. I am sure that you desire to know and to bring to the attention of the Congress and the public only the true facts about this matter, and accordingly I respectfully submit the following statement of facts:

Prior to the issuance of the order to which you referred, the question of the service to be given patrons by city-delivery carriers was left to the discretion of postmasters. This resulted in varying practices in different cities, and the department had for some time been receiving protests from patrons in many cities against the entire curtallment of delivery service on holidays. The complainants directed attention to the fact that railways, express companies, telephone and telegraph companies, and other public transportation and communication utilities accede to the desire of the public for reasonable service on those days. Several postmasters had taken the position with the department that the lack of uniformity throughout the country in the handling of mall on holidays was leading not only to criticism by their patrons but also to a feeling on the part of the employees that they were not being treated uniformly in the various postal districts.

In order to arrive at a correct solution of this matter, a communication was addressed, under date of November 12, 1915, to the bostmasters at several representative offices in various sections of the country, asking them for expressions of their opinion in the premises. They all replied that the department should outline a uniform plan and unanimously recommended that at least one full delivery of mail be made on every holiday. In view of the unanimity of the recommendations on the part of the postmasters, the department feels that this order has resulted in no injustice to th

Mr. Speaker, in connection with this letter from Post-master General Burleson, which I herewith submit, I de-sire, on my own part, to offer additional reasons which, in my opinion, not only constitute a full and complete reply to the explanation offered by the Postmaster General for the issuance of the order enforcing delivery service on all holidays, but it also gives further confirmation to the arguments presented by me before this body on February 12, 1916, in defense of a more liberal holiday observance than is now granted by the Post Office Department.

Quoting the foregoing letter, the Postmaster General is quite right in his assumption when he says:

I am sure that you desire to know and to bring to the attention of the Congress and the public only the true facts about this matter.

After more than an ordinarily careful perusal of his letter, however, comparing his statements with my own, I am utterly unable, in so far as the subject matter of holiday delivery service is concerned, to note any instance in which the accuracy of my statements is questioned. In laying this matter before the

House for its consideration, in substance I said as follows: Prior to November 20, 1915, many post offices, taking advantage of a privilege extended by postal regulations, enjoyed the discontinuance of delivery service on numerous holidays. I stated that such discontinuance of service was altogether dependent upon public sentiment in the community affected. I further stated that on November 20, and just prior to Thanksgiving Day, an order was issued by the department directing postmasters to effect one complete delivery of mail on all future holidays, and that this order came at a time when the people were being advised, by articles appearing in the local news-papers in many cities, that "Thanksgiving Day will be observed by the local post office by discontinuance of the City Delivery Service." Quoting section 284 of Postal Rules and Regulations, which prior to November 20, 1915, was the departmental regulation guiding postmasters in providing for holiday service in their respective post offices, I proceed to explain the general policy that was followed in reference to this whole matter. I quote from my remarks of February 12, 1916:

quote from my remarks of February 12, 1916:

According to custom in different communities, the question of opening post offices on holidays has been guided largely by public opinion. If the desire of the public was for a general observance of certain holidays and all business was suspended on these days, and there was no demand for postal facilities on those days, the postmasters observed section 284 of the Postal Laws and Regulations and closed their offices and gave the employees the benefit of the holiday. If the postmaster in any city knew there was a demand for the delivery of mail on holidays, he took advantage of the discretion contained in section 284 and gave the public such facilities as in his judgment the occasion required.

That the foregoing is an exact statement of the facts in the case is confirmed by the Postmaster General in his communication when he states:

Prior to the issuance of the order to which you referred, the question of the service to be given patrons by city-delivery carriers was left to the discretion of postmasters.

I further stated, in discussing this question of holiday observance, that not only were the Government employees in other departments granted their holidays, as well as 30 days' vacation, but that from year to year, by Executive order, they were given, during the months of July, August, and September, the added concession of regular Saturday half holidays. In fact, this custom prevails among the immediate employees of the Post Office Department itself. Moreover, as I pointed out, by de-partment regulation, discontinuance of mail on rural routes is authorized on certain holidays. I further tried to show that in all civil industry more liberal treatment of employees has grown to be a fixed policy, as evidenced by not alone the general recognition of holiday observance, but by the growing popularity of Saturday half holidays as well. This is a true statement of facts. Their accuracy is unquestioned.

It is then plainly evident, as I have stated before, that for an extended period of time prior to November 20, 1915, local postmasters observed holidays in conformity with what they judged to be the desires of the patrons of their office. In accordance with this policy a great many post offices did discontinue delivery of mail on such days and gave their employees a day of rest. It is further evident that, as a result of the order of November 20, neither the postmaster nor the people have any further voice in this matter, and that employees are now compelled to do regular duty where formerly they were tendered a day's vacation.

That this, too, is a true statement of facts is beyond question.

In fact the Postmaster General, in his letter, does not take issue with the correctness of the statements herein set forth. On the contrary, the one chief reason assigned by the Postmaster General in the foregoing communication is that this order en-forcing holiday delivery was promulgated in deference to public sentiment and in obedience to the wishes of the people. The means whereby public sentiment was ascertained, this communication goes on to state, was through an inquiry issued November 12, 1915, directed to the postmasters in free-delivery offices, with the result, as his letter states, that-

They all replied that the department should outline a uniform pian and unanimously recommended that at least one full delivery of mail be made on every holiday.

As a consequence, seven days after the issuance of this inquiry, November 19, 1915, the Post Office Department issued an order directing postmasters "that at least one delivery over the entire territory should be made" on all future holidays.

It will be noted the statement is made that the postmasters

were unanimous in urging holiday delivery of mail. This can not but appear strange to one who has given the subject thought, when it is remembered that prior to the issuance of this order postmasters had full and complete authority to enforce holiday service in their respective offices. Their freedom in this matter was in no way limited. That a great number of them from time to time did limit the service on holidays, no one will deny, and in doing so they must have been guided by public sentiment in their respective communities. If complaints had been general with the postmasters they certainly would not have continued to follow a practice which met with the disapprobation of even a respectable minority of their patrons. That they did continue the practice we know. That they could have discontinued it at any time they saw fit we also know. Is it not remarkable, then, that postmasters would recommend, in deference to public sentiment, the discontinuance of a custom that they have long followed, when at any time they could have changed this policy on their own initiative? It is passing strange, too, that they should have been unanimous in condemning a custom of their own creation. Indeed, is it not possible that an inquiry directed to the postmasters seeking their opinion on this subject of holiday service could have been so framed as to invite the very sort of replies that are said to have been received.

In this matter, as in all questions affecting the welfare of the Postal Service, I trust that I am in entire agreement with the Postmaster General in believing that there is but one court of last resort, and that is the people. The service is made for the people, and if the patrons of the Postal Service desire holiday delivery of mail undoubtedly they should have it. If, on the other hand, however, the people favor liberal regulations to govern the Postal Service, not only as it affects the service, but in the treatment of the amplayers as a profit these contents. in the treatment of the employees as well, then, again, the people should have their way. Nor should he forget in this in-stance and under this regulation in question that right is now

denied them.

I am not at all convinced that the statements made by the Postmaster General in his communication regarding the opinion of postmasters in various localities is a true index of public sentiment on this question. My own information and whatever else I have been able to glean from other sources leads me to an

exactly opposite conclusion.

In fact, never has an instance arisen in which the people have had an opportunity to broaden the usefulness of the Postal Service or to make more liberal regulations to govern the standard of employment of its servants but what they have availed themselves of the opportunity of doing so. Abundant reason have they in justification of this sentiment. Citizens of all classes see in the Postal Service something more than a mere device for the transportation of mails. They conceive it as a great public institution, whose activities enter more intimately into their lives than any other governmental department. They know, too, that in the character of service it renders and the manner in which it treats its employees leaves a profound impression on employment in civil life, and thus they desire to offer the Postal Service as an inspiring example

to be wisely patterned after by society at large.

Quick to sense this sentiment of the people, Congress has from time to time enacted many wholesome laws, framed with the one idea in mind of keeping this great department fully abreast with all safe and progressive movements in industry. It was here the eight-hour day found its earliest application. The same is true with vacation periods, compensation laws, and with observance of the Sabbath. Let us not forget that it is only a few years now since post offices were closed upon Sunday, and we must remember, too, that every objection offered against holiday observance was even more forcibly advanced in opposition to Sunday closing of post offices. In fact, here is one instance in which the people themselves were directly consulted as to their opinion regarding a proposed change in postal regulation. Closing the post offices on Sunday meant great inconvenience to millions of patrons who had been accustomed to receive their mail on that day; yet in reply to the inquiry, they gave an almost unanimous country-wide response favorable to Sunday closing. I have not the slightest doubt but what the same sort of a response would be given by the people if the same question of holiday service was submitted to them and their opinion was sought as to whether postal employees should be tendered a day of vacation on all future holidays. Comparing the wages, character of work, and the long period of time that must elapse before they can attain their maximum salary, convinces me further that here is a deserving set of employees doing a responsible work in a most reliable fashion who deserve at least the same consideration and should be tendered the same concessions as are granted to any other employees of the Government. This, too, when such sentiments will meet with the echoing approval of the citizens of our Nation.

I further quote from the letter of the Postmaster General:

With reference to your statement that "the department officials have ruthlessly dismissed from the service and forced the resignations of a large number of employees whose sole offense was that they had become superannuated on account of age and its infirmities, I assure you that there is no basis in fact for such a belief. On the contrary,

it is the policy to provide, so far as possible, for employees who have outlived their best years of service by giving them assignments of work which they are capable of performing.

Surely the department does not wish to convey the idea that there have been no removals of postal employees from the service due to age and infirmities. A review of the files of the Post Office Department showing cases of separation from the service must surely disclose numerous instances of employees dismissed from the service for this very reason. Are there no instances of men being compelled to resign on account of age? no employees been removed through the operation of the 150-day leave-of-absence rule? If not, what necessity prompted the issuance of this regulation in the beginning? If not, why this widespread demand from all parts of the Postal Service seeking for some provision to care for the old men of the service and asking for the abrogation of the 150-day leave-of-absence rule? Surely these complaints and this apprehension are not without some foundation in fact. and in my opinion investigation will disclose that few are the post offices of any considerable proportion throughout the country but can furnish instances of employees compelled to leave the service for no other reason but that of age and infirmity.

In conclusion let me express the hope to this body and to the Postmaster General that in the administration of the Post Office Department no backward step be taken. May the service it renders represent the highest type of modern efficiency furnished to the people at a reasonable cost, and in the care and concern manifested for the well-being of its employees may it set such a standard of employment that will be not alone just to its employees but will, in deference to public sentiment, keep the Post Office Department well in the front ranks of all practical movements designed to make easier the lots of those

that labor.

I append the following as a part of my remarks:

POST OFFICE DEPARTMENT, FIRST ASSISTANT POSTMASTER GENERAL, Washington, February 17, 1916.

Hon. D. F. Laffan,

Hons. D. F. Laffan,

House of Representatives.

My Dear Mr. Laffan: In response to your inquiry over the telephone, I am transmitting herewith for your information the following data in relation to the correspondence between this office and certain postmasters prior to the issuance of the order of November 19 regarding one delivery of mail by carriers on all holidays.

On November 12, 1915, the following letter was sent to the postmasters at several of the largest post offices:

"As many protests have been received by the department against the complete suspension of mail delivery by carrier on holidays, I wish to secure your opinion as to the advisability of establishing the uniform practice of requiring at least one delivery on all holidays. Reference is made to section 284, Postal Laws and Regulations."

In reply to this letter I am quoting paragraphs from the letters of the postmasters to show the practical unanimity of opinion that the interests of the service demand that at least one carrier delivery be made on all holidays:

"Letter carriers and other post-office employees should be allowed to observe holidays whenever the convenience of the patrons will so permit. It is important that prompt delivery be made of a very large percentage of first-class matter. Many letters are mailed in the belief that they will be delivered on holidays, the same as other days, and messages which otherwise would be sent by telegram are sent by mail. I believe it to be almost a necessity that one delivery of mail be made on each holiday, and that on Christmas the carriers should work full time.

"I can see no objection to the observance of local holidays, provided

messages which otherwise would be sent by telegram are sent by mail. I believe it to be almost a necessity that one delivery of mail be made on each holiday, and that on Christmas the carriers should work full time.

"I can see no objection to the observance of local holidays, provided one delivery of mail is made in all cases where such holidays are generally observed by the business houses. In my opinion, however, the number of local or State holidays to be observed at any post office should not exceed three per annum."

"If no delivery were made at all on holidays a post office might as well be closed entirely, as on Sunday, for undoubtedly many patrons would call and demand their mail, and the inconvenience resulting would affect not only the patrons but the employees of the office, who would be required to secure their mail and deliver it to them when called for. I believe that one delivery on a holiday should be sufficient to accommodate the public, and that after the carriers have left on that delivery the post office should be closed, provision being made for handling the mail for the remainder of the day as it is taken care of on Sunday.

"In reply to your letter of the 12th instant regarding the establishing of a uniform service providing at least one delivery of mail on all holidays, I have strongly held to the opinion that handling of mail is a matter of clear necessity, consequently, as postmaster I have observed the effecting of one complete delivery of mail by carrier service on each national holiday.

"Again, those patrons who are holders of boxes have a decided advantage over patrons who receive their mail by carrier service. If the Postal Service fails to perform delivery of mail by carrier, there is no denial of the service given holders of boxes. The matter should be consistently carried out. The work is current and must be accomplished in regular order."

"It is my belief that at least one delivery of mail should be made throughout the entire city at all free-delivery offices on all holiday

of this office that at least one carrier delivery should be given on each holiday."

"In the business section one delivery is made beginning at 8 a. m. In other sections the first and second deliveries are made as usual, the first beginning at 7 a. m. and the second at 9.30.

"This applies to all holidays with the single exception of Thanksgiving Day, which is almost universally observed, and business is not as heavy as on other holidays. On this holiday one delivery is made throughout the city.

"I consider this service not only essential but necessary for the needs of the service and to relieve congestion on the following morning.

"I am not as conversant with the requirements of other cities as I am in this, but it is my firm opinion that at least one delivery on holidays is a public necessity."

Daniel C. Roper,

First Assistant Postmaster General.

DANIEL C. ROPER, First Assistant Postmaster General.

POSTAL GUARANTY FUND AS RIDER IN POST OFFICE APPROPRIATION BILL (H. R. 10484).

POINTS IN OPPOSITION.

United States Guarantee Co..

United States Guarantee Co..

III Broadway, New York.

I. Bond companies, on bonds of postal employees now are required to pay claims rendered by the Post Office Department or by post-office inspectors not only for losses which the Government sustains or is liable for (such as losses of postal revenues and up to \$50 on registered letters lost or rifed) but also for losses sustained by users of the mails and for which the Government is not liable (such as the excess loss over \$50 on registered letters and all losses from the rifling of ordinary or unregistered mail, loss of or damage to parcels, etc.). The Government, while denying its own liability to users beyond \$50 on registered mail, assumes to act as a trustee for such users and proceeds to collect from the bond companies for the benefit of such users all loss in excess of \$50 on registered mail and all other loss sustained by such users. The Government therefore stops short of assuming full liability as a common carrier but does put a full common carrier's liability on the bond companies.

850 on registered mail and all other loss sustained by such users. The Government therefore stops short of assuming full lability as a common carrier but does put a full common carrier's liability on the bond companies.

H. When this postal guaranty fund provision was first inserted in House bill 10484 it read that the fund was "for the indemnification of the Government and any person or persons sustaining such loss or losses by payment out of such fund." And so it continued to read until after conclusion of the hearings before the Post Office Committee on January 26, 1916.

Under the language above quoted, the fund was plainly applicable to pay losses sustained by the Government out of postal revenues and to reimburse it for its limited \$50 liability on registered letters and also to pay any and all excess and other losses sustained by all users of the mails; thus imposing upon the fund a liability equal to that which would attach to the Government if it had assumed a full common-carrier's liability.

But when the bill emerged from the Post Office Committee and was reported to the House (H. R. 10484) its entire scope had been changed; not only changed but changed without a word in the hearings, from experts or otherwise, as to experiences or facts which would afford a proper basis for or justify the insertion of the new matter.

The main changes were: (a) The elimination of the previous language which permitted paying from the fund (p. 28, line 5) "to indemnify the United States of America for losses incurred," etc.; and (lines 18 to 21) "and to pay in full from such guaranty fund any person or persons who have incurred or suffered loss or losses for which the United States is liable"—thus clearly eliminating all losses to users of the mails beyond the \$50 limit on registered letters; and (b) the insertion (p. 28, lines 11 to 15) of language such as to include in the fund plan contractors for star routes and screen-wagon service (which are by far the most hazardous risks with which the Post Office Department h

ons; and it is certainly most ill judged to attempt to meet such heavy and numerous losses out of a fund contributed to mainly by the postal employees.

III. This injection of star-route and screen-wagon contractors into the fund is illustrative of the lack of due and efficient consideration given to this fund plan at any time.

While the Post Office Department may possibly have a grievance against one or two bond companies who it thinks have refused bonds to lowest bidders on star-route and screen-wagon contracts, yet it stands to reason that if the Post Office Department awards contracts to lowest bidders, uniformly or generally, and if lower than the bond company was willing to take a risk upon, that then the losses chargeable against the fund on such contracts are bound to increase largely beyond the heavy loss ratio thereon which drove most of the bond companies away from such risks.
